ABSTRACT

Hearings on a bill to reauthorize the Higher Education Act of 1965 are presented, with attention to policy formulations of the Higher Education Act Amendments of 1984 and the Administration's fiscal year (FY) 1985 budget and legislative proposals. Consideration is given to the appropriate federal role in higher education, the proper focus of federal programmatic effort, and federal aid to low- and middle-income students and to postsecondary institutions. Views from a panel of students on the impact of proposed alterations of current law are included. Legislative changes accompanying the budget request include: increasing College Work-Study support by $295 million in FY 1985 (which would represent possibly 335,000 more student jobs); and replacing the current half-cost limit of the Pell Self-Help Grant with a limit amounting to 60 percent of educational costs minus the family contribution, with a minimum grant of $500 and a maximum of $3,000. Supplementary materials include: a National Education Association report entitled "Excellence in Our Schools--Teacher Education; An Action Plan," publicity material on the Growth Initiatives for Teachers fellowship program for secondary school mathematics and science teachers, and an article on the Council on Legal Education Opportunity Program Fellows by Wade J. Henderson and Linda Flores. (SW)

HEARINGS ON THE REAUTHORIZATION OF THE HIGHER EDUCATION ACT

TUESDAY, MARCH 27, 1984

HOUSE OF REPRESENTATIVES,
COMMITTEE ON EDUCATION AND LABOR,
SUBCOMMITTEE ON POSTSECONDARY EDUCATION,
Washington, DC.

The subcommittee met, pursuant to call, in room 2261, Rayburn House Office Building, at 10:30 a.m., Hon. Paul Simon (chairman of the subcommittee) presiding.

Members present: Representatives Simon, Owens, Kogovsek, Penny, Coleman, Gunderson, and Packard.

Staff present: William A. Blakey, majority counsel; Laurie A. Westley, assistant majority counsel; John E. Dean, Republican assistant counsel.

Mr. SIMON. The subcommittee will come to order. First of all, my apologies to everyone. We had a Democratic caucus on this small thing called the Federal budget, on which there is yet to be unanimous agreement. I have a statement that I will simply enter in the record. Basically, we're confronting the question of where we go from here, and there can be no more important investment on the part of the country than in the field of education and no investment that means more to the future of this country.

What has emerged is a Federal package that does assist a great many people to go to college. It does assist many institutions that need help. But it is also clear that substantial improvements ought to be made if we are to do what we ought to be doing in this country. And this is the first in a series of hearings that we're going to be holding over the next 2 weeks on this general subject and I hope we can emerge with a package that the administration can eventually buy and a package that our colleagues in the House and the Senate can eventually adopt.

[Opening statement of Congressman Paul Simon follows:]

OPENING STATEMENT OF HON. PAUL SIMON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ILLINOIS, AND CHAIRMAN, SUBCOMMITTEE ON POSTSECONDARY EDUCATION, MARCH 27, 1984

The Subcommittee on Postsecondary Education is beginning hearings today, and will hold a number of hearings in the next 16 days on the Administration's FY 1985 budget recommendations with accompanying legislative proposals and proposed legislation reauthorizing the Higher Education Act of 1965. This series of hearings will address the entire spectrum of issues related to the appropriate federal role in higher education, the proper focus of our programmatic effort, and funding commitments to low and middle-income students and to postsecondary institutions.

We will begin these hearings by focusing on student financial aid and the Administration's funding priorities and policies as reflected in their FY 1985 budget recommendations and accompanying legislative proposals. The Administration has proposed a series of changes to the current financial aid program for students. The

result of those changes would be decreased access to higher education by the student who has limited resources. This decline in access for the neediest students will occur through an increased requirement to pay $500 or 40% of the cost of education, whichever is higher, before she or he can qualify for any federal student financial aid dollars. The Administration's proposals and accompanying legislation alter the basic principals which have guided student financial aid packaging since 1972. From a base of grants and Work-Study, with loans as a last resort, the Administration has shifted to a reliance on student borrowing and work with a requirement to pay a large percentage of the cost of her or his education from personal or family funds that may not be available.

The Higher Education Act Amendments of 1984 (H.R. 5240), which I introduced last Thursday with 25 of my House Colleagues, refocuses student financial aid on the neediest student to ensure that the student who could not begin, or would not complete, an education because of high costs and limited family resources will have that opportunity.

I have also simplified student aid programs with one grant, one work and one loan program, along with an institutional block grant program. The student financial aid programs were created by Congress over the last two decades. The purpose was to make funds available to students who had no other way to finance their education. In today's economy with nationwide unemployment at 7.8%, youth unemployment at 19.3% and minority youth unemployment at 43.5%, it is time to refocus these programs to address the need they were created to serve.

It seems an inopportune period to alter Federal financial aid to require a higher dollar contribution from the neediest student before she or he is eligible for a grant.

Our hearing today will not only review the policy formulations but we will have the opportunity to hear from a panel of students to learn the impact of proposed alterations in the current law. It is the students who can best answer the real question of whether the Administration's proposals would discourage students from beginning or completing their education. This is what we are here to duscuss—the policy formulations embodied in the Higher Education Act Amendments of 1984 and the Administration's FY 1985 budget and legislative proposals and their impact on students.

Our first witness this morning is Gary Jones, the Undersecretary of Education, and will be followed by a panel of students. This afternoon the Honorable Edward Elmendorf, Assistant Secretary for Postsecondary Education will join us. I want to thank each of you for joining us this morning and to welcome you.

Mr. SIMON. Mr. Coleman.

Mr. COLEMAN. Good morning, Mr. Chairman.

Mr. SIMON. My apologies for this delay here.

Mr. COLEMAN. That's all right. I know that you all have an agenda there to work out within the caucus. As ranking member of the subcommittee it certainly has been my pleasure to work with you, Paul, over the last 3 years in productively addressing the needs of higher education. During this period of time it's personally been an honor and a privilege to get to know you. I consider you a friend. And it's been a rewarding experience because, in general, we basically agree on the thrust of most of the legislation that's come through our subcommittee.

However, today I must play the role of a good ranking Republican and point out some of the deficiencies that have been put forward in H.R. 5240. I do so because I believe that H.R. 5240 is the wrong bill at the wrong time. It is the wrong bill because it completely ignores the pressing budgetary problems that confront our Nation, and it's the wrong time because, as we all know, it's not necessary to reauthorize the Higher Education Act until next year or even later than that.

So, I am opposing your bill, H.R. 5240, with some reluctance, because I know of the sincerity in which you have put forth your proposal. There are several parts of the bill, frankly, that we can agree to. Both of us are original cosponsors of the Talented Teacher

Act, which is incorporated, of the Urban University Act, which I am an original cosponsor of, and also the international education area which both of us recognize as an area that needs emphasis.

And I, frankly, would hope that we could use your bill as a starting point, for development of legislation which could be enacted next year, in 1985. I consider it unfortunate, however, that we are going forth on an expedited schedule.

In the course of the committee consideration for this bill, I will be putting forward constructive and, I think, very positive alternatives to many of the provisions which are contained in this proposal. These alternatives will be designed to provide the best possible Federal support for higher education while at the same time attempting to be fiscally responsible.

It's my sincere hope that we will be able to come to agreement over many of these proposed alternatives that I will be able to offer, and that I can, therefore, remove my current strong opposition to H.R. 5240.

Ordinarily, Mr. Chairman, the initiation of these hearings and redirecting our efforts at higher education would be a happy occasion for all of us here on Capitol Hill as well as throughout the university campuses of this Nation. Instead, today is a sad day for higher education because we're beginning hearings on the Higher Education Act reauthorization that does not enjoy that bipartisan support or the support of all segments of the higher education community.

In the past, support of this nature has been a clear prerequisite to producing a strong Higher Education Act. Some say, and I know that you have said it yourself, that now is the time to consider this reauthorization and not put it off until next year, that we will not be able to produce a strong bill next year. I respectfully disagree. At a time when our Nation is facing the largest budget deficit in its history we should not be creating and significantly expanding Government programs. Enactment of H.R. 5240, as presently written and introduced, would add over $4½ billion to those deficits in the first year of the reauthorization alone.

H.R. 5240 is written as if there were no budget priorities other than higher education. I know that the American people consider other subjects, such as nutrition and housing, employment training, agricultural development, national defense, elementary and secondary education, special education, and health to be priorities, at least as important to our national well-being as higher education.

Where would we be if Congress enacted legislation proposing increases in Federal support in all of these areas, equal to those proposed in H.R. 5240? Our budget deficit would not be $189 billion, because H.R. 5240 represents a 100 percent, plus, increase in spending, we would have a deficit of almost a trillion dollars or $800 billion.

Now, I realize that those are pretty sharp and harsh statistics, but they illustrate what happens when you increase funding and expenditures in this magnitude, as contained in this bill.

This committee must do its part to address the problems of the budget deficit. At the present time, our Nation is experiencing good economic growth. Unemployment is down. GNP is up 6.1 percent.

37-618 O—84—2

It's obvious the economy is heading in the right direction. However, there is a storm cloud looming on the horizon—the budget deficit. The CBO estimates that this year the deficit could be as high as $189 billion, it could rise to $200 billion next year.

Already Wall Street, the securities industries and the banking community in this Nation are adjusting to this deficit increasing prime interest rates, increasing interest rates at banks, anticipating substantial growth in that Federal borrowing sector. They are raising their interest rates as a result, choking off much needed sources of jobs and economic growth potential.

H.R. 5240 would make a substantial contribution to the growth of the Federal deficit. By enacting what I personally consider, a fiscally irresponsible Higher Education Act, we could be undermining our economic recovery. There is no need for H.R. 5240 to be considered this year. In 1980 this committee managed to secure bipartisan Republican and Democrat support by presenting a realistic bill, despite the fact that 1980 was an election year, and budget deficits were an issue.

Although I know it was not your personal intention, H.R. 5240, as developed, places what appears to be political concerns ahead of good education policy. I personally feel this is unfortunate.

I firmly believe that enactment of H.R. 5240 or anything similar to it is not in the best interest of higher education. The legislation creates an entitlement program which will double annual expenditures for the Pell Grant Program; it is unrealistic to expect the Appropriations Committee to fund a $6.2 billion Pell program, a $3.2 billion GSL Program, and still find funds for the rest of the Higher Education Act.

I also believe that enactment of H.R. 5240 now would make a substantial revision of the Higher Education Act during the budget process, that we all know will happen in 1985, a virtual certainty. This will result in instability in the program administration and confusion which we've always heard about from parents and students and administrators. The result—a replication of the problems that we had during the reconciliation in 1981.

I think it's, frankly, unfair to promise students that they may qualify for a $3,000 Pell grant in academic 1986–87 when we know full well the funds would not be available to meet that promise.

So, I believe that if a bill must go forward, it should go forward in a positive and constructive manner. As H.R. 5240 moves through the legislative process here in the House and the committee, I plan to offer a series of amendments to address what I consider to be the fundamental problems of the bill.

H.R. 5240 makes huge promises to almost every sector of the higher education community. It's not easy to convince any sector of the community to scale back an authorization or to delete a program, once it's been promised to them by the chairman of the subcommittee. It's unfair to raise expectations in the higher education community without having the dollars and cents available to turn those expectations into realities.

So, in closing, Mr. Chairman, and trying to be, very fair in my comments, I do want to voice some questions. The first and foremost is why must we consider the bill this year? Senator Stafford has personally told me that a bill will move through the Senate in

1984, and I quote his exact words, "Over my dead body." I believe the Senator and expect that he has a long career ahead of him.

I also wonder why we should enact legislation which, by its very cost, could undermine the economic recovery. Why should we allow political concerns to take precedence over sound education policy? Why should we risk misleading the American people by promising them programs and funding which is, in all likelihood, never to come to pass?

And finally, Mr. Chairman, I ask you, as I've asked you before, when can we return to the tradition of working together in a productive, bipartisan manner, on higher education. I think that really is up to you to decide. I thank you for providing me this extensive time to make those opening remarks.

[Opening statement of Congressman Coleman follows:]

OPENING STATEMENT OF HON. E. THOMAS COLEMAN, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MISSOURI

Mr. Chairman, as Ranking Member of the subcommittee it has been my pleasure to serve with you over the last three years in productively addressing the needs of higher education. During this period I have come to know you well and consider you a friend. It has been a particularly rewarding experience for me because on almost every bill or issue before the subcommittee we have been in substantial agreement.

Today, however, I find that it is my responsibility as Ranking Member to disagree with much of the proposal that you have put forward as H.R. 5240. I do so because H.R. 5240 is the wrong bill at the wrong time. It is the wrong bill because it completely ignores the pressing budgetary problems confronting our Nation. It is the wrong time because, as we all know, the Higher Education Act does not need to be reauthorized until next year.

I am opposing H.R. 5240 with some reluctance because I know of the sincerity with which you have put forth your proposal. There are several parts of the bill we could agree to. And I wish we could utilize your bill as a starting point for the development of legislation to be enacted in 1985. I consider it unfortunate that we are going forth on an expedited schedule unnecessarily.

In the course of committee consideration of H.R. 5240 I will be putting forward constructive, positive alternatives to many of the provisions contained in your proposal. These alternatives will be designed to provide the best possible federal support for higher education while at the same time being fiscally responsible. It is my sincere hope that we will be able to come to agreement over many of my proposed alternatives and that I will be able to remove my current strong opposition to H.R. 5240.

Mr. Chairman, ordinarily, the initiation of this process would be a happy occasion for all of us, both on Capitol Hill and on college and university campuses across the country. Instead, I believe that today is a very sad day for higher education. Today we are beginning hearings on a Higher Education Act reauthorization that does not enjoy bipartisan support or the support of all segments of the higher education community. In the past, support of this nature has been a clear prerequisite to producing a strong Higher Education Act.

Some say that that now is the time to consider this reauthorization and that next year we will not be able to produce a strong bill. I disagree. At a time when our Nation is facing the largest budget deficit in its history, we should not be creating and significantly expanding government programs. Our budget deficits are large now. Enactment of H.R. 5240 as it is presently written would add over four and a half billion dollars to those deficits in the first year of the reauthorization alone.

H.R. 5240 is written as if there were no budget priorities other than higher education. I believe the American people consider nutrition, housing, employment and training, agricultural development, National defense, elementary and secondary education, special education, and health to be priorities at least as important to our national well-being as higher education. Where would we be if Congress enacted legislation proposing increases in federal support in all of these areas equal to those

proposed in H.R. 5240? Our budget deficit would not be $189 billion, it would be well over $800 billion.

This committee must do its part to address the problem of the budget deficit. At the present time our Nation is experiencing an economic recovery of unprecedented strength. In the first full year of this recovery real GNP rose 6.1 percent. Unemployment dropped to the February level of 7.7 percent and consumer prices increased by only 3.2 percent. It is obvious that the economy is headed in the right direction.

Budget deficits, however, are a clear storm cloud on the horizon. The Congressional Budget Office estimates that the deficit for the current fiscal year could be as high as $189 billion and could top $200 billion in FY 1985. Already the Nation's securities markets have begun to react negatively to this bad news. In addition, banks, anticipating substantial growth in government borrowing, are raising their interest rates on business loans, thus choking off a much needed source of new jobs and economic growth.

H.R. 5240 would make a substantial contribution to the growth of the budget deficit. Let us make no mistake about it, by enacting a fiscally irresponsible Higher Education Act, we could be undermining our economic recovery.

There was no need for H.R. 5240 to be written as it has been. In 1980, this committee managed to secure Republican support by presenting a realistic bill despite the fact that 1980 was an election year in which concerns about the budget deficit were present. In developing this legislation, you have chosen not to work with your Republican colleagues to develop proposals which we could take together to the President for signature. Instead, although I know it was not your personal intention, H.R. 5240 as developed places political concerns ahead of good education policy. I feel this is unfortunate.

I firmly believe that enactment of H.R. 5240 or anything similar to it is not in the best interest of higher education. The legislation creates an entitlement program which will double annual expenditures for the Pell Grant program. It is unrealistic to expect the Appropriations Committee to fund a $5.6 billion Pell program, a $3.2 billion GSL program and still fund the rest of the Higher Education Act.

I also believe that enactment of H.R. 5240 now would make substantial revision of the Higher Education Act during the budget process in 1985 a virtual certainty. The resulting instability in program administration and confusion on the part of parents and students would replicate the problems created by the rewrite of the 1980 reauthorization in 1981. It is unfair to promise students that they may qualify for a $3,000 Pell Grant in academic year 1986–87, when we know full well that the funds would not be available to meet that promise.

If we must enact legislation this year, would it not be better to address current budget concerns now and avoid a reconciliation bill next year?

I believe if a bill must go forward, it should go forward in a positive and constructive manner. As H.R. 5240 moves through the legislative process in the House, I plan to offer a series of amendments to address what I consider to be the fundamental problems in the bill.

H.R. 5240 makes huge promises to almost every sector of the higher education community. It is not easy to convince any sector of the community to scale back an authorization or delete a program once it has been promised to them by the Chairman of the subcommittee. It is unfair to raise the expectations of the higher education community without having the dollars and cents available to turn those expectations and promises into realities.

In closing, I have to voice some questions. First and foremost is: Why consider a bill this year? Senator Stafford has personally told me that a bill will move through the Senate in 1984, and I quote, "Over my dead body!" I believe the Senator and expect that he has a long career ahead of him.

I also have wondered:

Why should we enact legislation which, by its very cost, could undermine our economic recovery?

Why should we allow political concerns to take precedence over sound education policy?

Why should we risk misleading the American people by promising them programs and funding which in all likelihood will never come to pass?

Finally, I have to wonder when the Chairman of this subcommittee will once again return to the tradition of working in a productive, bipartisan manner on higher education legislation?

Thank you, Mr. Chairman.

Mr. SIMON. All right. Before we get to our witnesses, if I may respond briefly to my friend and colleague, and he is my friend, and I

have great respect for him. There is no question that this Congress faces a serious budget problem. There is no question, at the same time, in my mind, that we have to determine, as a Congress, what our priorities are. And this subcommittee ought to be one of the agencies for telling the Congress and the people of this Nation what those priorities ought to be.

And I think one of those priorities ought to be in investment in our future. I don't think any economist can take a look at where you can get return on your dollar, will come up with any suggestion that the dollars we invest in higher education are not very substantial savings in the long run. I've never seen any study that suggests anything to the contrary. Are we, as a nation, going to discontinue making investments that pay off in the future? I hope not.

Second, what we have is a shift in emphasis. No question about it. A shift in emphasis that costs more up front but saves money, because we're not subsidizing loans as much as we have been, in the long run. And that seems to me to be sound fiscal policy, in addition to sound educational policy. Because the programs, up to now, and I think we have to be candid, the programs up to now have not been helping many of the people they were designed to help.

If we had the same percentage of blacks, Hispanics, and women who graduate from high school going into college, as we do white males, we would have no demographic projections of a decline in enrollment in the colleges of this country. Now, two other questions have been posed by my friend and colleague from Missouri. One is that he is going to have some alternatives, some amendments. I am going to be happy to sit down with you, Tom, or anyone else, to try and work these out.

This is not the law of the Medes and the Persians, cast in stone, that we're introducing. It is a concept. It is a very practical concept. It is a concept that would be a substantial improvement in higher education and would be a tremendous plus for this Nation.

And then the final question is why do it this year? In part for the same reason we did it in 1980. We felt that in an election year, frankly, it is more likely that you're going to get the OK of an administration than you will on the year following the election, and I have been in politics long enough and, Tom, you've been in politics long enough to know that is a reality.

I hope we can emerge with something, and let me just add that I have talked to Senator Stafford, I have talked to Members of the Senate of both political parties. If the House passes something, I have every reason to believe the Senate is going to act.

Now, obviously what the Senate passes and what the Senate acts upon may look somewhat different than the House product. And then we're going to have to work out practical compromises. There are going to be a lot of compromises in this bill before it sees the light of day in the House. But I think it is important that we move ahead. I think it's important that we let people know where we stand in an election year, where we in the House stand, where we stand in the Senate, where this administration stands. I want, in a sense, people to have their feet to the fire in this election year.

Mr. Owens, do you want to add any fuel to the fire here?

Mr. OWENS. No, Mr. Chairman. I have no statement.

Mr. SIMON. All right.

We have two distinguished witnesses to start off with here, Gary Jones, the Under Secretary of Education, and Dr. Elmendorf, who heads the higher education area for the Department.

[Prepared statement of Dr. Gary Jones follows:]

PREPARED STATEMENT OF DR. GARY JONES, UNDER SECRETARY, DEPARTMENT OF EDUCATION

Mr. Chairman and Members of the Committee, thank you for this opportunity to discuss this Administration's proposal to amend the Higher Education Act of 1965, entitled the "Higher Education Amendments of 1984."

Before proceeding with an explanation of our legislative proposals, I would like to emphasize that we are not proposing a reauthorization or extension of the Act at this time. We are continuing to study the need for long-term legislative changes in these programs, and will be submitting our proposals for reauthorization of the Higher Education Act at a later date. However, I think you can safely assume that our philosophy of restoring the traditional roles of the family and students in the financing of postsecondary education costs and of promoting institutional self-sufficiency will continue to be dominant and recurring themes.

The purpose of the amendments we are proposing is to authorize needed immediate initiatives included in the President's fiscal year 1985 budget. These initiatives will encourage student self-help efforts, improve the effectiveness and efficiency of our student aid and other higher education programs, reduce waste and program abuse, and more equitably distribute Federal assistance to disadvantaged students.

I am not prepared to comment in detail at this time on the legislative proposal for reauthorization of the Higher Education Act being proposed by Congressman Simon. Only last week did we see a large part of the proposal and what we have seen included some complicated changes in the Pell and Guaranteed Student Loan programs which could substantially affect the operation and costs of these programs. For example, the distributional and cost impacts of the proposed provisions to extend eligibility for Pell Grants to first-year graduate and professional students, changes to the Pell award rules, and provisions for variable interest rate student loans, as well as other changes, are difficult to quickly and accurately assess.

My initial reaction is that these amendments do little to restore the traditional roles of the family and the student in the financing of postsecondary education costs and of promoting institutional self-sufficiency. It appears these proposals in general would have the undesirable result of increasing the Federal Government's responsibility for financing postsecondary education.

Let me now be a little more specific in describing the legislative changes accompanying our FY 1985 budget request.

STUDENT SELF-HELP INITIATIVE

A major purpose of this legislation is to promote the principle that postsecondary students should be expected to contribute to their own education costs before Federal grant assistance is provided. This policy would be implemented by:

increasing College Work-Study support by $295 million in fiscal year 1985—representing a potential increase of some 337,000 student jobs;

giving institutions more flexibility in using Work-Study funds by allowing them to make student grants and to use funds for Cooperative Education and Job Location activities.

extending the need test for Guaranteed Student Loans (GSL) to students of all family income levels; and

restructuring the Pell Grant into a Pell Self-Help Grant explicitly designed to supplement family and student contributions.

This reformed grant program, in tandem with the federally subsidized work and loan programs, would continue to ensure access and broaden the institutional choice of financially needy students.

STUDENT GRANTS

These amendments include provisions designed to encourage student self-help and to target Federal grant aid toward students with the greatest need. Under the amended Pell Grant program, student awards would become subject to reasonable self-help expectations. The grant amount and self-help expectations would vary with

education costs so that needy students interested in attending higher cost schools and willing to undertake greater self-help efforts would receive larger amounts of Federal grant assistance than under current law.

In place of the current half-cost limit, the Pell Self-Help Grant would be limited to 60 percent of educational costs minus the expected family contribution, with a minimum student self-help expectation of $500. The maximum Pell award would be increased to $3,000. An inequity in the current program, whereby the expected family contributions of some students (those affected by the half-cost rule) are ignored, would be eliminated.

The combination of Pell Self-Help and Supplemental Grant awards would be limited to 60 percent of educational costs or $4,500, whichever is less, minus the expected family contribution. Also, the receipt of Supplemental and Pell awards by a particular student would be generally limited to four academic years—restoring a reasonable limit which was repealed in 1980.

WORK-STUDY COOPERATIVE EDUCATION

This legislation would increase to $850 million the 1985 Work-Study authorization level, and also increase institutional discretion in the use of these funds. While it is expected that the Work-Study program will be used primarily to finance employment opportunities, it is recognized that in special circumstances an institutionally—based grant might be required to complete the financial aid package of a needy student. Therefore, participating institutions would be allowed to use up to 50 percent of their Work-Study funding for making Supplemental Grants. The institutional allocation provisions would be simplified and made more equitable, with State allotments based solely on relative full-time equivalent enrollment subject to a FY 1984 hold-harmless level thus tying funding more closely to students' needs. All other hold-harmless provisions would be repealed.

An institution would be permitted to reserve up to $100,000 of its Work-Study allocation for purposes of administering Job Location and Development Centers, cooperative education, and/or adult literacy programs. This new approach to Federal support for cooperative education is designed to consolidate funding for federally sponsored student employment programs under a broader and more flexible program—through which insitutional and student participation in cooperative education programs may be substantially expanded.

STUDENT LOANS

The bill includes several important amendments to the Guaranteed Student Loan program. All applicants for regular Guaranteed Student Loans would become subject to the need analysis limitation which now applies only to those with adjusted family incomes above $30,000, thus eliminating unnecessary borrowing while improving equity in student treatment.

We are also proposing several amendments which are designed to re-establish State cost-sharing in meeting the administrative and default costs associated with the Guaranteed Student Loan program.

All current interest-free Federal loan advances to guarantee agency reserve funds would be returned by October 1, 1985.

The two guarantee agency administrative allowances based on new loan volume would be repealed.

The agencies would still be allowed to retain up to 30 percent of their default collections, as well as their borrower insurance premiums, to help meet administrative costs.

Federal reinsurance would be reduced from 100 percent (generally) to 80 percent of default costs.

These measures would create new incentives for State level efforts to control Guaranteed Student Loans default and administrative costs.

In the National Direct Student Loan program, Federal cancellation payments to educational institutions related to outstanding loans to individuals in certain occupations would be based only on the original institutional investment. Institutions would not have to reinvest these repayments in the National Direct Student Loan program as is now required. The National Direct Student Loan interest rate would be increased from 5 to 8 percent (the current Guaranteed Student Loan rate), effective for loans made after June 30, 1985. This would establish some degree of equity between National Direct Student Loan and Guaranteed Student Loan programs and would increase the flow of funds available for new loans in a reasonable way without new Federal capital appropriations.

INSTITUTIONAL AID PROGRAMS

We also will continue to support the Institutional Aid programs which provide Federal assistance to those postsecondary institutions serving high percentages of disadvantaged students. Our proposal reflects the President's continued commitment to historically Black colleges and universities as well as to many predominantly minority institutions.

Grants for these programs would provide assistance to participating institutions to improve the quality of their academic programs, student services, institutional management and fiscal stability and promote the ultimate objective of institutional self-sufficiency. The Department proposes legislative changes which would simplify the Institutional Aid programs, reduce administrative burdens, improve targeting of funds to "truly developing institutions" and emphasize endowment building. These proposals include:

merging Parts A and B, which are similar in purpose and method of operation, into one program;

limiting the assistance under the newly merged program to one five year non-renewable grant, with matching requirements of 10, 20, and 30 percent for the third, fourth and fifth years of the grant period;

simplifying the determination of institutional eligibility by reducing the number of eligibility factors from three to two, resulting also in an improved targeting of resources to schools with limited resources; and,

maintaining and emphasizing the new Endowment program as a major tool for promoting institutional self-sufficiency, while phasing out the Challenge Grant program.

SPECIAL PROGRAMS FOR THE DISADVANTAGED

To assist disadvantaged students to gain access to and complete programs of postsecondary education, and to complement the Federal investment in student financial assistance, the amendments we have submitted would consolidate and simplify the Special Programs for the Disadvantaged. The Department's proposals would restructure these programs and require institutions to share the costs of projects, reduce administrative burdens, limit eligibility, and target funds to programs that provide direct services to disadvantaged students. The changes we propose include:

eliminating the language which permits first generation college students to participate in the program, since these students are not necessarily needy;

providing authority for low-income and handicapped students to be eligible for all, instead of just some of, the Special Programs;

requiring cost-sharing of 10 percent for institutions participating in the Upward Bound program, in recognition of the benefit accruing to institutions in the form of increased enrollment;

limiting eligibility for the Special Services and Upward Bound programs to postsecondary institutions participating in the Federal student assistance programs to ensure funds help needy students;

requiring cost-sharing and eventual institutionalizing of the Special Services program in recognition of institutional responsibility for their students; and

consolidating the highly similar Talent Search and Educational Opportunity Centers programs into a single program which could be financed with Special Services or Upward Bound funds.

We believe that these amendments would substantially improve the effectiveness of Federal student financial assistance and other higher education programs and would result in a more equitable distribution of limited Federal resources.

I will be happy to respond to any questions you or members of the Committee might have.

STATEMENT OF DR. GARY JONES, UNDER SECRETARY OF EDUCATION, DEPARTMENT OF EDUCATION; AND DR. ED ELMENDORF, ACCOMPANIED BY WILLIAM DINGELDEIN

Dr. JONES. Thank you, Mr. Chairman. We're also joined by Mr. Dingeldein, who is Deputy Director of Budget Services in the Office of Planning, Budget and Evaluation.

If I may, Mr. Chairman, I too have appreciated the relationship you and I have had for 3 years. We have normally always disagreed but we've done it without being disagreeable.

Mr. SIMON. I'm going to have to excuse myself. I have two important people here to see me who happen to be from Illinois. [Laughter.]

Dr. JONES. Very fine.

Mr. COLEMAN. And I'm going to adjourn the hearings after he leaves. [Laughter.]

Dr. JONES. Well, Mr. Chairman, we appreciate the opportunity to appear here today and we do want to make sure the record shows that the administration at this time is, today, testifying to reflect its interest and its proposals as they relate to legislative initiatives submitted within the fiscal year 1985 budget. They should not be construed as a reauthorization package by the administration.

ADMINISTRATION'S FISCAL YEAR 1985 STUDENT AID PROPOSALS

I would, however, like to make a few comments in addition to the prepared text we have submitted. There has been much ado, over the past 2 or 3 years, about where this administration stands in relation to student financial aid, which takes 42 percent of the Department of Education's budget. So let me just briefly indicate to you what we have most recently submitted to Congress as legislative proposals, as well as consequent budget actions.

PELL GRANTS

No. 1, as it relates to the Pell grant, we have suggested increasing the maximum award to $3,000, which is $1,100 over current law. We have advocated increasing the maximum family income for a student to be eligible for an award to $28,400, which is $2,500 in excess of current law. We have increased the targeted funds to the low income students. Current law provides about 74 percent to students from families with an income of $12,000 or less. Our proposal would provide about 80 percent to those students.

We are proposing to increase the average award some $150, to $1,221. We also are advocating increasing the direct and indirect allowable cost to $3,000 for those students not living at home, which is $1,000 more than current law.

WORK-STUDY

As our proposal relates to the work-study program, once again we are advocating a 52-percent increase in funding, which would push the funding level up to $850 million. This would provide additional funding for about 300,000 recipients at the undergraduate level and 36,000 at the graduate level.

We're also advocating, rather than a 10 percent transfer of college work-study funds, a 50-percent transfer into the SEOG Program. Also we are advocating increasing flexibility for institutions who wish to allocate money toward cooperative education, job location development centers, or adult literacy programs.

GSL PROPOSALS

There has been much talk also about what we can do for graduate and professional students, and we have some ideas with the auxillary loan program. One is to expand the eligibility to parents

and spouses of graduate students. We also suggest there should be a deferrment of the repayment of the principal for 6 months, once a student has gone below a one half-time enrollment status. We also think lenders should be provided the authority to have each loan repaid over a 10-year period of time.

Relating to the Guaranteed Student Loan Program, we have been able to lower our budget request for GSL by advocating some cost-saving measures. If we don't enact these measures, Mr. Chairman, we're going to need another $221 million in fiscal year 1985, above and beyond what the administration is already proposing.

CAMPUS-BASED PROPOSALS

We are suggesting, for the SEOG Program, that with the 50-percent transfer possibility of funds from the college work-study program, there could be as much as $425 million in the SEOG Program for grants. This is $50 million more than current appropriation and it would also provide a maximum grant aggregate total of $4,500, which is $600 above the current law.

And as it relates to NDSL we are suggesting that the $585 million in revolving funds out of the $5 billion that are out there would be useful for several hundred thousands students.

SELF-HELP PROPOSALS

In summary, Mr. Chairman, for student financial aid, the self help proposal that the administration is advocating for the second year really permits students at all income levels attending higher cost schools to receive more Pell grant dollars than under current law. It permits low-income students at community colleges to perhaps receive up to 20 percent more Pell grant dollars. It permits low-income students to receive more Pell grant dollars at all institutions than under current law, and any student who demonstrates need will still be able to receive the Federal student financial aid program dollars.

COLLEGE BOARD STUDY

In conclusion, Mr. Chairman, let me mention there have been comments recently—yesterday over the wire services—about the college board and its latest report which talks about a 20-percent underfunding level for student financial aid since 1980. I would like to just take a moment and have the record show that the report the college board has released has overstated the 1980 Pell grant cost by some $200 million and that the guaranteed student loan estimates they used do not correlate with our numbers. They also included Social Security and Veterans' benefits programs, which are not need-based, to get to their 20 percent underfunding assessment.

It also does not take into account the increase in disposable income for parents as a result of the 25-percent cut in the tax rate.

More specifically, the student financial aid appropriations since 1980 have increased fully 28 percent in nominal terms. So, I think the Congress and the administration, working together, have provided what has turned out to be a reasonable level of funding to

meet the needs of the students who wish to continue their education beyond the secondary level.

We are prepared to respond to your questions.

Mr. SIMON. Those last figures you just put together, they exclude the Social Security cut completely?

Dr. JONES. The 28-percent increase?

Mr. SIMON. Yes.

Dr. JONES. Does it exclude it? Yes, it does exclude it. That's just the Department's program.

Mr. SIMON. Yes, yes.

Mr. Coleman.

ADMINISTRATION'S VIEW ON REAUTHORIZATION

Mr. COLEMAN. Mr. Jones, I note on page 2 of your prepared statement that you stated that you were not commenting on H.R. 5240 in any detail because you, frankly, had not had time to really study it close enough and it was not provided to you in your offices until last week, and I think it was probably changed and updated since then.

You're here today and you said nothing you should say should be interpreted as an expression of support as far as reauthorization for this year, but you are setting forth the proposal which we have all seen before from the administration. Is that basically your testimony, then?

Dr. JONES. Yes. We are certainly constantly thinking about reauthorization, but currently what we are submitting are legislative proposals to implement our fiscal year 1985 budget.

MERIT-BASED AID

Mr. COLEMAN. Well, in general, do you feel that there is a place in our higher student aid programs regarding merit-based student aid at all, and if so, would you care to comment, just philosophically, and in general?

Dr. JONES. I am a strong advocate of merit-based aid, but not supported by the Federal Government. I am not interested in having a debate in the Halls of Congress as to how much money should go for merit-based aid and how much should be for need-based aid. I have talked about the concept whereby the private sector can provide the necessary dollars to implement a very worthwhile merit-based program.

CAMPUS-BASED ALLOCATION FORMULA

Mr. COLEMAN. I do note that in Mr. Simon's proposal that he has set up an allotment formula for college study and institutional block grants in which the formula utilizes, as part of its base the amount of GSL's that an institution might be having utilized on its campus. Do you have information now? How difficult would it be to get that information? And what would be the effect of utilizing that concept in alloting other funds?

Dr. JONES. Well, I'm intrigued by that because we talked about a campus-based block grant program 2 or 3 years ago and we didn't receive any support from the Democratic Members of the Congress

at that time, nor did we get it from the community. So, we kind of disbanded the idea.

We would be more than happy to report back to you, Mr. Congressman, at another time, as to what our reflection would be as it relates to block granting of those programs.

Mr. COLEMAN. Could you comment specifically about the utilization in the formula of the amount of aid received through the student loan program? In other words, would there possibly be an attempt to overutilize unecessarily GSL's in order to boost up an institution's allotted funds, under these other formulas?

Dr. JONES. I would expect so.

ACCESS AND CHOICE

Mr. COLEMAN. I wonder if you could just comment briefly about access and choice, the two key reasons for having federally funded student aid programs. Do you feel that the Higher Education Act, in its present form, generally reflects the concern of both access and choice, and if you've had a chance to address H.R. 5240 on this issue also, could you do that? Do you feel that your proposal addresses those needs also?

Dr. JONES. Well, we're not prepared to talk about H.R. 5240, Mr. Congressman. I did not receive the final copy of that report, or the bill, until Friday of last week and I've hardly had time to digest the delicate matters within it. I would, however, suggest that the current law, as well as the administration's proposals, are highly cognizant of access and subsidizing choice. We have long advocated a continuation of the Federal role of assuring access, and a measure of choice. Our proposals, simply, we think, provide more dollars to the most needy students and also encourage a minimal level of student self-help and a greater family contribution by the middle income and higher income families.

Mr. COLEMAN. Mr. Chairman, I thank the witness for his testimony. I think that perhaps at a later date after they have an opportunity to reexamine the legislation, they may perhaps want to make additional comments later in the hearing process. I thank the gentleman.

TIMING OF REAUTHORIZATION

Mr. SIMON. We will provide that opportunity. I recognize there has been a short time here.

Mr. Owens.

Mr. OWENS. Just one basic question, Mr. Secretary. The President's Commission on Excellence in Education issued a report entitled "A Nation At Risk" where they emphasized the fact that there is a need for a sense of emergency—a sense of urgency, with respect to education. Are you saying, by your statement, that there was no contemplation of putting forth the reauthorization proposal this year, that that sense of urgency does not apply to higher education?

Dr. JONES. Well, the report largely focused on secondary education as opposed to postsecondary or even elementary education, for that matter. But you should not draw from that report, nor from

our testimony here, that we're not interested in reauthorization of higher education.

We do not contemplate enough action this year by Congress in order to have the administration submit its official reauthorization package. We are continuously, through Dr. Elmendorf's office, and Dr. Bauer's Office of Planning, Budget, and Evaluation, as well as my own, looking at what matters should be undertaken through a reauthorization bill, and as time progresses we will begin to put a bill together and be happy to share it with you.

ADMINISTRATION'S SUPPORT OF HIGHER EDUCATION

Mr. OWENS. Well, there's been a decrease in the number of students entering high educational institutions as a result of the Reagan administration's budget cuts. Are you saying that there's no need to express any concern about this, that the pool of people with higher education in this country is great enough to meet our needs in industry and defense and that we are prepared like other countries, like the Soviet Union, we are up to par?

Dr. JONES. I don't think you can measure a congressional Member's, nor an administration's emphasis on education simply in a matter of dollars. I think you have to measure it as a total contribution to the public's consciousness toward education. Without question we have the greatest reform movement in this Nation's history as it relates to American education, and the President and the Secretary have been catalytic in that venture.

Having said that, I think it's also important to understand that the enrollment in higher education has remained fairly constant for the last 3 or 4 years, even though, Mr. Congressman, there has been a decline in the number of high school graduates for the past few years. So, I think we need to be very careful when we analyze how many students are now in college, if there has been a decline in entering freshmen and sophomores in the last few years. If so, it's because there are fewer students graduating from our high schools.

The policies now in force, the statutory programs in force, are there to make sure any student who wishes to have access to higher education can, and the budgetary program, as passed by Congress for the past several years, has been able to endorse that policy.

Mr. OWENS. Well, you would say that the number of students enrolled in higher education institutions in the Soviet Union, the number being graduated in the Soviet Union from higher education institutions, is of no concern when compared with the numbers that we have?

Dr. JONES. I think the Soviet Union has its own way of educating its students, and far be it from me to endorse that, as opposed to ours. I don't think there is any nation in the world that can compare with the type of opportunities we provide students, from kindergarten through graduate and professional schools.

I think it is important we continue to recognize the needs—the financial needs—of our students, and that we meet those needs. Personally I think it's time we began to reward people for their achievement in secondary school and maybe that way through

merit scholarships we could improve achievement by our students in colleges and universities so that we can continue to compete intellectually, economically, and other ways against the Soviet Union.

Mr. OWENS. Thank you, Mr. Jones.

Mr. SIMON. Mr. Penny.

Mr. PENNY. No, I have no questions.

CBO'S ASSESSMENT OF ADMINISTRATION'S PROPOSAL

Mr. SIMON. Just if I may quote from a CBO memo to John Dean here. Just three quick comments, among the many others they have. "Fully funding the proposed Pell self-help grant formula would cost $3.7 billion in 1985 or 30 percent above the administration's request." They also point out that it reduces the flexibility that campuses have. It also says, "Some students with higher incomes at high cost schools, who had not previously received Pell grants, would get awards under the administration's proposal," and, "Total funding for the campus-based programs, SEOG's, NDSL's, and College Work-Study would decline by 23 percent." Do you have any comments on their assumptions here?

Dr. JONES. I haven't too many comments except that it's very clear, Mr. Chairman, there are programs we have advocated to be zero funded. You have just come from a meeting, sir, that is addressing the very difficult problem of budget considerations, and we constantly address that as well. We have looked for ways by which we can continue to meet the needs of students without providing new funds every time we come to Congress.

That is why when you look at the NDSL Program, we suggest we need to emphasize that institutions need to get those revolving dollars back into the institutions; and in 1985 we're expecting $585 million for that particular program.

Congress has continued to provide $180 million or so in new capital for that. We simply disagree. We don't think it's necessary to continue to spend money for that program when you have $5 billion in revolving funds and $585 million coming back in. As to flexibility, I think there's a lot of that we're advocating. When you take the congressional statute now of 10 percent transfer of college work-study into SEOG, and note we're suggesting 50 percent—that's a tremendous amount of flexibility we're providing institutions. We're providing more flexibility by letting them take not $25,000 but $100,000 and put it into cooperative education or adult literacy, which I know you're interested in, Mr. Chairman, as well as in the job location development centers.

So, there are many flexibilities we have integrated into our proposal this year.

Mr. SIMON. We thank you.

Mr. Gunderson, I'm sorry.

Mr. GUNDERSON. Thank you, Mr. Chairman. I'm kind of bashful so I'm not easily recognized.

Mr. SIMON. I did not see you walk in. My apologies.

STUDENT ACCESS IN RECENT YEARS

Mr. GUNDERSON. No problem at all.

One of the concerns that we all have is this question of access and we try to balance that with a commitment regarding the fiscal situation we face in this country with the budget. As I traveled around my campuses in my district over the Presidents' day recess and met with all but one of the chancellors, every one of them told me that they did not believe that as a result of the changes that we have imposed in the last couple of years that they had denied students access to their campus. They felt that we were at the point where we, however, had cleaned up the abuses. They were concerned where we went from here.

My concern and my question is, Has the Department, or are you, undertaking any studies at the present time in preparation for your reauthorization proposal? Did any analysis occur nationwide of the impact of the various changes that have occurred in the last 3 years, and in particular the impact of that on access to various students?

Dr. JONES. I think it's fair to say we have not done analyses, as it relates to our reauthorization package, because we don't have one. It is fair also to say, however, that we have done considerable analyses for submission of our fiscal year 1985 budget. Much of that has been done by Dr. Elmendorf in the Office of Postsecondary Education, and Dr. Bauer, who is our Deputy Under Secretary for Planning, Budget, and Evaluation.

We are very sensitive to any proposed program we submit to Congress. We take into consideration several things: demographic trends and economic trends of the country, the disposable income of families, targeting the most needy students, and things of that nature. I think it's very clear that the proposals we're putting forward address the needs of the most needy students.

There are some students who won't get as much grant money as they've gotten before, because they're more or less in middle income range families and they will be either providing more family contribution or they will be receiving, perhaps, more college work-study or something of that nature.

I think it also needs to be mentioned that, over the last 2 or 3 years, there has been a greater contribution by parents to their students' educations. We were told 2 or 3 years ago that this simply could not occur, that we had to have more Federal funding in order to accommodate students' needs. And we're working on some data in the Department now that will indicate, I think, fairly clearly that many people did not think as much Federal aid would be available as it turned out to be about 2 years ago when we had the big testimonies up here all the time. When parents didn't think the money was available, they did provide the money, because there has been about a 10-percent increase in parental contributions over the last 2 or 3 years.

Mr. GUNDERSON. Are you anticipating doing any comprehensive studies in this area?

Dr. JONES. Yes, sir, we will.

NONTRADITIONAL STUDENTS

Mr. GUNDERSON. My other question would be in the area of the nontraditional student. It seems to me that it is impossible to look

at the question of reauthorization and the needs for higher education, financial assistance in the mid-1980's and beyond without recognizing a very unique and different type of student who is becoming very, very important on almost every campus in this country, that being the older, nontraditional student.

Is the Department contemplating any kind of special financial assistance programs, recognizing the rather unique needs of this type of student?

Dr. JONES. Well, we have an adult literacy initiative now that addresses those people, to some degree. We have an emphasis on cooperative education now also.

Mr. GUNDERSON. We're talking well beyond literacy. I mean, we're talking about someone who has been to college and has a need to come back.

Dr. JONES. Yes, it's well beyond literacy.

Well, you will find that our student financial aid programs do address that as well, through the auxillary loan program, allowing parents as well as spouses to borrow under that program. That would help address the need of the nontraditional student.

Mr. GUNDERSON. You do recognize we have a special situation here that needs to be studied?

Dr. JONES. Yes, sir. That age group of the student population continues to grow. That's one reason we've had a decline in the number of high school graduates, which has had a leveling effect of enrollment in our institutions of higher education.

Mr. GUNDERSON. Thank you, Mr. Chairman.

Mr. SIMON. We thank you. Dr. Elmendorf, you are going to be with us this afternoon, I understand.

Dr. ELMENDORF. Yes, sir.

Mr. SIMON. All right, great.

We thank you very much. We will have one more witness now, then we're going to recess until 1:30, and proceed with the additional witnesses at that point.

My colleague, Congressman Bob Garcia, is somewhere here. There he is. Sitting modestly in the back of the room.

[Prepared statement of Congressman Robert Garcia follows:]

PREPARED STATEMENT OF HON. ROBERT GARCIA, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK AND CHAIRMAN, CONGRESSIONAL HISPANIC CAUCUS

Mr. Chairman, it is my pleasure to testify today as chairman of the Congressional Hispanic Caucus before the Educational and Labor Subcommittee on Postsecondary Education, for your bill to reauthorize the Higher Education Act which addresses the concern for access and equity in postsecondary education for Hispanic Americans.

The major issues facing Hispanics in higher education are limited access, discriminatory employment practices and disproportionately high attrition rates. Hispanics' limited access to higher education is exposed by the following statistics. From 1970 to 1980, Hispanic full-time undergraduate students increased from only 2.1 percent to 3.7 percent of the total college enrollment. While overall Hispanic college enrollment has increased in the past ten years, these figures are very misleading. Factoring in the declining college enrollment for the total population and the growth of Hispanics in the 18 to 24 year old brackets, we find that Hispanic college enrollment fell from 20.4 percent in 1975 to 16.1 percent in 1980. These figures belie any claims of greater Hispanic participation in higher education, but rather point to the imminent danger of having another generation of Hispanics lose the opportunity for a quality education.

Other patterns to gage access to higher education do not brighten the picture. The distribution of Hispanics in postsecondary institutions reveals their limited penetration into the higher education system. In 1980, 54 percent of Hispanic students attended two year colleges as compared to 36 percent of nonhispanic students. This situation is problematic for the pattern is that Hispanic are not transferring from two-year to four-year institutions in significant numbers. Another telling factor revealing the limited penetration of Hispanics into higher education institutions is the concentration of Hispanic students in fewer than two percent of our Nation's universities. For example, the 72 institutions with significant Hispanic enrollment account for nearly one half of all mainland Hispanic students.

To make higher education accessible to Hispanics, it is important to provide them with an institution setting with proper role models, relevant curriculum and sensitivity to their particular needs, all of which can be best provided through Hispanic's participation at the administrative and faculty levels in postsecondary institutions. Unfortunately we are far from having a proportionate share of Hispanic participation in the higher reaches of the higher education establishment where Hispanics are grossly underrepresented. Only 3 institutions are governed by Hispanic majoritites compared to more than 102 colleges and universities controlled by blacks and approximately 26 indian-controlled institutions. While Hispanics constitute about 2.7 percent of all employees in postsecondary institutions, they make up only 1.4 percent of the executive, administrative and managerial personnel and only 1.5 percent of faculty.

The lack of institutional settings sensitive to the particular needs of Hispanic students is best reflected in the serious attrition rate of Hispanic college students. Fifty-seven percent of Hispanic males and fifty-four percent of Hispanic females fail to graduate as compared to thirty-four percent of white males and females. When these figures are considered together with the already low totals of Hispanic college enrollment, one is forced to conclude that higher education is far from accessible to Hispanics and so are the opportunities which result from such education.

The consequences of the limited accessibility to higher education are exacerbated by the demographics of the Hispanic population. Hispanics are the youngest populaltion group in the nation. Their median age is 22 years, compared to 30 years for the non-Hispanic population. The proportion of the Hispanic population below 18 years old is much larger than that of the non-Hispanic population. The youth of Hispanics as a group makes them the most vulnerable to the consequences of not being afforded the opportunity to pursue postsecondary education.

Another important demographic factor affecting Hispanics' educational opportunities is their concentration is urban areas. Eight-eight percent of Hispanics reside in cities and ninety percent of Hispanic students attend public school. This means that most hispanic elementary and secondary students are enrolled in the mammoth and problem-ridden school districts of large cities. The issue of Hispanic representation in postsecondary education is tied to the plight of elementary and secondary schooling for Hispanic. The difficulties many of these students face both in Kindergarten through twelfth grade and in higher education suggest the necessity to improve the transition between the two systems.

I have outlined for you the challenges Hispanic Americans face in the pursuit for access and equity in higher education to emphasize the urgent need for the provisions in your bill addressing these challenges. For Hispanics, one of the most important provisions in your bill is the one for strengthening institutions with significant enrollments of Hispanic students by providing them with funding through a set-aside of $10 million dollars or up to 15 percent of title III funds. There only exist in the U.S. mainland three institutions which were established with the specific intention to serve Hispanic students, two of which are in my district. Unlike blacks and American Indians, Hispanic attend institutions that do not have historical missions to serve Hispanic students. This provisions recognizes the need for giving schools incentives to reach out to the Hispanic community by providing Hispanic students with an institutional setting sensitive to their particular situation. Through supporting these schools that have manifested a vested interest in serving Hispanics, we make higher education more accessible to the most educationally disadvanted group. We support the Subcommittee's intent in broadening the criteria for Hispanic institutions. Instead of just relying on pure numerical majority criteria, the Subcommittee has evolved criteria sensitive to the actual distribution of Hispanic college students in postsecondary institutions.

Another area of concern which your bill takes into account is that of financial assistance. Unless we can assure that students are able to underwrite the cost of college, postsecondary education will remain inaccessible. Since the Hispanic population does not earn much money in general, in financial aid programs are absolute-

37-618 O—84——3

ly critical. In 1980 the median income for Hispanic families was 14,700 dollars or 50 percent less than for white families and 25.7 percent of Hispanic families were below poverty levels. As a result, postsecondary education is rarely seen as an option because parents assume that it is beyond their financial means. In addition the complexity of the grant/loan process discourage parents and students unfamiliar with necessary application processes from seeking available needed financial aid. In fact studies have found that Hispanic students' grant/loan packages have a higher proportion of loans which, unlike grants, increase student indebtedness. Your bill addresses these concerns by simplying the grant/loan process to one work, one loan and one grant program coupled with a campus-based block grant. The overall simplification of Title IV programs will contribute to improving student access and the equality of educational opportunity for low income students, especially Hispanics and other miniorities. Moreover the financial aid package will limit student indebtedness by expanding grant and work assistance. By reducing economic and administrative barriers to student financial assistance, more students will be able to take advantage of the opportunities a college education can provide.

Your bill recognizes the effectiveness of the Special Services for Disadvantaged students programs in channelling disadvantaged students toward higher education. The TRIO programs have worked well in the past though limited int he extensiveness of their impact by inadequate funding. At present, the TRIO programs are serving less than 10 percent of the eligible student population which meet the 150 percent of poverty criteria. If present TRIO levels persist through the second half of the 1980's, and nothing is done to make more and better information about college opportunities available to needy students, another generation of Hispanic students will be denied access to postsecondary education. Over 90% of the students who have been afforded the opportunity to participate in TRIO programs, such as talent search and upward bound, go on to college. Among the TRIO programs, the High School Equivalency (HEP) and the College Assistance Migrant Program (CAMP) serve the most educationally deprived segment of the American population—migrant and seasonal farm-workers. The HEP population is over 65 percent Hispanic and the CAMP student population is over 90 percent Hispanic. Thus, the HEP's and CAMP's are providing the most disadvantaged Hispanics with access to the mainstream of secondary and postsecondary educational opportunites. The Modifications included in your bill, such as authorization increases, will permit the enhancement and expansion of TRIO's outreach to the target population and service more students.

Your bill opens up the option for cooperative education as an alternative way for Hispanic students to finance their college education by increasing its funding. The partnership between the private sector and the academic institution translates into both financial aid and employment opportunities for the students. This program is important to the Hispanic student as it provides him with assistance in overcoming at the same time the economic and employment hurdles that face him.

This bill, in response to the hearings on Hispanics access to Higher Education, includes a provision to meet the critical need for meaningful statistics on Hispanics in Higher Education which mandates the National Center for Educational Statistics to collect data on the educational attainment of Hispanics. In order to be able to address the issues of educational opportunity and equity, it is important to better evaluate the extent and the quality of Hispanic participation in Higher Education.

In this area of budgetary restraints and conservative fiscal policy it is imperative that our limited resources go to the areas of greatest need. The risks of not attending to those in greatest need may result in their not integrating into our technological society through their lack of participation in the opportunities which our society offers. This society must provide its youth with the education necessary to make them productive participants.

It is not only the right policy but good policy as well that we support and build up minority participation in postsecondary education, for the return which the government gets on its investment with these programs is significantly greater than its outlay. College graduates are much less likely to be unemployed than people who have not attended college. Therefore, they are less likely to drain the government's resources as recipients of public assistance. College graduates also have a much higher median income than non-college graduates. As a result, they contribute to federal revenues directly, through their tax dollars, and indirectly, through the ripple effect of their purchasing power.

STATEMENT OF HON. ROBERT GARCIA, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK

Mr. GARCIA. Mr. Chairman, first let me thank you and let me make it very clear that I will not take more than a few minutes.

What I'd like to do, with the permission of the committee, is to just summarize my statement.

Mr. SIMON. Your full statement will be entered in the record.

Mr. GARCIA. Thank you very much.

First of all, I didn't know how to address you, Mr. Chairman, as Senator or Congressman. But in any event, as an elected official, both, we wish you well.

Just ever so briefly, let me start off by congratulating the committee and especially you, Mr. Chairman, for your continuous fight on behalf of so many who have needs in this country, and we in the minority communities are deeply appreciative of all your work.

I would like to say to all the members of the committee that I am testifying here on behalf of the congressional Hispanic caucus. But I am sure that the figures that I will cite will pretty much relate to the black community or the poor white community of Appalachia as well. I think the equation, there is a common denominator wherever there is poverty, and in stating that to you, Mr. Chairman, I would like to talk about, very specifically, and I will just read one paragraph or two, that the major issues facing Hispanics in higher education are limited access, discriminatory employment practices, and disproportionately high attrition rates.

Hispanics' limited access to higher education is exposed by the following statistics: From 1970 through 1980 Hispanic full-time undergraduate students increased from only 2.1 percent to 3.7 percent of the total college enrollment. While overall Hispanic college enrollment has increased in the past year, the figures are very misleading. And it's for the same reasons that the Secretary who just testified before us, his figures are misleading as well.

As chairman of the Census Subcommittee in 1980, from 1979 through 1981, and having understood those figures and statistics, the reasons why the population in these institutions have remained the same is because the number of young people who are eligible today to enter into the institutions of higher learning have increased a substantial percentage. So that while the numbers look the same as they were before, in reality when you look at it in direct proportion to the number of youngsters who were eligible to go, there has been a significant drop.

And so when we talk about the Hispanic community, which has gained 1.6 percent in total college enrollment over the last 10 years, the fact is that the numbers really have decreased.

Factoring in the decline of college enrollment and the growth of Hispanics, and this falls into that category, in the 18- to 24-year-old brackets, we find that Hispanic college enrollment fell from 20.4 percent in 1975 to 16.1 percent in 1980. So, that as it relates to the conversation that you've just heard, you can see that those facts are misleading. And I think the record should be made quite clearly.

The other paragraph I would like to read to you, Mr. Chairman, is that the consequences of limited accessibility to higher education

are exacerbated by the demographics of the Hispanic population. Hispanics are the youngest group in the Nation. Their median age is 22 years old compared to 30 years old for the non-Hispanic population. The proportion of the Hispanic population below 18 years old is much larger than that of the non-Hispanic population. The youth of Hispanics, as a group, makes them the most vulnerable to the consequences of not being afforded the opportunity to pursue postsecondary education.

Another important demographic factor affecting Hispanic educational opportunities is their concentration in urban areas.

Eighty-eight percent of Hispanics reside in cities, and ninety percent of Hispanic students attend public schools. This means that most Hispanic elementary and secondary students are enrolled in the mammoth and problem-ridden school districts of large cities. The issue of Hispanic representation in postsecondary education is tied to the plight of elementary and secondary schooling for Hispanics.

The difficulties many of these students face, both in kindergarten through the 12th grade, and in higher education, suggest the necessity to improve the transition between the two systems. Another area of concern which your bill takes into account is that of financial assistance. Unless we can assure that students are able to underwrite the cost of college, postsecondary education will remain inaccessible, since the Hispanic population does not earn, let me repeat that, does not earn much money in general. And financial aid programs are absolutely critical. In 1980 the median income for Hispanic families was approximately $14,000, $14,000 to $15,000, or 50 percent less, than for white families and 25.7 percent of Hispanic families were below poverty levels.

As a result, postsecondary education is rarely seen as an option because parents assume that it is beyond their financial means.

I'm going to sum up now, if I may. I just think the statistics are important, Mr. Chairman, in terms of this dialog between the committee and the congressional Hispanic caucus.

It is not only the right policy, but good policy as well, that we support and build up minority participation in postsecondary education, for the return which the Government gets on its investment with these programs is significantly greater than its outlay. College students are much less likely to be unemployed than people who have not attended college. Therefore, they are less likely to drain the Government resources as recipients of public assistance. College graduates also have a much higher median income than non-college graduates.

As a result, they contribute to Federal revenues directly through their tax dollar, and indirectly through the ripple effect of their purchasing power.

Mr. Chairman, as usual, I think you're terrific and I thank you very much for the opportunity.

Mr. SIMON. We thank you very much and I just have a comment or two and then I'm going to turn the Chair over to Mr. Penny here, because unfortunately I have another meeting I have to get to.

The statistics you mention are dramatic. They become even more dramatic if you exclude community colleges, the 2-year colleges.

Mr. GARCIA. Right.

Mr. SIMON. Hispanics are disproportionately enrolled in those community colleges, and disproportionately underenrolled in the other colleges, public and private, of the Nation. Now, I don't mean to denegrate in any way the important role of community colleges. I am a strong backer of community colleges. But clearly there is an access problem.

One other comment, and this is nothing that we can handle with legislation, but just a general comment for my friends who are here from the higher education community. One of the things we also have to do to encourage Hispanics to become involved and to stay in higher education institutions is to have representatives of the Hispanic community and the faculty and administration of these institutions.

Just out of curiosity over the weekend I did some checking at Southern Illinois University, an institution between 2 campuses that has about 40,000 students. There is one Hispanic faculty member, in a State with a very substantial Hispanic population. Now, I'm not picking on Southern Illinois University, because I think I could find the same, unfortunately, in——

Mr. GARCIA. In New York State.

Mr. SIMON [continuing]. In New York State or a great many other places.

But, clearly, we have a job to do and students need faculty members with whom they can converse, whom they can see as role models, to make them feel a little more at home on a campus, and too often that, clearly, is not happening. I thank you. And I'm going to turn the Chair over to Mr. Penny. Mr. Coleman.

Mr. COLEMAN. I have no questions. I thank Mr. Garcia for being with us today and for his statement.

Mr. PENNY. Any questions at all? No questions to the left of me. No members to the right of me. [Laughter.]

And I don't have any questions, Mr. Garcia. Thank you for your testimony. We'll reconvene at 1:30.

Mr. GARCIA. Thank you very much.

[Whereupon, at 12:20 p.m., March 27, 1984, the hearing recessed until 1:47 p.m., the same day.]

Mr. SIMON. The subcommittee hearing will resume. We will now hear from Dr. Ed Elmendorf, the Assistant Secretary of Education for Higher Education.

STATEMENT OF DR. EDWARD ELMENDORF, ASSISTANT SECRETARY OF EDUCATION FOR HIGHER EDUCATION

Dr. ELMENDORF. Thank you, Mr. Chairman.

I have with me today Dr. Ron Kimberling on my left, who is the Deputy Assistant Secretary for Higher Education programs. On my right I have Ms. Sally Kirkgasler, who is the Program Office of Policy Development head, and on her right, Mr. John Haines, who is the Budget Office of Budget Development head for Postsecondary Education Evaluation Assessment.

We have no statement. We would be open to any questions the committee might have regarding the Higher Education Act or the continuation of the testimony this morning from Dr. Jones.

Mr. SIMON. OK, we thank you. Mr. Coleman.

Mr. COLEMAN. Why don't you go ahead with your questions?

Mr. SIMON. Let me—do you want to explain a little bit on the self-help provisions of how you arrived at your recommendations for Pell?

Dr. ELMENDORF. Yes, sir. The Pell self-help is, first of all, not a new term invented by this administration. Self-help is a term commonly used in the financial aid community. It's much more narrowly defined by the community than it is in our proposal. But let me tell you how they differ.

Self help is generally conceived of as work-study and loan by the financial aid community, ways in which the individual can help themselves in terms of enhancing their financial aid package.

We have more broadly defined "self-help" and allowed it to be defined as any type of assistance a student might get from any source, whatsoever, other than the Pell Grant Program, or other Federal grant program. Essentially that means everything can be considered toward meeting what we propose as a $500 minimum self-help contribution by the student or 40 percent of cost. That, we feel, is a strong basis to go in alongside the family contribution to try to fulfill the philosophy that this administration has proposed now for almost 3 years consistently, that the student is the primary financier of college, with assistance from the parent. After that, other sources of aid should be considered. After that, should there be a remaining need, it is the responsibility of the Federal Government to try to fill that need, using a combination of work, loan, and grant funds.

Further, we have also, throughout our proposal, assured ourselves that students do not go without having their needs met, and we do that through a very dedicated targeting approach of funding, not only in the Pell Grant Program, where you heard the Under Secretary state this morning 80 percent of the students in the Pell Grant Program would come from families earning less than $12,000. If you stretched that up even further to, I think it's $15,000 to $20,000, you have essentially 90 percent, 95 percent of the money, and 91 percent of the students, recipients, are from the lower income area.

Mr. SIMON. Under the uniform methodology, the student aid officer can modify that self-help contribution. As I understand, what you're requesting is to take away that flexibility. Is that correct?

Dr. ELMENDORF. Well, we consider that that flexibility is always going to be there with the aid officer, to determine just how much of the amount of institutional aid or Federal aid which they control can be used to fill up the funnel, so to speak, of how much it is that is remaining to be funded for that student. They can determine the level of work, the level of grant, with the exception of the Pell grant, which as you know was formula-based, and no one can tinker with the Pell grant. It essentially is based on a formula that does not change, except when an institution changes its cost of attendance. The student gets the same amount of funding no matter where they go, if the institution is, in fact, the same cost institution.

And a guaranteed student loan is, again, one of those things that the aid officer can change, can vary through their own institutional flexibility.

Mr. SIMON. Now, if you follow through, in your recommendations, and you were to eliminate the NDSL funding and SEOG, which takes away a good bit of that flexibility, then inevitably you increase borrowing. Have you made any calculations on what kind of increased borrowing would be required if your recommendations were to be followed?

Dr. ELMENDORF. I want to give you two answers to that question. The first one is yes, in the estimates that we have given for the Guaranteed Student Loan Program. Part of the calculation for the additional cost in that program, this proposed fiscal 1985 year, as opposed to 1984, is predicated on an increased volume. That is true. I think it was 110,000 additional borrowers.

The answer that I think is a better one——

Mr. SIMON. Excuse me. You say an additional 110,000 nationally?

Dr. ELMENDORF. Yes. We have estimated in our guaranteed student loan account an additional 110,000 borrowers, recipients, and we have increased that amount of funding from about $2.2 billion to $2.8 billion. We now would estimate over 3.2 million recipients in the Guaranteed Student Loan Program, including auxiliary loan recipients. That's considerably more than are now currently being funded. And we have data to show that there is a continuing increase in volume of new loans over the past 4 years in the Guaranteed Student Loan Program.

Let me go back to your SEOG and NDSL. We believe we have not decreased the need to meet the access goals, or decreased the flexibility of the institution because we have, as you probably know, increased the amount of money in the work-study program and taken down some of the more restrictive ways in which aid officers can move that money around.

Basically they can move now up to 50 percent of the $850 million that would go into that account, into an SEOG grant account and an NDSL—well actually not an NDSL but in NDSL we're leaving $585 million out there with institutions to reloan, to 733,000 participants. That's a pretty strong indication of a commitment to continue that account, but not with new money in it.

The program is 24 years old. I think it's served its purpose and the Guaranteed Student Loan Program now is there. It's in 58 different States and trust territories with guarantee agencies, and we find it's being used.

Mr. SIMON. Mr. Coleman.

Mr. COLEMAN. Dr. Elmendorf, this morning I asked Mr. Jones to elaborate on the concept. Under H.R. 5240, that the utilization of the volume of student loans is used in a formula which establishes the allotment that a college would receive for block grants and college work-study. He was unable to answer that question.

Do you have that information now? Could you get it? And what impact might that have on student—the Guaranteed Student Loan Program by using this as an index in a formula like this?

Dr. ELMENDORF. Let me answer your last question first. I think it would have a significant impact on the allocation of any type of block grant funding or any type of funding, because the profiles of

recipients, for example, in the Guaranteed Student Loan Program, are considerably different from the profile of recipient in the Pell Grant Program.

Pell grant, you heard me say, has 74 percent of the money targeted to students who come from families less than $12,000. Well, that's a different population than those who borrow. When you mix or average those two populations on a campus and then try to derive a third program from those two, I think you've sort of compromised, if you want me to use that term loosely, both the intent of each of the programs, which are to serve, essentially, different populations, in order to make a third program stay alive or come into existence, in this particular case.

I think that requires a great deal more study.

We have information, in the Pell Grant Program, because we are the processor and we can simply look in and give you a profile of the recipients. We do not have that kind of information accessible to the Department through the Guaranteed Student Loan Program. It would have to be collected through 58 different State guarantee agencies or some reasonable collection of a random or selected sample from them, which would have to be used in order to get that kind of data.

So what I'm telling you is we could probably give you a reasonable profile of a Pell grant recipient. We would have a very difficult time doing that for the Guaranteed Student Loan Program.

Mr. COLEMAN. Do you think that abuse could occur in some institutions, let's say, by pushing GSL's in order to help qualify or increase their allotment under this other program? Do you see that as a potential problem?

Dr. ELMENDORF. Let me just say that it's been my experience that where there's a Federal incentive out there, and institutions are aware of how to increase the amount of funding to their institutions they, in the past, have used those incentives to the maximum. Now, whether they would abuse it is a question I can't answer at this time. But if we look back at the last 10 years, tuition costs have been escalating, are still escalating, but not at the same rate, because the economy hasn't driven that kind of rate.

Nor do I believe higher educational institutions can continue to justify raising the tuition at the level they have, and I also believe that the Guaranteed Student Loan Program, now that it's so fully accessible and available, could, in fact, be used if it were driving a third program that meant more money to the institution, could be used for less than honorable purposes.

Mr. COLEMAN. Congressman Gunderson raised a question this morning concerning the nontraditional student. Could you comment on how you perceive the role of Federal student financial aid programs impact on nontraditional students? Do you have some ideas on how to mainstream these students into our Federal student aid system?

Dr. ELMENDORF. I think there are some options one could look at. I'm not saying that we have looked at any of them. But on the one hand, if the interest in the adult learner, the older student, was intense, it would probably be so intense that Congress would be looking at, perhaps, the rewrite of a title. I know that there has been some interest expressed in rewriting title I, by the adult learner.

They are feeling that some of the programs now in existence have not broken them out as a special group and treated them in a special way.

I don't feel that we necessarily need to do that until we do a great deal more of looking into some of the specific needs of the older student. We have a study group reporting to us at NIE looking at research on higher education as an extension of the "Nation At Risk" report because the report did not specifically address higher ed.

One of the issues that we'd like to look at in that study group is the impact of student financial assistance on the adult learner, as it relates to their emerging needs for access to higher education.

On the other end of the continuum, I think we do a pretty good job of recognizing the special needs of adult learners by keeping the programs open to those who attend less than full time. Every one of our campus-based programs, our Pell Grant Program, and our GSL Program, and under our proposal, the administration's proposal, we have opened the door to the Auxillary Loan Program, to half-time participation.

We think that is one way we've tried to recognize the emergence of a population of older students attending or dropping into higher education.

Mr. COLEMAN. Do you support the proposal to increase the maximum loan amounts under GSL? Does it represent a sufficient enough income to keep pace with tuition increases and the cost associated with attending an institution of higher learning?

If not, what limits would you set for undergraduate and graduate GSL borrowing?

Dr. ELMENDORF. Well, the way we've approached it is first we've taken a look at the debt burden that's out there now. We're facing a rather dismal situation in the future as it relates to claims or defaults on the current Guaranteed Student Loan Program. The number of loans in repayment now is approaching $30 billion and as you look at our budget you will see that we have had to address that by budgeting for over $227 million increase in claims paid on defaulted student loans.

I don't think that we can fairly look at increasing loan limits at this time, when we haven't found a reasonable approach or solution to keeping the loan claims or defaults down to a reasonable level.

We're just now beginning to get into what we call repayment. All of those post-MISA loans that were made, the Guaranteed Student Loan Program volume was less than $4 billion, less than 4 years ago. Every year since then it has climbed to $6.8 billion to almost $8 billion and it continues to grow at that rate. We're trying to do some study to project what the demand on the budget will be in the out-years as a result of these default claims.

That alone causes me to pause before I would even think about increasing loan limits, as a reasonable recommendation, fiscally sound, when we are facing the kind of budgets that we are.

Mr. COLEMAN. Let me make sure I understand your figures, $30 billion is in the pipeline being paid back?

Dr. ELMENDORF. $30 billion is potentially in repayment.

Mr. COLEMAN. Potentially in repayment, and the $227 million was——

Dr. ELMENDORF. That's the additional amount we will have to budget for claims or people who have gone into default rather than into repayment. And we, in turn, have to reimburse, the Government has to reimburse, the State agency.

Mr. COLEMAN. What portion of the pool is that $227 million? What percent?

Dr. ELMENDORF. We have 11.3 percent of that $30 billion that is in what we call default status.

Mr. COLEMAN. OK. As I understand your other remarks, you're not in favor of increasing the loan limits at all. Concerning the other 89 percent who are not in default: How will they handle the increased expenses, that are rising at approximately 10 percent annually and live within the same limitations that we have now?

Dr. ELMENDORF. Well, one way we approached it in terms of budget policy was to try to take more of the burden off the Auxiliary Loan Program, to extend out the payment on that so that you could get $3,000 as a parent, or the spouse of a graduate student. Both of those together now allow a graduate student, for example, to borrow $8,000. That's a considerable portion of money and it is now, under our proposal, much easier to get that either as a graduate student or the wife or husband of a graduate student, plus borrow the full $5,000.

Those are the ways we have approached it because it, in fact, opens access but it doesn't cost the Government significant amounts of new money. It's not highly subsidized, in fact it's not subsidized at all right now.

Mr. SIMON. Would my colleague yield?

Mr. COLEMAN. I will yield. I think under Mr. Simon's bill, he would reduce that $8,000 loan limit to $7,000, would he not, so that my concern over increased costs wouldn't be satisfied by this proposal. H.R. 5240 reduces down to $7,000 under the GSL Program and not to $5,000 and $3,000 that you mentioned before.

Dr. ELMENDORF. That's true but I don't believe there has been any change proposed, although I'm not certain about that, in the maximum an undergraduate or graduate might borrow.

Mr. COLEMAN. We're talking graduate. I yield.

Mr. SIMON. Yes. I am wondering whether any—whether you have done any studying on what is happening by our increased reliance on loans for financing higher education. In terms of what we're doing to discourage people from low-income families from taking advantage of higher education?

When you talk about, let's just say, an $8,000 loan to someone who's from a family with a family income of $12,000, that's a horrendous sum. If you talk about an $8,000 loan to a family with a $50,000 income it doesn't mean that much. And what we are doing with this policy, even though we make those loans available to everyone, we're skewing the student population so that those of limited income increasingly say, "I just can't assume this kind of an obligation," and so they're not going.

Dr. ELMENDORF. It's been my experience, Mr. Chairman, that there is an inequity there, and you've cited it, and that is that low-income students have to be led to the trough in order to borrow, to

attend higher education. We recognize that and one of the basic reasons, underpinning the way we arranged the new policy proposals in Pell, was to avoid that kind of a situation from occurring.

Let me tell you how we do that. We changed the cost of attendance figure to 60 percent of cost of attendance, which takes away, I think, some of the demand that would float over into the need to borrow category. We increased the maximum grant to $3,000. This is another way of breaking the lockstep hold that some students feel is impossible to break because of the fact that they're located in an inner city or an urban environment. You heard Mr. Garcia testify relative to the Hispanic population. We're sympathetic to that and most of the Hispanic population average salary falls very nicely into the income level that would benefit most from the policy proposals that we make in Pell, by allowing those students to break out of a subset of no choice they're locked into, and I'm not throwing any disparaging comments about the community college, but I'm simply saying 75 percent of the Hispanics and 55 percent of the blacks are enrolled in that sector. Many are there because that's the right, best fit for them. Many are not because they haven't found a legitimate way to break out of that sector. And we feel that our Pell grant proposal, aimed at the type population that would most benefit, can get greater grant aid, to attend a higher cost institution if they choose, public or private, thereby facilitating the payment of cost through grant dollars rather than through unnecessarily borrowed loan dollars. So, we feel that that's an avoidance of unnecessary borrowing and a breakout for low-income students, away from their locked in attendance at a low-cost institution to a public or a private higher cost institution.

Mr. SIMON. We have a rollcall over on the floor right now. I think, since my colleague has some additional questions, we'll just take a 10-minute break right now for a rollcall and we'll be right back.

[Brief recess.]

Mr. SIMON. The subcommittee will come to order.

I think my colleague does have some questions. I know I have some questions. What we would like to do is submit them in writing to you and we will proceed from there, then, and we thank you very, very much for your testimony.

Dr. ELMENDORF. We also have some questions that you asked us to respond to. We have them not only with the question in the original but all of the answers, all of the right answers, which we'd like to submit for the record. [Laughter.]

Mr. SIMON. Good. All right. All right. We thank you very, very much. Thank you all for being here.

Dr. ELMENDORF. Thank you.

[The information follows:]

TITLE IV STUDENT ASSISTANCE

Question: How do you estimate the cost savings associated with the Administration's self-help proposal for the Pell Grant program and what will the estimated cost savings total?

Answer: As you know, the Administration's fiscal year 1985 budget specifies several major changes in the eligibility and award rules. These changes are outlined below:

- o income assessment rates on the discretionary income for the parents of dependent students of 18%/20%/25%/30%/ with $5,000 increments;
- o a self-help function in the award calculation based on the following award rules:
  1) maximum award minus SAI
  2) cost of attendance minus $500 minus SAI
  3) cost of attendance minus 40% of cost of attendance minus SAI
  4) $1,000 plus 25% of cost of attendance minus SAI;
- o maximum of $3,000 room, board, and miscellaneous expense allowance for students not living at home; a maximum of $1,500 allowance for students commuting and living at home;
- o an administrative allowance of $5 per Pell Grant recipient;
- o maximum award of $3,000;
- o minimum award of $100.

Program cost, number of recipients, and average award of this proposal are as follows:

	Total Program Cost	Recipients	Average Award
1985-86 Pell Self-help Grant (Fully Funded)	$2.8 billion	$2.3 million	$1,221

The individual impact of the major changes in the proposal are presented below. Each item is shown as an increase or a decrease from the proposed FY 1985 policy estimate. That is, if elements of the current law are substituted into proposed policy they have the effect listed below. However, as always we caution on the use of the cost of individual estimates since all of the policy changes are interactive and any attempt to isolate only one particular proposal may not be fully representative of its efffect in combination with the other elements.

Changes from Current Law	
11/13/20/25 percent income assessment rates	$ + 210 million
Current law award rules	$ + 475 million
$1900 maximum award	$ - 500 million

Within proposed policy, while the new award rules "save" approximately $475 million and higher income assessment rates "save" approximately $210 million, the increase in the maximum award has the opposite effect--increasing costs by $500 million. Thus, it is clear that the features of our proposed policy which increase costs are countered by features which reduce costs resulting in only slightly higher fiscal year 1985 program costs.

EFFECT ON CAMPUS-BASED PROGRAM

Question: What will be the impact of the proposed elimination of the Federal contribution to the Supplemental Educational Opportunity Grant, the State Student Incentive Grant and the National Direct Student Loan programs on institutional flexibility in fashioning student aid packages?

Answer: The Administration's fiscal year 1985 student financial assistance budget contains several provisions which give institutions maximum flexibility in administering the Title IV student financial assistance programs in order to best meet the unique needs of students. Under our Work-Study proposal institutions, at their discretion, will be allowed to transfer up to 50 percent of their Work-Study allocation to the Supplemental Grant program. Currently, the limit is 10 percent. This expanded authority ensures the availability of additional grant assistance should the financial aid administrator determine that a campus-based grant is a necessary ingredient in the student's financial aid package.

While no new Federal funding is requested for the Direct Loan program, approximately $585 million will be available on-campus for new loans from payments made on loans in repayment. It is estimated that without recourse to a Federal appropriation, institutions will have funds to provide average loans of $800 to 731,400 students.

Funds from the State Student Incentive grant program are awarded directly to States which distribute the funds. The degree of flexibility in the use of those funds at the institutional level is determined by the States. The Administration believes that Federal funds are no longer necessary as a stimulant to encourage States to provide State-based aid inasmuch as State expenditures for grant aid have continued to expand even as Federal funding has dropped or remained level in recent years. We would expect institutions to continue to enjoy flexibility in the awarding of State funds.

Question: What will be the impact on the College Work-Study or the Supplemental Educational Opportunity Grant programs by allowing a transfer of up to 50 percent of the CWS funds to the SEOG program?

Answer: Under the Administration's Work-Study proposal institutions, at their discretion, will be permitted to transfer up to 50 percent of their Work-Study allocation to the Supplemental Grant program. This authority ensures the availability of additional grant funds which might be required to complete the financial aid package of a needy student. Although it is difficult to predict the institutional use of the transfer authority, should all institutions use the maximum amount to make grants, $425 million would be available, which is $50 million more than the funding level for Supplemental Grants in 1984.

REAUTHORIZATION PROPOSALS

Question: The Department has submitted almost identical legislative recommendations with its fiscal year 1984 and 1985 budget proposals. Since the Reagan Administration will not submit its HEA reauthorization proposals "at this time" what "long-term legislative changes" are under study and how do they differ from the recommendations of the past two years?

Answer: The Department has submitted a number of proposals designed to make needed changes to the authorizing legislation governing the higher education programs in each of the last two years as part of the budget and appropriations process. The changes proposed have been important but not inclusive of all the issues which should be addressed in the reauthorization of the Higher Education Act.

As you are aware, we have already begun the process of developing a comprehensive reauthorization package. Hearings were held throughout the country last summer. At this time, however, we do not have a complete reauthorization package ready to submit to the Congress. We are considering many options. However, such proposals are very tentative and it would be premature to describe them in detail.

Question: In his letter of March 12, 1984 transmitting the Department's Legislative Proposals, Secretary Bell stated that "average student contributions...do not begin to reflect actual student earning or borrowing capacities." On what factual data is that assertion based? Please provide that data to the Subcommittee. What is the "actual student earning" or "borrowing" capacity referred to by the secretary?

Answer: Support for the statement that "average student contributions for relatively better off individuals represent only a small share of education costs, and do not begin to reflect actual student earning or borrowing capacities" can clearly be found in data collected annually by the Cooperative Institutional Reserach

Program (CIRP). These data, collected from first-time, full-time freshmen, show that for the 1982-83 school year students with family incomes from $25,000 to $40,000 receive an average of $1,401 from a combination of work and loans. Among those students who actually worked or borrowed during the year, the average rises to $1,923. For students with family incomes above $40,000 these averages drop to $990 and $1,698 respectively.

These amounts are a small portion of the average cost of education for many, if not most, of these students. For example, in 1982 the cost of education at a private institution was approximately $6,800--at a private university approximately $8,100.

Student earning capacity might be estimated on the assumption that a typical student could work 10 hours per work during the school year (40 weeks) at the minimum wage. This student would earn $1,340. The student could further choose to contribute toward his or her education by also working full-time for 10 weeks during the summer -- earning an additional $1,340 -- or by working additional hours during the school year. Note that the average annual earnings of students with family income of $25,000 to $40,000 is $777 -- far below even modest work expectations.

The student's borrowing capacity, especially in these income categories, is substantial. Moreover, for undergraduate students showing financial need, $4,000 per year is available through Federal sources.

In sum, current levels of student earnings and borrowing on the average, cover only a small portion of educational costs and these actual earning and borrowing levels are well below the capacity of the typical student.

PRINCIPLE OF STUDENT SELF-HELP

Question: Where in the legislative history of the Higher Education Act of 1965, as amended, or the Middle Income Student Assistance Act of 1978 is the "...principle that postsecondary students should be expected to contribute to their own education costs before Federal grant assistance is provided? Is this a Reagan Administration "principle"?

Answer: The cost of higher education has traditionally been borne by those who will directly benefit - the student and his/her family. The role of the Federal government has traditionally been limited to achieving specific goals such as encouraging certain disciplines or providing equal educational opportunity. The philosophy underlying the 1985 budget request for the student financial assistance programs is to restore that tradition -- the responsibility of the family and the student in financing postsecondary educational costs. In the past few years, the commitment on the part of the parent and student has been eroded through the large increases in Federal financial assistance, particularly after the passage of the Middle Income Student Assistance Act, which reduced

expected parental contributions and encouraged parents and students to look to the Federal Government as the first resource for financing postsecondary costs. Parental contributions began declining with Federal student financial assistance supplanting instead of supplementing family contributions.

Under the Administration's Pell Self-Help Grant proposals students will be expected to contribute financially to their own educational costs through a self-help requirement of $500 or 40 percent of the cost of education. Currently, Pell Grant awards are not contingent on any self-help contribution. It is now possible for certain students to finance their postsecondary education through a combination of a Pell Grant and family contribution with no personal financial commitment. The Self-Help Grant program will correct this inequity by re-establishing the principle that those who are the primary beneficiaries of higher education should show some commitment toward financing its costs.

The self-help principle is not a new principle in student financial assistance. Many States and institutions invoke some form of self-help in allocating their scarce resources for postsecondary education. In fact, one of the best examples of the principle of self-help is contained in the Uniform Methodology which is used to determine awards under the Federal campus-based (Supplemental Educational Opportunity Grant, Direct Loan, and Work-Study programs) student financial assistance programs as well as other State and institutional programs. The Uniform Methodology includes a standard summer savings expectation for all dependent students of $700 for freshmen and $900 for all other students. Institutions use these standard figures or adjust them as economic conditions dictate.

This Administration believes that a self-help requirement in the Pell Grant program will continue a practice that has long been a principle in the student financial aid community while correcting certain inequities in the program and restoring the responsiblity of the family and the student in financing the cost of postsecondary education.

Question: Please outline the four year accumulated debt levels for a student from an: $8,000/year income family; $9,400/year income family; and $14,800/year income family.

Attending a $9,000 year (tuition, fees, plus room and board), assuming enactment of your proposals in FY 1985 and the Committee's FY 1985 budget recommendations ($2,299 maximum grant, 60% of the cost of attendance). You should use the maximum CEOG grant level; average CWS award; maximum $1,500 NDSL; and maximum GSL loan $2,500.

Answer: Estimates of aid packages can only be taken as rough approximations of the actual aid students will receive. Even with a given income, family circumstances and packaging philosophies vary substantially, resulting in substantially different family contributions and awards. In addition, costs of education, family incomes,

taxes and the specific treatment of the family's resources in the need analysis formulas also change from year to year. However, based on the assumptions provided above, as well as additional assumptions necessary to make these projections, the four year accumulated debt levels for typical students[1] from families with incomes of $8,000, $9,400 and $14,800 would be:

Family Income	Administration's FY 1985 Budget Proposals	Committee's FY 1985 Budget Recommendations[2]
$8,000	$12,000	$12,804
$9,400	$12,000	$12,804
$14,800	$14,000	$13,924

As these figures show, lower income students bear smaller debt burdens under our proposals than under the Committee's recommendation. These debt levels would result from the following estimated aid packages:

Aid Package For Family Income of $8,000 or $9,400

	Administration's Proposals	Committee's Budget Recommendations
UM Family Contribution[3]	$700	$700
Pell Grant[4]	3,000	2,299
Supplemental Grant	1,500	2,000
Work-Study	800	800
Direct Loan	1,500	1,500
Guaranteed Loan[5]	1,500	1,701
Cost of Attendance	9,000	9,000

Aid Package For Family Income of $14,800

	Administration's Proposals	Committee's Budget Recommendations[2]
UM Family Contribution[3]	$700	$700
Pell Grant	2,500[6]	2,019[7]
Supplemental Grant	1,500	2,000
Work-Study	800	800
Direct Loan	1,500	1,500
Guaranteed Loan[5]	2,000	1,981
Cost of Attendance	9,000	9,000

1/ Family size of four. One family member enrolled in college. Both spouses employed. No unusual expenses. No assessable assets. Estimated U.S. income taxes. The student is an incoming freshman.

2/ Assumed to imply the current Pell Grant need analysis, as updated for inflation.

37-618 O—84——4

3/ Although no parental contribution would be expected at these income levels, there would be a $700 summer earnings expectation. This estimate assumes no major changes in the Uniform Methodology calculation from 1984-85 to 1985-86.

4/ Based on a Student Aid Index of 0.

5/ Excludes amounts for origination fees and insurance premiums.

6/ Assumes an estimated Student Aid Index of $500, based on estimates of taxes, etc.

7/ Assumes an estimated Student Aid Index of $280, based on the Pell need analysis as under current law (updated for inflation), and on estimates of taxes, etc.

Question: What will be the increased volume of GSL borrowing occasioned by the self-help proposal's requirement that $500 or 40% of education costs be earned through work-study, borrowed through GSL or acquired from the family? How much will this additional borrowing cost assuming OMB's interest rate projections (8.7%)? How does the projected borrowing level compare to the levels anticipated if your proposals are not enacted by the Congress?

Answer: The Guaranteed Student Loan program plays an integral role in the overall student financial assistance strategy for fiscal year 1985. Guaranteed Loans can be used to assist students in meeting their self-help contributions under the proposed Pell Self-Help Grant program. However, because most students are already meeting their self-help contributions, expected under our proposal, any increase in loan volume attributable to meeting this requirment would be minimal and would have a negligible cost impact on the Guaranteed Student Loan program.

As you know, the legislative proposals contained in our fiscal year 1985 budget for the Guaranteed Student Loan program are as follows:

- o extend the need analysis requirement for regular loans to all income levels;
- o require guarantee agencies to return all Federal loan advances prior to October 1, 1985;
- o eliminate the two direct administrative cost allowances to guarantee agencies;
- o provide 80 percent reinsurance on all new loans insured by guarantee agencies, while retaining all of the current policy requirements for 100 percent reinsurance; and
- o base payment of interest benefits and special allowance on loan funds actually disbursed in cases where lenders make more than one disbursement, rather than on the anticipated annual loan amount.

If these legislative proposals are not enacted by the Congress, loan volume in fiscal year 1985 would be expected to increase from a projected $7,544 billion to $7,746 billion. This difference in volume is attributable to the unnecessary borrowing which would occur without the enactment of our proposal to extend the need analysis requirement to all income levels and which would result in additional costs of approximately $1.6 million in fiscal year 1984 and $23.9 million in fiscal year 1985. Furthermore, if none of our proposals are enacted, the total cost of the Guaranteed Student Loan program would increase by $17.3 million in fiscal year 1984 and $221.5 million in fiscal year 1985.

INSTITUTIONAL CAPACITY TO USE WORK-STUDY FUNDS

Question: Your proposals recommend a $295 million increase in Work-Study funds. Are there sufficient jobs in the public and non-profit sectors and on college campuses to expend the additional funds? On what factual data has the Administration based its projection that institutions can absorb $300 million in additional CWS funds?

Answer: As the table below illustrates, institutions have continually requested Work-Study funding levels far in excess of appropriated amounts. Institutions must be able to substantiate these requests on the basis of realistic projections of job availability. Thus, the Administration believes that institutions can effectively utilize the additional funds.

FISCAL YEAR	INSTITUTIONAL REQUESTS ($ MILLIONS)	APPROPRIATION ($ MILLIONS)
FY 80	$800	$550
FY 81	$1,002	$550
FY 82	$1,185	$528
FY 83	$1,355	$590
FY 84	$1,295*	$555

*Preliminary data.

It should also be noted that the Administration proposal would allow the institutions increased flexibility in using these funds, including the transfer of up to 50 percent of their allocations to make Supplemental grants and up to $100,000 to support Job Location Development, Cooperative Education, and adult literacy programs.

WORK-STUDY TRANSFERS

Question: How many institutions carried over CWS funds during the 1980-81, 1981-82 and 1982-83 academic years? How much was carried over to the following academic year? How much used in Cooperative Education? What portion of those funds were returned to the Department for reallocation?

Answer: The information is provided in the following tables:

Institutions Carrying Work-Study Funds Forward*

1980-81	1981-82	1982-83**
987	1,491	1,449

Work-Study Carried Forward*

1980-81	1981-82	1982-83**
$11,767,247	$21,366,026	$20,839,392

Funds Earmarked for Cooperative Education

1980-81	1981-82	1982-83**
$2,157,745	$1,541,519	$2,005,862

Returned Funds Earmarked for Reallocation

1980-81	1981-82	1982-83**
$2,157,745	$1,541,519	$2,005,862

* 1980-81 funds were forwarded to 1981-82, etc.
** Data are preliminary and partially edited.

Question: What amendments have you proposed to make the Auxiliary Loan program more attractive to lenders and students? Are there any additional costs associated with your proposals?

Answer: Our legislative amendments include a number of proposals which are designed to make the Auxiliary Loan program more attractive to lenders and students. These include broadening eligibility to parents and spouses of graduate students. Currently, eligibility is limited to graduate and professional students, independent undergraduates, and parents of dependent undergraduate students. Our proposed changes would limit borrowing to $3,000 per academic year, $15,000 in the aggregate, for an individual student.

In addition, our proposals would provide an initial in-school deferment of repayment of the principal of the loan for student borrowers until six months after the student ceases at least half-time enrollment at an eligible institution. Interest would continue to accrue (and could be capitalized at lender option) regardless of the enrollment status of the student.

Our amendments would also permit lenders to charge up to $25 per loan (which may be deducted from the loan amount) to parent or spouse borrowers to defray the cost of verifying the credit-worthiness of the borrower. While lenders may use, and guarantee agencies may require credit checks at present, no provision is made in current law for a fee to be charged.

The amendments would also increase the maximum repayment period and change the method for its calcuation for parents and spouses under the program. Our amendments would authorize lenders to provide a new ten-year repayment period each time a new loan is taken out and provide for repayment of loans under a single repayment schedule. This change will allow lenders to consolidate PLUS loans to parents and spouses in the same manner as regular GSLs, thus reducing current PLUS administrative problems and costs.

Finally, our proposals would provide new authority for direct Federal insurance of Auxiliary Loans for lenders which do not have access to a single guaranty agency program for substantially all of the loans the lender intends to make under the program. This would enable certain regional and nationwide lenders to offer Auxiliary Loans if no guarantee agency were available.

These amendments would provide equity in student treatment, reduce the number of defaults on in-school principal repayments, and improve lender and borrower response to the Auxiliary Loan program without increasing the cost of the program.

INSTITUTIONAL AID PROGRAMS

TITLE III

Question: How many colleges are scheduled to "Graduate" from Title III and are currently receiving 4-7 year grants under Part A?

Answer: In fiscal year 1983, a total of 146 four-to-seven year grants were made under Part A of Title III. Those institutions are scheduled to graduate at the end of their current award period.

Question: Describe by type and sector, the institutions receiving Title III funding since enactment of the 1980 amendments.

Answer: Below are two graphs which show the distribution of funds by type and control for fiscal years 1982 and 1983.

TITLE III

Question: On what basis does the Administration justify increasing the Black College set-aside (in a discretionary grant program) when the Department has been unable to award the $27.5 million in set-aside funds in the competitive process without re-competing funds not yet awarded.

Answer: In fiscal year 1982 the Department was unable to award a $27.5 million set-aside for historically Black colleges and universities for several reasons. First, this set-aside, under Part B of Title III, has much more restrictive requirements than under Part A. As a result, many historically Black colleges and universities applied for and received grants under Part A. In addition, several of these institutions did not apply for funds and several institutions did not meet the eligibility requirements, therefore, were unable to receive funds. For these reasons it was difficult for the Department to award the funds under the set-aside to historically Black colleges and universities. The Department requested authority to carry-over the unobligated funds earmarked for these institutions into fiscal year 1983 to enable those institutions who did not receive funds to apply under a special mini-competition. Workshops were held prior to the mini-competiton to provide technical assistance to the historically Black colleges and universities. The institutions then applied for and received grant awards. All 1982 and 1983 funds under the set-aside were obligated in 1983.

Our proposal to increase the set-aside to historically Black colleges and universities to $45.7 million would cover the entire title, including the Endowment program and not just one program as provided by current law.

We believe that a set-aside of $45.7 million is important in meeting the unique needs of our Nation's historically Black colleges and universities. These institutions continue to award a high percentage of the bachelors degrees received by Black students and constitute a significant national resource in educating low-income and minority students.

SPECIAL PROGRAMS FOR THE DISADVANTAGED

Question: The Department has proposed the "consolidation" of two of the TRIO programs and abolition of a third. Why?

Answer: We have proposed consolidating the Talent Search and Educational Opportunity Centers into one program because these programs are designed to serve similar purposes. Current law for each of the programs allows similiar activities and services making the two programs nearly identical. The principal difference is in the age requirements which can be waived in both programs. Also, the financial counseling and information regarding Federal Student Aid programs provided under these programs duplicates services available under the Student Financial Aid programs. Our proposal would provide institutions the flexibility to choose the services that would best meet the needs of their students and community.

We are proposing to eliminate the Staff Training program authority but would continue to support training as an activity under the TRIO authority. The funds for this program would be better targeted to address the traditional barriers of low-income students by providing direct services to them. We do not have any evidence that suggests that this program is more cost effective than training currently available from other sources.

Question: What evidence does the Department have that the two programs serve overlapping purposes and the same clientele?

Answer: The legislation allows similar activities under both programs. Both programs provide participants with information on postsecondary opportunities and student financial assistance. They also provide assistance in applying for admission and financial aid.

Question: On what basis does the Department recommend a 50 percent reduction in TRIO funding? Recent Department studies support the conclusion that TRIO programs work -- informing students about college opportunities, preparing them for successful college study, and assisting them through tutoring/counseling to complete their academic study and obtain a degree.

Answer: Our proposal calls on participating institutions to share some of the cost of the projects under the Special Services and Upward Bound programs. These programs have proven successful and now should be increasingly supported at the local level. This is reflected in our legislative proposals. The Department's proposals provide a 10 percent cost-sharing under Upward Bound; and 25 percent cost-sharing under Special Services; and, the gradual institutionalization of the Special Services program.

We believe that institutions that benefit from the program should provide some measure of support. Presently, no such support is required. With enrollments in higher education stabilizing or declining over recent years, institutions are now more financially motivated to provide the TRIO-type services in order to help increase or maintain enrollments of non-traditional students.

Although no funds are requested for Talent Search or Educational Opportunity Centers programs, activities encompassed by these programs would be allowable under the Special Services and Upward Bound programs. These programs are not a priority because they provide only short term services and have not been shown to be effective through evaluations or studies. In addition, these programs were begun in an era in which many disadvantaged students were unaware of the postsecondary opportunities -- both in terms of the programs and financial assistance -- open to them. This type of information is now more readily available to disadvantaged students.

Mr. SIMON. Our next witnesses are a panel of students, Gary Edelson, a second-year medical student at George Washington University; Shawne Murphy, senior at St. Olaf's College; Gregory Moore, president of the United States Student Association; and Diana Sifuentes, a first-year law student at the University of Houston.

If the four of you can take your place.

Gregory Moore, president of the United States Student Association.

Mr. MOORE. Thank you, Mr. Chairman.

[Prepared statement of Gregory T. Moore follows:]

PREPARED STATEMENT OF GREGORY T. MOORE, PRESIDENT, UNITED STATES STUDENT ASSOCIATION, WASHINGTON, DC

Mr. Chairman and members of the House Subcommittee on Postsecondary Education of the Committee on Education and Labor, I thank you for this opportunity to present our views to the Subcommittee on H.R. 3520, the current Reauthorization of the Higher Education Act of 1965.

As President of the United States Student Association (USSA) representing over three million college and university students across the country, we are very concerned about the future of student aid programs and the involvement of students in the formulation of these changes. Last spring, USSA and the National Student Educational Fund (NSEF) conducted hearings around the country in preparation for the reauthorization of the Higher Education Act. These hearings provided students an opportunity to discuss their experiences and thoughts on the current financial aid delivery system as the consumers of student aid. I have included our Special Report on the hearings entitled: Dialogue and Data: Students Speak Out on Diminishing Access and Equal Opportunity in Postsecondary Education for your consideration as part of my testimony.

The clear message that emerged from the hearings is that students are facing record levels of unmet need due to increased costs of attending a postsecondary institution. The 23 percent drop in the value of student aid since 1980 has forced some students to borrow more, some to work more, and others to forego a higher education. There is also confusion about the existing programs and how a student's eligibility is determined. USSA recognizes that many of the current problems are the result of continuous budget and appropriations battles which have negated many of the provisions in the Higher Education Amendments of 1980, but the reality is that many students' educational opportunities have been seriously jeopardized.

The reauthorization process is important in collecting input from all sectors of the education community but the Congress must make a commitment to increase funding for education to ensure access for all students to a postsecondary education. Education funding can not be viewed as just a yearly appropriation level but as a cumulative investment in the future of our nation's youth.

PELL GRANTS

USSA supports the concept of Pell Grants as the foundation of federal student financial assistance upon which other student aid programs—loans, college work-study, supplemental educational opportunity grants, and state grant programs should be based. Creating Pell Grants as a true entitlement would eliminate the damaging uncertainty that has prevailed over the past four years due to Administration proposals and the appropriations and budget process which have together created delays and real cuts in the programs. These cuts have often taken place at a time when critical decisions were being made by students and their families concerning the choice and affordability of an institution. This uncertainty has led to even more confusion in the financial aid office due to re-packaging of campus based awards at the last minute.

USSA supports the modification of the half-cost provision in the Pell grant program from 50 percent to 75 percent of tuition, compulsory fees, books, and the living allowance. The fixed "half-cost" provision has resulted in many low income students who have unmet need being capped at the 50 percent level of costs which are artificially low and needs that are high. USSA is concerned about the living allowance tier structure that is presented in this bill. We are concerned about living allowances being fixed in the law without consideration for inflation increases or vari-

ations in geographic cost-of-living differences which can not be realistically assessed in a national formula.

Furthermore, we are concerned about the proposed changes in the independent student definition in this bill and how this definition could restrict access to Pell as an entitlement to the low income student whose access to a higher education is directly linked to the availability of student aid. An American Council on Education study of the 1981-82 Pell grant recipient pool at public institutions showed that 31 percent of all Pell grant recipients were independent students. Of that amount, 42 percent were minorities and 85 percent were between the ages of 20 and 22. Age 24 appears to be an arbitrary age upon which to assume independence or to require additional documentation including "and had sufficient income from an independent source to indicate financial independence during the preceding year" to be classified as an independent student. This wording sounds ambiguous and will undoubtedly increase the confusion about the definition for many student aid recipients. Beyond the confusion is the very real possibility of denying critically needed student aid dollars to students who are unable to justify their independence status and are then presumed dependent.

INSTITUTIONAL BLOCK GRANT PROGRAM

USSA does not perceive the institutional block grant proposal as a direct simplification in the process of applying for student financial aid from the student's perspective. Since students do not apply for each program separately on their campus they are currently filing an application that is being used to package their campus based award. The appropriations for CWS, NDSL, and SEOG would be merged into a block grant which would be distributed on campuses based on the dollar amount of Pell and Guaranteed Student Loans received on the campus. This allocation formula appears to contradict the intent of the bill to direct the federal funds to those institutions who are serving the students with the highest level of unmet need. My immediate reaction is that there will be an institutional incentive to require a loan "self-help" prior to receipt of campus-based awards since this would be the basis for the campus' allocation the following year. If there is some documentation or information which demonstrates what the existing relationship between the receipt of Pell and GSL, it might be helpful to better understand the implication for students of this proposal.

GUARANTEED STUDENT LOANS

USSA agrees that grants and work need to be reinstated as the primary source of funding for student financial aid. USSA is concerned about the level of student indebtedness directly impacting a student's choices' beyond undergraduate education and the increasing portion of the federal student aid budget which has been spent on the GSL program, thus limiting funds for grant programs. USSA supports the elimination of the origination fee which is included in H.R. 5240 which would result in every student saving the 5 percent of the current value of the loan plus the interest that would have been paid during repayment. USSA fully supports the creation of "lenders of last resort" to increase access to GSL funds. Many low income students and/or their families cannot obtain GSL's from lenders because of poor or no credit history. It is important to break down this barrier to access to a program that should be the option of all students if they need the funds for pursuing a postsecondary education.

A major student concern within the GSL program is the insurance premium. This fee is being charged to every student to cover the re-insurance by the state guaranty agencies to the federal government. This fee must also be repaid with interest. Research conducted by the National Commission on Student Financial Assistance documented that large portions of student insurance premiums were being used to cover basic operating expenses of the guaranty agencies and not being used for their intended purpose of covering defaulted loans. USSA urges that the insurance premium by examined further by Congress. We are concerned about a fee that students across the country are having to pay out of an already shrinking pool of available resources.

USSA is concerned about the proposal to float the Guaranteed Student Loan interest rate if the Treasury bill reaches 13 percent. We maintain that the GSL interest rates should remain consistent and should not involve the uncertainty created by a student borrowing today not knowing what the future interest rates charged in the Guaranteed Student Loan program will be. The proposal to reduce the special allowance to 3 percent prior to entering repayment would result in savings to the federal government in bringing down the total costs of the GSL program without

affecting the number of students receiving a loan. The 3 percent figure was calculated by the National Commission as a figure which adequately compensates for the expenses incurred in servicing the loan while a student is in school. USSA opposes any efforts to transfer special allowance charges onto students during any part of the loan process.

USSA strongly supports the creation of the National Center for Postsecondary Educational Opportunities as a mechanism for increasing student awareness of their potential eligibility for financial assistance through the broad dissemination of necessary information. USSA supports the expansion of the TRIO programs to meet the needs of educationally and economically disadvantaged college students. Due to limited funding, TRIO programs served 493,000 students last year—less than 10 percent of the eligible population. Studies have shown that students who receive the full range of special services—counseling, tutoring, and basic skills—are 2.26 times more likely to complete the first year of college.

Although not a TRIO student myself, I was fortunate to be a recipient of the Cleveland Scholarship Program, which provides high school students with the necessary information to help them through the financial aid process. In addition, I was awarded a scholarship which provided me with the necessary funds to attend college. This gap was after receipt of all the federal, state, and institutional financial aid that I was eligible for. Without this extra funding to meet my "unmet" need, I would not have been able to begin or successfully complete my undergraduate degree at Ohio University.

By instituting an agency such as the Center for Postsecondary Educational Opportunities, programs such as TRIO and Cleveland Scholarship Program could help benefit more of the students who are in desperate need of their assistance. The future of education remaining accessible to all students lies in the maintenance and expansion of financial aid programs which promote equal opportunity in higher education.

Thank you for this opportunity to present the views of the United States Student Association on H.R. 5240. USSA is looking forward to working with the Subcommittee throughout tthe reauthorization process in our mutual efforts to debate, formulate and ultimately enact into law a bill that will direct student financial aid for the rest of this decade towards equal access in education. Thank you.

STATEMENT OF GREGORY T. MOORE, PRESIDENT, UNITED STATES STUDENT ASSOCIATION

Mr. MOORE. Mr. Chairman and members of the House Subcommittee on Postsecondary Education of the Committee on Education and Labor, I thank you for this opportunity to present our views to the subcommittee on House Resolution 5240, the current reauthorization of the Higher Education Act of 1965.

As president of the United States Student Association, representing over 3 million college students——

Mr. SIMON. If I may interrupt just for a moment, let me just say to the four of you, we'd be happy to enter your statements in the record, if you wish to summarize, however you wish to proceed, or you may go ahead and read your statement.

Mr. MOORE. I'll try.

As president of the United States Student Association, representing over 3 million college and university students across the country, I am very concerned about the future of student aid programs and the involvement of students in the formulation of these changes. Last spring USSA and the National Student Education Fund conducted hearings around the country in preparation for the reauthorization of the Higher Education Act. These hearings provided students an opportunity to discuss their experiences and thoughts on the current financial aid delivery system, as the consumers of student aid.

I have included our special report on the hearings, entitled "Dialogue and Data: Students Speak Out on Diminishing Access and

Equal Opportunity in Postsecondary Education," for your consideration as part of my testimony, and I have 10 copies here for members of the committee.

Mr. SIMON. Thank you.

Dialogue and Data: Students Speak Out on Diminishing Access and Equal Opportunity in Postsecondary Education

Dear Colleague:

We are pleased to present you with this special edition of Cognition, entitled, *Dialogue and Data: Students Speak Out on Diminishing Access and Equal Opportunity in Postsecondary Education*. This report represents the collective efforts of NSEF and USSA staff in speaking with those grappling with the intricacies of the financial aid system on a daily basis—student consumers and financial aid administrators.

Over 300 prospective and enrolled students and numerous financial aid officers supplied their views on the state of the financial aid delivery system by: responding to a survey about barriers limiting postsecondary access to low-income persons, participating in financial aid hearings in five states, and discussing aid delivery problems informally with staff.

When outlining these endeavors, we must credit the College Board—the sole supporter of the study and chief contributor to the hearings—for without the Board's financial backing and expert technical assistance this report would not exist.

The College Board has a history of providing assistance for such endeavors, for in 1978 it financed the precursor to this publication—*Unmet Needs*—a stirring account of hearings conducted by the College Scholarship Service Student Committee (CSS), an advisory body of the Board's financial aid arm. Committee members travelled to seven states and spoke with over 230 students in order to secure information about financial aid delivery from student consumers and to recommend improvements in the system.

When comparing the findings of both reports, the reader will be struck by their similarities. The oddage, "History repeats itself," certainly rings true in the field of financial aid, for the major problems listed in *Unmet Needs*—inadequate information dissemination, unrealistic needs analysis formulas, and insensitive aid office staff—still exist six years later. These shortcomings are intensified by damaging Reagan administration policies.

This consumer viewpoint delineates recurring problems in the aid delivery system, and should serve as a catalyst for reform. It is our hope that the opinions expressed by these students will be taken seriously by higher education policymakers when sitting in meetings in Washington, D.C., for it is easy for them to forget how their decisions impact upon the average student struggling to meet educational expenses.

As Congress begins hearings on the Reauthorization of the Higher Education Act, student advocates intend to use this information and their personal experiences to vastly improve the aid system for the next decade. Comments are welcome, and we hope this report provides the reader with a clearer picture of the student experience in dealing with the complex financial aid system.

For the students,

Kathleen M. Downey, President
National Student Educational Fund

Gregory T. Moore, President
U.S. Student Association

"I could literally fill pages of testimonials on discussions which I've had, letters which I have answered from distraught students, angry parents, crying parents who want to strike out."

—Harvey Grotrain, Financial Aid Director, University of Michigan, Ann Arbor

I. Student Aid Appropriations

① Financial Aid Appropriations Are Inadequate.

"The plain truth is that students are working and we are over our heads in debt, but to attend a school like Michigan, it is not enough. We need financial aid."

—Carla Dearing, a Midwestern University Student

The sentiments expressed above were echoed throughout the hearings by students and aid administrators alike. The bottom-line is that both are frustrated because too few dollars must still be stretched to accommodate too many needy students. While calling for the infusion of more dollars into student aid programs may sound like a simplistic solution to a complex problem—and a recommendation expected from students—it is difficult to correct many of the problems outlined in this report without increasing available dollars for student financial aid. This conclusion can be backed by budget figures.

Aid Value Decreased

While student aid has fared better than many social programs, the higher education community can hardly breathe a sigh of relief. Granted, while student aid appropriations could have been cut much more, approved allocations have failed to keep pace with inflation. Since 1980, the value of student aid has decreased by 23 percent, while tuition and the cost of living has risen sharply.

To compound the problem, other programs benefitting low-income students such as Food Stamps, Legal Services, Aid for Families with Dependent Children, and Medicaid have been slashed, Social Security Benefits have been eliminated, and Veteran's Educational Benefits are being phased out. The result is fewer dollars for an already inadequate financial pool.

Fy 85 Budget—Bad News

The President's FY 1985 budget, which contains a $300 million cut in student aid, proves no relief is in sight. While Congress has successfully rolled back many of the President's harmful budget recommendations, its members have been unable to move forward by strengthening access to postsecondary education through increased appropri-

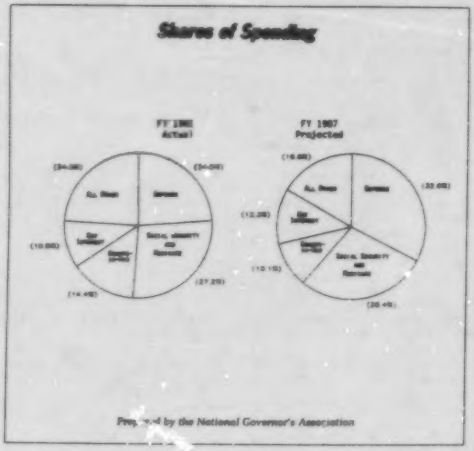
"Only the Pell Grant Program remains untouched with the 1985 request equaling the 1984 appropriation of $2.8 billion. But, 300,000 grants will be lost, because while keeping the dollar amount constant, the maximum grant award will be increased."

ations to student aid programs. Higher education representatives and Congressional advocates have been forced to take the defensive and to be content with maintaining the status quo.

The President's FY 1985 recommendations for higher education are a repeat of previous efforts calling for cuts of $326 million in campus-based programs resulting in the loss of over 900,000 awards, recommending no new federal capital for the revolving National Direct Student Loan (NDSL) program, and halving TRIO Programs which have enabled many low-income students to obtain a college degree.

Only the Pell Grant Program remains untouched with the 1985 request equaling the 1984 appropriation of $2.8 billion. But, 300,000 grants will be lost, because while keeping the dollar amount constant, the maximum grant award will be increased.

Once again, the administration is pushing "self-help" provisions requiring students to contribute 40 percent of their educational costs or $500 (whichever is greater) through loans, earnings, or work-study before receiving a grant.



Prepared by the National Governor's Association

Where is the Money?

Looking at the cuts made in student aid and other social programs, one must ask the question—Where has all the money gone? The answer is rather direct—to the Defense Department.

The President and his supporters would have us believe that the budget is being cut to compensate for our huge deficit, but only the most uninformed can buy this strategy. The simple fact remains that the current administration has carefully orchestrated a major transfer of federal dollars from social programs to the Pentagon, with the federal deficit soaring, not decreasing.

"The President and his supporters would have us believe that the budget is being cut to compensate for our huge deficit, but only the most uninformed can buy this strategy."

While student aid programs are not funded to keep pace with inflation, the defense budget has nearly doubled since 1980. Much of this money is earmarked for weapons development, and the effectiveness of these new arsenals has been questioned by liberal and conservative think tanks alike.

FY '87 Projections

This trend of supporting defense at the expense of socially beneficial programs—including student aid—will continue. In his 1985 budget proposal, President Reagan offered a budget blueprint through FY 1987. According to a budget analysis issued by the National Governors Association (NGA), between FY '81 and '87, the total federal budget will grow by 63 percent, defense spending by 121 percent, grants by 14 percent, and "all others" by 13 percent.

When adjustments are made for inflation, the impact of this spending is more vivid with the total federal budget growing by only 22 percent and defense spending by 86 percent. Grants and "all others" would actually decrease by 15 and 16 percent respectively. The question remains—Will citizens, particularly students, allow this situation to occur? $

② Perception—Aid Dollars Are Not Available.

"It is not the reality, but the perception of reality on which people make their educational decisions in their lives."

—Charles Black, Financial Aid Director University of California

Moving away from the reality that too few dollars have and continue to be allocated to student aid programs, let us address the perception of this reality. While the student aid appropriations picture is bleak, the situation perceived by prospective/enrolled students and their families—that no aid dollars are available—is much worse. And, as Mr. Black so correctly stated, this perception is what individuals are basing their educational decisions upon.

Most student testifiers confirmed that their decisions about attending and selecting a college were based on institutional costs and the size of their student aid package. This is particularly true for low-income persons, who rarely have savings to contribute to their education.

At this juncture it is difficult to measure just how much the perception of massive federal budget cuts in student aid has damaged the psyche of junior and senior high students now forming judgments about their postsecondary education options. If the trends identified by the Berkeley financial aid director are any indication of future practices, the higher education community is facing a difficult problem.

Less Applicants, Higher Income

In his incisive testimony, Charles Black added credence to his opening quote by informing the panel of two disturbing trends surfacing at Berkeley. First, while University enrollment increased between the 1978-79 and 1980-81 academic years, 1,000 fewer students applied for financial aid. These figures were perplexing to him given the harsh economic times and increasing college costs.

Second, the income level of aid applicants increased within the same time frame by 36 percent. While admitting that income levels did rise over those

"A trend has developed where higher income students are applying for aid."

years, he pointed to how unlikely the average income rose by the same percentage.

While further investigations have yet to discern a national trend in this direction, financial aid experts believe that such a pattern has already developed in many higher priced institutions. If the budget practices of the last four years continue, it is likely that such a trend will become more widespread. $

③ The Needs Analysis System Is Unrealistic.

"All of these programs are being cut under the belief that students and their families will be able to cover these losses with other financial resources. The simple truth is that these people do not have other financial resources. As these benefits are cut, it is simply cutting their chances at higher education."

—Carla Dearing, a Midwestern University Student

A cornerstone of Reagan administration aid policies has been that students and their families must take greater responsibility for covering postsecondary education costs. While this theory may sound sensible to upper income policymakers, it is not a practical for countless families living on the edge of survival.

The quote above—made by a student from a family of eight—captures the feelings of many student testifiers, who contend that the current needs analysis system is unrealistic. Inflated expected parental contributions and sub-standard living allowances were cited as problems. There was also concern about the summer savings expectations and whether financial aid administration can be flexible about the amount of jobs can't be earned.

A statement appearing in *Unmet Needs* best summarizes the politics of the needs analysis system then and now: "Definitions of 'need,' 'independence,' and 'full funding' are designed to facilitate the rationing of funds and are not based on the reality of students' situations. The President, Congress, the Office of Education (now Department of Educa-

Timing: Continued

tion), and private organizations argue the fine points of these artificial definitions while students do not eat well, do not buy necessary books, do not go to the doctor, spend as much time in the financial aid office as class, or do not go to school at all." The problems identified in 1976 are exacerbated by our country's worsening economic conditions.

Parental Contribution

In the 1976 hearings, students relayed information about the inability of their parents to supply their expected contribution, which left them with an unmet financial need. In 1983 nothing changed. Instead, the problem has grown, because of increased unemployment and sluggish economic growth.

The frustration of many students was summarized by a Michigan student who said, "Just because you have a dependent status, it doesn't mean that your parents pay the magic amount the computer turns out. That may sound logical to a computer, but it's not very practical."

Compensating for Unmet Need

Since students are not receiving their parents' expected contribution, they must locate funds to compensate for this difference. Traditionally, students have used loans, work-study, or outside employment. This process has become more difficult, because of stricter eligibility requirements for loans, work-study allotments have not kept pace with inflation, and off-campus jobs are nearly impossible to find. The loan route poses a special problem for low-income persons, and this issue is addressed in more detail later in this report.

"Self-help" Requirements

The news of President Reagan's proposed "self-help" requirements broke just two month before the hearings commenced. Testifiers familiar with this recommendation found it almost laughable given their already precarious financial situation.

Students opposed this measure for the obvious reason that they have no idea how they would obtain the "self-help" quota. One California student believed that this percentage could only be obtained by working additional hours. In his estimation this strategy was not feasible given the 20 hour cap on work-study and the lack of off-campus jobs.

The Issue of Divorce

Our country's spiraling divorce rate has introduced a new problem into the needs analysis system. In a private interview, a D.C. area parent described the special problem divorced parents, particularly women, face when they are required to report court-ordered child support payments as income on financial aid application forms.

While this rule seems logical on the surface, it is not fair, because within three years of divorce 75 percent of divorced men default on their child support payments. Our society's tolerance of a parent absconding this financial responsibility has thrown countless families into poverty. (Note: The House recently passed H.R. 2974, which would allow states to garnish wages and intercept tax refunds of those parents negligent in their child support payments, but the Senate has yet to act.)

No provision is made in the student aid needs analysis system to compensate for this dilemma. So, student aid awards are being calculated based on income which is never received. This only magnifies the financial predicament of these families.

Independent Status

Much attention has been given to the definition of an "independent student," because a perception exists that upper income students between the ages of 18 and 22 are feigning financial independence to get their parents off the hook for meeting their educational expenses.

A one year waiting period is required by the federal government to become independent, while state policies vary. Many states require a waiting period of up to five years. A student may be forced to drop out of school during these waiting periods, because of inadequate support.

Data collected by the American Council on Education (ACE) reveals that only a small percentage of the 18-22 year old students classified themselves as independent, and of these, a clear majority were either minority, married, or have dependents. (See the *Myth vs. Reality Box.*)

A major problem with the independent student question is that despite the fact that students may receive more than the $4000 worth of support allowed by the federal government, this contribution represents only a fraction of today's average educational costs. These students get

Myth vs. Reality Independent Students

Suspicion has been aroused about whether 18-22 year old students claiming financial independence from their parents are doing so falsely. The American Council on Education (ACE) analyzed 1981-82 Pell Grant grant recipient data in the public and proprietary sectors to determine if these accusations were founded. The results of their initial review follow:

Public Institutions

- Only 31 %—225,000—of all Pell Grant recipients classified themselves as independent.
- Approximately 19%—34,000—had dependent children.
- Ninety-one percent attended school full-time.
- Forty-two percent were minorities: 29% were Black and the remaining 13% percent were Hispanic, Asian, or Native American.
- Eighty-five percent were between the ages of 20 to 22, the remaining 15% were 14-19.
- Approximately 71%—160,000—of the total were single with no dependents; over half were female and 44% were minorities.
- Of all 18-22 year old independent Pell recipients in this sector, 57% were either minority, married, or had dependents.

Proprietary Institutions

- Only 29%—7,000—Pell Grant recipients between the ages of 18-22 classified themselves as independent.
- Ninety-four percent attended school full-time.
- Fifty-nine percent were minorities; 48% were Black, and the remaining 12% were Hispanic, Asian, or Native American.
- Seventy-six percent were between the ages of 20 to 22; the remaining were 17-19 years old.
- Data was unclear but it appears that 61%—46,000—were married.
- Of all 18-22 year old independent Pell recipients in this sector, 70% were either minority or married, and of these, 78% were women. $

Myth Vs. Reality Students and Work

The Congressionally-created National Commission on Student Financial Assistance analyzed student work patterns between 1974 and 1981 to determine if increased funding of student aid programs diminished student willingness to work. A growing concern existed that the availability of grants and loans had decreased student incentive to work. The results dispelled this notion. Conclusions follow:

- Work appears to be a constant source of income for full-time students as well as a learning experience supplementing formal classroom education.
- Students were more likely to work in 1981 than in 1974. This increase is partly due to a rise in the employment rate of student populations less likely to work in 1974 such as women, Black, lower income, four-year college, and private college students.
- Students from wealthy families are less likely to work than others.
- Working Blacks are likely to work more hours than whites; but Blacks, as a whole, are less likely to work than whites.
- First year students are less likely to work.
- While the gap closed somewhat since 1974, students in two-year colleges are more likely to work and to work longer hours than students in four-year programs.
- Students attending public colleges tend to work more than their counterparts in private colleges; by 1981, the difference almost disappeared.

(Note: The data source used for the report is the October Current Population Survey (CPS)—a sample of about 155,000 individuals—compiled annually for the Census Bureau. This information reflects student work status during the October week the survey was performed; therefore, if a student worked during the summer, but not during this week, the summer work would not be counted. Thus, the Commission stated it probably underestimated student income from work.) §

caught in a bind where they desperately need the $600 plus their parents can afford, but when receiving this money they qualify for less aid.

Emphasis on Loans

Anger was expressed about the inability of students to obtain adequate grant support, particularly after the first year of school. This situation has forced students to rely on loans to meet college costs. Problems with this plan follow:

- **Low-income persons are less likely to borrow:** Students and aid officers alike, testified that low-income students—particularly minority students—and their families are less likely to borrow than their higher income counterparts. They are reluctant to take on large debts because they fear the inability to repay them.
- **Low-income persons encounter greater difficulty in obtaining loans:** Despite the fact that the federal government guarantees the repayment of student loans, banks still fail to approve loans to low-income persons. Banks are permitted to use their own criteria for approving loans, and often limited income families do not meet their standards. Reasons such as poor credit ratings or no credit rating at all are frequently cited.
- **Student indebtedness is increasing:** Student loan debt is reaching large proportions. Low-income students, who ordinarily would not have borrowed, are being forced to consider this alternative. Increasing student indebtedness is not a sound policy, since the Educational Testing Service (ETS) recently published a report citing that current maximum allowable debts will not be easily repaid. According to ETS findings, "If students are given no option except to repay their student loans on an equal monthly installment basis, the currently permissible GSL borrowing limits ($12,500 for undergraduates and $25,000 for graduate and professional students) appear to be too high in relation to the ability of most groups of students to make the maximum monthly payments associated with the loan limits, especially during the crucial first years of repayment."

Students and Work

Besides taking out loans, students are also working to compensate for their unmet need. According to the National Commission on Student Financial Assistance, the number of working students increased between 1974 and 1981. The Commission's figures contradicted a widely held belief that large increases in student aid programs within the same time period discouraged students from working. (See *Myth Vs. Reality* box on this page.) Given the inability of student aid funds to keep pace with inflation, it is safe to assume that more students will work to pay for school.

While students have demonstrated their willingness to help meet educational costs through work, their testimony indicated some problems do exist.

- **Work interferes with academics:** Many student testifiers complained about how work interferes with their studies. This is particularly true for students in difficult curriculums like medicine, science, and engineering. Working too many hours also prevents students from participating in extracurricular activities which can compliment their classroom experience.
- **Work-study does not always provide enough income:** Student earnings through the College-Work Study program are not high. The typical salary does not usually exceed minimum wage, and a cap of 20 hours per week has been set. Students with significant unmet need cannot cover their costs through this program, and must seek off-campus employment. This task is easier said than done given the high unemployment rate. Students lucky enough to find another job, face greater interference with their studies.
- **Students required to complete internships face difficulties:** Many academic programs now require students to complete an internship before graduating. Most often a student is placed in an agency or business during the normal working hours. While these programs provide valuable training in the student's field of study, monetary compensation is not always offered. This poses a special problem, because the student is not available during traditional work hours for Work-Study, thus forgoing essential income. Additionally, students participating in internship programs have difficulty seeking off-campus employment, because of the program's hours.
- **Disabled students risk losing SSI benefits when they work:** Many disabled students attend college through Vocational Rehabilitation and Supplemental Security Income (SSI) payments. If Work-Study earnings are factored in, disabled students run the risk of being cut off from the SSI rolls. Most disabled students rely heavily upon these payments. §

II. Student Aid Administration

① Inadequate Information Is Still a Student Aid Problem.

"I never know what's going on. I fill out my FFS and mail it in by the deadline. I get little green forms, and I take it to the financial aid office just like they tell me. Sign where I am supposed to sign, and then I wait and see what my financial aid is going to be."

—Jamie Goldner, a Midwestern University student

The age-old claim that information about the existence of, application procedures for, and award process of student financial aid programs is not reaching students—particularly those most in need—is still being made. Findings from the hearings and a study of access barriers to low income persons, show that inadequate information dissemination is still a major student aid issue.

"Survey findings showed that AFDC recipients are not receiving information about educational opportunities or financial aid from social service agencies or postsecondary institutions."

Program Information

In the 1976 hearings, students charged that information about the existence of student aid programs was not reaching those most in need. In 1982, NSEF joined with the College Board to determine if the situation had improved. We chose to survey Aid for Families with Dependent Children (AFDC) recipients, since they sit on the bottom rung of the economic ladder. *(See the box on the opposite page for more information.)*

Survey findings showed that AFDC recipients are not receiving information about educational opportunities or financial aid from social service agencies or postsecondary education institutions. In fact, the most unreliable form of relaying information—via word of mouth—nearly equaled the percentage of recipients who received information from "reliable sources."

Before contacting NSEF, only 31.9 percent of survey respondents had ever received information about student aid or educational opportunities. Only one respondent received such information from the social services office, while 5.5 percent received it from the Comprehensive Employment and Training Act (CETA) and the Work Incentive Program (WIN). Colleges fared a little better by informing 7.1 percent.

Survey participants offered insights into the types of information needed in order to consider attending a postsecondary education institution and where they obtain their information. Topics such as jobs training, child care, non-federal sources of financial aid, career/school counseling, family budgeting and counseling, and volunteer work were identified. Family and friends accounted for 80 percent of their information sources.

The results of this survey prove that efforts to reach this population must be improved.

Process Information

The lack of student knowledge of the student aid process is underscored by the the opening quote. Another student confirmed the confusion felt by many when he stated, "Financial aid, you almost need a master's degree to figure it out." The current financial aid processing system has become so complex that even the most advanced degree does not help when wading through excessive red tape.

This level of complexity and the inability of students to grasp the process has resulted in student intimidation and frustration with the system. The results have ranged from students making mistakes on their aid applications, to missing deadlines, to not applying for aid at all.

Misinformation Relayed

Tied to the problem of no information is the issue of misinformation or misunderstanding information provided. It is difficult to determine whether the core of the problem is that incorrect information is being relayed or that students, unfamiliar with financial aid jargon, are not understanding the message.

This point was illustrated by Charlene, a D.C.-area student, who relayed her tale about a misinterpretation of an aid office staff person which almost cost her a semester of school.

When she went to the aid office in April to apply for a loan, she was informed that she was not eligible for a loan until September, because the term on her current loan would not expire until then. Charlene incorrectly interpreted this statement to mean that she could not begin the application process until that time, rather than the true case—she could not receive the actual loan until then.

When she returned to the aid office in September, she was informed that her

"This point was illustrated by Charlene, a D.C.-area student, who relayed her tale about a misinterpretation of an aid office staff person which almost cost her a semester of school."

loan payment would not be received for at least eight to ten weeks. This left Charlene in a state of panic, because her tuition was due and after exhausting her own and her parents' savings, she still came up $600 short.

Since the campus demanded full payment at registration, and since they would not waive any of her tuition charges even though she had applied for a loan, Charlene saw no other option but to drop out for a semester.

When she informed her work-study employer that she was leaving school for the semester, the director loaned her the $600.

While the aid office counselor was attempting to help the student, the jargon associated with financial aid confused her. When immersed in this system on a daily basis, it is easy for counselors to forget that many terms are misunderstood by the average student. ①

Background
The AFDC Study

From June 1981 through December 1982, NSEF conducted a pilot program aimed at providing Aid for Families with Dependent Children (AFDC) recipients with informational and motivational counseling about higher education opportunities and financial aid.

This goal was met by advertising the availability of this information in the Prince George's County social services newsletter, answering information requests via the phone and mail, and conducting community workshops across the county featuring aid and admissions officers from area community, four-year, and technical colleges.

Over an 18-month period NSEF staff member Gwen Benson-Walker, conversed with over 500 AFDC recipients, who were desperate to find an alternative means to securing income. The College Board in New York—interested in obtaining more information about barriers preventing AFDC recipients from attending college—decided to use this network to further examine the issue.

NSEF and the College Board developed and distributed a survey to over 200 callers, and 100 individuals responded. The results unveiled seemingly insurmountable informational, social, and economic barriers which have and continue to prevent low-income persons from taking advantage of educational opportunities, thus traping them in the poverty cycle with little hope for change.

NSEF focused upon the AFDC population because these individuals sit on the bottom rung of the economic ladder. AFDC, established under the Social Security Act of 1935, provides cash assistance to children who have been deprived of parental support due to death, disability, or prolonged absence of one or both parents. Over 3.5 million families totalling 10.5 million persons survive on an annual income of $2,000 to $6,000.

The full report can be obtained by writing to NSEF. $

② Policy Changes Cause Chaos.

"Only once in the last seven years have the federal programs functioned in the same way as the previous year. Given this past year, Murphy's Law was in full force when not a single program functioned as it should have."

—Dr. Grotrian, Financial Aid Director, Central Michigan State University

While the trend of constantly changing financial aid policies was not introduced by the current administration, more alterations have been made in these programs in the last four years than ever before. Consensus exists that many of these shifts have resulted in more problems for students and aid officers alike. Changes include:

- increasing the interest rates on National Direct Student Loans (NDSLs), Guaranteed Student Loans (GSLs), nursing loans, and other medical loans;
- mandating the payment of a 5 percent origination fee on GSL's which is withheld before a student receives a loan but must be repaid;
- requiring families with an adjusted gross income exceeding $30,000 to undergo a needs test prior to receiving aid;
- forcing male students between the ages of 18 and 24 to verify that they have registered for the draft before receiving aid;
- delaying and revising the allocation of student aid funds to campuses;
- releasing application forms late;
- phasing out student social security and veteran's benefits; and
- requiring financial aid officers to validate data appearing on all students' aid applications.

Confusion for Students

As the previous section explained, most students have never understood the inner-workings of the student aid system. It has become so complex that it is almost beyond comprehension. Constant policy changes do little to improve this situation.

According to testimony received, the most damaging result of these changes has been student perception that they are no longer eligible for aid. This belief is bolstered by the student rumor mill, which runs rampant as news of budget cuts and regulation changes break.

Bewilderment about the regulations also results in additional student problems such as missed deadlines, incorrect completion of forms, and anxiety that student aid funds will not be forthcoming.

"Financial aid personnel are equally distressed by changes, because they must not only make sense of the morasse of new regulations, but must also explain these changes to students and implement them in a timely fashion. They are also a target of student anger, because they are constant bearers of bad news."

Chaos in the Aid Office

Financial aid personnel are equally distressed by changes, because they must not only make sense of the morasse of new regulations, but must also explain these changes to students and implement them in a timely fashion.

Since aid office staff have been the constant bearers of bad news during the past four years, they are frequently the target of student anger and resentment. Aid office staff, in turn, become annoyed with students because they are under pressure and do not have extra time to explain the changes; the problem goes on and on. The combined frustration of students and staff makes for a deadly combination that can explode at any given moment.

Besides affecting the human relations aspect of aid operations, constant changes influence the smooth delivery of student aid. An office operating in the state of constant flux cannot reach maximum efficiency levels. Confusion, tension, and deadline pressure usually results in delayed services, lost paperwork, and burned-out personnel. Such is not an appropriate environment for one of the most important offices on campus. $

③ Aid Office Staff Need to Be More Sensitive to Student Needs.

"You go in there, you have your forms. They do the clerical work, and you leave. It isn't let's sit down and maybe there is a way we can help you find financial aid."

—*Susan Block, a Midwestern University Student*

While the statements made about aid office staff were not overwhelmingly negative, students did feel improvements are needed. Treating students poorly is commonplace on many campuses according to many NSEF-USSA contacts. Certain students liken the attitudes of some aid office staff to social service department workers, who believe they are giving their clients something for free. For this, you are to be grateful and accept less than respectful behavior.

"From the statements made during the hearings, it appears that most tension is felt from lower level aid office personnel as opposed to directors and assistant directors."

From the statements made during the hearings, it appears that most tension is felt from lower level aid office personnel as opposed to directors and assistant directors. In fact, most positive remarks about financial aid office staff were provided when a student made his or her way through the campus aid bureaucracy to speak to a top level aid officer. According to student testifiers, such personnel were more than willing to assist the student in resolving problems.

Much of the communication problems between students and staff relates back to mutual confusion resulting from the complex and changing nature of the system. Often, the staff are either unwilling or unable to explain the process to unfamiliar students.

"Since aid packages are based on the student's or parents' income for the previous calendar year, sudden loss of employment can drastically change a student's financial condition. Provisions currently exist for students to complete a Special Condition form and to receive additional aid, but this practice is not widely advertised or accommodated."

Rigidity

Students feel that the current financial aid system is too rigid and unadaptable to special circumstances—no matter how serious. This point was best illustrated by a student named Jamila Feldman, who had a progressive neurological disorder which left one side of her body nearly immobile.

Work-Study constituted a major portion of Jamila's financial aid package. She encountered numerous problems with this packaging scheme for several reasons. First, she was repeatedly assigned to Work-Study jobs that she could not handle such as typing and pushing carts in the library. While the aid office was agreeable about changing her assignments, Jamila had to spend time completing the necessary steps to get re-assigned on three occasions. When she finally received the job she wanted—tutoring in the Language Lab—she eventually was forced to resign, because her illness made it impossible to climb steps. No elevator was available.

Second, her illness forced her to miss work on numerous occasions. As a result, she was unable to earn her maximum Work-Study allotment. This left her with an unmet need in addition to steep medical bills, which were substantial but not high enough for her to qualify for Medicaid coverage.

While the aid office helped her in changing jobs, she felt the staff could have exercised more sensitivity toward her special needs. Jamila also believed that her aid package should have been designed differently—not counting so heavily on Work-Study earnings that she could not earn due to her poor health.

Special Financial Conditions

Testimony from Michigan students was filled with pleas for more sensitivity toward changing financial situations brought on in that state by the auto industry crash, which has had a ripple effect on the entire state's economy. Additional industrial states are feeling the same pinch, and the student aid system must be more responsive to this negative economic trend.

"Testimony from Michigan students was filled with pleas for more sensitivity toward changing financial situations brought on in that state by the auto industry crash, which has had a ripple effect on the entire state's economy."

Since aid packages are based on the student's or parents' income for the previous calendar year, sudden loss of employment can drastically change a student's financial condition. Provisions currently exist for students to complete a Special Condition form and to receive additional aid, but this practice is not widely advertised or accommodated.

The students, who did inquire about the existence of such a program and completed the necessary application, usually never received a response or were denied additional aid. Overall, campus aid officers were reluctant to change aid packages in midstream, and students were very discouraged about their unwillingness to provide assistance during this trying time.

④ Aid Office Staff Work Under Poor Conditions.

"For financial aid administrators there is no slack period. Relief has now evaporated. You find yourself reading the rules and proposed bills, final regulations, and question and answer sheets about the regulations; copying stacks of materials to keep up with your staff; and engaging in mandatory overtime. Stress management has become a standard offering in all professional meetings. It isn't any wonder that financial aid experiences the greatest turnover in any area of employment in the world of education. And, yet we are expected to build a cadre of experienced professionals to manage a complex set of programs."

—Harvey Grotrain, Financial Aid Director, University of Michigan, Ann Arbor

This quote provides the reader with a vivid description of the deep frustration felt by aid office staff dealing with the headaches of increased need and decreased dollars coupled with constant changes in rules and regulations.

Aid office personnel—the backbone of the system—keep the process moving and operating on a daily basis. The frustration voiced by this student aid officer is only the tip of the iceberg and identifies a very serious problem in higher education—the lack of continuity in aid office staff.

The hours are too long, the work is too exasperating, and the pay is too low to keep personnel. These sub-standard working conditions also prevent staff from performing to the best of their ability. If this situation cannot be improved, it may well spell the downfall of the student aid delivery system. $

⑤ The Timing of Student Aid Is Hurting Access.

"I had to return my Pell Grant Student Aid Reports five times for corrections. That caused a delay in the receipt of my financial aid award, and I almost was forced to drop out of school. Then, they didn't give me any money! Why should I bother."

—Faith Ottins, a Northeastern University Students

The most threatening administrative problem to higher education access is timing. Students raised serious complaints about the timing of both receiving their award notification and the actual funds. Aid officers also outlined how the feds' footdragging in informing them of their allotments and forwarding the funds has negatively impacted on students.

Timing and Students

Complaints about the timing of award notification and receipt of awards were recurring themes throughout the hearings. While this problem impacts all aid recipients, it particularly hurts students with families of their own, particularly single parents, and low-income persons. This problem not only occurs with grants and loans but also with Work-Study earnings.

Dora de la Rosa, who serves on the Chancellor's Advisory Committee on Affirmative Action in California, attested to the fact that coming up with living and school expenses before the financial aid checks arrive is very difficult, if not impossible, for many students. They are often left without money for carfare, books, food, and other necessities.

As the waiting period lengthens, tension mounts, and students strongly consider dropping out of school. This plan, however, would not result in savings, because after attending classes for two to three weeks a student will not qualify for a significant refund.

This issue is particularly applicable to AFDC recipients. Through the survey, NSEF found that of the respondents who enrolled in college before contacting NSEF, only 10 percent had obtained a degree. Financial problems were the major cause of the high attrition rate, and remaining obstacles such as family/problem difficulties with financial aid, lack of affordable child care, transportation problems, not being able to afford living and college expenses, and full-time employment interference largely relate back to money.

It is important to understand that when an AFDC recipient attends college a financial burden is placed on his or her entire family. Additional expenses such as books, carfare, and child care can break

Myth Vs. Reality
Sacrifice

Tales spread about students cashing in their financial aid checks and purchasing sports cars and investing in money markets are an exception, not the rule. A list of sacrifices made by students, their parents, and aid officers to fund education costs follow:

- **Care today, gone tomorrow:** In order to obtain enough funds to pay for educational and living expenses, students have been dropping out every other semester or going to school part-time rather than full-time. This plan increases costs.
- **What do you want, blood?:** This old colloquial expression used to signify extraordinary demands, applies to a Wisconsin student who displayed bandaids covering the portion of his arm where he donated plasma twice a week for money.
- **Mandatory weight loss program:** Since students must decrease their living expenses, food allowances are significantly reduced. One student relayed that her meal expenses were dependent upon the rate of her gas and electric bills; usually only $15 per month was left.
- **Early retirement:** Parents without adequate dollars to finance their children's postsecondary costs are dipping into their retirement funds. Drawing on this money prior to retirement age results in the payment of taxes and penalties.
- **House for sale?:** No, parents are not selling their homes; they are remortgaging them. High interest rates make this expensive.
- **Overnight processing:** In the interest of saving students money, a Michigan aid office conducted a marathon processing session, which he compared to "...the fellow in the TV commercial who is trying to get a package delivered overnight." $

Needs Analysis Continued

an already subsistence budget. Without a modicum of financial security, it is extremely difficult for a low-income person to attend school.

Aid Office Notification

The timing problems experienced by financial aid administrators has been in the notification of their allotments and in receiving these funds. The dilemma was best described by a Michigan aid officer who relayed a story of personal risk.

During the 1981-82 academic year, his aid office disbursed nursing loan dollars to students prior to receiving the allotment, because it would not serve the institution or the student to wait well into the semester to disburse the funds. Eventually—two months before the end of the academic year—the campus received the anticipated federal allocation. This particular aid officer and his institution were willing to take the risk and notify students in advance; the worry involved in making such a decision cannot be ignored.

The risks did not end here. During the following academic year, 1982-83, the institution did not receive notice of its funding for the campus-based funds—NDSL, CWS, and SEOG—until October, six months after the aid office had begun to make commitments to students. In the words of the officer, "We took the risk, gambled, and funds came through. Will we be so lucky next time?"

The risks did not end here. The same officer went on to relay that when Congress was attempting to help by approving a supplemental appropriation, they had caused a problem, for when they approved the supplemental for the Pell Grant Program it threw off over 3,000 awards. These recalculations came at a time when the aid office was attempting to process winter term awards for all aid recipients. Finding the time to correct this problem was not an easy task.

Application Mistakes

A major aspect of the timing problem surrounds mistakes made by students or the processor on the financial aid application form. In a private conversation with NSEF staff, one student attending a high-priced New England university informed us that her forms werereturned to her five times. This caused her award to be delayed by several months. The back and forth needed in correcting applications is wasting a great deal of time. $

⑥ Solomon Will Cause Administrative Difficulties.

"The amendment discriminates by gender, heritage, and economic status, because this regulation would have a disproportionate impact on male and minority college students who are most economically disadvantaged. Financially secure students, who do not depend on financial aid, will not have to register for the draft and at the same time will be allowed to continue their college careers, while middle class and poor students who are just as academically capable will be unfairly denied the right to an education." — *Randy Hayman*

Both the House and the Senate voted overwhelming in favor of the Solomon Amendment to the Defense Reauthorization Act requiring male students to register for the draft prior to receiving student aid. The passage of this act drew an immediate outcry from the student and financial aid community, who questioned whether receipt of student aid should be contingent upon draft registration as well as its constitutional implications.

On January 20, 1983, secretary of education Terrel Bell announced the Department's lengthy implementation process calling for all students to complete a "Statement of Verification" certifying that they had registered for the draft or were not required to do so because of age, sex, or another permissable reason.

Then, the student's Selective Service letter verifying registration must be supplied. If the student does not possess this letter for some reason—lost or never received it—he can sign an affidavit (at the discretion of the institution) and receive aid.

But, within 120 days the letter must be submitted to the aid office; otherwise the student will be asked to attend a hearing to prove registration or will be viewed in default of the aid granted. The universities are asked to provide the names and social security numbers of those students signing statements but not producing the letter to the Department of Education for collection purposes.

The Minnesota Public Interest Research Group (MPIRG) took the issue to federal court, and Judge Alsop issued a preliminary injunction in March followed by a permanent one in late June. Just two days before the July 1 starting date of Solomon, the Supreme Court revoked Alsop's permanent injunction. The Department demonstrated reasonable action by allowing institutions to wait until September 1 to begin enforcement and waiving the requirement that the Selective Service Letter be submitted to the aid office.

As a result, aid offices have not felt the full effects of Solomon. Be assured, however, that Solomon will once again become an issue. $

Student Opposition Solomon Amendment

- **Administrative burden:** Students and aid officers agree that the Solomon Amendment enforcement will cause additional paperwork for already overextended aid office staff. Time could be better spent assisting students with their aid problems and disseminating more information about the programs.
- **Confusion and Delays:** This report has already addressed problems caused by the complex aid system. Now, students will be asked to complete more forms and provide additional documentation. More paper always opens the door to increased error.
- **Philosophical Principles:** Students raised serious questions about the inability of this law to accommodate individual principles about service in the military. No provisions are made for conscientious objectors.
- **Represents a bill of Attainder prohibited by the Constitution**—when Congress steps into the role of the courts and legislatively determines criminal guilt without benefit of a trial and all protections afforded a defendant.
- **Forces a student to incrimination himself**—which is protected under the Fifth Amendment—because he must complete a Statement of Compliance when applying for aid.
- **Violates the equal protection clause**, because it discriminates most blatantly on the basis of age and sex. A case can also be made for discrimination based on race and income, because a large percentage of aid applicants are minorities and lower income persons. $

III. Access and Equity Issues

① Aid Cuts Disproportionately Affect Minority & Low-Income Students.

"I've always thought it was part of the government's job to make life a little bit more fair, to ensure that everyone regardless of race, social class, or economic conditions they were born into, have equal opportunities to pursue their life goals."

—Curtis Marez, a Western University Student

This statement made by a first generation Hispanic student represented the views of many testifiers. Both students and aid officers highlighted their fear that cuts in financial aid programs would make the campuses more homogenous according to race, income, and gender. This concern is justified given the disproportionate number of minority, women, and low-income persons dependent upon student aid, and the trend that more white, middle to upper income students are obtaining aid.

"In 1981, the median income for Black families was 56.41 percent of that for white families. In 1974, 50.93 percent of Black aid recipients came from families with an income below $12,500; by 1981 that figure increased to 57.44 percent."

The results of a study completed by the National Commission for Student Financial Assistance entitled, *Changing Characteristics of Student Aid Recipients, 1974–1981*, provides comprehensive information about the characteristics of aid recipients. The major theme of this report is the large growth in the number of middle and upper income students participating in the program. This trend is attributed to legislative changes made through the passage of the Middle Income Student Assistance Act (MISAA) in 1978, especially the provision which eliminated the income ceiling for the Guaranteed Student Loan Program.

Another dramatic shift in family income levels was reported. In both 1974 and 1981 the majority of aided students had family incomes over $20,000, but the probability that aid recipients would have an income level over this amount increased between 1974 and 1981. Almost two-thirds of all white aid recipients came from families with incomes exceeding $20,000.

The economic picture, however, grew worse for Black families. In 1981, the median income for Black families was 56.41 percent of that for white families. In 1974, 50.93 percent of Black aid recipients came from families with an income below $12,500; by 1981 that figure increased to 57.44 percent.

While this report did not break down the income levels of Hispanic students, a report conducted by the National Association of Spanish Broadcasters and Strategy Research Cooperation found that of all Hispanic families only 37 percent have an income level over $20,000.

Despite the increase in the number of white, middle to upper income students receiving aid, low-income, minority students still receive more aid dollars, particularly Pell Grants. While not as pronounced as the division along race and economic lines, women do receive more aid than men in all aid programs except GSLs. $

② TRIO Programs Should Be Supported.

"I know firsthand the value of TRIO Programs. For hundreds of thousands of disadvantaged youth, TRIO Programs are their only hope at attaining a college education. Proposed cuts in TRIO Programs are unrealistic. How will these students be served? The results will be the denial of educational access to countless students."

—Julie Brown, a Midwester University Student

Strong support for the advancement of TRIO Programs was voiced by student aid officers. (Note: These programs are called TRIO, because three programs—Talent Search, Upward Bound, and Special Services for the Disadvantaged—originally comprised the program. Since that time two additional programs—Staff Training and Educational Opportunity Centers—have been added.)

According to a report issued by the Institute for the Study of Educational Policy (ISEP), in Fiscal Year 1981, TRIO Programs placed more than a half million disadvantaged students in postsecondary education. Information about the success of these programs was released by the National Council on Educational Opportunity Associations (NCEOA) after Department of Education studies were conducted. Highlights appear in the box in the next column. $

Special Services

- Students who receive the full range of special services were 2.26 times as likely to complete their first year of college as students who did not.

Upward Bound

- Four years after high school graduation, Upward Bound participants were four times as likely to have earned a baccalaureate degree as compared to non-participants.

Talent Search

- Talent Search Projects served 200,612 students: 8,449 Native Americans; 6,841 Asians; 82,914 Blacks; 39,541 Hispanics; and 63,066 whites. Thirty-seven percent—74,790 students were placed in postsecondary education institutions.

Educational Opportunity Centers

- Educational Opportunity Centers served 127,198 clients: 3,621 Native Americans; 4,645 Asians; 50,780 Blacks; 19,734 Hispanics; and 48,418 Whites. Twenty-seven percent—34,145—clients were placed in postsecondary education institutions. $

③ Better Coordination Is Needed.

"When my caseworker and I were attempting to trim my budget, she actually asked me if I really needed books for school."

—A former D.C. area AFDC Recipient

Student testimony and the AFDC study (See Background box on page 7.) revealed coordination problems between financial aid and other income maintenance programs. These problems are described below.

AFDC

Aid for Families with Dependent Children (AFDC) recipients attempting to gain financial independence through postsecondary education have become caught in a Catch-22 situation—receiving student aid can result in reductions in AFDC and food stamp benefits. A previous College Board study, *The Interaction Between Public Assistance and Student Financial Aid*, identified and explained the serious problem.

In brief, the controversy surrounds the fact that many departments of social services define educational expenses to be only tuition and fees, while the needs analysis system for computing student aid awards allows a student to factor in education-related expenses such as books, carfare, and living expenses as well as child care in some more enlightened states.

Current regulations prohibit Pell Grants, Supplemental Educational Opportunity Grants, National Direct Student and Guaranteed Student Loans from being factored in as income. Work-Study, as well as state and institutional grants and loans, however, are not exempt. As a result, social service offices reduce a recipient's AFDC and food stamp benefits in some proportion to the amount of financial aid the recipient is receiving over and above tuition and fees. Such action is unfair, because student aid funds are used to cover educational expenses, as opposed to food and clothing for dependent children.

Several lawsuits have been filed over this issue, but a beneficial decision has yet to be rendered. The U.S. Supreme Court declined to hear an appeal of a New York court decision dealing with the state's treatment of the combined financial resources of student aid and public assistance. This refusal let stand a New York lower court decision stating that it was reasonable for a state to prioritize student aid benefits in a manner designed to minimize state welfare costs, even if it penalized students, as well as an appeals court ruling that student aid provided directly to the school can still be considered available for income.

SSI

Similar to the problem experienced by AFDC recipients, is the dilemma faced by disabled students receiving Supplemental Security Income (SSI). According to a D.C. area disabled student advocate, a growing concern exists within the disabled community about the loss of SSI due to the receipt of student aid, particularly College Work Study.

Additionally, disabled students encounter confusion because they must now deal with two funding sources—Vocational Rehabilitation and federal student aid programs. The Voc Rehab program offers a wide range of support needed for disabled persons to succeed in educational programs. The bulk of these benefits are derived from the state and are supplemented by federal funds.

"Besides worrying about being cut off of SSI, disabled students also encounter confusion because they must deal with two funding sources—Vocational Rehabilitation and federal student aid programs."

In the wake of sweeping cuts in all social programs, state Rehabilitation Services are feeling the pinch. Subsequently, a trend has begun where these agencies are asking student clients to apply for Title IV student financial assistance to lessen their burden, thereby, freeing up scarce resources to assist other disabled persons requiring their services.

Because of this trend, an agreement has been reached between the Office of Student Financial Assistance and the Office for Special Education and Rehabilitation Services which encourages coordination between these two bodies to provide information. This agreement, however, needs to be strengthened in order to improve financial aid services for disabled students.

(202)775-9043 (USSA)

Mr. MOORE. The clear message that emerged from the hearing is that students are facing record levels of unmet needs due to increased cost of attending a postsecondary institution. The 23-percent drop in the value of student aid since 1980 has forced some students to borrow more, some to work more, and others to forego a higher education.

There is also confusion about the existing programs and how a student's eligibility is determined. USSA recognizes that many of the current problems are the result of continuous budget and appropriation battles which have negated many of the provisions in the Higher Education Amendments of 1980, but the reality is that many students' educational opportunities have been seriously jeopardized.

The reauthorization process is important in collecting input from all sectors of the education community, so the Congress must make a commitment to increase funding for education to ensure access for all students to a postsecondary education.

Education funding cannot be viewed as just a yearly appropriation level, but as a cumulative investment in the future of our Nation's youth. And I appreciate the high priority the chairman has placed on the appropriation levels as an investment in our future.

In the area of Pell grants, USSA supports the concept of Pell grants as a foundation of Federal student financial assistance, upon which other student aid programs, loans, college work study, supplemental education opportunity grants, and the State grant programs should be based. Creating Pell grants as a true entitlement would eliminate the damaging uncertainty that has prevailed over the past 4 years due to the administration's proposal and the appropriations and budget process, which have together created delays and real cuts in the programs. These cuts have often taken place at a time when critical decisions are being made by students and their families concerning the choice and affordability of an institution.

This uncertainty has led to even more confusion in the financial aid office due to repackaging of campus-based awards at the last minutes.

USSA supports the modification of the half-cost provision of the Pell grant program from 50 percent to 75 percent of tuition, compulsatory fees, books, and living allowance. The fixed, half-cost provision has resulted in many low-income students who have unmet need, being capped at the 50-percent level of cost, which are artificially low, and the needs that are high.

USSA is concerned about the living allowance tier structure that is presented in this bill. We are concerned about living allowances being fixed in the law without consideration for inflation increases or variations in geographic cost-of-living differences, which cannot be realistically assessed in a national formula.

Furthermore, we are concerned about the proposed changes in the independent student definition in this bill and how this definition could restrict access to Pell as an entitlement to the low-income student, whose access to higher education is directly linked to the availability of student aid.

An American Council on Education study of the 1981-82 Pell grant recipient poll of public institutions showed that 31 percent of

all Pell grant recipients were independent students. Of that amount, 42 percent were minorities and 85 percent were between the ages of 20 and 22.

And age 24 appears to be an arbitrary age upon which to assume independence or acquire additional documentation, including, quote, "And has sufficient income from an independent source to indicate financial independence during the preceding year," unquote, to be classified as an independent student. This wording sounds ambiguous and would undoubtedly increase the confusion around the definition for many student aid recipients.

Beyond the confusion is the very real possibility of denying critically needed student aid dollars to students who are unable to justify their independent status and are then presumed dependent. USSA does not perceive the institutional block grant proposal as a direct simplification in the process of applying for student financial aid from the student's perspective.

Since students do not apply for each program separately on their campus, they are currently filing an application that is being used to package their campus-based awards. The appropriations for SSIG, NASA direct student loan, and the SEOG, would be merged into a block grant which would be distributed on campuses based on the dollar amount of Pell and guaranteed student loans received on the campus. This allocation formula appears to contradict the intent of the bill to direct the Federal funds to those institutions who are serving the students with the highest level of unmet need.

My immediate reaction is that there would be an institutional incentive to require a loan self-help prior to the receipt of campus-based awards, since this would be the basis for the campus' allocation the following year. If there is some documentation or information which demonstrates that the existing relationship between the recipient of Pell and GSL, it might be better to understand the implications for students in this proposal.

USSA agrees that the grants and work need to be reinstituted as the primary source of funding for student financial aid. USSA is concerned about the level of student indebtedness, directly impacting a student's choice, beyond undergraduate education, and increasing portions of the Federal student aid budget, which has been spent on the GSL Program, thus limiting funds for grant programs.

USSA supports the elimination of the origination fee, which is included in House Resolution 5240, which would result in every student saving a 5 percent of return value of the loan, plus the interest that would have been paid during repayment.

USSA fully supports the creation of lenders of last resort, to increase access to GSL funds. Many low-income students and/or their families cannot obtain GSL's from lenders because of poor or no credit history. It is important to break down this barrier to access to a program that should be the option of all students, if they need the funds for pursuing a postsecondary education.

A major concern within the GSL Program is the insurance premium. This fee is being charged to every student to cover the reinsurance by the State guaranteeing agencies, to the Federal Government. This fee must also be repaid with interest. Research conducted by the National Commission on Student Financial Assistance, documented that large portions of the student insurance premiums

were being used to cover basic operating expenses of the guarantee agencies and not being used for their intended purposes of covering defaulted loans.

USSA urges that the insurance premium be examined further by Congress. We are concerned about a fee that students across the country are having to pay out of an already shrinking pool of available resources.

USSA is concerned about a proposal to float the guaranteed student loan interest rate if the Treasury bill reaches 13 percent. We maintain that the GSL interest rates should remain consistent and not include the uncertainty created by students borrowing today and not knowing what the future interest rates are, charged in the Student Guaranteed Loan Program would be.

We are equally concerned about floating National Direction Student Loan Programs that are supposedly designed to make loans more accessible to low-income students. The proposal to reduce the special allowance to 3 percent prior to entering repayment would result in savings to the Federal Government in bringing down the total cost of GSL Programs without affecting the number of students receiving a loan.

The 3-percent figure was calculated by the National Commission as a figure which adequately compensates for the expenses incurred in servicing the loan while the student is in school. USSA opposes any efforts to transfer special allowances charges to students during any part of the loan process. We strongly support the creation of the National Center for Postsecondary Educational Opportunities as a mechanism for increasing student awareness of their potential eligibility for financial assistance, due to broad dissemination of necessary information. We support the expansion of the Trio Programs to meet the needs of educationally and economically disadvantaged college students. Due to limited funding, Trio Programs served 493,000 students last year, less than 10 percent of the eligible population.

Studies have shown that students who receive the full range of special services, counseling, tutoring, in basic skills, are 2.26 times more likely to complete the first year of college. Although not a Trio student myself, I was fortunate to be a recipient of the Cleaver Scholarship Program, which provides high school students with the necessary information to help them through the financial aid process.

In addition, I was awarded a scholarship which provided me with the necessary funds to attend college. This was after receipt of all Federal, State, and institutional financial aid that I was eligible for. Without this extra funding to meet my unmet need, I would not have been able to begin or successfully complete my undergraduate studies at Ohio University.

By instituting an agency such as the Center for Postsecondary Educational Opportunities, programs such as Trio and the Cleaver Scholarship Program could help benefit more of the students who are in desperate need of their assistance.

The future of education remaining accessible to all students lies in the maintenance and expansion of financial aid programs, which provide equal opportunity in higher education.

Thank you for this opportunity to present the views of the U.S. Student Association on House Resolution 5240. We are looking forward to working with the subcommittee throughout the reauthorization process in our mutual efforts to debate, formulate, and ultimately, enact into law a bill that will direct student financial aid for the rest of this decade toward equal access in education. Thank you.

Mr. SIMON. We thank you.

Ms. Sifuentes, you have been a witness before this subcommittee before and we are pleased to have you again.

[Prepared statement of Diana Sifuentes follows:]

PREPARED STATEMENT OF DIANA SIFUENTES, LAW STUDENT, UNIVERSITY OF HOUSTON LAW SCHOOL

My name is Diana Sifuentes and I am currently a student in the School of Law at the University of Houston. I would like to take a few minutes this morning to talk to you about my life as a migrant farmworker and in particular how one program, the High School Equivalency Program at the Unversity of Houston, dramatically changed my life.

When people ask me where I was born, I answer Weslaco, Texas because, indeed, this is where I grew up. But the truth is that I was born somewhere between Weslaco and Robstown, Texas in a small town along highway 77. My mother and father were migrants, and, on the day I was born they were on their way to work in the fields. My father probably still worked that day.

I was one of seven daughters of Eva and Santos Rivera and as I say, we were migrants. Neither my mother nor my father had any formal education and my earliest memories are of the fields. Each year in late March or early April we would leave Weslaco and begin the trip to Michigan, Ohio and Indiana where we would pick strawberries and cherries. I especially remember the farm where we picked in Michigan. We were fortunate because we did a good job and one farmer, Mr. Kolarik invited us back year after year. He cleaned and washed down the chicken coop before we arrived and that was our "house" for three or four months. I also remember the going rate in those days for strawberries, twenty-five cents a box. We started at 4:00 in the morning and worked until 6:00 at night. All of us worked, my six sisters, my mother and my father, and honestly, I would like to be able to say that it was fun or that it brought the family really close or that I learned the value of hard work from this experience, but I can't. It was difficult, tedious, boring and in many ways (because of the lack of facilities) dehumanizing. The main thing you learn is that you never want to do it again in your life; that almost anything seems preferable.

But working in the fields was the only thing my father knew and it provided enough money to get us by when we got back to Weslaco in October until the next season came the following March.

There were few migrant educational programs in those days, and though people came to the fields in Michigan to talk to my parents about the children attending summer school, we were depended on to help, education would have to wait.

As you can imagine, my education suffered. The area around Weslaco, Texas generally known as "the Valley" has the highest concentration of migrant and seasonal farmworkers of any place in the country and the schools had a dual system, one for migrants, one for non-migrants. It wasn't that we migrants were held back; it was just that there were no expectations for us. We were passed from grade to grade whether we knew the materials or not, and, of course, beginning the school year in late October instead of early September and ending the year in March instead of June put us four months behind in terms of teaching time each year. I remember when I was in the fifth grade, a teacher gave me a huge stack of workbooks and worksheets and said "do these over the summer". While I know she meant well, I didn't understand any of it well enough to work on it, and I surely couldn't do it at the Kolarik farm.

My schooling continued this way, each year I was further behind, each year I left for the fields in March and returned in October until at sixteen I dropped out of school, got married and began a family. Less than a year after getting married, my husband was sent to Vietnam and a year later he returned a different man; a man enraged and brutal. We were divorced within a year.

My situation was now worse than before. Good jobs are not available to people without high school diplomas and besides, I now had a one year old son. That summer I was back in Michigan picking strawberries, (now for a dollar twenty-five a box) and it was here that a recruiter told me about the High School Equivalency Program at the University of Houston.

In October, 1971 I came to the HEP program. I lived here on campus with other students. I was given the most intensive basic instruction I had ever received but more than this there were expectations. Expectations that I would succeed, that I would get my General Educational Development Diploma, that I would graduate from HEP and go on to college—and I did.

After only eight weeks in HEP I was tutoring other students. There was a true sense of cameradarie among students and, for the first time, I had teachers who understood where I came from and what I was capable of achieving. Not only this, but I also saw other students, regular students from the University of Houston going to classes, studying, participating in campus activities. I knew I could do what they were doing and I really was motivated by thier example.

I visited the library, the bookstore, the gym, the University Center. I "rubbed elbows" with regular university students and I had a student I.D. People who grow up in families where college is an expectation don't realize how frightening college is for someone who never was expected to be there. HEP was tremendously helpful in assisting me in overcoming the fear of the unknown in relation to attending college.

By Christmas of 1971, I had completed the work at the University of Houston HEP, had received my G.E.D. and was back home. After a year of struggling, I enrolled at Pan American University and through grants and loans and working forty hours per week completed my bachelors degreee in June 1980.

In the summer of 1983, I enrolled in the CLEO program at Washburn University. CLEO (The Council on Legal Educational Opportunity) was much like HEP in that it was an intensive, nononsense program for students who really wanted to do well in law schools. We studied day and night, and at the end of six weeks, I was accepted at the University of Houston as a first year law student.

I cannot credit this turn of events totally to HEP, but I can say without HEP, I would not be where I am today. During the past fifteen years, the University of Houston High School Equivalancy Program has assisted over 2,000 students to obtain their G.E.D.; nationally over 22,000 students have graduated from HEP programs since their inception in 1967, and for almost two-thirds of these students, the G.E.D. is not the end of their academic career, but the beginning. A study by Clark, Phipps, Clark and Harris conducted for the Department of Labor in 1980 indicated that sixty-two percent (62%) of HEP graduates reported additional educational experiences beyond the G.E.D.

Last year, 92% of the graduates from the University of Houston HEP completed college application forms and over 68% were accepted into colleges, universities or technical/vocational schools. I believe that this is especially significant in a time when dollars are so carefully overseen.

As a matter of fact, it is interesting to note in this cost conscious world what a cost effective program HEP is. Figures published last year by the United States Census Bureau indicate that a high school graduate can expect to earn approximately $230,000 more in his or her working career than a non-high school graduate. If we figure only a twenty percent tax rate (20%), the 101 G.E.D. graduates of this year's University of Houston HEP will pay 10 times as much in taxes (over and above what they would have paid without a G.E.D.) as it cost to help them obtain their G.E.D. And, this does not include the additional taxable income derived from those HEP graduates who complete college. (See Table) HEP is, indeed, an extremely cost-effective program.

I know that great strides have been made in migrant education during the past 10 years, but 78% of migrant students still do not complete high school. I believe strongly in the HEP concept. I believe:

1. That the High School Equivalency Program and its sister program, The College Assistance Migrant Program be extended through Fiscal Year 1990
2. That funding for HEP (and CAMP—College Assistance Migrant Program) should be increased
3. That HEP's should continue to be intensive day programs located on college and university campuses
4. That existing programs, programs with proven track records should be given preference in funding opportunities (programs that begin one year and end the next don't really help the migrant)

5. That every effort be made to formally coordinate HEP/CAMP efforts with other migrant programs, while leaving HEP and CAMP as entities separate from other secondary migrant programs

6. That host colleges and universities provide increased technical support, support that would supplement, not supplant current staff

7. That every effort be made to work toward increasing the potential impact of the Council on Legal Educational Opportunity. CLEO has never had more than one million dollars per year and its impact on educationally disadvantaged youth could be tremendously expanded through an increased appropriation

In summary, HEP did change my life. HEP's call themselves "second chance" programs, for me, as for many migrants, this second chance is really the only chance.

TABLE

According to the United States Census Bureau, a man with a high school diploma can expect to earn $260,000 more in his lifetime than a man who does not have a high school diploma and a woman can expect to earn $170,000 more if she has a high school diploma than a woman who does not.

This year, HEP will graduate about 100 students with G.E.D.s; many of these will go on to college, but even figuring that none of them go on to college, these 100 students (assuming 50 male and 50 female) will earn approximately $21,500,000 more in their lifetimes than if they had not completed their G.E.D.s. On this surplus income alone, at a 20% rate, these students will pay $4,300,000 in taxes during their lifetime. This is 10 times what it cost to provide them their G.E.D.

H.E.P. is an extremely cost-effective program.

Lifetime Earnings [1]	Difference		Additional Taxes (for 100 students at 20%)
	Male	Female	
No high school diploma or G.E.D., $601,000(M), $211,000(F)			
High school diploma or G.E.D., $861,000(M), $381,000(F)	$260,000	$170,000	$4,300,000
College degree $1,190,000(M), $523,000(F)	589,000	312,000	9,010,000

[1] Census Bureau predicates their figures on an average 38 year work life for a male and 28 years for a female.

STATEMENT OF DIANA SIFUENTES, FIRST-YEAR LAW STUDENT (FORMER HEP STUDENT), UNIVERSITY OF HOUSTON

Ms. SIFUENTES. Congratulations on your victory.

Mr. SIMON. Thank you.

Ms. SIFUENTES. My name is Diana Sifuentes and I am currently a student at the law school at the University of Houston. You have already heard all of this before, but I am going to tell you again.

I would like to take a few moments this afternoon to tell you about my life as a migrant farmworker and, in particular how the high school equivalency program and the CLEO programs have dramatically changed my life. I grew up in a little town called Weslaco in south Texas but I was born in Robstown. My parents were on their way to pick cotton the day I was born. My mother tells me that I was 2 weeks old when I first went to the cotton fields—so I am very familiar with them.

I am the oldest of seven daughters of Eva and Santos Rivera. Neither of my parents had any formal education and my earliest memories are of working in the fields. Each year in late March or early April, we would leave Weslaco and begin our trip to Michigan, Ohio, and Indiana, and all of those other States. That's where we would go to pick strawberries, cherries, tomatoes, cucumbers, and anything else that was growing.

One particular farm that we used to go to, I guess we did such a good job that the farmer always invited us back. My parents are still going to that same farm. Each year he would clean and wash down the chicken coop before we arrived and that was our house for 3 or 4 months.

At that time the going rate for picking strawberries was about 25 cents a box. It takes about an hour to fill each box so it was about 25 cents an hour. We were up around 4 o'clock in the morning and we worked until we couldn't see anymore, until it was dark. All of us worked, my six sisters, my mother and my father. Quite honestly, I would like to say that it was fun or that it brought us together or that I learned the value of hard work, but I can't. It was very hard work—tedious and boring and, in many ways, because of the lack of facilities, dehumanizing.

The main thing you do learn is that you never want to do it again, that you will do almost anything else. But working in the fields was the only thing my parents knew how to do. It provided money for us to get by when we got back to Weslaco in October.

There were few migrant educational programs in those days and though people came to the fields in Michigan to try to talk my parents into letting us attend summer school, we were depended upon to help, so school would have to wait. So, as you can imagine, my education suffered.

The area around Weslaco where I grew up is known as the Valley and it has the highest concentration of migrant and seasonal farmworkers of any place in this country. The schools had a dual system—one for migrants and one for nonmigrants. The one for migrants, of course was a lot easier. You could get passed from grade to grade and were not expected to do much because you were going to drop out anyway.

We would get on an average 4 to 5 months of school a year. The teachers, I guess, felt that we weren't going to do much anyway so they would sort of just give us the homework and you know, take it with you when you go up north and try to do it over the summer. It's kind of hard to do when you get up at 4 o'clock in the morning and work for 12 to 14 hours, you don't really have the time or the energy to do any homework. So a lot of it you just didn't learn.

My schooling continued that way until I was 16 when I dropped out of school. I got married so that I would stop working in the field and I know that's a terrible thing to do, but at the time, it was feasible. Less than a year after I got married, my husband was sent to Vietnam and, like many of the other men that were sent to Vietnam, he came back a very different man. We were divorced within a year.

My situation was now worse than before. I was now divorced with a handicapped child and no high school diploma. So, that summer I was back in Michigan picking cherries and it was that time that I ran into this person that took the time to talk to me about the HEP Program and said that if I really hated working in the fields as much as I thought I did, that I should look into it. And I did. I enrolled in the HEP Program.

In October 1971, I went to Houston and I got my GED, I lived on campus with other students. I was given the most intensive basic instruction I had received, but more than that, I was given hope.

Hope that I could succeed, that I could be more than a migrant farmworker.

After I got my GED, I went back to the valley, and even with a diploma it was kind of hard making ends meet and because of my child, my expenses were pretty high. So I decided to go to college. After 5½ years, I finally got out.

I think the experience at HEP, not just helping me get into college or getting me my GED, the fact that the HEP Program was at the University of Houston gave me a feeling of belonging or being able to do what these other people were doing, the ones that were going to the college. I think that is very important.

It took me about 8 weeks to get my GED and for about a month after that I sort of tutored the other kids that were in the program. After I got my B.A. in psychology, I worked for a migrant program placing kids in educational programs. Then last summer, the summer of 1983, I enrolled in the CLEO Program and I did well enough, I guess, because I got accepted to the University of Houston law school and that's where I am now.

I cannot credit the turn of events totally on HEP and CLEO because I think some of it has to do with my determination, but I think that without these programs, I wouldn't be here today.

I would like to tell you a little bit about HEP and all this I learned from the HEP Program. During the past 15 years, the University of Houston High School Equivalency has assisted over 2,000 students to obtain their GED. Nationally, over 22,000 students have graduated from the HEP Program and for almost two-thirds of these students, the GED is not the end of their academic career, it is the beginning.

I understand that a study by Clark Phipps, Clark & Harris conducted for the Department of Labor in 1980, that 62 percent of HEP graduates reported additional educational experiences beyond the GED Last year, 92 percent of the graduates from the HEP Program at Houston completed college applications and over 68 of those were accepted into colleges, universities, and vocational schools.

I believe that that is significant in a time when dollars are so carefully overseen. As a matter of fact, it is interesting to note in the cost-conscious world what a cost-effective program HEP is. Figures published last year by the U.S. Census Bureau indicate that a high school graduate can expect to earn approximately $230,000 more in his or her working career than a non-high school graduate. If we figure only a 20-percent tax rate, the 101 GED graduates of this year's University of Houston HEP will pay 10 times as much in taxes over and above what they would have paid without a GED. This does not include the additional taxable income derived from those HEP graduates who complete college. HEP is indeed an extremely cost-effective program and a worthwhile commitment to this country's most valuable resource, its people.

I know that great strides have been made in migrant education during the past 10 years, but 78 percent of migrants still do not complete high school. I believe strongly in the HEP concept. I believe the High School Equivalency Program and its sister program, the College Assistance Migrant Program should be extended. Funding for HEP and CAMP should be increased. HEP's should contin-

ue to be intensive day programs located on campuses because of the exposure to the learning experience.

Programs with proven records should be given preference in funding opportunities. Programs that begin one year and end the next year don't really help the migrant. Every effort should be made to formally coordinate HEP-CAMP efforts with other migrant programs while leaving HEP and CAMP as entities separate from other secondary migrant programs.

Host colleges and universities should provide increased technical support, not supplant current staff. Every effort should be made to work toward increasing the potential impact of the Council on Legal Education Opportunity. CLEO has never had more than $1 million per year, and its impact on educationally disadvantaged youth could be tremendously expanded through an increased appropriation.

In summary, I would like to say that without HEP and CLEO it would have been impossible for me to get through my GED and to college. I thank you for your time.

Mr. SIMON. We thank you for your, I think, really great story. The University of Houston should be proud of you and your family should be proud of you.

Shawne Murphy, president of the Coalition of Independent College and University Students. Shawne Murphy comes from a very Irish institution, St. Olaf's College. [Laughter.]

Ms. MURPHY. They say that I am their token Irish individual.

[Prepared statement of Shawne Murphy follows:]

PREPARED STATEMENT OF SHAWNE M. MURPHY, PRESIDENT, THE NATIONAL COALITION OF INDEPENDENT COLLEGE AND UNIVERSITY STUDENTS, WASHINGTON, DC

TESTIMONY

My name is Shawne Murphy and I am a student at St. Olaf College in Northfield, Minnesota. Additionally, I presently serve as President of COPUS, The National Coalition of Independent College and University Students. Thank you for allowing us the time to respond to this Reauthorization Bill. I will do so with some generalities as I have not had sufficient time since the Bill was printed to examine it in depth.

Congressman Simon, we applaud many of your dreams for the Postsecondary Student Aid Programs. Indeed, many of your dreams have been our dreams as well. The total cost of attendance at an independent university has risen by over $2,600 on average since 1980. While we have attempted to meet this rise by working more jobs and borrowing more money, you have recognized our need for increased grant aid to have continued access to Higher Education.

In addition, we cheer the concept of an instituted master calendar for the Department of Education so that students will know when to expect the necessary information and be able to plan accordingly. The elimination of the Guaranteed Student Loan's (GSL) 5% origination fee will finally do away with what was to have been a temporary measure. The inclusion of the family contribution schedule in law is also to be applauded.

We have, however, some major worries concerning general aspects of the Bill. In the Pell Grant area, we agree that all needy students should be automatically "entitled" to Pell Grant assistance. We are deeply concerned, however, that as the costs of the Pell Grant and GSL entitlements increase, Congress will opt to hold the line on Student Aid Funding by restricting appropriations to those campus based programs that make higher priced independent education available to needy students. We think that combining the campus based programs into an institutional block grant may leave them especially vulnerable.

Additionally, as students within the independent sector, we must express our concern with the new 75% of cost Pell Grant provisions. While the $3,000 maximum will increase grant aid to all needy students, the new 75% of cost formula will go a lot farther toward meeting the full cost of attendance for students in the public

sector. We are very concerned, as are the colleges and universities that we attend, that needy students faced with borrowing large sums at unstable rates will choose to attend a less expensive institution. Economic segregation among the sectors of higher education would be a tragedy to all students in all sectors as well as for the whole of society. The 21% deterioration in the value of student aid that we have endured since 1980 has already had an impact on the number of needy students attending independent higher education. The detrimental effects of this change on the quality of campus life as a growth experience have been reported to us by many COPUS affiliates.

Significant shifts by students from the private to the public sector will bring a much larger burden to the states. This is evidenced by statistics from Minnesota, Michigan, and Illinois. In Minnesota, 20,000 state residents attend private colleges. If 50% of those were to shift into the public sector, it would cost the state government approximately $27.5 million represented by the increased tuition subsidies required to educate them in the public sector. Michigan boasts over 54,000 residents at private colleges. At 50% shift from private to public would cost the state $73.5 million. Illinois has an even higher number of state residents in the private sector; 94,000 students representing 25% of the total enrollment at independent colleges. A 50% movement of these students from the private to the public sector would cause a $198.5 million dollar increase in state spending.

One may argue that it is unrealistic to assume that a 50% shift of state residents would occur. However, in Illinois, even if only one-fourth of the residents transferred, that would represent a $99 million state expenditure.

In the development of the 1980 Amendments to the Higher Education Act, the public and private sectors reached a detailed agreement on the percentage of cost issue that acknowledged the significant differences in the cost of attendance in the various sectors. We believe that the sectors should once again have the opportunity to reach an agreement so that all sectors can work toward an equitable bill seeking heightened access and choice for all students entering Higher Education.

In regard to Institutional Block Grants, Mr. Chairman, we applaud your desire to simplify the financial aid programs for students. Yet, we are not sure that by combining two grants, the SEOG and the SSIG, and one loan program, NDSL, into the Block Grant and allowing Financial Aid Administrators to disperse varying amounts of grants and loans to each student, that the programs are made any simpler at the campus level.

While we have not had enough time to evaluate the impact of the Block Grant distribution formulas for the campus based programs we are worried that, by making the formula sensitive to the number of Pell Grants and GSL's dispersed in the preceeding year, campuses will require that their students first take out GSL's before receiving campus based aid. In this way, the schools would protect their campus based allotment for the follwing year. In addition, if there was a significant shift of Pell grant recipients from the independent sector to the public, independent schools would lose that much more campus based assistance.

In addition to Block Grants, we are sorely troubled over the plan to allow GSL's and NDSL's to float under the interest rate for Treasury Bills. Affordable repayment rates for young people entering the job market have been a fundamental part of the education loan programs. Added to our worries that graduates will have to pay more as Treasury Bill rates rise is the serious problem that students will not be able to identify how much debt they are accumulating until they enter repayment. Not only must students have a grasp of their accumulating debt in order to plan their educational and professional futures, they must do so in order to avoid default.

Traditionally, a large number of those students who default on their loans are students who never graduate and/or enter repayment. A new class of defaulter is emerging, however. They are students who have simply accumulated too many debts and are unable to meet their monthly repayments.

With loan rates floating under Treasury Bill rates, a catch-22 situation might develop during periods of poor economy. High interest rates would demand higher payments from graduates as well as restrict their opportunity to obtain jobs that would enable them to meet those payments.

A similar catch-22 would result from the proposed changes in the provisions for loan consolidation. Students whose income did not allow them to meet their monthly payments, up until recently, could consolidate their loans at a 9% interest rate and repay over an extended 20 year period. By raising the rate to 9.5% and restricting the extended period to fifteen years, students who have borrowed the maximum allowable $25,000 over the course of their postsecondary education would pay $261/month rather than $225/month; an increase of 16%.

37-618 O—84——6

In that the legislative authority for consolidating loans has been allowed to expire, we agree that a new consolidation plan must be included in your reauthorization package. We question, however, if the .5% taken away from the special allowance paid to lenders should reappear on the bills of those graduates that require an extended repayment schedule.

The question of increasing student indebtedness is an important issue not only for students but for the nation, as well. The ever increasing debts that students are graduating with is influencing career paths and job choice. The ability of graduates to enter fields in community service, teaching, or the arts is being compromised by their necessity to pursue careers that are more lucrative personally but less enriching nationally. Newly trained doctors and lawyers must consider their payments on five figure debts before deciding where they will practice and who they will serve.

Ideally, COPUS would like to see loan repayment rates become sensitive to the income of the borrower. In this way, graduates can pursue career paths that serve their communities and their nation as well as themselves.

Mr. Chairman, we know that you are committed to a national investment in America's youth that serves the nation overall. Your plans for reauthorization make great strides toward reinvigorating America's investment in its young people. We ask you to take note of our concerns.

Again, thank you for the opportunity to voice these concerns to you this morning.

STATEMENT OF SHAWNE MURPHY, PRESIDENT, COALITION OF INDEPENDENT COLLEGE AND UNIVERSITY STUDENTS, AND SENIOR, ST. OLAF'S COLLEGE

Ms. MURPHY. As the chairman stated, my name is Shawne Murphy and I am presently a student at St. Olaf College. I think in the interest of brevity I am going to stick with my written statement so that we can get through this.

I would like to thank you for allowing us the time to respond to this reauthorization bill. I will do so in a fairly general manner. Considering the amount of time that I had to examine the printed copy of the bill, I would rather not talk about the specifics too much and I think you are probably happy with that.

Congressman Simon, we would like to applaud the dreams that you expound on for the postsecondary aid programs in this bill. Indeed, many of your dreams have been dreams that we as students in the independent sector have had as well.

The total cost of attendance at an independent university has risen by over $2,600 on average since 1980. While we have attempted to meet this rise by working more jobs and borrowing more money, you have recognized our need for increased grant aid to have continued access to higher education and we appreciate that.

In addition, we cheer the concept of an instituted master calendar for the Department of Education so that students will know when to expect the necessary information and to be able to plan accordingly. The elimination of the guaranteed student loan's 5 percent origination fee will finally do away with what was to begin with to be a temporary measure.

The inclusion of the family contribution schedule in law is also to be applauded. We have, however, some major worries concerning general aspects of the bill. In the Pell grant area, we agree that all needy students should be automatically entitled to Pell grant assistance. However, with regard to Congressman Coleman's opening statement this morning, we, too, are concerned that as the cost of Pell grants and GSL entitlements increase, Congress will opt to hold the line on student aid funding by restricting appropriations to other aid programs, including those campus-based programs that

make higher priced, independent education available to needy students.

We think that combining the campus-based programs into an institutional block grant may leave them especially vulnerable.

Additionally, as students in the independent sector, we must express our concern about the 75 percent of cost Pell Grant provisions. While the $3,000 maximum will increase grant aid to all needy students, the new 75 percent of cost formula will go a lot farther toward meeting the full cost of attendance for students in the public sector. We are very concerned, as our the colleges and universities that we attend that needy students faced with borrowing large sums of money at unstable interest rates will choose to attend a less expensive institution. Economic segregation among the sectors of higher education would be a tragedy to all students in all sectors as well as for the whole of society.

The 21-percent deterioration in the value of student aid that we have endured since 1980 has already had an impact on the number of needy students attending independent higher education. The detrimental effects of this change on the quality of campus life as a growth experience have been reported to us by many of our coaffiliates across the country. Significant shifts by students from the private to the public sector will bring a much larger burden to the States. This is evidenced by statistics from Michigan, Minnesota, and Illinois.

In Minnesota, 20,000 State residents attend private colleges. If 50 percent of those were to shift to the public sector, it would cost the State government approximately $27.5 million represented by the increased tuition subsidies required to educate those individuals in the public sector.

Michigan boasts over 54,000 residents in private colleges. A 50-percent shift from the private to the public would cost that State $73.5 million. Illinois has an even higher number of State residents in the private sector, as you probably know, Mr. Chairman—94,000 students representing 25 percent of the total enrollment at independent colleges. A 50-percent movement of these students from the private to the public sector would cost Illinois $198.5 million in State spending. One might argue it is unrealistic to assume that a 50-percent shift of State residents from the private to the public sector might occur.

However, in Illinois, even if only one-fourth of those residents transferred, that would represent a $99 million State expenditure.

In the development of the 1980 amendments of the Higher Education Act, the public and private sectors reached a detailed agreement on the percentage of cost issue that acknowledged the significant differences in the costs of attendance in the various sectors. We believe that the sectors should once again have the opportunity to reach an agreement so that all sectors can work toward an equitable bill seeking access and choice for all students entering higher education.

In regard to institutional block grants, Mr. Chairman, we applaud your desire to simplify the financial aid programs for students. Yet we are not sure that by combining two grants, the SEOG and the SSIG and one loan program, the NDSL, into the block grant and allowing financial aid administrators to disburse

varying amounts of grants and loans to each student, that the programs are made any simpler at the campus level.

Now we have not had enough time to evaluate the impact of the block grant distribution formulas from the campus-based programs. We are worried that by making the formula sensitive to the number of Pell grants and GSL's disbursed in the preceding year, campuses will require that their students first take out GSL's before receiving campus-based aid.

In this way, the schools would protect their campus-based allotment for the following year. In addition, if there is a significant shift of program recipients from the independent sector to the public sector, independent schools would lose that much more campus-based assistance.

In addition to block grants, we join USSA's concern over the plan to allow GSL's and NDSL's to float under the interest rate for Treasury bills. Affordable repayment rate for young people entering the job market has been a fundamental part of the education loan programs. Added to our worries that graduates will have to pay more as Treasury bill rates rise is the serious problem that students will not be able to identify how much debt they are accumulating until they enter repayment. Not only must students have a grasp of their accumulating debt in order to plan their educational and professional futures, they must do so in order to avoid default.

Traditionally, a large number of those students who default on their loans are students who never graduate and/or enter the repayment schedule. A new class of defaulters is emerging, however. They are students who have simply accumulated too many debts and are unable to meet their monthly repayments. With loan rates floating under the Treasury bill rates, a catch-22 situation might develop during periods of a poor economy. High interest rates would demand higher payments from graduates as well as restrict their opportunity to obtain jobs that would enable them to meet those payments.

A similar catch-22 would result from the proposed changes in the provisions for loan consolidation. Students whose income did not allow them to meet their monthly payments up until recently could consolidate their loans in a 9 percent interest rate and repay over an extended 20-year period. By raising the interest rate to 9.5 percent and restricting the extended period to 15 years, students who have borrowed the maximum allowable $25,000 over the course of their postsecondary education would pay $261 a month rather than $225 a month, an increase of over 16 percent. If we take into consideration those students who get married after they graduate from the institutions and those students who may have borrowed the maximum amount, you are talking about a married couple who is going to have a debt of $50,000, which is quite a burden to take on at the beginning of married life, let alone the beginning of a job search.

In that the legislative authority for consolidating loans has been allowed to expire, we agree that a new consolidation plan must be included in your reauthorization package. We question, however, if the 0.5 percent taken away from the special allowance paid to lenders should reappear on the bills of those graduates that require an extended repayment schedule.

The question of increasing student indebtedness is an important issue, not only for students but for the Nation as well. The ever increasing debts that students are graduating with is influencing career paths and job choice.

The ability of graduates to enter fields in community service, teaching, or the arts, is being compromised by their necessity to pursue careers that are more lucrative personally but less enriching nationally.

When we train doctors and lawyers we must consider the repayment of five figure debts, before they decide where they will practice and who they will serve.

Ideally, COPUS would like to see repayment rates become sensitive to the income of the borrower. In this way graduates can pursue career paths that serve their communities and their Nation as well as themselves.

Mr. Chairman, we know that you're committed to a national investment in America's youth that serves the Nation overall. Your plans for reauthorization made great strides toward reinvigorating America's investment in its young people. But we ask you to take note of our concerns. Again, we thank you for this opportunity for expressing them.

Mr. SIMON. We thank you very much for your testimony. My colleague from Missouri has to leave and wants to interrupt the testimony to make a couple of comments.

Mr. COLEMAN. I apologize to our last witness, but I must get back to some people waiting for me in my office. I want to thank all of you for coming, your statements were very good statements. You all have made some very excellent points.

Let me say to the young lady—I'll probably mess up your name—Sifuentes?

Ms. SIFUENTES. That's right.

Mr. COLEMAN. Sifuentes. That those programs that you are talking about, are supported by Democrats and Republicans, they're not a controversial part of this bill, I don't believe, and I think I speak for at least all the Republicans here. [Laughter.]

I think I can speak for all of the Republicans on the committee and I would think most of them who are Members of the House. So, don't think that we do not find these programs helping people. Those programs that have proven that they help people, like yourself, certainly get everybody's support, and I wish you the best of luck because I'm sure you're going to be a crackerjack lawyer.

Ms. Murphy, in your comments you raise some very good points. You mentioned the impact on public education that could occur by the increased number of students going into the public sector because of the Simon bill. Let's don't forget about those of you who are left behind. Your fees will go up considerably because you have certain costs that are fixed and you will have to be picking up that person who has now moved to the State university as well. So the impact that you didn't mention, is implicit, and I think that's another example of what I tried to say this morning, that this bill has got some problems and it has to be cleaned up before there will be widespread support within the community.

I thank all of you for your comments, I do have to go now, Mr. Simon will continue the hearing.

Mr. SIMON. Thank you.

And our final witness, Gary Edelson, who is a second-year medical student at George Washington University.

[Prepared statement of Gary Edelson follows:]

PREPARED STATEMENT OF GARY EDELSON AND THE ASSOCIATION OF AMERICAN MEDICAL COLLEGES, WASHINGTON, DC

Good morning. I greatly appreciate this opportunity to speak about reauthorization of the Higher Education Act (HEA) and the Title IV student financial assistance programs that are of great interest and benefit to medical students. I am here today to represent my own views and those of medical students all over the country. My statements are also in accordance with the position of the Association of American Medical Colleges.

Medical student access to the Title IV programs is justified by the basic realities that, without it, thousands of capable students would be unable to finance the costs of their education, and that it is in the national interest to ensure equality of access to medical education. Title IV aid is crucial to medical students for a number of reasons: medical school tuition and fees are high and getting higher, averaging over $12,000 at private institutions; medical students and their families have traditionally supplied every available dollar to meet the costs of medical education and that is still only rarely sufficient to meet all those costs; and a number of health professions education programs designed to help medical students finance their educations have been severely reduced in the past 3 years and may yet be reduced even further.

The extent to which medical students rely on key Title IV programs—GSL, NDSL, CWS, and PLUS/ALAS—is not always appreciated by those unfamiliar with the financing of medical education, but in 1982–83 these programs accounted for over 45% of all aid disbursed to medical students. The limited numbers and types of scholarships available for medical education forces medical students to rely chiefly on loans, and the GSLP is their chief source of loan money. In 1982–83, 58.3% of all medical students received GSLs. The average GSL was $4,745 and GSL support amounted to 40.5% of all support received by medical students. In many ways, the GSL program serves the same function for medical students that the Pell Grant Program does for needy undergraduates—that is, it gives them a base upon which they can build to meet the total costs of their education. Once students have negotiated GSLs to meet their educational costs, they frequently must, in addition, turn to other sources of loan capital which aren't nearly as attractive; here I speak of loans made under the Health Education Assistance Loan (HEAL) and PLUS/ALAS programs. As medical school tuitions have risen, and other sources of relatively inexpensive loan capital have become scarcer, medical school borrowing under these less attractive programs has increased sharply: from $15.3 million in the 1980–81 school year to $50.4 million in the 1982–83 school year under the HEAL program, and from $2.0 million in the 1981–82 school year to $11.2 million in the 1982–83 school year for the PLUS/ALAS program.

In the process of borrowing so heavily to meet their educational costs, medical students have become saddled with debts of a truly unprecedented degree. These levels of high-interest debt burden will inevitably create a serious preoccupation among young medical school graduates with retiring their debt and could modify the extent to which physicians tradionally engage in pro bono activities. These large debts will also discourage them from practicing in health manpower shortage areas. Moreover, expected incomes of physicians will surely be tempered by their increasing number in this country. In the final analysis, this set of circumstances could have serious consequences for the successful recruiting of the most talented individuals into medical schools.

I personally appreciate the utility of the GSL program because I have taken out the maximum GSL available to graduate and professional students for the past two years. Yet, the availability of these loans has hardly enabled me to avoid relying substantially on other, less attractive, loans for financing my education. Last year I took out a HEAL loan at a 12¾% interest rate, and this year I received a PLUS/ALAS loan for $3,000 at 12%.

Medical students are gratified that your legislation proposes to increase GSL loan limits for professional students to $7,000. These increases, however, still leave the GSL yearly maximum at barely more than one-third of the total costs of education at private medical schools. Since the alternative for students at these schools generally is one of relying on much less attractive loans, I respectfully submit that a

mechanism be developed to link GSL yearly and cumulative limits to 1983-84 tuition and fees at the medical schools. The AAMC is currently working to effect such increases in GSL limits through the regulatory process. The change I have mentioned could easily be accomplished by requiring the Secretary to use the authority in Sections 432(b)(4) and (c)(3) of your legislation for tuition and fees exceeding certain levels. Further information on this subject will, with your permission, be submitted for the hearing record.

Medical students also will benefit greatly from being eligible in their first year of study for the Pell Grant Program, as envisioned in H.R. 5240. This would help to keep M.D. debt loads at more reasonable levels. The concept behind graduate inclusion in the Pell Grant program is quite sound, and hopefully will provide greater impetus for currently under-represented minority and disadvantaged students to pursue careers in medical education.

Medical students would also benefit from becoming eligible for the Campus-Based block grant program. They borrowed a total of $14.9 million under the NDSL program in the 1982-83 school year, and their ability to avoid higher debt burdens will certainly be aided by eligibility for new grant funds. Again, I have personally benefited from the NDSL program, having received $5,500 in NDSL loans as an undergraduate at Brandeis and having taken out $2,800 more in loans under this program for the current school year.

A concomitant of the heavy reliance by students on loans to finance medical education is the need to structure repayment plans which are congruent with the earning patterns of M.D.s. A few points need to be stressed. The first is that medical students are graduating with ever-increasing amounts of debt. The mean debt for the graduating senior with debt was $23,914 in 1983, an increase of 18.9% from the previous year. Furthermore, the number of students with educational debts of $30,000 or more increased by 44.4% from the previous year, to a total of 13.5%. I myself have accumulated a total of $37,200 in educational debt, and I'm just completing the second year of my medical studies. What I need and what other students in similar circumstanced need are repayment terms that match our earning patterns. Until the residency period is completed, M.D.s do not earn a great deal of money—a 3rd year resident, 7 years out of college and pushing 30 years of age receives, on the average, a salary of $21,378 a year; a 6th year resident receives an average of $24,739. But even when minimum length residency is chosen, with repayment of debt assumed not to begin until it is completed, the initial average debt burden for an M.D. is unacceptably high unless repayment adjustments are made. A study mandated by the National Commission on Student Financial Assistance has shown that with a salary of $38,100, typically received by individual physicians who have ended their residencies and are starting in practice, repayment of the average medical student debt over 10 years will initially consume about 21 percent of that individuals's discretionary income. This is a substantially higher percentage than the 15% debt burden which is generally considered to be the maximum acceptable level of educational debt. However, the thousands of individuals who will still be in residency when they must start repayment will face much harsher repayment prospects. Loan consolidation with an extended repayment option would thus be highly desirable for medical school graduates.

The terms of consolidation as described in your legislation may be insufficient to meet the needs of medical school graduates. I am especially concerned about the limiting of the maximum repayment period to 15 years. I have already borrowed a total of $31,300 under the NDSL, GSL, PLUS and HEAL Programs (the latter loans are currently included in Sallie Mae's consolidation authority under Title VII of the Public Health Service Act) and could well need a 20 year repayment period if I enter the family practice career I am now contemplating. Many medical students will find themselves in similar circumstances.

There are, of course, many other programmatic details which I could address today, but in the interests of time I will not touch on them. I hope, however, that my basic message has been clear: that the Title IV student aid programs meet an essential need in medical education, and that it is difficult to imagine a variegated student population without them. I thank you for allowing me to appear before you and I am happy to answer any questions that you may have.

STATEMENT OF GARY EDELSON, SECOND-YEAR MEDICAL STUDENT, GEORGE WASHINGTON UNIVERSITY

Mr. EDELSON. My name is Gary Edelson and, as you mentioned, I am a second-year medical student at the George Washington

School of Medicine and Health Sciences. I greatly appreciate this opportunity to speak about reauthorization of the Higher Education Act and the title IV student financial assistance programs that are of great interest and benefit to medical students.

I am here today to represent my own views and those of medical students all over the country. My statements also are in accordance with the position of the Association of American Medical Colleges. In the interest of time I will read selected portions of my statement only.

Medical student access to the title IV programs is justified by the basic realities that without it thousands of capable students would be unable to finance the costs of their education and that it is in the national interest to ensure equality of access to medical education.

Title IV aid is crucial to medical students for a number of reasons. No. 1, medical school tuition and fees are high and are getting higher, averaging over $12,000 per year at private institutions.

No. 2, medical students and their families have traditionally supplied every available dollar to meet the costs of medical education and that is still only rarely sufficient to meet all of those costs.

No. 3, a number of health professions education programs designed to help medical students finance their educations have been severely reduced in the past 3 years, and may yet be reduced even further.

The extent to which medical students rely on key title IV programs, GSL, NDSL, college work-study and PLUS/ALAS is not always appreciated by those unfamiliar with the financing of medical education. But in 1982-83 these programs accounted for over 45 percent of all aid disbursed to medical students.

The limited numbers and types of scholarships available for medical education, forces medical students to rely chiefly on loans in the GSLP as their chief source of loan money.

In 1982-83, 58.3 percent of all medical students received GSL's. The average GSL was $4,745 and GSL support amounted to 40.5 percent of all support received by medical students.

In many ways, the GSL Program serves the same function for medical students that the Pell Grant Program does for needy undergraduates. That is, it gives them a base upon which they can build to meet the total costs of their education. Once students have negotiated GSL's to meet their educational costs, they frequently must, in addition, turn to other sources of loan capital which aren't nearly as attractive. Here I speak of loans made under the health education assistance loan, HEAL, and PLUS/ALAS programs.

In the process of borrowing so heavily to meet their educational costs, medical students have become saddled with debts of a truly unprecedented degree. These levels of high interst debt burden will inevitably create a serious preoccupation among young medical students, medical school graduates, with retiring their debt, and could modify the extent to which physicians traditionally engage in pro bono activities.

These large debts will also discourage them from practicing in health manpower shortage areas.

Moreover, expected incomes of physicians will surely be tempered by their increasing number in this country. In the final anal-

ysis, this set of circumstances could have serious consequences for the successful recruiting of the most talented individuals into medical schools.

Medical students are gratified that your legislation proposes to increase GSL loan limits for professional students to $7,000. These increases, however, still leave the GSL yearly maximum at barely more than one-third of the total costs of education at private medical schools. Since the alternative for students at these schools generally is one of relying on much less attractive loans, I respectfully submit that a mechanism be developed to link GSL yearly and cumulative limits to 1983-84 tuition and fees at the medical schools.

The AAMC is currently working to effect such increases in GSL limits through the regulatory process. The change I have mentioned could easily be accomplished by requiring the Secretary to use the authority in sections 432 (b)4 and (c)3 of your legislation for tuition and fees exceeding certain levels.

Further information on this subject will, with your permission, Mr. Chairman, be submitted for the hearing record.

Medical students also will benefit greatly from being eligible in their first year of study for the Pell Grant Program, as envisioned in House Resolution 5240. This will help to keep M.D. debt loads at more reasonable levels. The concept behind graduate inclusion in the Pell Grant Program is quite sound and, hopefully, will provide greater impetus for currently underrepresented minority and disadvantaged students to pursue careers in medical education.

Medical students would also benefit from becoming eligible for the campus-based block grant program. They borrowed a total of $14.9 million under the NDSL program in the 1982-83 school year, and their ability to avoid higher debt burdens will certainly be aided by eligibility for new grant funds.

I have personally benefited from the NDSL program, having received $5,500 in NDSL loans as an undergraduate at Brandeis University and having taken out $2,800 more in scarce NDSL loan funds under this program for the current school year.

A concomitant of the heavy reliance by students on loans to finance medical education is the need to restructure repayment plans which are congruent with the earning patterns of M.D.'s. A few points need to be stressed.

The first is that the medical students are graduating with ever-increasing amounts of debt. The mean debt for the graduating senior with debt was $23,914 in 1983, an increase of 18.9 percent from the previous year. Furthermore, the number of students with educational debts of $30,000 or more increased by 44.4 percent from the previous year, to a total of 13.5 percent.

I myself have accumulated a total of $37,200 in educational debt, and I'm just completing the second year of my medical studies.

What I need and what other students in similar circumstances need are repayment terms that match our earning patterns. Until the residency period is completed, M.D.'s do not earn a great deal of money. A third-year resident, 7 years out of college, and pushing 30 years of age, receives on the average, a salary of $21,378 a year. A sixth-year resident receives an average of $24,739.

Loan consolidation with an extended repayment option would thus be highly desirable for medical school graduates.

The terms of consolidation, as described in your legislation, Mr. Chairman, may be insufficient to meet the needs of medical school graduates. I am especially concerned about the limiting of the maximum repayment period to 15 years. I have already borrowed a total of $31,300 under the NDSL, GSL, PLUS and HEAL programs. The latter loans are currently included in Sallie Mae's consolidation authority under title VII of the Public Health Service Act, and could well need a 20-year repayment plan if I enter the family practice career I am now contemplating.

Many medical students will find themselves in similar circumstances. There are, of course, many other programmatic details which I could address today. But in the interest of time I will not touch on them. I hope, however, that my basic message has been clear, that the title IV student aid programs meet an essential need in medical education, and that it is difficult to imagine a variegated student population without them.

I thank you for allowing me to appear before you and I am happy to answer any questions that you may have.

Mr. SIMON. We thank you very much.

On the loan matter, and obviously what we're trying to do in this bill is to shift a little away from that heavy indebtedness that you're talking about that, frankly, frightens a great many students. And I'm thinking out loud, without having explored this, whether this is a realistic possibility at all.

What if we were to say on repayment that you cannot be expected to repay more than 15 percent of your income? Would that be helpful or is that not very meaningful?

Mr. EDELSON. I think as far as AAMC is concerned, for medical students, it would be a very good idea. Anything that would limit, or take into consideration the amount owed versus the amount of income, would be helpful.

Mr. SIMON. All right.

Mr. MOORE. I guess, Mr. Chairman, I would be concerned with whether or not that would call for a minimum to be paid, and I would also be concerned on how long that debt would be spaced out, over the years, if a student is to go on and not gain a high income job, whether or not it would take a severe long time for that debt to be paid back.

Mr. SIMON. Well, presumably that would extend some loans beyond the 15-year period.

Mr. MOORE. Right.

Mr. SIMON. But make it a little easier to repay that. So you don't feel that you're just overwhelmed by that debt. My concern is, frankly, not only the repayment but what it does in skewing, and you referred to this in your testimony, what it does in skewing where you respond to need in our society. If you graduate from medical school and you have a choice of serving an inner city neighborhood that is desperately needing physicians, or you have a choice of going to McLean, where your income is going to be much greater, if you have that huge debt, even though your inclination may be to serve the area that needs the help the most, your economic circumstance may force you to go not where society needs you, but where you can repay that debt. And the same thing happens to teachers and to people in every other profession.

Anyway, we're just in the formative stages in all of this and I—any suggestions you may have, any modifications, we would welcome.

Ms. Murphy, I would be interested in anything you or others from the independent sector might suggest in the way of a formula for the block grant, that would obviously—one of the things that I want to—I shouldn't say "obviously," but one of the things I want to move away from is the economic segregation that has already become a pattern in the United States in the last 3 years. We are moving in the wrong direction then. We're trying to move away from it. I don't want the block grant provisions to accelerate that, and as you look at this bill, if you and your friends can come up with any modifications that will—can ensure that we don't move in that direction, I would welcome that.

Ms. MURPHY. If you might answer a question for me, I think we'll have a place to go from. Our concern is why you feel there's a necessity for the block grant in the first place. With the NDSL and the SEOG and the SSIG, those programs seem to be working fine as separate and distinct programs, and our concern is what is the motivation for putting them into a block grant.

Mr. SIMON. The motivation is really twofold, a twofold motivation. No. 1, simplification. And second, and a greater concern, is flexibility. We get complaints from schools that, "Why, we have an NDSL program, an SEOG, an SSIG, and the various programs. Here we come along with John Jones or James Smith, who doesn't fit into these comfortable categories." And so we're trying to design a program where no one will fall through the cracks, where the campus, St. Olaf's College, can have the flexibility to make sure they continue to have token Irish students there at St. Olaf's College, along with all those Norwegians up there.

That's basically the idea.

Ms. MURPHY. I guess our concern, to take it from there, is that it will not simplify things for the students, being that the student is put in a position, in some instances, where they need to cut their own deals, for example, with the financial aid office. They need to go down there and negotiate the NDSL's, the SEOG's, the SSIG's, more so than they do now, because there are stricter guidelines.

I will take your offer to see if we can come up with some way of working that block grant so that we encompass both those areas.

Mr. SIMON. Well, we would be very eager to work with you. I don't see that that would make any—what we are proposing, would make any difference. But we can, on that part of it, we would be eager to work with you on that.

Diana Sifuentes, all I can say is your testimony is helpful, once again. I was pleased to hear my colleague say that they were going to continue to support this program. But your being here reinforces, and you just personally illustrate how that—how and why that program is extremely important. And we appreciate your being here.

I would like to enter into the record the document that Gregory Moore referred to. I have just seen it for the first time and glanced through it and it looks excellent and we will enter it into the record at the end of the testimony. The one aspect that you touch on in your testimony that we have not really discussed in going

over all the details of an extremely complicated bill, is the insurance premium.

What suggestions do you have, or let me—maybe that's an unfair question to toss at you so quickly. Let me just suggest to you that if you and the other representatives of the student associations can come to us with some suggestions, and suggestions that still serve the purpose that the insurance premium does, but not load us up, we are concerned about the cost factor in the bill. I would be very interested—if you care to comment on it, but if you do not care to, we would be very interested in your suggestions.

Mr. MOORE. We are going to take that back and do more research on it. But in our hurriedness to get all of the information in the testimony, we thought we would at least mention it and then follow up with additional information later.

Mr. SIMON. Great.

Mr. Kogovsek.

Mr. KOGOVSEK. I have no questions, Mr. Chairman.

Mr. SIMON. We thank you very, very much.

Oh, I'm sorry. Mr. Penny. And I hate to say it to Pat Brown, I thought that was Pat Brown sitting the other side of you, wherever—I apologize either to my colleague from Minnesota or Pat Brown, either one.

Mr. PENNY. That's all right. I just have a couple of questions

Mr. SIMON. The gentleman from Minnesota.

Mr. PENNY. I don't particularly care who answers these questions. Any of you or all of you may want to jump in and answer these two questions. We focused—you focused in your testimony and the discussion so far has focused on the reauthorization bill. But I'm curious to have someone in this group respond to the President's suggestion of beefing up significantly the work-study budget and using that as an alternative, financial aid approach.

Mr. MURPHY. Let me jump in here. He's my Congressman.

I think the problem that we have with work-study, I don't know of any individual in the independent sector or probably in the public sector either that isn't willing to work to help put themselves through school. The problem that we encounter is trying to find a balance between work and study. We have found that some students, if they need to work both on campus, with work-study jobs, and off campus, in town, or doing other things, that it takes away from the time they spend studying, and their first priority shifts from that concentration on education to paying for the education, and it defeats the whole purpose of being there.

Some data that we got from the National Institute of Independent Colleges and Universities stated that in 1979 an average of 31.1 percent of a student's budget was covered by self help. This figure increased to 41.4 percent by 1981, representing an increase of over $1,000 per student, which is quite a large amount of money for the student to pick up through self help and work. So, that would be my response to your question.

Mr. EDELSON. If I could just address that issue.

Mr. PENNY. Yes.

Mr. EDELSON. As far as medical students go, college work-study is just not a viable means of income. Well, it is a viable means of income but it isn't a viable possibility because of the time commit-

ment for medical school. It's just not feasible to work and get through medical school at the same time.

Mr. PENNY. Go ahead.

Mr. MOORE. I just wanted to comment on a couple of things. One is that we are encouraged by the fact that there will be expanded employment opportunity and more funding of the work-study program. However, a lot of the students who do tend to be funded by the work-study programs in the public sector are students who may have to go through extra courses of developmental courses, in math or English, or other areas where they will have to require extra study and time, and the additional burden of work-study will put that extra amount of time into the student's schedule that will be taken away from study, and so again the students that tend to be more dependent on work-study will also be more dependent on the need to take extra courses, and that would make it a lot more difficult to get out of school quicker.

Mr. PENNY. Ms. Sifuentes.

Ms. SIFUENTES. As you might know, law school is difficult and, you know, 15 hours a week that you work you don't get very much money but you lose a lot of very valuable time that you could be devoting to learning what you're supposed to be there for.

Mr. PENNY. My next question has to do with the income-sensitive repayment schedule for loans. I notice an endorsement of that approach in Shawne Murphy's testimony, and I haven't had a chance to review all the other testimony as yet, but maybe some of the others of you have endorsed that as a long-term objective as well. Could you be more specific as to what approach or what outline we should follow in developing an income-sensitive repayment schedule?

Ms. MURPHY. I guess I'll start again.

One of the programs that we're aware of that has an income sensitive repayment schedule is at Northwestern University in Illinois. From my understanding, which I admit is vague, what they do after 10 years or after a certain period of time is analyze the income of the individuals that are on that repayment and figure out what their salary is, what sort of debt they can incur, what sort of position they hold, whether it be a doctor or a lawyer in the business community, or in a service organization or teaching, where, as we all know, the incomes are very low.

I think that sort of idea needs to be taken into account here. I'm not exactly sure how easy it would be to do on the federal level, and I can understand that, but I think if we maybe leave some of that negotiations or analysis to State and Federal agencies, as opposed to just national agencies, we may be able to take in that income sensitive repayment a little more easily.

It also takes some of the stress off for some of those individuals who feel that teaching is what they want to do or service is what they want to do, as opposed to being in the business environment. They would rather serve other individuals than make a lot of money, and would like to be able to make that choice, and take that career path instead.

Mr. EDELSON. As far as AAMC is concerned, I think that I know that we could accept something like that as long as it took into account the HEAL program, the Health Education Assistance Loans,

which is T-bill plus 3½ percent. If it could be better than that program, you know, it would be a good idea.

Mr. PENNY. Some congressmen have suggested that we use the IRS as a means of determining what amount an individual is able to repay on their loan over the years. Do you find that at all attractive?

Mr. MOORE. I think that one of the good parts about the Cleveland Scholarship Program was that the Cleveland Scholarship Program did provide a lender of last resort. They did provide the mechanism for low-income students to turn to the lenders of last resort or was able to arrange loans to be given out to students who had no credit rating or poor credit ratings.

And one of the things that was good about it was that there was a hesitancy on the part of many low income parents and students who we counseled in the Cleveland Scholarship Program, to take out loans at all, for fear of having to go in debt. So, having an agency that's not directly tied in with the Government, I think, was something that was a little bit more appreciated by people who were first generation college students, who weren't used to dealing with having to pay large amounts back in any type of loan, and the Cleveland Scholarship Program, which provided counseling and services, did provide an opportunity for that loan to be set up through a third party, and so I think that having the IRS take a larger role in that collection area probably would not be good for first generation college students or for low-income people.

Mr. PENNY. In a sense what the proposal, the proposal that's been made, would make the IRS the collection agency.

Mr. MOORE. Right.

Mr. PENNY. And then they would transfer to the appropriate or to the general fund, the repayment on those loans.

Your preference, clearly, through your testimony, is that we leave that decision to be made by some agency, some individual other than the IRS?

Mr. MOORE. Yes. I think the colleges do a pretty good job of collecting that money themselves. I think students would have a greater allegiance to paying back loans through their university than they would through the IRS.

Mr. PENNY. Nobody else wants to jump in?

Ms. MURPHY. I don't know if I necessarily agree wholeheartedly with Greg in regard to who a student is going to be more likely to pay back. I think what we found, at times, is that some colleges just don't have the ability or the expertise to track down students once they leave institutions, and students may not receive the information they're supposed to be getting if they're repaying through the institution.

I don't know that the IRS is the place to do it either. I wouldn't have an answer to that. Except that I know that it's a very busy and I guess stressed sort of organization and maybe we might not want to throw another burden onto their shoulders. But I'm not exactly sure where we would put it. I just don't have the expertise to make that sort of judgment.

Mr. PENNY. Well, there is a lot of interest in Congress in trying to make these payment schedules income sensitive. It goes a step farther than our consolidation efforts in making it easier for stu-

dents to pay off their loans, and the only question is just how do we go about designing an income sensitive repayment program, and I appreciate the comments you've all shared with me on that topic.

Mr. MOORE. I have one thing on that. That is that I think there's not enough concentration on counseling for students after the financial aid process is over, where the explanation for repayment of the loan is actually given priority by financial aid administrators. So, I think if there was more contact with the student, right before graduation, about the payment schedule, that would help out a lot.

Mr. PENNY. Thank you. I have no further questions, Mr. Chairman.

Mr. SIMON. If I could just comment briefly on my colleague's suggestions and questions. One of the problems we get into is if we move toward IRS collection of student loans, we get into committee jurisdiction problems. I think it is very unlikely Ways and Means is ever going to approve IRS collecting for us. I think that's the practical reality. Even if, in theory, it's desirable.

On the College Work-Study, if I can just add my comments, if I can join the student rank here for just a moment, my first year of college I worked 35 hours a week, and it sounds great to say you worked your way through college. I didn't get much out of that first year of college. That may be very apparent to everyone here.

But I really think we can overdo this business of encouraging students to work. I think the comment you made, Diana, of the problems of going to law school and also trying to work are important. I think it's great if a student can do both and wants to do both. But I don't think we ought to make that a requisite in order to get through college.

We thank all of you very, very much.

Ms. MURPHY. Could I make one final statement?

Mr. SIMON. You get the last word.

Ms. MURPHY. Not intentionally. My very knowledgeable staff member informed me in regard to the insurance premium, the National Commission on Student Financial Aid made a statement that they did not see that the insurance premium was necessary. I don't have the specifics on that but we'd be more than happy to submit that for the record, for your information.

Mr. SIMON. We thank you all very much.

The hearing stands adjourned.

[Whereupon, at 3:36 p.m., March 27, 1984, the subcommittee recessed, subject to the call of the Chair.]

[Material submitted for inclusion in the record follows:]

U.S. CONGRESS,
CONGRESSIONAL BUDGET OFFICE,
Washington, DC, March 12, 1984.

Memorandum to: John Dean, House Committee on Education and Labor.
From: Maureen McLaughlin.
Subject: Administration's Fiscal Year 1985 Proposal for the Grant and Campus-Based Student Aid Programs.

This memorandum responds to your request for an analysis of the Administration's fiscal year 1985 proposed changes in the grant and campus-based student aid programs. The Administration's proposal intends to increase the role of students and their families in paying the costs of education, expand opportunities for low-income students to attend more expensive schools, and target aid more to the lowest income students. To do this, the Administration has submitted a 1985 proposal that is quite similar to their 1984 proposed changes.

Because our estimated funding levels for the Pell Self-help Grant proposal are higher than the Administration's estimates and because the possible methods of reducing costs to the requested budget level would affect students differently, it is difficult to determine the total effects of the Administration's grant and campus-based proposal. For these reasons, the memorandum includes the following three parts. The first section describes the Administration's 1985 budget request and the general effects of these funding levels. The second part analyzes how the Administration's Pell Self-help Grant proposal, if fully funded, would affect program costs and grant recipients. The third section discusses the effects of various methods of reducing Pell Grant costs to the requested level of funding.

These estimates have not been reviewed by the Director of the Congressional Budget Office and therefore do not represent official CBO estimates.

SUMMARY

The Administration is requesting $3.65 billion for the grant and campus-based programs in 1985, 8 percent below 1984 appropriations and 14 percent less when adjusting for inflation. The Administration's proposal would modify the Pell Grant program; would eliminate Supplemental Educational Opportunity Grants (SEOGs), State Student Incentive Grants (SSIGs), and federal capital contributions for National Direct Student Loans (NDSLs); and would increase funding for College Work-Study (CW-S). Because these programs are forward-funded, the changes would not affect students until the 1985–1986 school year.

These proposals would affect funding for grants, campus-based loans, and work-study differently. Compared to 1984 appropriations, the proposal would decrease funding for grant programs by 14 percent, reduce funding for campus-based loans by almost 100 percent, and would increase appropriations for College Work-Study by 53 percent. Total campus-based aid—SEOGs, NDSLs, and CW-S—would decline by 23 percent.

These proposals would reduce the variance in federal aid received by similar students because a greater proportion of funding would be determined by federal formula and less by schools' financial aid officers. This change would, however, reduce the discretion of campus student-aid officials in dealing with special circumstances not reflected in the federal formula.

Our estimates indicate that fully-funding the proposed Pell Self-help Grant formula would cost $3.7 billion in 1985, or 30 percent above the Adminstration's request. The Administration, on the other hand, feels that the requested $2.8 billion can fund fully the proposed formula. Because our estimate is substantially above the Administration's estimate and because we don't know how the Administration would choose to reduce costs to the requested funding level, it is difficult to determine the overall effects of the proposal on different types of students.[1]

If the proposal were fully funded, whether particular students would gain or lose would depend principally on their educational costs, their family incomes, and the types of aid they are now receiving. Holding other factors constant, students at high-cost institutions would generally gain under the Administration's proposal, whereas only the lowest income students at low- and medium-cost schools would receive larger awards. Moreover, students now receiving aid from both Pell Grants and SEOGs, SSIGs or NDSLs, or students now getting aid only through the programs proposed for elimination, would generally be adversely affected compared to those now receiving only Pell Grants. As a result, some students, but not all, would pay a larger share of educational costs under this proposal.

If the proposal were not fully funded, however, it could affect students differently depending on how awards were changed. For example, the linear reduction method included in the law would maintain proposed awards for students with the lowest expected family contributions—more than one-half of current recipients—and would substantially reduce or eliminate awards for the remaining students. This method would increase the proportion of aid received by the lowest income students compared to fully funding the Administration's proposal. On the other hand, another method—subtracting the same dollar amount from all awards—would reduce grants for all students, but awards for the most needy students would decline by the smallest percentage. Or, the proposed Pell Grant formula could be changed—for example, reducing the maximum award—to lower costs. The first rule has not yet been used;[2]

---

[1] Our estimates are based on specifications of the proposal that were provided by Education Department personnel. If the proposal varies from these descriptions, the effects could also differ.

[2] Although the current reduction formula has not been used to reduce awards, a similar formula that was specified in previous law was used in 1982.

the second was used in fiscal years 1980 and 1981, and the maximum award was reduced in several years.

OVERVIEW OF THE ADMINISTRATION'S 1985 BUDGET REQUEST

The Administration would alter the current Pell Grant program formula [3] and would eliminate Supplemental Educational Opportunity Grants (SEOGs), State Student Incentive Grants (SSIGs), and federal capital contributions for National Direct Student Loans (NDSLs). At the same time the Administration would increase funding for College Work-Study (CW-S).[4] These changes would begin to affect student aid in the 1985–1986 school year because the programs are forward funded.

The Administration's 1985 budget request would reduce appropriations for the grant and campus-based programs by 8 percent compared to 1984 levels and would change the distribution among grants, campus-based loans and work-study aid (see Table 1). The requested funding would be 14 percent below the Congressional Budget Office 1985 current baseline, which estimates the amount of funds necessary to continue the 1984 appropriations in real terms in 1985.

TABLE 1.—BUDGET AUTHORITY FOR THE GRANT AND CAMPUS-BASED STUDENT AID PROGRAMS FOR FISCAL YEARS 1984 AND 1985

[In millions of dollars]

	1984 appropriations	1985 current baseline [1]	1985 administration request	Percent change: 1985 request from 1984 appropriations	Percent change: 1985 request from 1985 current baseline
Pell self-help grants [2]	$2,800	$2,974	$2,800		−6
Supplemental educational opportunity grants	375	398		−100	−100
State student incentive grants	76	81		−100	−100
National direct student loans	181	192	$4	−98	−98
College work-study	555	589	850	+53	+44
Total	3,987	4,234	3,654	−8	−14
Grant programs [3]	3,251	3,453	2,800	−14	−19
Campus-based programs [4]	1,111	1,179	854	−23	−28

[1] Estimates the amount of funds necessary to continue the 1984 level of appropriations in real terms in 1985.
[2] The Administration's proposal refers to the Pell Grant proposal as Pell Self-help Grants.
[3] Includes Pell Grants, Supplemental Educational Opportunity Grants, and State Student Incentive Grants. Funding levels for the grant and campus-based programs do not add to the total because Supplemental Educational Opportunity Grants are included in both groups.
[4] Includes Supplemental Educational Opportunity Grants, National Direct Student Loans, and College Work-Study. Funding levels for the grant and campus-based programs do not add to the total because Supplemental Educational Opportunity Grants are included in both groups.

The Administration's proposal would reduce funding for federal grant programs—Pell Grants, SEOGs, and SSIGs—by 14 percent between fiscal years 1984 and 1985 and by 19 percent after adjusting for inflation (see Table 1). Federal capital contributions for the campus-based loan program, NDSLs, would be eliminated, but schools could continue to provide loans using repayments from previous NDSLs. College Work-Study would increase by 53 percent, or 44 percent after adjusting for inflation. Total funding for the campus-based programs—SEOGs, NDSLs, and CW-S—would decline by 23 percent between 1984 and 1985.

In addition to reducing the amounts of student aid available, the Administration's requested funding levels would reduce the variance in aid received by similar students because a greater proportion of funding would be determined by federal formula and less by schools themselves. This shift would reduce the discretion of campus student aid officials in dealing with special circumstances not reflected in the Pell Grant formula. In addition, all campus-based aid would be provided through the Work-Study program whereas current campus-based aid is distributed through three programs, SEOGs, NDSLs, and CW-S.

[3] The Administration's proposal refers to Pell Grants and Pell Self-help Grants because their proposal includes a self-help requirement in addition to the expected family contribution.
[4] The Administration is also proposing to change the Guaranteed Student Loan (GSL) program by instituting needs analysis for all students and by altering the financial agreements between the federal government and state guarantee agencies. This memorandum does not discuss these changes, however.

Because appropriations for Pell Grants would remain the same in nominal dollars, the amount of aid determined by federal formula would be the same in 1985 as in 1984 (see Table 1). In addition, since total funding would decline, Pell Grants would represent a larger proportion of appropriated funds in 1985. In the Pell Grant program a student is eligible to receive a particular amount of aid that depends on his family income and school costs; schools do not have any flexibility in determining the level of Pell Grants available for their students.

The amount of federal aid available for schools to allocate would decline by about one-quarter because federal assistance for the campus-based student aid programs would decline by 23 percent between fiscal years 1984 and 1985 and by 28 percent compared to the CBO current baseline estimates (see Table 1). In the campus-based programs, the federal government provides funds to the institutions who determine, within federal guidelines, which students get aid. The Administration's proposed budget levels would affect the current types of campus-based aid differently, however, by eliminating SEOGs and all new federal capital contributions for NDSLs, and by increasing CW-S funding.

ADMINISTRATION'S PROPOSED CHANGES IN THE PELL GRANT PROGRAM

This section analyzes the effects of the Administration's Pell Grant proposal if it were fully funded. Because the Administration's proposal significantly changes the Pell Grant formula and because our estimates vary substantially from the Education Department's numbers, most of the analysis focuses on comparing the current Pell Grant program with the proposed changes. The discussion of the overall effects—including all grant and campus-based programs—is short since it depends very much on how the Administration would change the proposal to reduce costs.

DESCRIPTION OF THE ADMINISTRATION'S PELL GRANT PROPOSAL

The Administration's proposal includes four main changes in the existing Pell Grant formula.[5] The following description is based on conversations with personnel at the Education Department because the Administration has not yet submitted their complete student aid proposal to the Congress. If the Administration's proposal varies from this description, the effects could also differ.

First, the proposal would increase the maximum award from $1,900 to $3,000 in order to expand opportunities for low-income students to attend more expensive schools.

Second, the Administration's proposal to change the current definition of schools costs would create more uniformity in allowable costs for students who do not live with their parents. Costs would equal tuition and fees plus a living allowance—$3,000 for students living on campus or off campus without their parents and $1,500 for students living with their parents. Current allowable costs include tuition and fees for all students and living costs also vary according to students' living arrangements. For a student living on campus, non-tuition costs equal room, and board, plus $400; a student living off campus without his parents is given a $2,000 allowance; and a student living at home with his parents has an allowance of $1,500.

Third, the Administration would target more aid to the lowest income students by increasing the portion of income that families of dependent students are expected to contribute to school costs—income assessment rates. The proposal would raise the assessment rates from 11, 13, 18, and 25 percent on each $5,000 increment of discretionary income to 18, 20, 25, and 30 percent.

Fourth, in order to increase student's self-help requirements, the proposal would change the current rules for determining the award level to the lowest of the following three calculations: (1) maximum award minus expected family contribution (EFC); (2) school cost minus EFC minus (the greater of $500 or 40 percent of cost); and (3) $1,000 minus EFC plus 25 percent of costs. Under the current Pell Grant program, a student's award is determined by choosing the lowest of the following three calculations: (1) maximum award minus expected family contribution (EFC); (2) one-half of school costs; and (3) school costs minus EFC.

EFFECTS OF THE ADMINISTRATION'S PELL GRANT PROPOSAL

The Administration's proposed Pell Grant changes, if fully funded, would cost an estimated $3.7 billion, or 30 percent more than both the Administration's requested funding level and the expected cost of the current program in 1985—$2.8 billion (see

[5] This memorandum analyzes the overall effects of the Administration's proposal. As you requested, another memorandum will examine the effects of each proposed change.

Table 2). Compared to the existing program, this proposal would increase the number of students receiving awards slightly, 4 percent, but would raise average awards by almost 30 percent, from $1,100 in the current program to $1,400.

TABLE 2.—ESTIMATED EFFECTS OF ADMINISTRATION'S 1985 PELL GRANT PROPOSAL ON TOTAL COST, NUMBER OF RECIPIENTS, AND AVERAGE AWARD [1]

	Total cost (in billions of dollars)	Number of recipients (in millions)	Average award (in dollars)
Current program [2]	2.8	2.5	1,100
Administration's proposal [3]	3.7	2.6	1,400

[1] Estimates assume that all grants calculated according to the award formulas would be funded without any reductions. Numbers may not multiply due to rounding.
[2] Refers to the estimated cost of the current Pell Grant program adjusting the income offsets for inflation but not altering other parts of the existing formula, such as the maximum award. The current baseline, on the other hand, estimates the real value of the 1984 appropriation in 1985.
[3] See text for a description of the proposed changes.

The effects of the Administration's proposal on particular students would depend on students' school costs, their family incomes, and the types of federal aid they are now receiving. Analyzing example students highlights these effects (see Table 3).

Holding other factors constant, students attending high-cost schools would gain more under the Administration's proposal than students at lower schools. For example, a student in a four-person family with income of $10,000 would receive $1,100 more if he attends a high-cost school and $210 more if he enrolls in a low-cost school (see Table 3). As a result, the proportion of aid going to students at private schools would increase slightly.

TABLE 3.—EFFECTS OF ADMINISTRATION'S 1985 PELL GRANT PROPOSAL ON EXAMPLE STUDENTS

[In dollars] [1]

Type of current grant aid and family income	Type of school					
	Low-cost [2]		Medium-cost [2]		High-cost [2]	
	Current award	Proposed minus current	Current award [3]	Proposed minus current	Current award [3]	Proposed minus current
Students currently receiving Pell grants:						
$10,000	$1,050	+$210	$1,900	+$150	$1,900	+$1,100
$15,000	1,050	−690	1,350	−200	1,350	+750
$20,000	700	−700	700	−700	700	+400
Students currently receiving Pell grants and supplemental educational opportunity grants: [4]						
$10,000	1,450	−190	2,400	−350	2,600	+400
$15,000	1,450	−1,090	1,850	−700	2,050	+50
$20,000	1,100	−1,100	1,200	−1,200	1,400	−300

[1] Calculations assume dependent students who are members of families of four. (Dependent students represent 50 percent of all recipients.) Estimates assume that all grants would be fully funded.
[2] These figures approximate expected average costs, respectively, for students attending two-year public schools living at home, students who live on campus at four-year public schools, and students who live on campus at four-year private schools.
[3] Represents the grant that a student would receive in the current program with a $1,900 maximum award.
[4] Currently about 20 percent of students who receive Pell Grants also get Supplemental Educational Opportunity Grants (SEOGs). Most students who get SEOGs, however, also receive Pell Grants. Estimates assume that a student receives the average SEOG for the particular type of school.

The lowest income students would generally gain more or lose less than other students at similar schools. For example, at a low-cost school, a student with a family income of $10,000 would receive $210 more whereas a student with a family income of $20,000 would get $700 less than in the existing Pell Grant program (see Table 3). The resulting income distribution would be similar to the current program, however, because some students with higher incomes at high-cost schools who had not previously received Pell Grants would get awards under the Administration's proposal.

Because of the proposed greater uniformity of treatment, students who now receive aid through Pell Grants and through one of the programs scheduled for elimination, for example SEOGs, would be adversely affected compared to students receiving only Pell Grants. For example, a student with a family income of $10,000 at a medium-cost school would receive an additional $150 if he were now getting only a

Pell Grant, but would lose $350 if he were now receiving aid from both Pell Grants and SEOGs (see Table 3). In addition, students who currently receive aid only through SEOGs, SSIGs, or NDSLs would generally receive less under the Administration's proposal.

As a result of these changes, some students and their families would be required to contribute more to their educational costs because they would receive less federal aid under this proposal. On the other hand, those students who would receive more federal aid under the Administration's proposal would thus contribute less.

REDUCING PELL GRANTS TO THE REQUESTED FUNDING LEVEL

If appropriated levels of funding are not sufficient to fully fund all Pell Grants, as determined by the award rules, the law requires that students' grants be reduced so that expected program costs equal available funds. Or, the program rules—for example, the maximum award—could be changed so that total costs would be lower.

In the past, several methods of reduction have been used. Until 1983, the law provided a particular reduction formula that maintained grants for students with the lowest expected family contributions and reduced other grants by greater proportions for larger expected family contributions. If these reductions were insufficient, the law stated that all grants would be reduced by the same proportion (the percentage by which costs exceeded funding). The first part of this formula was used in 1982. In 1980 and 1981, however, the Congress superceded this provision and required that all awards be reduced by a fixed dollar amount, $80 and $50 respectively. In many years, the Congress has changed the formula so that program costs would be lower.

These methods of reduction affect students differently. The first method—the scheduled reduction formula—protects the lowest-income students entirely and then reduces other awards in a progressive manner. The constant percentage reduction, however, reduces awards for the lowest-income students by larger amounts than for other students. The flat dollar reduction represents a smaller percentage reduction in the larger grants of the most needy students, but decreases grants for all students.

Beginning in 1983, the scheduled reduction formula discussed above has been changed. The new rule would protect grants for students with the lowest expected family contributions and would reduce all other grants in a linear and progressive manner. This rule has not yet been used and the Congress could, as in other years, choose to change the reduction method or the program rules.

If the linear reduction rule now included in the law were applied to the Administration's proposal, approximately 1.5 million students who would receive $2.6 billion of funding would have their grants maintained at the level provided by the new formula. The remaining 1 million students who would receive $1.1 billion if the proposal were fully funded, would have their awards eliminated or reduced substantially because only $200 million of funding would be available for them. Using this reduction formula would increase the proportion of funds for the lowest income students—at least 85 percent of Pell Grant funds would go to students with family incomes below $10,000.

HEARINGS ON THE REAUTHORIZATION OF THE HIGHER EDUCATION ACT

WEDNESDAY, MARCH 28, 1984

HOUSE OF REPRESENTATIVES,
COMMITTEE ON EDUCATION AND LABOR,
SUBCOMMITTEE ON POSTSECONDARY EDUCATION,
Washington, DC.

The subcommittee met, pursuant to call, at 9:50 a.m., in room 2257, Rayburn House Office Building, Hon. Paul Simon (chairman of the subcommittee) presiding.

Members present: Representatives Simon, Owens, Penny, Coleman, Gunderson and Packard (ex officio).

Staff present: William A. Blakey, counsel; Laurie Westley, assistant counsel; Marsha Wice, legislative assistant; John E. Dean, Republican assistant counsel; and Rose DiNapoli, Republican legislative associate.

Mr. SIMON. The subcommittee will come to order.

This morning the Subcommittee on Postsecondary Education continues its hearings on reauthorization of the Higher Education Act. We are taking a slightly different approach today—we will hear from business people and leaders in various sectors of State government, including State agencies created to serve the interests of higher education.

It has become increasingly important over the past decade that higher education focus its attention on meeting the needs of the business and corporate community. Not only must students be trained to meet the personnel needs of business and government, but higher education and those in the public and private sectors have a great deal to learn from each other. This interaction will contribute to economic growth and a better America.

The importance of a strong Federal-State relationship in higher education cannot be overemphasized. From the funding of our great land-grant colleges in 1862, the relationship has grown and matured.

[Opening statement of Congressman Paul Simon follows:]

OPENING STATEMENT OF HON. PAUL SIMON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ILLINOIS AND CHAIRMAN, SUBCOMMITTEE ON POSTSECONDARY EDUCATION, MARCH 28, 1984, MORNING

This morning the Subcommittee on Postsecondary Education continues its hearings on reauthorization of the Higer Education Act. We are taking a slightly different approach today—we will hear from businessmen and leaders in various sectors

103

of state government, inlucding state agencies created to serve the interests of higher education.

I believe that it has become increasingly important, over the past decade, that higher education focus its attention on meeting the needs of the business and corporate community. Not only must students be trained to meet the personnel needs of business and government, but higher education and those in the public and private sectors have a great deal to learn from each other. This interaction will contribute to economic growth and a better America.

The importance of a strong Federal-State relationship in higher educations cannot be emphasized enough. From the funding of our great land-grant colleges in 1862 the relationship has grown and matured.

I want to welcome our first witness this morning, Walter Bruning, President, Computer Systems, Co., The Control Data Corporation. He will be followed by a panel which includes two very good friends of mine and of higher education—State Representative Wilhelmina Delco, Chair of the Higher Education Committee in the Texas Legislature and Joseph Cronin, President of the Massachusetts Higher Education Assistance Corporation and NCHELP.

I hope that our witnesses this morning can add a different perspective to the views we will hear from those most closely associated with higher education.

Mr. SIMON. Our first witness this morning is Walter Bruning, the president of Computer Services Co., which, as I understand it, is a branch of the Control Data Corp.; is that correct?

Mr. BRUNING. Yes, sir.

Mr. SIMON. We are very pleased to have you with us.

STATEMENT OF WALTER BRUNING, PRESIDENT, COMPUTER SERVICES CO., THE CONTROL DATA CORP.

Mr. BRUNING. Thank you, Mr. Chairman.

Mr. Chairman and members of the subcommittee, my name is Walter Bruning and I am president of the Computer Services Co. of the Control Data Corp., a worldwide computer and financial services company based in Minneapolis. For nearly 20 years, Control Data has been a leader in the field of computer-based education and training with our Plato computer system.

Although I am now in the corporate sector today, I am no stranger to postsecondary education. I have had 12 years of experience in higher education as vice president for administration at the University of Minnesota and as a professor at the University of Nebraska. While I am responsible for other business areas in my current position at Control Data, I am also responsible for its education and training programs, including the Control Data Institutes, a network of more than 40 centers which provide training and retraining in computer skills.

I am, therefore, familiar with traditional higher education, as well as proprietary institutions in the vocational sector. So I welcome this opportunity to discuss with you the role of the business community in strengthening postsecondary education and in exploring more effective ways to enhance that role through the reauthorization of the Higher Education Act of 1965.

I would like to emphasize the need for partnerships and increased cooperation among business, educational institutions, and Government to respond to the challenge of accelerating technological change.

I would like to focus on two critical issues: First, the training and retraining of a broader segment of the population in scientific, technical, engineering and other technological skills; and second,

the need for expanding and upgrading faculty, curricula, and equipment to keep pace with the rate of technological change.

Through an array of programs at the National Science Foundation, Department of Defense and Department of Energy, business, education, and Government are already cooperating on research and development projects. But, except for the community colleges and postsecondary vocational education institutions' involvement with training under JTPA and the new vocational education proposals, most colleges and universities are not cooperating with business in teaching and training.

Business invests billions of dollars annually for education and training of its employees. Usually individual companies do the training. There are just too few instances of cooperative training and retraining efforts between business and postsecondary educational institutions.

Before elaborating on possible new partnerships between business, education, and Government, I would like to underscore the importance of title IV student assistance programs which are indeed the centerpiece of this legislation. I might add parenthetically that I am personally aware of the importance of student financial assistance as a means for expanding opportunities because, without Government loans, I would not have been able to complete my own education and I probably wouldn't be here this morning with this opportunity to testify in support of the bill.

Student aid programs are a critical part of the current structure of postsecondary education. Our experience with the Control Data Institutes shows the impact that Federal student aid programs have on the patterns of postsecondary enrollments. For example, there are over 65,000 alumni of Control Data Institutes in the United States, and approximately 70 percent of those alumni received Government loans or grants. About 75 percent of the current Control Data Institutes students receive Federal or State assistance. Without such aid, these students would have been unable to continue their education. As you well know, the 1972 Education Amendments helped to support our Control Data Institute students when the legislation expanded eligibility to students attending vocational institutions.

During the course of these hearings, you will receive testimony from a number of individuals more knowledgeable than I about the current student aid system and the need for adjustments. From my own perspective, I would like to emphasize the growing need for retraining and the inability of the current title IV provisions to meet this need. Because of the speed of technological change, many people will have to be retrained three or four times during the course of their working lives. As a result, the nature of our educational system is likely to change over the next several decades.

One of the major functions of the Control Data Institutes is retraining. About 25 percent of our current students are college graduates, and about 50 percent have substantial college training. Their previous educational experience just did not lead to suitable employment opportunity.

The current student aid programs, however, are not geared to the needs of many of those who require retraining, as I have already said. Most individuals who are now employed will not qualify

for aid on the basis of financial need. It may be that the student aid structure simply cannot and should not—particularly in these times of fiscal restraint—accommodate these retraining needs. Perhaps a different system of aid should be instituted to serve older individuals.

I personally favor one promising proposal, the special training account similar to the existing individual retirement accounts. I realize this is a tax proposal that does not fall under this committee's jurisdiction. Nevertheless, I think that, with some modifications, it is worthy of consideration. Under such a plan, employees could voluntarily set aside a portion of their earnings tax-free that would be matched by their employer. The funds set aside could be used to finance training costs should the individual be displaced or desire to change professions. Unused portions of the employee contributions would be returned to them at the time of retirement.

Individuals who need retraining will be found not only in traditional industries, which have already been addressed in some measure through JTPA and the vocational education legislation, but also will include engineers and others in technology-intensive industries who find themselves unable to keep pace with changing job requirements. In fact, one of Control Data's most acute needs is the retraining of engineers, especially those who are out of school 3 to 7 years.

Universities would seem the most likely suppliers of highly skilled retraining. But as a general rule, universities do not perform the retraining function especially well. Therefore, I suggest that this committee consider cooperative efforts in retraining, and it may be best to develop this form of cooperative arrangement off-campus.

Specifically, I recommend the creation and funding of several regional consortia of business, universities and labor. These consortia would develop innovative educational technology programs to provide training and retraining to workers onsite or at special facilities established for this purpose. This could begin as one or more demonstration projects newly authorized in the law, or under the auspices of the Fund for the Improvement of Postsecondary Education.

I would especially like to applaud the chairman's bill, which would provide financial assistance to States that develop educational programs to assist in the rehabilitation of criminal offenders. For many years, Control Data has operated training programs in prisons using our PLATO Fairbreak Program. In fact, we have such programs at 24 prison sites in the United States today, including a Control Data Institute inside the Federal prison in Leavenworth, KS. Just recently, we formed a corrections services division to offer management services for establishing and operating comprehensive education, training, and job creation opportunities in prisons.

I believe, also, that the cooperative education concept is worthwhile and should be encouraged. Individuals who participate in cooperative programs generally require less Government assistance because of what they are able to earn in their jobs. This form of pay-as-you-go education and training is effective because it decreases the total cost to the Government while introducing stu-

dents to the work environment. I would suggest, however, that the legislation be amended to permit co-op students in technical fields to receive some of their training, as well as their work experience, in participating businesses.

Higher educational institutions are having great difficulty finding and hiring faculty in high-demand areas such as computer science, electrical engineering, material science and systems engineering. Moreover, many of the graduate students in these areas are foreign nationals. For example, in 1980–81, over one-third of Ph.D.'s and over one-fourth of the master's degrees granted in engineering went to foreign nationals.

In addition—and my own industry has to bear part of the blame for this—many Americans studying in high-demand fields go to work directly in industry once they receive their B.S. degrees. This trend must be reversed or our advanced graduate degree programs will be nothing more than a means for transferring technology and human capital to foreign countries, and the U.S. economy will surely suffer.

At Control Data, we have tried to address the problem of inadequate faculty by developing curricula that rely extensively on the use of advanced learning technologies. For example, we are participating in a consortium of six engineering schools to develop a lower division engineering curriculum that utilizes our PLATO computer-based education system. A complete freshman and sophomore curriculum is planned, consisting of mathematics, chemistry, physics, and computer science, plus additional liberal arts courses—all told, about 64 credit hours. Much of it will be available by yearend. Colleges are able to combine classroom instruction and PLATO instruction as they wish, and to deliver instruction at remote locations, even at home.

Another use of advanced learning technologies which Control Data has pioneered to make up for faculty shortages is the concept of engineering centers, in which business helps colleges and universities provide engineering curricula. There is just not enough time this morning to expand on that topic.

The use of advanced technologies, however, is not a substitute for good faculty. Efforts need to be undertaken to increase the number and quality of faculty that are available to teach in high-demand fields. To accomplish this goal, I would like to urge the committee to consider authorizing a new program as part of title IX that would provide scholarships and/or loan forgiveness for students enrolling in scientific or engineering schools at the graduate level.

I realize that the notion of scholarships targeted for use in specific fields of study is somewhat out of favor. But the idea really has not been discredited in my mind. Allocating assistance for specific needs worked well in the early years of the National Defense Education Act, and similar measures may be needed to meet future challenges.

If such legislation were developed, I would favor targeting this aid on minority or disadvantaged individuals. Our faculty resources in the sciences are limited, as I have already said, but they are particularly weak in minority representation. This discrepancy could be resolved by a new program patterned perhaps after the existing

assistance for training in the legal profession, the so-called CLEO program.

The introduction of new technology in postsecondary education is agonizingly slow and lags far behind the pace of change that is occurring in business and industry. Right now, businesses, especially those involved in high technology, are on a 2- to 4-year innovation cycle, and this cycle is shortening. Students who are leaving school, however, are taught on decade-old gear and have little exposure to new tools.

At Control Data, we have tried to take a number of steps to address this very real problem.

For example, we have invested substantially in the Micro-Electronics and Information Sciences Center at the University of Minnesota and in the Semi-Conductor Research Corporation at Research Triangle in North Carolina. Both of these investments are designed to modernize and upgrade the education of undergraduates and graduate students in electrical and electronic engineering, materials science and computer science.

Second, we have also committed ourselves to the concept of supercomputer institutes throughout the United States to teach undergraduates and graduate students how to use the next generation of scientific and engineering computing machines. Programs along this line have already been proposed in Minnesota, Georgia, and Texas.

Faculty shortages and obsolete equipment are especially severe problems at institutions with large minority enrollments. These schools do not have the resources to offer their students a sustained scientific and engineering program that will prepare them for today's increasingly technological job market.

It is my impression that the University of Minnesota, for example, is probably 10 years behind where it should be in terms of providing its students with sufficient scientific and technological resources in some engineering areas. If that is the situation of the University of Minnesota, where does that leave the institutions without the types of resources and corporate support that Minnesota enjoys?

At Control Data, we recognize this problem and are trying to help. Recently we entered into an agreement with the National Science Foundation to provide Tuskegee Institute with a mainframe computer and PLATO equipment and instructional materials. Unlike many other donation plans, we extend royalties to participating institutions which develop new courseware which could be marketed by Control Data.

Let me suggest that the reauthorization of title III might try to encourage this kind of shared resource approach for minority schools, as is suggested in the chairman's bill.

Mr. Chairman, that concludes the formal part of my testimony. Let me emphasize again the urgent need for forming partnerships and fostering cooperation among educational institutions, business, labor and Government to realize the enormous potential of advanced technology in postsecondary education.

I thank you for the opportunity to be here this morning, and I would be happy to answer any questions.

[Prepared statement of Walter Bruning follows:]

PREPARED STATEMENT OF DR. WALTER H. BRUNING, PRESIDENT, COMPUTER SERVICES CO., CONTROL DATA CORP.

SUMMARY

Business, postsecondary educational institutions, and government should form partnerships to respond to the challenge of accelerating technological change. The partnership concept, which is integral to most research and development efforts, should be emulated in postsecondary education for the purposes of:

The training and retraining of a broader segment of the population in scientific, technical, engineering, and other technological skills;

The expansion and upgrading of faculty, curricula, and equipment to keep pace with shortening innovation cycles.

Legislation should encourage the creation of regional consortia of business, universities, and labor to develop innovative educational technology that would provide training and retraining to workers on-site or at special facilities, either as a demonstration project or under the auspices of FIPSE.

Innovative retraining programs should also be supported for prisoners at penal institutions as proposed in Title I of the Chairman's bill.

The legislation should also encourage the development of curricula that utilize advanced learning technologies to overcome faculty shortages in high demand fields such as engineering and computer science.

The use of advanced learning technologies, however, is not a substitute for good faculty. A new program could be authorized as part of Title IX to provide fellowships and/or loan forgiveness for U.S. students enrolling in scientific or engineering schools at the graduate level, particularly minority or disadvantaged students who are so underrepresented in these areas.

Title III of the legislation should provide incentives to business to share resources—faculty, curricula, and equipment—with postsecondary educational institutions, as suggested in the proposed legislation.

Mr. Chairman and Members of the Subcommittee: My name is Walter Bruning and I am the President of the Computer Services Company of the Control Data Corporation, a worldwide computer and financial services company based in Minneapolis. For nearly twenty years, Control Data has been a leader in the field of computer-based education and training with our PLATO system.

Although I am now in the corporate sector, I am no stranger to postsecondary education. I have twelve years of experience in higher education as Vice President for Administration at the University of Minnesota and a a professor at the University of Nebraska. In my current position, I am responsible for Control Data's education and training programs, including the Control Data Institutes, a network of more than 40 centers which provide training and retraining in computer skills.

I am therefore familiar with traditional higher education as well as proprietary institutions in the vocational sector. I welcome this opportunity to discuss with you the role of the business community in strengthening postsecondary education and in exploring more effective ways to enhance that role through the reauthorization of the Higher Education Act of 1965.

I want to emphasize the need for partnerships and increased cooperation among business, educational institutions and government to respond to the challenge of accelerating technological change. I would like to focus on two critical issues:

The need for training and retraining of a broader segment of the population in scientific, technical, engineering and other technological skills;

The need for expanding and upgrading faculty, curricula, and equipment to keep pace with the rate of technological change.

Through an array of programs at the National Science Foundation, Department of Defense and Department of Energy, business, education, and government are already cooperating on research and development projects. But except for the community colleges and postsecondary voc-ed institutions' involvement with training under JTPA and the new vocational education proposals, most colleges and universities are not cooperating with business in teaching and training.

Business invests billions of dollars annually for education and training of its employees. Usually individual companies do the training. There are just too few instances of cooperative training and retraining efforts between business and postsecondary educational institutions.

STUDENT FINANCIAL ASSISTANCE

Before elaborating on possible new partnerships between business, education, and government I want to underscore the importance of the Title IV student assistance

programs which are indeed the centerpiece of this legislation. (I might add that I am personally aware of the importance of student financial assistance as a means for expanding opportunities, since, without government loans, I would not have been able to complete my own education.)

Student aid programs are a critical part of the current CDI structure of postsecondary education. Our experience with the Control Data Institutes shows the impact that federal student aid programs have on the patterns of postsecondary enrollments. There are over 65,000 alumni of Control Data Institutes, and approximately 70 percent received government loans and grants. About 75 percent of current students receive federal or state assistance. Without such aid, these students would have been unable to continue their education. As you well know, the 1972 Education Amendments helped to support our Control Data Institute students when the legislation expanded eligibility to students attending vocational institutions.

During the course of these hearings you will receive testimony from a number of individuals more knowledgeable than I about the current student aid system and the need for adjustments. From my own perspective, I'd like to emphasize the growing need for retraining and the inability of the current Title IV provisions to meet this need. Because of the speed of technological change, many people will have to be retrained three or four times during the course of their working lives. As a result, the nature of our educational system is likely to change over the next several decades.

One of the major functions of the Control Data Institutes is retraining. About 25 percent of our current students are college graduates and about 50 percent have substantial college training. Their previous educational experience just didn't lead to suitable employment.

The current student aid programs, however, are not geared to the needs of many of those who require retraining. Most individuals who are now employed will not qualify for aid on the basis of financial need. It may be that the student aid structure simply cannot and should not (particularly in these times of fiscal restraint) accommodate these retraining needs. Perhaps a different system of aid should be instituted to serve older individuals. One promising proposal is a special training account similar to the existing Individual Retirement Accounts. I realize this is a tax proposal that does not fall under this committee's jurisdiction. Nevertheless, I think with some modifications it is worthy of consideration. Under such a plan, employees could voluntarily set aside a portion of their earnings tax-free that would be matched by their employer. The funds set aside could be used to finance training costs should the individuals be displaced or desire to change professions. Unused portions of employer contributions would be returned to them at the time of retirement.

REGIONAL CONSORTIA TO DELIVER RETRAINING

Individuals who need retraining will be found not only in traditional industries (which have already been addressed in some measure through JTPA and the Vocational Education legislation) but also will include engineers and others in technology-intensive industries who find themselves unable to keep pace with changing job requirements. In fact, one of Control Data's most acute needs is the retraining of engineers.

Universities would seem the most likely suppliers of highly skilled retraining. But as a general rule, universities do not perform the retraining function especially well. Therefore, I suggest that this committee consider cooperative efforts in retraining, and it may be best to develop this form of cooperative arrangement off-campus.

Specifically, I recommend the creation and funding of several regional consortia of business, universities and labor. These consortia would develop innovative educational technology to provide training and retraining to workers on-site or at special facilities established for this purpose. This could begin as one or more demonstration projects newly authorized in the law, or under the auspices of the Fund for the Improvement of Postsecondary Education (FIPSE).

TRAINING FOR PRISONERS

I would like to applaud the Chairman's bill, which would provide financial assistance to states that develop educational programs to assist in the rehabilitation of criminal offenders. For many years, Control Data has operated training programs in prison using our PLATO Fairbreak program. In fact, we have such programs at 24 prison sites in the U.S., including a Control Data Institute at the federal prison in Leavenworth, Kansas. Just recently, we formed a Corrections Services Division to

offer management services for establishing and operating comprehensive education, training and job creation in prisons.

COOPERATIVE EDUCATION

I believe that the cooperative education concept is worthwhile and should be encouraged. Individuals who participate in cooperative programs generally require less government assistance because of what they are able to earn in their jobs. This form of "pay as you go" education and training is effective because it decreases the total cost to the government while introducing students to the work environment. I would suggest, however, that the legislation be amended to permit coop students in technical fields to receive some of their training as well as their work experience in participating businesses.

SCIENTIFIC AND ENGINEERING FACULTY AND CURRICULA

Higher educational institutions are having great difficulty finding and hiring faculty in high-demand areas such as computer science, electrical engineering, material science, and systems engineering. Moreover, many of the graduate students in these areas are foreign nationals. For example, in 1980–81, over one third of PhD's and over one fourth of the Master's Degrees granted in engineering went to foreign nationals.

In addition—and my own industry has to bear part of the blame for this—many Americans studying in high-demand fields go to work directly in industry once they receive their BS degrees. This trend must be reversed or our advanced graduate degree programs will be nothing more than a means for transferring technology and human capital to foreign countries, and the U.S. economy will surely suffer.

At Control Data we have tried to address the problem of inadequate faculty by developing curricula that rely extensively on the use of advanced learning technologies. For example, we are participating in a consortium of six engineering schools to develop a lower division engineering curiculum that utilizes our PLATO computer-based education system. A complete freshman and sophomore curriculum is planned, consisting of mathematics, chemistry, physics and computer science, plus additional liberal arts courses—about 64 credit hours in all. Much of it will be available by year end. Colleges are able to combine classroom instruction and PLATO instruction as they wish and to deliver instruction at remote locations, even at home.

Another use of advanced learning technologies which Control Data has pioneered to make up for faculty shortages is the concept of Engineering Centers, in which business helps colleges and universities provide engineering curricula.

But the use of advanced technologies is not a substitute for good faculty. Efforts need to be undertaken to increase the number and quality of faculty that are available to teach in high-demand fields. To accomplish this goal, I'd like to urge the Committee to consider authorizing a new program as part of Title IX that would provide scholarships and/or loan forgiveness for students enrolling in scientific or engineering schools at the graduate level.

I realize that the notion of scholarships targeted for use in specific fields of study is somewhat out of favor. But the idea has not been discredited. Allocating assistance for specific needs worked well in the early years of the National Defense Education Act, and similar measures may be needed to meet future challenges.

If such legislation were developed, I would favor targeting this aid on minority or disadvantaged individuals. Our faculty resources in the sciences are limited, as I have already discussed, but they are particularly weak in minority representation. (For example, I'm told that of the 1300 Ph.D's in computer science awarded in 1982, only two were black.) This discrepancy could be resolved by a new program patterned after the existing Assistance for Training in the Legal Profession (CLEO) program.

THE PROVISION OF ADEQUATE EQUIPMENT

The introduction of new technology in postsecondary education is agonizingly slow and lags far behind the pace of change that is occurring in business and industry. Right now, businesses—especially those involved in high technology—are on a two-to-four year innovation cycle and this cycle is shortening. Students who are leaving school, however, are taught on decade-old gear and have little exposure to new tools.

At Control Data we have tried to take a number of steps to address this very real problem.

We have invested substantially in the Micro-Electronics and Information Sciences Center (MEIS) at the University of Minnesota, and the Semi-Conductor Research Corporation (SRC) at Research Triangle in North Carolina. Both of these investments are designed to modernize and upgrade the education of undergraduate and graduate students in electrical and electronic engineering, materials science, and computer science.

We have also committed ourselves to the concept of supercomputer institutes throughout the United States to teach undergraduates and graduate students how to use the next generation of scientific and engineering computing machines. Programs along this line have already been proposed in Minnesota, Georgia, and Texas.

THE PROBLEM AT MINORITY INSTITUTIONS

Faculty shortages and obsolete equipment are especially severe problems at institutions with large minority enrollments. These schools do not have the resources to offer their students a sustained scientific and engineering program that will prepare them for today's increasingly technological job market.

It is my impression that the University of Minnesota is probably ten years behind where it should be in terms of providing its students with sufficient scientific and technological resources in some engineering areas. If that is the situation of the University of Minnesota, where does that leave the institutions without the types of resources and corporate support that Minnesota enjoys?

At Control Data, we recognize this problem and are trying to help. Recently we entered into an agreement with the National Science Foundation to provide Tuskegee Institute with a mainframe computer and PLATO equipment and instruction materials. Unlike many other donation plans, we extend royalties to participating institutions which develop new courseware which could be marketed by CDC.

Let me suggest that the reauthorization of title III might try to encourage this kind of shared resource approach for minority schools, as is suggested in the Chairman's bill.

Mr. Chairman, that concludes the formal part of my testimony. Let me emphasize again the urgent need for forming partnerships and fostering cooperation among educational institutions, business, labor and government to realize the enormous potential of advanced technology in postsecondary education.

I would be happy to answer any questions.

Mr. SIMON. Thank you, Mr. Bruning.

I have to say, first of all, as a general compliment to your parent corporation that every time I see anything that Control Data does and I meet Control Data personnel, I am just uniformly impressed.

Mr. BRUNING. Thank you.

Mr. SIMON. I really appreciate what you are doing.

I have one small item here. In your testimony, you mentioned there were 65,000 alumni of Control Data Institutes.

Mr. BRUNING. Yes, sir.

Mr. SIMON. How many of those are working?

Mr. BRUNING. I can't give you exact numbers, Mr. Chairman, but a substantial number. I am sure it is in the high 80's to 90 percent in the computer industry today. The placement rates of the Control Data Institutes in the most recent 6 months were in excess of 77 percent of recent graduates, and that trend is increasing now as the economy continues to strengthen.

The effect that those graduates have had on the computer industry is an interesting question, because they work for all companies, every company in the area of computer programming, computer engineering and technology.

Mr. SIMON. I somewhat proventially look at the State of Illinois, as each of tends to do in our respective areas.

Mr. BRUNING. Yes, sir.

Mr. SIMON. One of the things that I have noted is that the State of Illinois is a great center for higher education, but we have not

used that as a magnet to attract industry to the State of Illinois, with very few exceptions—Argonne and Fermi a little bit.

Mr. BRUNING. Yes, sir.

Mr. SIMON. It occurs to me as I listen to your testimony and read it that, if the universities in the State of Illinois—and I am sure this is applicable in other States—were able to keep on top of things, as far as equipment and retraining—and your point about retraining, I think, is a significant one—that could be a factor in attracting and keeping industry.

Mr. BRUNING. Yes, sir. I can give examples of that, Mr. Chairman.

Throughout the United States—and I think especially the Microelectronics and Computer Technology Consortium, MCC, the location within the State of Texas, was very, very heavily influenced by the University of Texas and its commitment to that cooperative research and development effort in the electronics industry.

Within the State of Illinois right now, Mr. Chairman, Control Data is actively working with an area economic development program, working with State officials, to try to combine the best elements of the higher education system and the State environment to encourage small business formation and job creation within the State. So Control Data has quite an interest in the State of Illinois.

Mr. SIMON. Good.

One final question before I turn it over to my colleagues. You mentioned your work in prisons. One of the realities is we have this massive problem in our country of adult illiteracy, 23 million as the most conservative estimate of functionally illiterate adult Americans. The majority of people in our prisons are functionally illiterate. Have you, with all the creative genius of your company, taken a look at this whole question of—I assume the prison programs you are talking about are more training people to be computer operators and that sort of thing.

Mr. BRUNING. No, sir.

Mr. SIMON. Are you talking about basic education?

Mr. BRUNING. No, sir, Mr. Chairman. Our program is comprehensive and, for over a decade, Control Data has been involved with the question of functional illiteracy among prisoners and recidivism. We believe there are direct correlations between that. If offenders can be taught to read and write and possess the basic skills necessary to do useful work, then they can be taught to do useful work and the recidivism rate should subsequently be reduced considerably.

The programs with PLATO are most often oriented to basic skills, teaching the prisoners to read and write, so that they can then have some kind of vocational training.

We have elevated that to the vocational training level in the Stillwater Prison in the State of Minnesota, at Leavenworth, and at some other institutions. We find a good deal of excitement among State corrections officials about these programs. We detect across America a growing interest by the private sector to become involved to help solve this problem—and the problem must be solved.

So we are very supportive of your section in this bill.

Mr. SIMON. I thank you for that.

Has anyone in your company, or anyone in the American Penology Association—whatever they call themselves—done a study of recidivism and what has happened to the difference between those who have been trained and those who haven't and what happens?

Mr. BRUNING. I don't have such information, but we would be happy to make available to the committee whatever we have.

Mr. SIMON. I would be interested in that.

Mr. BRUNING. I will see that that is sent to you.

Mr. SIMON. I would like it entered in the record. I also would like to personally see it.

Mr. Gunderson.

Mr. GUNDERSON. Thank you very much, Mr. Chairman.

Thank you, Mr. Bruning, for your testimony.

First of all, you talk a lot about the partnerships between business, industry, and Government. What exactly would you suggest for the Federal role as incentives to promote these kinds of partnerships and training?

Mr. BRUNING. Mr. Gunderson, I think that, under the FIPSE section of the legislation, there is authority to go ahead and try some things in terms of building retraining programs.

But it may be better to have some special development projects, as I suggested. What has to happen is the right combination of business and universities have to come together with a common interest, and that common interest is generally regional, a region in trouble, industry changing, and all of those things you read about every day and we see in our economy. And you have to find a group of leaders who want to attack that problem as a regional matter.

I think that the bill could incorporate some funding to try this in two or three locations in the United States, with planning money being the first step, but then the execution being a cooperative venture, regional, State and local moneys, some investment by the business, and the Federal Government helping with some aid to people who are out of work and who need to be retrained.

We can be more specific about that and give you some specific models that might be tried.

I would just offer this comment. In our experience at Control Data in working cooperatively with universities, you really have to desire to get it done. So often the programs you come forward with are not readily discernible as something that universities might get involved with. I can say that having been on both sides of the desk. But we believe it is very important, especially in the high technology areas, to have university faculty and programs involved in such a way that the training is a bit more vocational than universities would normally get involved with.

Mr. GUNDERSON. Are you looking at big dollars or just pilot projects?

Mr. BRUNING. I would hesitate, Mr. Gunderson, to give you a limit at this point, but I think we are talking about several million dollars to try this in several regions.

There are educational technology opportunities to leverage these dollars today using systems like PLATO, our company's system, and there are other computer-based education systems available. You get a good deal more bang for the buck now, if I may—consist-

ency in retraining programs by putting together things with computer-based education.

Mr. GUNDERSON. You indicate on page 4 of your testimony, that, "It may be that the student aid structure simply cannot and should not accommodate these retraining needs. Perhaps a different system of aid should be instituted to serve older individuals."

Mr. BRUNING. Yes, sir.

Mr. GUNDERSON. I think the greatest challenge we face in this reauthorization is coming up with some kind of a means to deal with the nontraditional student, that tests the new area—that is what we need to change.

Mr. BRUNING. Yes, sir.

Mr. GUNDERSON. I am interested in your comments. I would be interested as to why you believe the present structure cannot, and particularly should not, serve these needs?

Mr. BRUNING. Mr. Gunderson, I think the traditionally served student bodies of postsecondary institutions tend to use all the dollars that can be appropriated. I don't think all of the need is being met today. It is very difficult. There are so many students who are in need that another approach may have to be taken. I suggested this notion of a retraining account. There is a lot of debate about that right now across the country.

Some aspects of this do make sense. For example, Control Data is involved with one of the major automobile manufacturers in a training and retraining program. This was made possible because organized labor and the automobile manufacturer agreed that a portion of the contract settlement should, in effect, be set aside for training, because the company and the union both realized that things will change. This has opened up opportunities now to build retraining programs, and that is an alternative method of funding that doesn't come directly from an authorization and appropriation by Congress.

So some discussion and some creative thinking must be done there. The traditional needs are so great, it is just that putting more strain on that is probably going to be difficult.

Mr. GUNDERSON. My concern—I don't disagree with any new initiatives elsewhere, from industry, et cetera—but if we are looking at a change in the population where probably 25 percent of our college population is going to be nontraditional students, to suggest that there ought be no Government role to serve that 25 percent and that ought to all be taken care of by——

Mr. BRUNING. Mr. Gunderson, I am not suggesting that. There should be a role for Government. But I don't think that right now any of us are smart enough to see where that would go, so we ougth to try some things. We need to start some new initiatives.

I am not sure exactly, if my memory serves me right, what we all had in mind when the first Federal program started for student aid way back when, when I was a student. They turned out to be essential to the growth and development of this country and its economic system.

So we are facing that now with retraining. It is upon us. The formula isn't worked out. My only suggestion is that this committee, in coordination with other committees of the Congress, take a hard look at something like a retraining account or some relationship

that might occur with organized labor. Some creative thinking has to occur now. Ten years from now, I think it might be too late.

Mr. GUNDERSON. Thank you, Mr. Chairman.

Mr. SIMON. Mr. Penny.

Mr. PENNY. Thank you, Mr. Chairman.

Dr. Bruning, in following the same line of questioning started by Mr. Gunderson, I would like to learn from you how most of your employees, the nontraditional students, are financing their education? What kind of resources are they turning to?

Mr. BRUNING. Mr. Penny, it is a combination of things. Control Data does assist its employees to take courses in colleges and universities within whatever regions we operate. But that is not really the major program.

The major program is one that we have to run and direct ourselves in terms of retraining the people to move into new areas of the rapidly changing computer business. As I indicated in the testimony, we are finding it somewhat difficult, in the area of engineering especially, for us to do the entire thing. We need help, and we have been somewhat unsuccessful in encouraging higher educational institutions to cooperate with us.

Now, that varies across the country, and there are some notable exceptions, which encourage us to promote the cooperation model.

But the short answer to your question is we basically pay for it ourselves, do it ourselves and, in some cases, the employees themselves do invest in their own future and spend their own time and money.

Mr. PENNY. The Plus Loan Program is one that would be available to nontraditional students. Is that an attractive alternative?

Mr. BRUNING. Mr. Penny, I don't know. I am not that familiar with the program. I couldn't comment.

Mr. PENNY. It carries a higher interest rate than the GSL. It is not a needs-based kind of loan program and requires an immediate repayment schedule

Mr. BRUNING. I think, Mr. Penny, for those people who are employed, that is a possibility. But retraining in the broadest sense has to include those dislocated workers, and then I think you have a problem there where you need more direct benefit, direct aid, with deferred repayment.

Mr. PENNY. Your comments about a retraining account similar to the IRA, would you envision that being rolled together in the same account, and then the Government authorizing two purposes for those funds: One, retraining, if you need it; but otherwise, it is reserved for your retirement?

Mr. BRUNING. Mr. Penny, there is some discussion about that. I am aware of it. I think the difficulty is many workers don't have individual retirement accounts, so you have a problem connecting the two.

I think the programs might be administered similarly, and may come together at the point of retirement for a worker. That is, any residual in a retraining account might be applied to retirement. But I don't think they could be merged. I haven't thought that through clearly, I admit.

But, again, my suggestion is that the discussion should start now, and those hard questions have to be addressed.

Mr. PENNY. I would like to back up and ask just a little bit about on-the-job training programs.

The Job Training Partnership Act, as you indicated, does a good job of coordinating technical training and on-the-job training between our junior colleges and vocational schools and industry. I know this is a relatively new development, and maybe we haven't had in effect long enough for you to make any careful analysis of how it is working, but what is your idea of how that is going to play out?

Mr. BRUNING. Mr. Penny, I think that is going to succeed. The major difficulty with JTPA right now is the local PIC's understanding the regulations and getting moving with it. We participate in that training market and, indeed, support the legislation. I am optimistic about it. We work closely with community colleges and vocational schools in many regions of the country. So I support that strongly to continue with that.

I think you have to connect, in some cases, basic skills training and training education through high school equivalency with a vocational program, and those schools are the obvious places to connect. I support that.

Mr. PENNY. Lastly, Mr. Bruning, in meeting the equipment needs of our higher education institutions, is there something more we can do to build a partnership with private industry in responding to the needs in that regard?

Mr. BRUNING. Yes, sir, Mr. Penny. Control Data and other companies have had considerable experience with this. Some joint relationship should be more formally defined. Obviously, companies who donate equipment to universities receive some favorable tax treatment on that, but to encourage this interaction, I think there has to be more of a public policy statement by the Congress, in some sense to target what needs to be done.

I realize, as I said in the testimony, that targeting is a difficult concept, because once you start it and you produce what you need, it is hard to turn it off and back up, and you may indeed produce a surplus of people with that kind of training. But, nevertheless, in our economy, there develop shortages which could create long-term problems.

So I, again, would favor some sort of perhaps special projects in the legislation that would bring companies and universities together to encourage the placement of equipment which represents current state-of-the-art knowledge in that industry. One of the more difficult problems is graduates coming to us from today's institutions who have to be basically trained on the job immediately upon hiring for 6 months to a year to become familiar with the techniques industry is involved with. It is a very difficult problem.

Mr. PENNY. Thank you, Mr. Chairman. I have no further questions.

Mr. SIMON. If I could just ask two very, very brief questions.

Mr. BRUNING. Yes, sir.

Mr. SIMON. What does it cost to go to Control Data Institute?

Mr. BRUNING. The program, depending on the course of study, is about $6,000. Now, it takes from 6 to 7 months to go through that program. It is individualized and self-paced, so it varies according to the student.

Mr. SIMON. So the increases we are proposing in the Pell grants and in the GSL would be of assistance?

Mr. BRUNING. Yes, sir. Most of our students cannot finance their education solely with Federal or State assistance; they must find private sources, loans from banks, and what have you.

Mr. SIMON. Then one final question. You deal with the schools of engineering and the various universities. What are you finding on the quality of faculty?

Mr. BRUNING. Mr. Chairman, that is a very difficult situation. We see a deterioration in the engineering schools, by and large, faculty being hired into industry and the salary differentials are very large right now in the high-demand areas. We must do something to train more people so that there is a little better supply.

Major institutions in this country, which you and I would think would be fine institutions, if you look at individual departments, and computer science in particular, they are struggling, really struggling. If there is anything that could be done in this bill to help that situation, it would benefit the whole country.

Mr. SIMON. Dr. Bruning, we really appreciate your being here. You have been an excellent witness here.

Mr. BRUNING. Thank you. I appreciate the opportunity.

Mr. SIMON. Thank you.

Next we will have a panel with Representative Wilhelmina Delco, Dr. Joseph Cronin, Dr. Eleanor McMahon, and Dr. John Corrozzi.

To introduce our first witness, I am going to call on my colleague who is visiting us, Representative J. Pickle, who manages—I must tell you, Representative Delco—he manages to just get by passing his bills. Yesterday, he passed one on the floor of the House 400 to 1 or something?

Mr. PICKLE. It was 410.

Mr. SIMON. It was 410 to 1. So you have a powerhouse introducing you here, Representative Delco.

Mr. PICKLE. Mr. Chairman, you are very kind, and I thank the committee for letting me introduce or present to you one of your first speakers of the panel, and to say to you personally how much we appreciate the leadership you give in the field of postsecondary education, and in the general functioning of the Education and Labor Committee. I think you are as strong a voice on that committee as anybody in all the Congress. We appreciate your leadership.

Wilhelmina Delco is our State representative, and has been in Austin for 10 years. She represents our city of Austin and that district, and she is now chairman of the committee on higher education.

Her husband is dean of Huston-Tillotson College—dean or vice president or both—and, together, they are strong forces in our city and in our State government. I don't know of anybody who is more highly respected than Wilhelmina Delco.

More than that, she is my good friend. I know personally that she has a deep interest in advancing the cause of education. So it gives me particular pleasure to present to you, Mr. Simon, Wilhelmina Delco, our State representative-Austin.

I thank you.

Mr. SIMON. I hate to say this, but the other three of you are not going to get such generous introductions here. [Laughter.]

STATEMENT OF HON. WILHELMINA DELCO, CHAIR, COMMITTEE ON HIGHER EDUCATION, TEXAS HOUSE OF REPRESENTATIVES

Ms. DELCO. But, Mr. Chairman, they are not holding public office. I think that part of that consideration is the fact that Congressman Pickle runs unopposed each time, and it is because of actions like that that he enjoys that status in the Congress.

I say that because I am also running unopposed, so I understand how that works.

Mr. SIMON. That is how he gets his bills through 410 to 1, too.

Ms. DELCO. Exactly.

I am particularly pleased to be represented by Congressman Pickle in the Congress of the United States, because he is concerned with an area that is near and dear to all of us as we approach our older years, and that is the whole dilemma of Social Security, so I am delighted that he is up here.

I would also like to take this opportunity to congratulate you, Congressman Simon. We are going to hate to see you leave the House of Representatives with all of the leadership you have brought us there, but we are fervently hoping that you will carry that strong voice and commitment to the Senate successfully in November.

Mr. SIMON. I share that hope with you.

Ms. DELCO. I would like to thank the subcommittee and you, Congressman Simon, for extending this invitation to me to testify on the reauthorization of the Higher Education Act. I have chosen to speak specifically to the importance of this country's historically black institutions of higher education and the impact of the proposed changes to the act upon them.

But I would like to first comment upon what I view is the most critical problem area that is facing higher education today, problems which I feel are being addressed in a most admirable and comprehensive way by this subcommittee's proposal. The subcommittee, its chairman, and staff are to be commended for their work.

As this year's graduating college seniors struggle to find jobs in a tight market, students entering and returning to campus in the fall will face financial problems of their own, the ever-soaring costs of education, which has to be the most critical problem.

In comparison with recent years, 1982-83 higher education operation appropriations show a shrinking of current dollar increases nationwide. The national rate is down by 4 percent. As a percent of State taxes, higher education appropriations peaked in 1975 and 1976, and have steadily declined since this period.

In the area of tuition and fees, institutions, public and private, because of the soaring costs of education, are now being forced to shift more of the burden of the cost of providing an education to the student. The average increase in fees and tuition is running at 10 percent to 15 percent nationwide among public and private institutions.

The schools most at risk are the smaller, less prominent private colleges, where higher tuition and fees will result in potential stu-

dents turning to the low-cost public schools for their higher education. Especially at risk here are the private historically black institutions, whose students increasingly must depend upon financial aid for their education. Approximately 70 to 95 percent of all the students in historically black colleges are on some kind of financial aid.

According to an economic analysis by the American Association of University Professors, the increases in faculty salaries, measured in current dollars, during the decade of the 1970's left actual faculty salaries nearly 21 percent below the 1970–71 real dollar level of salaries; from 1976–77 to 1981–82, faculty salaries, in real dollars, fell by almost 12 percent.

Recent enrollment data show that part-time students are enrolling in greater numbers than full-time students. Therefore, increasing tuition in fees, ever-increasing educational costs, shrinking State and Federal appropriations in the areas of student entitlement, grants and research, and slowing or static enrollment all contribute to a desperate situation for our colleges and universities, but also to a golden opportunity for action by those responsible for developing and enacting policy, such as your legislation under consideration today.

We are all aware of the current financial plight of most of our institutions of higher education, as well as the projected enrollment drop. For State financing, the National Governors Association last May issued a report which states that State financial reserves for 1983 were below 1 percent, as contrasted with a desired 5 percent, and that, in 1984, most States would be suffering a financial fiscal deficit.

In addition to the problems related to finance and enrollment at our higher education institutions, other areas have been cited as in need of serious attention. For example, competency testing of teachers and education majors have demonstrated that both are, in general, below desirable standards in the basic skills. Buildings on our college and university campuses are deteriorating as a result of the suspension of needed maintenance, renovation of existing facilities and construction of new facilities due to declining revenues and slowing enrollment growth. Equipment in laboratories, classrooms and offices is rapidly becoming obsolete.

I was particularly heartened by the previous testimony with the impact of business being concerned in that.

I was very heartened by the proposals offered in your bill, and I will not go into those in the interest of saving time. But I would like to again emphasize how important I believe all of those provisions are.

I would like to devote the remainder of my time to the historically black colleges and the plight that they face.

Beginning in 1830 all the way through the 1890's, almost 100 institutions of higher education were established to meet the educational demands of black people emerging from slavery in this country. I am proud to be a graduate of one of these institutions, Fisk University in Nashville, TN. And it is a clear demonstration of the plight we face, because it is truly an institution at risk, and your proposals will be of immeasurable value to that institution.

Financial support for colleges that are historically black have been developed over the years, both from private sources and from public sources. Significant in the public source model is the one that was established for developing industrial education by the enactment of Congress of the Morrill Acts in 1862 and 1890.

It must be stated that, even though black colleges benefited from these acts, the driving force behind them was not so much a concern for educating the former slaves as it was a need to increase the country's productivity in agriculture and farm goods and to educate a basically agrarian population as the country expanded westward. In order to meet this need, some State legislatures, such as Texas in 1876, provided for a constitutional branch university for colored youths. Thus, for whatever reasons, black colleges have been, through the Phelps-Stokes Fund, the Peabody Fund, the Slater Foundation and the Morrill Acts, both publicly and privately supported.

In recent years, however, there has been an assault on the very existence of black colleges, particularly those publicly supported. They were deliberately created to be different from other colleges and, yet, ironically, they are now being penalized financially for not being like other State-supported schools. Under the guise of desegregation, some people are advocating a change of the ethnic orientation of the black college because of a distorted view of the goal of desegregation. Government actions to reverse the consequences of centuries of legally imposed racial segregation must not be used as a pretext to change the role, scope and missions of these institutions.

The end result of desegregation is not for blacks to be with whites, or to create an inferiority complex in blacks or a superiority complex in whites. The goal of desegregation should be to provide equal access to all, so that institutions, facilities and activities predominated by one racial group carry no inherent stigma of advantage or disadvantage. In other words, desegregation should allow anyone and everyone to participate equally and fully in the mainstream of American life.

Despite this goal of desegregation, there are others who still urge the death of the black colleges because of an alleged failure to produce graduates capable of successfully competing with graduates of other schools.

In my testimony, I have given you some statistical information, and I will not repeat that, except to highlight a few of the instances that I think make the point.

Meharry Medical College and Howard University produced about 85 percent of the black physicians in this country. Black colleges have graduated about 75 percent of all of the black Ph.D.'s, 75 percent of all black Army officers, and 80 percent of all black Federal judges.

In fact, in 1979, the National Advisory Committee on Black Higher Education and Black Colleges and Universities stated that, during the past 10 years, some 87 historically black colleges had graduated more black students with baccalaureate degrees than all of the other American higher education institutions combined.

I would just like to add here my support for your education programs in prison, because Texas has the largest prison system in the

free world. With that in mind, the fact that the recidivism is reduced when prisoners have at least 2 years of college work, it is particularly important to recognize how many of our people would be affected by a good program of education in the prison system.

White colleges and universities with better and larger facilities and greater financial resources have graduated an embarrassingly small number of black students.

Despite the failure of my own State of Texas to grant Prarie View A&M, its black land grant college, its fair share of constitutionally dedicated endowment fund, this school has done an outstanding job, even with underfunding and severely inadequate facilities and equipment. By 1981, all of its academic programs were fully accredited, and it had graduated more black engineers than any of the Nation's 307 colleges and universities offering engineering degrees. It had also graduated more than 50 percent of the blacks currently enrolled in medical and dental schools in Texas, and approximately 70 percent of the black registered nurses in Texas. This was all accomplished, even though the State only spends about $2,269 per student at Prairie View, compared with $3,327 at its parent institution, Texas A&M University. Prairie View's endowment is $10,000 and A&M is $474 million.

Other discrepancies in public funding of black and white colleges in Texas can be shown with examples of Texas Southern University and the University of Houston, institutions that are approximately eight blocks apart.

The State only spends about $2,812 on each student at Texas Southern—which, incidentally, has no endowment—in contrast, the University of Houston did not even join the State system until 1963, yet, the State spends about $3,501 on each of its students, with an endowment at that university of $15.7 million.

These obvious disparities between State-supported black and white colleges certainly account for the difference in their performance. Accordingly, with more equitable funding, these differences can be eliminated, and the State of Texas has made a valiant effort to increase their progress over the last 2 years in working toward narrowing these differences.

As with any institution of higher education, the black college must pursue academic excellence and develop in its students the ability of critical thinking. The black college, however, also has a unique mission to take youth from disadvantaged backgrounds and instill in them self-pride and self-worth. This mission must be met because the public school systems continue to graduate high school students as being qualified to handle college-level work; however, upon entering college, a significant number of these students become disappointed when they discover that they need remedial courses. In such a context, the black college provide an atmosphere with encouragement and without intimidation and alienation so that intellect can be developed and nourished and learning stimulated. It must finally graduate persons whose undergraduate education has removed educational handicaps and allows them to compete on a level with college graduates from around the Nation.

The black college is also a historical national resource. In the past 25 years, they have produced close to one-half of a million graduates, and continue to turn out approximately 34,000 gradu-

ates a year. They enrolled about 230,000 students. While more than 70 percent of black college youth are enrolled in white colleges, only about 40 percent of those black college youth graduate from white colleges.

About 50 percent of the blacks enrolled in Texas colleges are enrolled in predominantly black institutions. Texas A&M, the University of Houston, and the University of Texas at Austin have only about 2.6 of their enrollment black. Since blacks make up 12.7 percent of the State's population, public higher education in Texas is running a deficit of at least 10.1 percent with respect to black students graduating from white schools.

As national and State assets, black colleges need national and State support. Black colleges must live because they represent the image of black people in education. If they do not survive, this image is erased. These institutions have also consistently impressed upon their graduates a duty of civic participation. As such, it is no surprise that the majority of black leaders are graduates of historically black colleges.

Black and white colleges complement each other, and both make unique and different contributions to this country. The focus of the differences is a matter of history, emphasis, philosophy, orientation, and mission. Thus, Prairie View, Texas Southern, and Huston-Tillotson College in Austin are black only in the sense that Texas A&M, the University of Houston, and the University of Texas are white, and they both operate within a certain historical and cultural context.

It is important to recognize, even as the previous speaker talked about the contributions of industry into the development of economic growth in this country, and specifically mentioned MCC, the Micro-Computer Consortium, which is in Austin, Huston-Tillotson College, which is also in Austin, does not participate in this consortium.

Every college cannot be a University of Texas, a University of California or a University of Illinois. There should be a range of colleges. Black colleges must not be apologetic for their existence; they must operate as all colleges should to justify their existence. We must save black colleges, not only for the sake of an elected population and the potential development of that population, but for the future economic growth of our communities and our country.

I apologize for having to leave you before this panel is completed, but I am to host a reception in Houston tonight for the National Conference on Excellence in Education for Economic Growth, at which we regretfully accept Congressman Simon's absence.

It is my pleasure to appear before you today. I thank you for the invitation. I will be glad to answer any questions.

[Prepared statement of Wilhelmina Delco follows:]

PREPARED STATEMENT OF HON. WILHELMINA DELCO, CHAIR, COMMITTEE ON HIGHER EDUCATION, TEXAS HOUSE OF REPRESENTATIVES

I would like to thank the subcommittee and its chairman, Congressman Paul Simon, for extending its invitation to me to testify on the Reauthorization of the Higher Education Act of 1965. I have been asked to speak specifically to the importance of this country's historically black institutions of higher education and the impact of the proposed changes to the act upon them. I would first like to comment

upon what I view as the most crucial problem areas facing higher education today—problem areas which I feel are addressed in the most admirable and comprehensive way by the subcommittee's proposal. The subcommittee, its chairman, and staf. are to be commended for their work.

As this year's college seniors will struggle to find jobs in a tight market, students entering and returning to campus in the fall will face financial problems of their own—the ever soaring costs of education.

In comparison with recent years, 1982-83 higher educational operation appropriations show a shrinking of current dollar increases nation-wide. The national rate is down by 4%. As a percent of State Taxes, higher education appropriations peaked in 1975-76 and have steadily declined since this period.

In the area of tuition and fees, institutions, public and private, because of the soaring costs of education, are now being forced to shift more of the burden of the cost of providing an education to the student. The average increase in tuition and fees is running at 10%—15% nation-wide among public and private institutions. Next year the total bill (tuition, room, board, and fees) for one year at a private college is expected to jump as much as 12%, from an average of $7,475 to more than $8,300; the average cost of attending a public institution of higher education may rise from $4,388 to $4,800. The schools most at risk are the smaller, less prominent private colleges, where higher tuition and fees will result in potential students turning to the lower cost public schools for their higher education. Especially at risk here are the private historically black institutions.

In the area of faculty salaries, the academic community has been much concerned about the erosion of faculty salaries by inflation. According to an economic analysis by the American Association of University Professors, the increases in faculty salaries (measured in current dollars) during the decade of the seventies left faculty salaries nearly 21% below the 1970-71 real dollar level of salaries; from 1976-77 to 1981-82, faculty salaries—in real dollars—fell by almost 12%.

Economic realities, educational trends, and preceptions of the future affect students and their preferences in higher education. Recent enrollment data show that part-time students are enrolling in greater numbers than full-time students. Enrollment at public four-year institutions, which are usually attended by traditional, 18 to 24 year old, full-time students, is growing at a much slower rate than at other types of institutions, and in many cases is static. Furthermore, recent trends indicate that the growth of black enrollment is slowing.

Increasing tutition and fees, ever increasing educational costs, shrinking State and Federal appropriations in the areas of student entitlement grants and research, and slowing or static enrollment all contribute to a desperate situation for our colleges and universities, but also to a golden opportunity for action by those responsible for developing and enacting policy, such as the legislation under consideration today.

We are all aware of the current financing plight of most of our institutions of higher education, as well as the projected drop. For State financing, the National Governors Association, last May, issued a report which states that State finanical reserves for 1983 were below 1%, as contrasted with a desired 5%, and that in 1984 States would be suffering a deficit.

In addition to the problems related to finance and enrollment at our higher education institutions, other areas have been cited as in need of serious attention. For example, competency testing of teachers and education majors have demonstrated that both are, in general, below desirable standards in the basic skills. Buildings on our college and university campuses are deteriorating as a result of the suspension of needed maintenance, renovation of existing facilities and construction of new facilities due to decliining revenues and slowing enrollment growth. Equipment in laboratories, classrooms, and offices is rapidly becoming obsolete.

In examining the subcommittee's document and the background material, I was especially heartened by the proposed changes regarding teacher education and professional development; in the area of student financial aid, the modifications of the trio programs, the special allowance and the elimination of the original fee in the GSL Program, the cost containment and the concept of rewarding institutions that maintain low tuition and fees, combining the SEO6, NDSL, and the SS16 Programs in one campus-based block grant, and the modification of the "half-cost" provision for Pell grants, along with making the Pell grants an entitlement program; and the establishment of a separate new black college and university act. I wholeheartedly endorse the subcommittee's legislation as the most inclusive of the proposals to reauthorize the Higher Education Act and hope that most, if not all, of its provisions are passed into law.

Now, my thoughts on the importance of our historically black colleges and universities, all of which would benefit most from your reauthorization proposal.

The first black colleges in America were founded in the North. Cheyney State College was established in 1830 in Philadelphia, Pennsylvania, as an elementary and high school. Lincoln University was established in 1854 by a white Presbyterian minister under the name of Ashmun Institute, and in 1866 became the first American college to be named after President Abraham Lincoln. Wilberforce University, established in 1856, is the first predominantly black college organized by blacks. Organized efforts for educating blacks were not, however, limited to the North; similar efforts were made in the South at the start of the Civil War, and the need for these institutions became quite apparent after the war had ended.

At that time, there were about four million black people in the United States, and about twenty-eight of them had a college education. The missionaries who primarily organized these efforts recognized that, in order to participate in American society and be prepared for their roles as new citizens, the former slave population needed to be educated. Accordingly, between 1865 and 1900, a significant number of predominantly black colleges were established--Fisk University in 1866, Morehouse College in 1867, Prairie View in 1876, among others. As these colleges developed, disagreement centered on whether they should be based upon the industrial or liberal arts models of education. Financial support for these colleges therefore came from those entities which supported one or both of these models. For example, a significant amount of financial assistance came from such foundations as the General Education Board, the Peabody Fund, the Slater Foundation, and the Phelps-Stokes Fund. In support of the industrial model, Congress enacted the Morrill acts of 1862 and 1890, which provided training for both blacks and whites. The driving force behind both of these acts, however, was not so much a concern for educating the former slaves as it was the need to increase the country's productivity in agriculture and farm goods and to educate a basically agrarian population as the country expanded westward. In order to meet this need, some State legislatures, such as Texas in 1876, provided for a constitutional branch university for colored youths. Thus, for whatever reasons, black colleges were both publicly and privately supported.

In recent years there has been an assault on the very existence of the black college. Yet black colleges, particularly those publicly supported, were deliberately created to be different from other colleges: as noted in the subcommittee's background material, they are ironically penalized financially for not being like other State-supported schools. Under the guise of desegregation, some are advocating a change of the ethnic orientation of the black college because of a distorted view of the goal of desegregation. But Government actions to reverse the consequences of centuries of legally imposed racial segregation must not be used as a pretext to change these institutions.

The end result of desegregation is not for blacks to be with whites, or to create an inferiority complex in blacks or a superiority complex in whites. Nor does desegregation aim at abolishing black institutions built and established with the minds and sweat of black people. As such, this understanding of desegregation is not counter to those arguments made successfully in the 1940's, 1950's, and 1960's on behalf of desegregation; because they were made on behalf of the equal opportunity to associate in classrooms, on campuses, and in other settings.

The goal of desegregation should be to provide equal access to all, so that institutions, facilities, and activities predominated by one racial group carry no inherent stigma of advantage or disadvantage. In other words, desegregation should allow anyone and everyone to participate equally and fully in the mainstream of American life.

Despite the goal of desegregation, there are others who still urge the death of the black colleges because of an alleged failure to produce graduates capable of successfully competing with graduates of other schools. In the first place, history does not bear this out. For example, the national census in 1900 showed and impressive accomplishment within a 36-year period after the black college came on the scene. By that year, there were 21,268 black teachers, 15,530 black ministers, and 1,734 black physicians and surgeons. More recently in 1980, of the 300,000 physicians in the United States, fewer than 2% were black. The latter figure is a distrubing revelation since desegregation has been judicially required since 1954, although Meharry Medical College and Howard University have produced about 85% of the black physicians. Furthermore, black colleges have graduated about 75% of all black Ph.D.'s, 75% of all black army officers, and 80% of all black Federal judges. In fact, in 1979, the National Advisory Committee on Black Higher Education and Black Colleges and Universities stated that, during the past ten years, some eighty-seven historical-

ly black colleges had graduated more black students with baccalaureate degrees than all of the other American higher education institutions combined. So it seems that colleges and universities have produced graduates capable of successfully competing with graduates of other schools, and there is a no doubt that they will continue to do so.

White colleges and universities with better and larger facilities and greater financial resources have graduated an embarrassingly small number of blacks. Accordingly, these figures regarding the black college are even more impressive when one considers what these institutions have accomplished with so little financial support. With more financial assistance, as proposed by this subcommittee, the black college can certainly do a better job.

One case demonstrates this point. In my own State of Texas, Prairie View A & M University was established in 1876 as one of three constitutionally dedicated institutions of higher education, along with the University of Texas and Texas A & M University. Prairie View A & M was established as the "Branch University for colored youth. Three years later, Prairie View A & M was authorized to receive funds from the constitutionally dedicated endowment established for the exclusive use of the three above named universities, the available university fund (AUF), and was again authorized by the State legislature in 1881 to participate in the fund. In 1882, however, the State Comptroller ruled that Prairie View A & M was not eligible to share in the AUF because it was not a legitimate constitutional university. In effect, this State official ruled that the legislature had not established a branch for colored youth. Despite the failure of the State to grant Prairie View A & M its fair share of the AUF, the school has done an outstanding job, even with underfunding and severely inadequate facilities and equipment. By 1981, all of its academic programs were fully accedited and it had graduated more black engineers than any of the Nation's 307 colleges and universities offering engineering degrees. It also had graduated more than 50% of the blacks currently enrolled at medical and dental schools in Texas, and approximately 70% of the black registered nurses in Texas are graduates of that university. This was all accomplished even though the State only spends about $2,269 per student at Prairie View compared with $3,327 at Texas A & M, with an endowment at Prairie View of $10,000 and at Texas A & M of $474 million. Interestingly, Prairie View has a student body of about 5,012, whereas Texas A & M has a student body of about 35,054, with only 300 black students.

Other discrepancies in public funding of black and white colleges in Texas can be shown with examples of Texas Southern University and the University of Houston. In 1947, with an initial appropriation of $3,350,000, including $350,000 for a law school to accommodate one black student, Heman Sweatt, Texas Southern University (TSU) was created specifically to keep blacks out of a State-supported white university. To date, TSU is not a part of the Texas A & M University or the University of Texas system and receives the majority of its funds from the State legislature. In fact, the State only spends about $2,812 on each student at Texas Southern University, which, incidentally, has no endowment. In contrast, the University of Houston did not join the State system until 1963, yet the State spends about $3,501 on each of its students, despite a university endowment of $15.7 million. By 1978, the University of Houston had received from the State legislature $141.5 million for buildings, compared to $31.3 million that Texas Southern University has received since 1947.

These obvious disparities between State-supported black and white colleges certainly account for the difference in their performance. Accordingly, with more equitable funding, these differences can be eliminated, and the State of Texas has made progress over the last two years in working toward narrowing these differences.

It has been said that the only criterion for any institution's existence is whether or not it is making a unique contribution to society. The question is, therefore, what does the black college contribute to American society?

As with any institution of higher learning, the black college must pursue academic excellence and develop in its students the ability of critical thinking. The black college, however, also has a unique mission to take youth from disadvantaged backgrounds and instill in them self-pride and self-worth. This mission must be met because the public school systems continue to graduate high school students as being qualified to handle college-level work; however, upon entering college, a significant number of these students become disappointed when they discover that they need remedial courses. In such a context, the black college must provide an atmosphere with encouragement and without intimidation and alienation so that intellect can be developed and nourished, and learning stimulated. It must finally graduate persons whose undergraduate education has removed educational handicaps and allows them to compete on any level with college graduates from around the Nation.

The black college is also a critical national resource. In the past 25 years, they have produced close to one half of a million graduates and continue to turn out 34,000 graduates per year. They also enroll about 230,000 students. While more than 70% of black college youth are enrolled in while colleges, only about 40% of black college youth graduate from white colleges.

In light of the facts presented, black colleges in Texas are certainly making a meaningful contribution to society. Student enrollment in those institutions in 1983 was 17,000. About 50% of the blacks enrolled in Texas colleges are enrolled in predominantly black institutions. In contrast, out of 103,765 students enrolled at predominantly white Texas A&M University, University of Houston, and University of Texas at Austin, only about 2.6% are black. Since blacks make up 12.7% of the State's population, public higher education in Texas is running a deficit of at least 10.1% with respect to black students graduating from white schools. As national and State assets, black colleges need national and State support. I use Texas as an example because I am most familiar with my own State. However, as the subcommittee is certainly aware, the picture I have described here is essentially the same in all 50 States.

Black colleges must live because they represent the image of black people in education. If they do not survive, this image is erased. These institutions have also consistently impressed upon their graduates a duty of civic participation despite a century of segregation and continuing racial discrimination. As such, it is no surprise that the majority of black leaders have graduated from black colleges. Black colleges contribute to the vitality of America's inherent pluralism and diversity in higher education and enrich and enlarge educational opportunity. Within this context, these colleges have historically been centers of interracial and intercultural contact and understanding.

Black and white colleges complement each other and both make different and unique contributions. The focus of the difference is a matter of history, emphasis, philosophy, orientation, and mission. Thus, Prairie View, Texas Southern, and Huston-Tillotson are "black" only in the sense that Texas A&M, University of Houston, and University of Texas are "white" and operate within a certain historical and cultural context. The black college does make a unique positive contribution to American society; and because of these historical and cultural differences, and a deficit from white colleges in making available equal and adequate educational opportunities for the black populace, black colleges should continue to live.

Every college cannot be a University of Texas, a University of California or a University of Michigan; there should be a range of colleges. Black colleges must not be apologetic for their existence; they must operate as all colleges should to justify their existence. Based upon such proof, the black college must survive. As noted by the subcommittee, Dr. Benjamin E. Mays, president-emeritus of Morehouse College, has said, "If America allows black colleges to die, it will be the worst kind of discrimination and denigration known in history. To decree that colleges born to serve Negroes are not worthy of surviving now that white colleges accept Negroes would be a damnable act."

We must save the black college.

Mr. SIMON. We thank you very much for being here.

Let me just add that you are correct; your alma mater, Fisk University, faces problems, but there are a lot of others that are close to that.

Ms. DELCO. Absolutely.

Mr. SIMON. What we have tried to design in this bill is something that can be of significance to these institutions, as well as to the students of this Nation.

I think we better just go ahead, rather than proceed on with questions here. We understand your having to leave the panel.

Ms. DELCO. OK. Thank you very much.

I would like to say that, particularly in your section on black colleges, I think it is important to identify the reasons for this institutions, and we especially appreciate the emphasis that you are giving to the need of black colleges.

Mr. SIMON. I would just add that the section on endowment also can be extremely important to some of the schools, two of them

you mentioned—one with a $10,000 endowment, and the other with none.

Ms. DELCO. That was exactly the reason I mentioned them, Congressman, because black colleges have historically been shoestring operations, as you probably know. They survived after the Reconstruction era by taking up collections on Sunday morning. If it had not been for the religious community support, they would not have been able to survive.

I will make one other general statement, and that is that if black colleges had not existed, black people probably would have been reenslaved after Reconstruction beause they were the only force that kept a sense of community and a sense of support and a sense of worth in the black community.

Mr. SIMON. Thank you very, very much again for testifying.

Ms. DELCO. My pleasure.

Mr. SIMON. Commissioner Eleanor McMahon, the commissioner of higher education for the State of Rhode Island.

STATEMENT OF ELEANOR M. McMAHON, COMMISSIONER OF HIGHER EDUCATION, RHODE ISLAND

Ms. MCMAHON. Thank you, Congressman Simon and other members of the subcommittee. My name is Eleanor McMahon, and I am the commissioner of higher education for the State of Rhode Island. I very much appreciate your invitation to be here today.

I would note, Congressman Simon, our deep respect in regard for you in Rhode Island, and our gratitude for your extraordinary and continuing commitment to education, which we hope you will soon be exercising in a somewhat smaller forum.

In general terms, the proposals set forth in the concept paper distributed by you, and in the draft legislation subsequently sent out, our welcome indeed. First, the proposals represent a serious effort to introduce greater efficiency into the structure of the Federal effort to support higher education. Second, there is an obvious concern to improve equity by repeatedly assigning the highest priority to helping those institutions and those students who demonstrate the greatest need for special support. And third, but by no means least, the proposals put forth would mean a general increase in the amount of Federal dollars available to support higher education institutions during a period of increasing fiscal constraint.

This preoccupation with financial support is especially strong in the case of my own State, Rhode Island, where there are two factors operating to intensify the general problems which characterize all of American higher education. One is Rhode Island's unfavorable demographic situation, with a college-age population that is shrinking at one of the fastest rates in the Nation, and the inefficiencies that inevitably follow from that shrinkage. The second factor is the State's ratio of high tax effort to limited tax capacity and the limitations for the future inherent in that ratio. Rhode Island traditionally has been very generous to higher education, the most generous of the New England States, in terms of its tax capacity. But its ability to maintain that generosity is in jeopardy.

Since Rhode Island does have a higher education assistance authority with statutory responsibility for attending to matters relat-

ing to student financial aid, and since I know that you will be hearing today from the National Council of Higher Education Loan Programs, it would be inappropriate for me to comment in great detail on the suggested new title IV.

I would, however, note that, according to a recently published study by the college board, the real value of student aid from all sources has taken a dramatic drop of 21 percent since 1980. If we truly mean what we say about improving access to higher education for those whose economic circumstances are most limited, then that trend must not only be stopped, it must be reversed.

I endorse the continuation of the GSL Program, the restriction of GSL's to needy students alone, and an increase in the maximum loans to at least those levels recommended in the proposed new title IV. We must, however, shift the balance of loans and grants so as to favor the latter markedly, lest the prospect of a heavy burden of indebtedness for their further schooling lead many would-be first-generation college students to abandon their aspirations.

It has been said that the present generation of high school students will be the first in the history of this Nation to be less well educated than their parents. Failure to fund title IV adequately could guarantee that this grim prediction would become a reality, and the American dream would fade accordingly.

With respect to title III, I am pleased to see the effort to simplify a section of the law that many have found confusing. My only suggestion at this point concerns the provision for waivers from strict need-based criteria in determining which institutions are eligible to receive grants. The use of need-based criteria is a good idea, and the provision for waivers by the Secretary of Education under certain limited circumstances is an equally good idea.

I would, however, ask you to consider adding one more set of conditions under which the Secretary would be able to waive the usual criteria—namely, the authority to make grants when the applicant institution ranks at or only moderately above the average amount of student aid and the institution's proposal shows exceptional promise for developing a program that could be emulated with profit by other institutions of low or modest means or of producing knowledge that would be useful to other such institutions.

As one who has spent a substantial portion of my professional career working in or with teacher education programs, I am pleased to see a strong new title V on teacher training programs. Especially encouraging is the section that provides resources to establish school/college partnerships.

Two years ago, Rhode Island set up a joint committee on school and college articulation, and its first of five recommendations dealt with improving communication between secondary and postsecondary personnel. As a matter of fact, last night, we had a meeting at which 400 members of college faculties and the secondary schools of our State, 92 percent of whom were represented, met to discuss this whole problem of articulation across the secondary and postsecondary lines. The school/college partnership provision of title V should prove to be a great boon in our continuing efforts to devise suitable means of implementing that critical recommendation.

I do have one major concern regarding Perkins scholarships proposed for title V, and that relates to the capacity of a State to do

its share in implementing such a program without being given the resources to do so in the form of an adequate level of administrative support. In any agency such as the one that I direct, which already has a very wide range of responsibilities and a professional staff that totals 15, that is a particularly important consideration, and the lack of language specifying that a reasonable portion of a State's grant may be used for administrative purposes in connection with activities approved in the grant proposal is a serious omission.

The proposed new title VI, as described in the concept paper, is commendable in making international education a national priority. For all kinds of reasons, both humanitarian and those stemming from enlightened self-interest, and almost all of them too obvious to need explication, we must work harder at communicating better with our fellow members of the global village, and this title promises to make that tax a little easier.

I especially applaud the business and international education program designed to promote the linkages between institutions of higher education and the American business community engaged in international economic activity.

I want to state my emphatic support for the proposed new title VII. Though all of the help it would provide would be most welcome, that is especially true of the grants it would make available for purchasing laboratory and instructional equipment. Primarily through the Strategic Development Commission in Rhode Island, created in response to the recommendations of the New England Board of Higher Education, as to the critical link between the health of higher education and the health of the economy, several important steps have been taken in Rhode Island to force a strong partnership between higher education and the business/industrial community in the interest of developing the State's economy, and the type of assistance envisioned in the Federal act would be instrumental to our institutions in carrying out their responsibility in that partnership.

We have, as a matter of fact, before the Rhode Island Legislature in this session a kind of baby Morrill Act, which would provide corporate tax credits for gifts of equipment for support of faculty chairs and for support of programs in the technology and scientific areas.

I heartily endorse the initiative in support of spreading cooperative education. My observations of that concept in practice have been very positive. Not only does cooperative education strengthen the ties between business and education and provide students with an invaluable opportunity to learn with little risk about careers in which they are interested, but it also gives students the best kind of feedback possible—the reactions of supervisors, colleagues, customers and clients—to their mastery not only of professional skills, but also of communication and other general education skills.

I also strongly support the emphasis of the reauthorization bill on graduate education with its expanded support through title IX and other titles for graduate schools, graduate students, and research libraries—all defined by the Rhode Island Strategic Development Commission as critical to the State's future economic development.

I would note here a complementary proposal presently before the Rhode Island Legislature which would create research greenhouses, based on the research being done at Brown University and the University of Rhode Island, with the goal of accelerating the transfer of basic research to the applied stage and to product development and spinoff industries.

Over the years FIPSE has been a great help to higher education in advancing the state of our art, and I am pleased to see its extension included in your proposal as title X.

Finally, the idea of providing endowment money to those institutions that are a hand-to-mouth existence, or close it, is an inspired one, and I, therefore, applaud the inclusion of title XII as an imaginative stroke.

Again, Mr. Chairman, I thank you for inviting me to express my views here today, and I would be happy to answer any questions you might have.

Mr. SIMON. Thank you very much.

[Prepared statement of Eleanor McMahon follows:]

PREPARED STATEMENT OF ELEANOR M. MCMAHON, RHODE ISLAND COMMISSIONER OF HIGHER EDUCATION

Congressman Simon and other members of the Subcommittee on Postsecondary Education: My name is Eleanor McMahon, and I am the Commissioner of Higher Education for the State of Rhode Island. I appreciate very much your invitation to be here today.

In general terms, the proposals set forth in the concept paper distributed by Congressman Simon and in the draft legislation subsequently sent out look welcome indeed. First, the proposals represent a serious effort to introduce greater efficiency into the structure of the federal effort to support higher education. Second, there is an obvious concern to improve equity by repeatedly assigning the highest priority to helping those institutions and those students who demonstrate the greatest need for special support. And third, but by no means least, the proposals put forth would mean a general increase in the amount of federal dollars available to support higher education institutions during a period of increasing fiscal stringency.

This preoccupation with financial support is especially strong in the case of my own state, Rhode Island, where there are two factors operating to intensify the general problems which characterize all of American higher education. One is Rhode Island's unfavorable demographic situation, with a college-age population that is shrinking at one of the fastest rates in the nation and the inefficiencies that inevitably follow. The second factor is the state's ratio of high tax effort to limited tax capacity.

Since Rhode Island does have a Higher Education Assistance Authority with statutory responsibility for attending to matters relating to student financial aid, and since I know that you will be hearing today from the National Council of Higher Education Loan Programs, it would be inappropriate for me to comment in great detail on the suggested new Title IV. I would, however, note that according to a recently published study by the College Board, the real value of student aid from all sources has taken a dramatic drop of 21% since 1980. If we truly mean what we say about improving access to higher education for those whose economic circumstances are most limited, then that trend must not only be stopped—it must be reversed. I endorse the continuation of the GSL program, the restriction of GSLs to needy students alone, and an increase in the maximum loans to at least those levels recommended in the proposed new Title IV. We must, however, shift the balance of loans and grants so as to favor the latter markedly lest the prospect of a heavy burden of indebtedness for their further schooling lead many would-be first-generation college students to abandon their aspirations. It has been said that the present generation of high school students will be the first in the history of this nation to be less well educated than their parents. Failure to fund Title IV adequately could guarantee that this dim prediction would become a reality—and the American dream would fade accordingly.

With respect to Title III, I am pleased to see the effort to simplify a section of the law that many have found confusing. My only suggestion at this point concerns the

provision for waivers from strict need-based criteria in determining which institutions are eligible to receive grants. The use of need-based criteria is a good idea, and the provision for waivers by the Secretary of Education under certain circumstances is an equally good idea. I would, however, ask you to consider adding one more set of conditions under which the Secretary would be able to waive the usual criteria—namely, the authority to make grants when the applicant institution ranks at or only moderately above the average amount of student aid and the institution's proposal shows exceptional promise for developing a program that could be emulated with profit by other institutions of low or modest means or of producing knowledge that would be useful to other such institutions.

As one who has spent a substantial portion of my professional career working in or with teacher education programs, I am pleased to see a strong new Title V on teacher training programs. Especially encouraging is the section that provides resources to establish school-college partnerships. Two years ago, Rhode Island set up a Joint Committee on School and College Articulation, and its first recommendation dealt with improving communication between secondary and postsecondary personnel. The school-college partnership provision of Title V should prove to be a great boon in our continuing efforts to devise suitable means of implementing that critical recommendation. I do have one major concern regarding the Perkins Scholarships proposed for Title V, and that relates to the capacity of a state to do its share in implementing such a program without being given the resources to do so in the form of an adequate level of administrative support. In an agency such as the one that I direct, which already has a very wide range of responsibilities and a professional staff that totals 15, that is a particularly important consideration, and the lack of language specifying that a reasonable portion of a state's grant may be used for administrative purposes in connection with activities approved in the grant proposal is a serious omission.

The proposed new Title VI as described in the concept paper is commendable in making international education a national priority. For all kinds of reasons, both humanitarian and those stemming from enlightened self-interest, and almost all of them too obvious to need explication, we must work harder at communicating better with our fellow members of the global village, and this title promises to make that task a little easier.

I want to state my emphatic support for the proposed new Title VII. Though all of the help it would provide would be most welcome, that is especially true of the grants it would make available for purchasing laboratory and instructional equipment. Several important steps have already been taken in Rhode Island to forge a strong partnership between higher education and the business/industrial community in the interest of developing the state's economy, and this type of assistance would be instrumental to our institutions in carrying out their role in that partnership.

I heartily endorse the initiative in support of spreading cooperative education. My observations of that concept in practice have been very positive. Not only does coop ed strengthen the ties between business and education and provide students with an invaluable opportunity to learn with little risk about careers in which they are interested, but it also gives students the best kind of feedback possible—the reactions of supervisors, colleagues, customers and clients—to their mastery of communication and other general education skills.

I also strongly support the emphasis of the reauthorization bill on graduate education with its expanded support through Title IX and other titles for graduate schools, graduate students, and research libraries—all defined by Rhode Island Strategic Development Commission as critical to the state's future economic development.

Over the years FIPSE has been a great help to higher education in advancing the state of our art, and I am pleased to see its extension included in your proposal as Title X.

Finally, the idea of providing endowment money to those institutions that are living a hand-to-mouth existence, or close to it, is an inspired one, and I therefore applaud the inclusion of Title XII as an imaginative stroke.

Again, Mr. Chairman, I thank you for inviting me to express my views here today.

Mr. SIMON. Dr. Joseph Cronin, formerly from Illinois—it doesn't say that here—and now the president of the Massachusetts Higher Education Assistance Corp. and the National Council of Higher Education Loan Programs.

STATEMENT OF JOSEPH CRONIN, PRESIDENT, MASSACHUSETTS HIGHER EDUCATION ASSISTANCE CORP. AND THE NATIONAL COUNCIL OF HIGHER EDUCATION LOAN PROGRAMS, INC., ACCOMPANIED BY JEAN S. FROHLICHER, GENERAL COUNSEL, NATIONAL COUNCIL OF HIGHER EDUCATION LOAN PROGRAMS, INC.

Mr. CRONIN. Thank you, Mr. Chairman.

Because I testified before your committees five times in the last 6 years, I thought it completely unnecessary to bring along Speaker O'Neill to present me today.

I also want to note with enthusiasm that, whatever job I have held, you have been chairman of the right committee. When we needed funds for special education or for research, you were the person to address, and when it comes to the revision of title IV in higher education programs, again, you are the right person. I can't wait to find out in 1985 whether you will be serving on the Senate Foreign Relations Committee or Banking or Education and Human Resources to find out what my role is going to be in the late 1980's.

I am very, very pleased to be here on behalf of these several groups. The Massachusetts Higher Education Assistance Corp. assists 120,000 students and parents a year to pay for higher education. We provide $300 million of assistance. We are also under contract with the board of regents of higher education to administer the State's scholarship program. We are the oldest State guarantee agency in the Nation, 28 years old, preceding the Federal program by about 10 years.

I am also representing the National Council of Higher Education Loan Programs, which includes the 50 State agencies and not-for-profit corporations who assist 3 million students a year to the tune of about $7 billion. We have, at your request, been working for about 6 months on a position paper, which we would like to have included in the record, along with my prepared testimony, which is much too lengthy to read.

Mr. SIMON. We will enter both in the record.

Mr. CRONIN. Instead, today, I would like to comment on the five questions that you have addressed to me in the letter earlier this month, and focus my testimony on some of these significant concerns.

First of all, although we are the National Council of Higher Education Loan Programs, we support substantial increases in the Pell grants and Federal scholarships. Many of us run State agencies both for scholarship and loan programs, and we understand the significant relationship between them.

What is more, a 4-year college program these days, even in public universities, can cost $25,000, and an independent college or university as much as $40,000 to $60,000 for 4 years of undergraduate education. The most needy students must have at least a $3,000 Pell Grant along with State and campus scholarships in order to meet those tuitions, fees, and costs of education. We believe that very, very strongly, and we put that up front in our position paper ahead of our discussion of loans.

Second, we believe that the Guaranteed Student Loan Program needs some adjustments, but it is fundamentally sound. The capital

comes from banks who are quite experienced in making loans and, for the most part, very, very good at collecting loans. The role of colleges is to verify enrollment and to verify the cost of education. Under the GSL, for the most part, colleges do not have to pursue their own alumni.

The State agencies that guarantee the loans, that administer the programs, are close to the colleges and close to the lenders. Many of their representatives serve on our governing boards and advisory committees. We are under continuing and positive pressure to make the program better, to improve information to students, to cut loan processing time, to prevent defaults, to pursue defaulter indefinitely, to cut costs and to reduce the paperwork for the students, the schools, lenders, and others.

We support in your proposed legislation the phaseout of the FISL Program and the phasedown of NDSL over time. We recommend the provisions for a lender of last resort in each State to finish the job of solving the access problem. We pretty much have that solved, but there are a few States. The language in your most recent committee draft handles that situation very well.

We also recommend a 12-percent unsubsidized supplemental student loan program of up to $4,000 a year. This, in a way, is a program that we had in the 1970's, that was canceled, and it would help some of the moderate-income families tremendously.

We also support a continuation of the Plus Program for parents at up to $4,000 a year, according to the cost of education. We will provide language for this supplementary student loan program.

With me today is Mrs. Jean Frohlicher, who for many years worked in the Office of Education and then on the Senate side on the technical issues, and we will work very closely with you and with staff to provide details on this proposal.

In terms of the Guaranteed Student Loan Program itself, it needs a 5-year tuneup. No. 1, the origination fee is a front-end tax on students who cannot afford a 5-percent bite, the loss of $125 on the undergraduate loan and $250 on the graduate professional side. Students pay this fee twice, once when the origination fee is deducted from their loan check, and a second time when they go to work and must then repay the loan, including the origination fee, which they never saw.

It is regressive. It was a stopgap measure in 1981. It is antieducation. A student loan is not a mortgage, and we don't need 5 points charged up front each year for 4 years. Abolish the fee—and we are pleased to see the abolition of the origination fee is on the committee draft.

Second, the needs test is working well to restrict borrowing from families earning more than $30,000 a year. Since 1981, you do not hear the old complaints about misuse for family investments. If you extend the test to all students, however, you will create more paperwork for as many as 800,000 students—most of them working-class students—and their colleges, and save relatively little.

The National Council of Higher Education Loan Programs recommends that you apply a credit eligibility index for new loans above $2,500 per year as you raise the loan limits. Again, Mrs. Frohlicher and I will provide to the staff a credit eligibility index based on family income, family size, and the cost of education.

Incidentally, the $65,000 income cap, an absolute income cap, will hurt only 3 percent of the families in the program right now, but it will hurt those families with three, four or more children with two of them in college at once. I speak from some personal knowledge. From 1980 to 1990, the Cronin family will have two children in college each and every 1 of those 11 years, and when you have an outlay of some $300,000 in tuitions for seven children—I guess I speak as the last of the vanishing breeders—but it is a major impact.

We have a number of families who have two children and two in medical school paying up to $40,000 to $50,000 a year in tuition and fees alone. We would just ask the committee to show some compassion for those families. There are many Mormons, Catholics, other Christians and Jews who have large families, and will to continue to for many years in the future.

If you have the needs test or the credit eligibility index, you don't need to have any cap, because only those who absolutely need the funds will receive them.

The loan limits of $2,500 were sufficient in 1972, when that number was first placed in the legislation. It is not enough in 1984, and will be woefully inadequate in 1990, when reauthorization would expire.

Furthermore, if you abolish the FISL program and phase out the NDSL, which offers from $500 to $1,000 a year now for students—in other words, a student now can get $3,000 or $3,500—and if you raise the GSL only to $3,000, you will actually reduce the amount of loan funds available to students in a number of our middle and upper range of education costs. I know you don't intend to do it, to reduce—I know you want to stabilize or bring some kind of parity between the program.

Our recommendation, the NCHELP recommendation, is that you raise the annual GSL limits to $4,000 a year for undergraduates and $8,000 a year for graduate students. The Massachusetts Higher Education Board several months ago recommended $5,000, just so you have some feel of what the demand side is, especially in the Northeast corner of the Nation, but it is also true in the Midwest where you have a number of excellent independent colleges and universities with tuitions and the cost of education in the $12,000, $14,000 and $15,000. We put it very, very clearly.

In 1972, a $2,500 loan was equivalent to the cost of education for the entire year at many of our public universities, and it would buy about a semester at our quality private colleges and universities. Right now, at a private college or university, a $2,500 loan pays for about 6 or 7 weeks of higher education. You can't even get to the midterm examination, midsemester examination, on a GSL, just because of the erosion and inflation factor in the cost of living. That is why $3,000 just won't be enough.

The committee bill at the moment is only $1,000 shy of the NCHELP recommendations in each category, undergraduate or graduate, so we don't think we are far apart. And many will not borrow the maximum. Again, with the credit eligibility index, it will be tied to the cost of education and to family contributions and need, and not all will borrow those amounts. But we are concerned

about a low number remaining in place, a low loan limit remaining in place, until 1990.

Incidentally, student loan defaults do not go up with higher level borrowing. This is a misunderstanding or a myth that, fortunately, John Lee's excellent research for the National Commission on Student Financial Assistance, rebutted. His research shows the opposite—the more dollars, the more degrees, the less the percentage of default.

So also does the Sallie Mae experience with the options of consolidation program show, that the default rate in those higher loans is closer to 1 percent than 5 percent.

We do not accept, by the way, the recent ETS numbers on the acceptable debt burden for undergraduates. They said about 5 percent. That is an arbitrary number. Today's students who graduate college can pay $100 a month or more if they want to go away from home to a good school, to a State university or to an independent college or university. This may be 10 percent of starting salary, but that will decline each year.

All this to say that we think the students, the graduates of tomorrow, will be able to afford to repay these loans as they invest in themselves.

We believe, of course, that some students need longer than 10 years to repay their loans. Here the ETS study is very useful in suggesting a longer payment period. But this should not necessarily mean continued taxpayer subsidy for persons in their 30's. We know that Congress is concerned about it, and we need the dollars for those students who are coming along, not for middle-income or middle-class or professionals 8, 10, 12 years out of school.

So we have in our proposal, in our longer paper, a graduated shift in repayment toward market rates, so that the advantages of spreading out the loan over a longer time period are calculated very carefully by the consumer. In brief, the interest rate for students 3 years out of college who want to extend the repayments could rise by one-half percent annually, beginning about year 3, so by the time you get to 10 years the student was actually paying at the full amount and the Federal subsidy would disappear. Again, you have to see this proposal on paper, but I am saying that, by the end of the 10 years, the student would be paying 15 percent in today's market for the loan, so that the Federal cost by the 11th year would wash away.

I think this would be an acceptable proposal. We know that OMB, we know that the minority members, as well as the majority members, are very, very concerned about the cost of any kind of repayment or extension that would go beyond 10 years. We think we have a solution. It was thought out by one of our most senior members, Kenneth Reeher of Pennsylvania. We think it will work financially, both for the Federal Government and the students, and will be acceptable to the lending community.

A few comments on the special allowance for banks. We think that the current formula, T-bill plus 3.5 percent, is not excessive. We think that if the Congress forces State secondary markets into taxable bond issues, the 3.5 percent formula remains very necessary, including an in-school.

It is not true that the banks do not work while the student is in school. Take, for example, my eldest daughter, a graduate of the University of Illinois, who, before she graduated, changed her name, changed her residence, she's changed her place of business twice and her address four times in the 3 years since she was a graduate. So there is a lot of work for banks that is different from other consumer loans.

We have a number of proposals for saving money, because we are a bipartisan group and we know that it is responsible to have some provisions that would save money, especially in this critical time.

We recommend a $75 per month minimum repayment. We believe that is in the committee draft right now, and we applaud that. We recommend a 3-percent increase in the charges paid by defaulters on their defaulted loans as a kind of penalty add-on. The Federal Government would share in the recapture of this money.

We believe that the Federal income tax rebates to defaulters ought to go back to the repayment of their student loans. Seven States have pioneered this effort with State income tax set-offs. It works, it makes sense, and it is a powerful deterrent to future defaults. We need some tools like that.

We also agree with the concept of the return of Federal advances to the Federal Government after an independent audit of our other State agency showing that it has the fiscal capacity and the reserve to make that possible.

Finally, a recent report suggests that women students may be shortchanged by aid policies, may, for example, get less in the way of Pell grants and, under certain circumstances, may experience greater defaults. The Federal Government right now does not require us to collect data by gender and, therefore, we have not noticed this problem before. But I would urge you to require through your legislation that these data be collected systematically, either by NCES or by the new Advisory Committee of the National Center that is recommended in the committee draft. The Federal Government should collect this information, and there should be some committee discussion of the ways in which—unintentionally, but present—system grants and loans may discriminate against women. I know my five daughters will appreciate my bringing that to your attention, but all women and men have a concern about equity and justice in the loan programs.

Thank you, Mr. Chairman.

Mr. SIMON. Thank you.

[Prepared statement of Joseph M. Cronin follows:]

PREPARED STATEMENT OF DR. JOSEPH M. CRONIN, PRESIDENT, MASSACHUSETTS HIGHER EDUCATION ASSISTANCE CORP. AND PRESIDENT, NATIONAL COUNCIL OF HIGHER EDUCATION LOAN PROGRAMS, INC

Mr. Chairman and Members of the Subcommittee: My name is Joseph M. Cronin. I am President of the Massachusetts Higher Education Assistance Corporation (MHEAC) and current President of the National Council of Higher Education Loan Programs, Inc. (NCHELP).

MHEAC is the State guaranty agency for the State of Massachusetts. The agency has insured $1.8 Billion in Guaranteed Student Loans for residents of Massachusetts and those attending school within the State. The default rate on loans guaranteed by MHEAC is approximately 4.5%.

The National Council of Higher Education Loan Programs, Inc. is primarily comprised of State guaranty agencies, State secondary markets, and State direct lend-

ers. Our membership also includes other entities involved in the Guaranteed Student Loan Program, such as major lenders, student loan servicers and collectors, underwriters and bond rating agencies, and nonprofit organizations concerned with the stability and success of the Program.

Voting Members of NCHELP, the State agencies, secondary markets, and direct lenders, met in Chicago, Illinois, on February 2nd and 3d, 1984, to discuss the issues confronting Guaranteed Loans as the reauthorization process commences. The result was a 20-point position paper, which, along with an outline of the paper, I would like to have included in the Subcommittee Record as an appendix to my testimony.

Our recommendations incorporate three major themes:

Reaffirmation of the fundamental soundness and effectiveness of the Guaranteed Student Loan Program.

Simplification and stabilization of the GSL Program.

Realistic distribution of cost for the GSL Program.

THE FUNDAMENTAL SOUNDNESS AND STABILITY OF THE GSL PROGRAM

Recognizing a need for a proper balance between grant funds and loan funds for needy students, NCHELP believes that substantial increases should be made to the Federal grant programs to insure that needy students are not overly reliant on loans to meet their educational costs, particularly in the lower division undergraduate population. The Council commends the Chairman for his commitment to this balanced approach, as exemplified by his proposal to make Pell Grants an entitlement and to substantially increase the maximum award. While we may disagree on details, such as the proper loan limits for Guaranteed Loans, we strongly support the increases in grant funds proposed by H.R. 5240. GSL default experience will definitely be affected by the funding balance achieved for grants and loans to needy students in the years ahead.

It is essential for the success of the Guaranteed Student Loan Program that a stable environment be maintained, in order to provide an adequate supply of loan capital. This environment must include not only the balanced approach to loans and grants already mentioned, but also protection of the Program's entitlement nature and encouragement of private lender support.

SPECIAL ALLOWANCES

One essential element in retaining lender support is the continuation of the Special Allowance, which relates a lender's return on Guaranteed Student Loans to the cost of money as exemplified by Treasury-bill rates. NCHELP believes that the current level of Special Allowance, T-bill plus 3.5 percent, represents a fair, and not excessive, return to lenders. We therefore oppose the provision in H.R. 5240 which would reduce this allowance to T-bill plus 3 percent. Many lenders hold their student loans through the repayment period; reduction of the Special Allowance by one-half a point could make loans, especially small-balance loans, less than cost-effective during the expensive process of collection. Finally, the current uncertainly concerning the future of tax-exempt student loan revenue bond financing, with its concomitant pressure for States to seek taxable sources of funds, would make a reduced Special Allowance totally unfeasible. Taxable funds will cost State secondary markets and direct lenders substantially more than tax-exempt funds; one-half of a reduced Special Allowance would not provide enough return to cover costs.

The Council urges the Subcommitttee to reconsider its proposal to reduce the Special Allowance, and to continue the current level without change.

LENDER OF LAST RESORT

As State agencies, NCHELP Members strongly support the continuation of the current, decentralized State or private, nonprofit responsibility for administration of the Guaranteed Student Loan Program. We commend the Chairman for his proposal to repeal the Federally Insured Student Loan Program, except for isolated instances where its continuation is absolutely necessary.

States and private, nonprofit organizations have proved since the passage of the Education Amendments of 1976 that they can administer the GSL Program more efficiently and with substantially lower defaults. Recent growth in the programs of a number of the newer State guaranty agencies has reflected a strong effort on the part of those agencies in overcoming local lender reluctance to participate in the GSL Program because of unsatisfactory experience with the prior Federally Insured Program. Repeal of FISL will reinforce the decision the Congress made in 1976, and

will discourage subtle efforts on the part of some who would seek to recentralize and re-Federalize the Guaranteed Student Loan Program.

Total access to student loan capital by all eligible students is the goal of all NCHELP Members. To this end, we support the provision of H.R. 5240 requiring each State to provide a lender of last resort program to assure access to subsidized loans to eligible borrowers. Many States have already developed such lenders on their own; others are currently considering mechanisms for last-resort lending.

It is critical that the statutory language on lender of last resort leave each State free to determine the best method for assuring all eligible borrowers of access to loans. Some States have agreements with commercial lenders to serve as lenders of last resort; others have established State agencies or designated private, nonprofit organizations to serve students that would otherwise be unable to receive loans. H.R. 5240 leaves that flexibility in the hands of each State agency. Only if an agency were unwilling to enter into any arrangement for a lender of last resort would the Secretary have authority to make alternate provisions for such a lender. We strongly support this provision in the Chairman's bill.

LOAN LIMITS

However, while access to capital is important, equally important is access to sufficient capital to provide adequately for a student's educational expenses. NCHELP does not believe that H.R. 5240 goes far enough in increasing loan limits. We recommend an annual ceiling for undergraduates of $4,000 and for graduates of $8,000. Aggregate levels should similarly be increased to $20,000 for undergraduates and $40,000 for graduate students. In addition, Congress should periodically review these limits in light of increased college costs.

The GSL annual undergraduate loan limit of $2,500 was set in 1972, a year when the amount could pay for all of a student's costs at a public college, and for one semester at an independent college or university. Now it pays for six or seven weeks at many colleges and universities in metropolitan areas around the Nation. While H.R. 5240 proposes an increase to $3,000, the next reauthorization may not occur until the 1990's, at which point $3,000 will amount to a $500 increase over 18 years, a minuscule increase of less than one percent per year.

Maximums of $3,000 grant and $3,000 loan looks like "balance," but it is not always the "appropriate balance" sought by the Congress. The most needy student may need $4,000 or $6,000 in Federal, State, and institutional scholarships; it may be most unwise to saddle him with debt. On the other hand, a less needy student, or members of a large middle-income family, may need a $4,000 student loan, especially if ineligible for a Pell Grant.

NCHELP shares the Subcommittee's concern that students not be overburdened by debt when they graduate. However, current evidence is that substantial indebtedness does not lead to increased defaults. The National Commission on Student Financial Assistance found that those with high loan balances were least likely to default. Similarly, the Student Loan Marketing Association has testified that those students with loans of more than $10,000 were better repayment risks, with default rates of close to one percent.

The college graduate of the 1980's will earn one million dollars in his lifetime, most of this due to a college education. A graduate degree could bring from $1.5 million to $4 million—not just for athletes or surgeons—but also for lawyers, businessmen, engineers, and researchers. That is why those of us who guarantee loans urge the Subcommittee to increase the annual loan limits to $4,000 for undergraduates and $8,000 for graduate students.

CONSOLIDATION OF TITLE IV STUDENT LOAN PROGRAMS

As noted previously, NCHELP supports the repeal of the FISL program, as proposed by H.R. 5240. Since the program is being terminated administratively by the Department of Education, it should be terminated legislatively.

Similarly, the Council believes that the separate National Direct Student Loan Program has served its purpose and should not be continued as a separate program. H.R. 5240 proposes to incorporate NDSL into an institutional block grant, leaving it to the institution's option whether to continue to make loans at the campus level. NCHELP's recommendation would allow even greater discretion by the college financial aid administrator.

We suggest that institutions currently participating in the NDSL program be given three options:

1. Continue as institutional loan program;

2. Utilize the NDSL revolving fund in their need-based grant and/or a work-study program; or

3. Become eligible lenders under the GSL program, using the revolving fund as loan capital.

The third option would provide additional assurances to the institutions of the continued availability of loan capital for students served by the NDSL program, while providing a guarantee for the fund corpus which they do not now enjoy. The guarantee provided for these loan funds would apply only to new borrowers after the effective date of the legislation.

NONSUBSIDIZED LOAN PROGRAMS

For many years, the Guaranteed Loan Program included a component authorizing unsubsidized guaranteed loans for students whose family income exceeded the statutory ceiling. This program was lost in 1981 with the enactment of the ALAS program as an adjunct of the PLUS or parental loan program first authorized in 1980. The result has been confusing to students, parents, and lenders. While PLUS loans are increasingly being made, the ALAS program has not lived up to expectations. As a result, students in need of additional credit are too often unable to receive loans.

The Council proposes to separate the parental and supplemental student loans into two distinct programs. While this recommendation would appear to add complexity to the Act by creating two new programs, we believe that the resulting clarification and simplification of the provisions and purposes of the programs would actually serve to increase the supply of loans available to meet the needs of *both* parents and students.

The proposed Supplemental Student Loan Program would have the following features:

1. The maximum interest rate would be 12 percent.

2. At the lender's option, the student would be given the choice of paying interest while in-school or of having the interest capitalized at the end of each calendar quarter.

3. Dependent undergraduate students, as well as independent undergraduate students and graduate students, would be eligible to borrow.

4. The annual and aggregate loan limits would be the same as recommended for the regular loan program—$4,000 and $20,000. These limits would be in addition to any GSL borrowing, not to exceed educational cost less other financial aid. Students would be allowed to borrow expected parental contribution.

5. Loans would have the same repayment terms and grace periods as regular GSL loans; they would be allowed to be consolidated under the same provisions. Special allowances would be paid.

6. If students had previously borrowed under the ALAS program, they would be allowed to refinance their loans under the new program.

In summary, the Supplemental Student Loans would be made on the same terms and conditions as regular Guaranteed Student Loans, except that the interest rate would be 12 percent and no in-school interest subsidy would be paid.

The new Loans for Parents Program would have the following features:

1. The maximum interest rate would be 12 percent. Special allowances would be paid.

2. Parents would be eligible to borrow $4,000 per year per student, up to an aggregate of $20,000. They would be limited by total cost of education less other financial aid, and would be able to borrow their expected parental contribution. Parents could borrow for undergraduate or graduate students, and their loan amounts would be in addition to the amounts borrowed by the student.

3. Other than the unemployment deferment, parents would not be eligible for any of the other deferments available to student borrowers.

4. A parent borrower would be able to refinance prior loans taken out on behalf of the child and consolidate those loans with the new loan. This would include PLUS loans, including those bearing interest at 14 percent.

5. The maximum repayment period for a parent loan would be ten years from the date it is taken out or refinanced.

6. All other terms and conditions of a parent loan would be the same as those currently in law.

ELIGIBILITY FOR GUARANTEED STUDENT LOANS

In order for a student to demonstrate need for a Guaranteed Student Loan, the Council proposes the development of a Credit Eligibility Index. This Index would reflect a standard for credit-eligibility which would differ from existing needs analysis

which serve as rationing devices for too-scarce grant funds. The CEI would be based on family size and the adjusted gross income in the tax year prior to the academic year in which the loan is made. Campus aid administrators would be allowed to exercise professional judgment in adjusting the Index in those cases where there has been exceptional change in family circumstances.

Students from families with adjusted gross incomes of more than $20,000, and those from families below that income level who sought Guaranteed Loans of more than $2,500 for undergraduates and $5,000 for graduates, would have their eligibility determined under the Credit Eligibility Index. The maximum loan amount would be equal to the total cost of education, less other financial aid received, within the loan limits set by law.

The Council proposes that the Index be established in the Higher Education Act, either by means of a formula or by benchmarks for a table. The Index would be used in the same manner as the current GSL Contribution Tables. We also propose that separate indices be established for dependent students from one- and two-parent families, and for independent students who are married, single, or single heads-of-household, a total of five separate indices.

Any student eligible for less than $500 but more than $1 would receive a loan of $500. This would parallel the current statutory provision that students eligible for $501 but less than $1,000 receive $1,900. It would also substantially alleviate the current problem which many students, especially those in proprietary schools and community and junior colleges, face with lenders who are reluctant to make small-balance loans.

ADMINISTRATIVE PROVISIONS

The Council also proposes a number of specific administrative changes designed to simplify and stabilize the Guaranteed Student Loan Program:

1. Eliminate the maximum repayment rule of 15 years. It serves no useful purpose and threatens to cause administrative nightmares.

2. Allow half-time students an in-school deferment. If a student is attending school at least half-time, he should not be required to be in repayment status on his prior Guaranteed Student Loans.

3. Establish statutory standards for foreign school participation in GSL. This has been the subject of controversy and court action; the Congress should take the lead in establishing standards for participation of foreign institutions.

4. Return the initial grace period after a student's in-school period to 9 months. H.R. 5240 makes this change, and the Council supports it. The reduction to 6 months has resulted in little savings to the government and has created unnecessary difficulties for students in making transitions from undergraduate school to graduate school or work. In addition, for administrative simplicity, allow students eligible for a 6-month post-deferment grace period on one of their loans such a grace period on all of their loans.

5. Allow agencies to retain a flat 30 percent of collections on accounts in default, rather than requiring detailing accounting for eligibility for that amount.

6. Modify subrogation requirements to limit their applications to agencies that, in any fiscal year, do not collect an amount equal to four percent of the total balance of loans in default at the close of the previous fiscal year. Subrogation provisions have been a source of much discussion between Council Members and the Department of Education; they should be spelled out in the statute by the Congress.

TAX-EXEMPT ISSUES

The Council strongly believes that State-level secondary markets and direct lenders should have access to public-purpose tax-exempt financing, in order to maintain an adequate and stable supply of loan capital. While we recognize that tax law is the purview of the Ways and Means Committee, provisions of the Higher Education Act governing Special Allowances and Plans for Doing Business affect the operations, and the very existence, of State direct lenders and secondary markets. In this context, the Council appreciates of efforts of Members of this Subcommittee and other Members of Congress in urging the Department of Education to modify its proposed Regulations concerning tax-exempt funding. Such modifications are necessary if a stable and broad-based supply of Guaranteed Loan capital is to continue.

ORIGINATION FEE

The Council strongly supports the repeal of the 5 percent origination fee proposed by H.R. 5240. The origination fee was a stop-gap budget measure whose time has

come and gone. It should not be continued; students should receive the entire amount they borrow.

EXTENSION OF REPAYMENT

As students borrow more and more to meet rising college costs, their loan burdens become such that a 10-year repayment period is insufficient to repay their obligations. Forcing such students into such a short time-period, with unreasonably high monthly payments, can only force them into delinquency and default. However, mere extension of the term of a Guaranteed Loan, with its accompanying Special Allowance payments, can be exceedingly costly to the Federal government. Obviously, some accommodation must be made between conflicting interests.

The National Council of Higher Education Loan Programs, Inc. proposes that students be permitted to extend their repayment period beyond ten years, but in such a manner that the student, not the Federal government, bears the increased costs.

Our proposal works this way: At any point within three years of the start of the repayment period, the borrower may select a repayment period of up to 20 years. During the first three years, the interest rate to the student would be the average rate of the original loan(s). Thereafter, the student's interest rate would increase by one-half of one percent each year; the Special Allowance would be reduced concomitantly. This would continue until the borrower is paying an interest charge which at least equals the interest and Special Allowance which the lender would have received if repayment had not been extended.

At this point, the student's interest rate for the subsequent 12-month period will be calculated to equal the interest and Special Allowance the lender would have received in the previous quarter if repayment had not been extended. This interest rate would similarly be recalculated annually until the principal amount was repaid.

This proposal would have the advantage to the student that his interest rate would rise gradually, at the rate of one-half of one percent per year, over the life of the loan, rather than suddenly ballooning to market rate. This rise could usually be expected to reflect his increased earning capacity in the years after he left school. The student would not have to meet any statutory minimum amount in order to take advantage of extended repayment. The extensive disclosure required by the law, plus students' assessment of their own earning potential, should allow students to make educated judgments concerning the advisability of opting for extended repayment programs.

The lender would be assured of a return equivalent to that it would have received if the loan had not been extended. The rate paid by the student would be reflective of rising—or falling—interest rates, so the lender would not have to take the risk of trying to second-guess interest rates over the long term.

There would be minimal cost to the Federal government, if any, for this extended-repayment option. Savings to the Treasury in default prevention could be substantial.

MONTHLY MINIMUM REPAYMENT

The Council proposes to increase the minimum monthly payment to $75 for all new borrowers. This is similar to the provision of H.R. 5240 requiring a minimum annual aggregate of at least $900. It is unrealistic to recommend higher loan limits and longer repayment terms without corresponding increases to the actual minimum monthly repayment amounts.

FEDERAL ADVANCES

As State guaranty agencies become more firmly established financially, it is appropriate that some of the cost of the Guaranteed Student Loan Program be shared by them. Therefore, the Council recommends that States be encouraged and permitted to return all Federal advances to the Federal government within a reasonable time frame. It is our position that the reasonableness of that time frame should *not* be determined by the Secretary of Education or by the State agency itself. Rather, it should be based on an independent determination of the overall financial condition of the agency's loan guarantee program.

INSURANCE PREMIUM

Existing law prohibits "collection of an excessive insurance premium." The Council would recommend that this be amended to limit the total fee charged to students

as an insurance premium to three percent of the loan amount. Guaranty agencies would be authorized to charge a flat fee for all students.

Current fees charged by guaranty agencies vary from State to State. In many cases, they are calculated on the basis of a projection of a student's years in school and the total life of the loan. Thus, a student entering a four-year school would pay a higher insurance premium for a $1,000 loan than a student entering a one-year program. Yet the first student may drop out of school after his first year, having borne a disproportionate share of the insurance fees.

Authority to charge a flat fee to all students, based on their annual loan amounts, would equalize the cost of all students and would reduce the cost to a substantial number of students.

LOAN CONSOLIDATION

The Council supports loan consolidation by all eligible lenders and holders of Guaranteed Student Loans. In addition, guaranty agencies should have the ability to guarantee loans consolidated by eligible lenders within their States.

PROGRAM ADMINISTRATION

In order to maintain a reasonable sharing of the cost of reinsurance between the Federal government and State guaranty agencies, the current methodology for reinsurance should be retained. Any alternatives to the current system of progressively graduated system of reinsurance should be considered in the light of their continued incentives to State guaranty agencies to keep default rates as low as possible.

In addition, the existing Administrative Cost Allowance of up to one percent of loans guaranteed annually should be retained. To guaranty agencies, especially the newer ones, such allowances are necessary to maintain an efficient level of program operations.

COLLECTIONS AND DEFAULT PREVENTION

The Council has a number of suggestions to improve collection of delinquent Guaranteed Loans and to reduce defaults.

First, Federal income tax refunds due to defaulted borrowers should be applied to their defaulted loan indebtedness, at the request of the guarantor. Similar requirements have been successfully implemented at the State level in several States.

We are aware that the Internal Revenue Service has traditionally opposed use of the Federal tax system for collection of other than Federal taxes due. However, defaulted loans are a direct drain on the Treasury. It is not unreasonable for the Federal government to such leverage, given the ample opportunity a student has to repay the loan before such action would be taken.

Second, Federal law should provide that garnishment of wages would be allowed in any State, at the request of the guarantor. Again, several States have taken action on their own to provide for garnishment. However, once a student crosses a State line, enforcement of a decision in one State becomes extremely cumbersome, if not impossible, in another State.

Third, the Council supports the provision in H.R. 5240 establishing a statute of limitations of at least six years on defaulted student loans. States with longer statutes would not be affected.

Finally, the Council believes guaranty agencies should be authorized to raise the interest rate on all defaulted student loans by three percent over the rate in effect at the time of default. This provision would only apply to loans made after the date of enactment of the Higher Education Amendments of 1984. A student who defaults on his loan payments should incur a substantial penalty for his failure to repay. This provision would transfer much of the program's cost from the Federal government to the student, thus providing a substantial deterrent to default.

The National Council of Higher Education Loan Programs, Inc., as I have noted, supports many of the provisions contained in H.R. 5340. With a few modifications, we believe that the legislation could provide a successful blueprint for Federal efforts in student loans for the remainder of the 1980's. The Council looks forward to working with the Chairman and Members of the Subcommittee as the reauthorization process unfolds.

Mr. Chairman, I would be happy to answer any questions you or other Members of the Subcommittee might have.

[Revised as of February 14, 1984]

AN OUTLINE OF THE POSITION PAPER ON THE REAUTHORIZATION OF THE GUARANTEED STUDENT LOAN PROGRAM AND OTHER TITLE IV PROGRAMS PRESENTED TO THE NCHELP BOARD OF DIRECTORS—FEBRUARY 2, 1984 BY THE NCHELP REAUTHORIZATION COMMITTEE, PETER KEITEL AND JOE L. MCCORMICK, CO-CHAIRMEN

This NCHELP position paper proposes to make 20 specific recommendations around three major themes:

Reaffirmation of the fundamental soundness and effectiveness of the GSL Program.

Simplification and stabilization of the GSL Program.

Realistic distribution of cost for the GSL Program.

THE FUNDAMENTAL SOUNDNESS AND EFFECTIVENESS OF THE GSL PROGRAM

1. Recognizing a need for a proper balance between grant funds and loan funds for needy students, substantial increases should be made to the federal grant programs to insure that needy students are not overly reliant on loans to meet their educational costs, particularly in the lower division undergraduate student population. GSL default experience will definitely be affected by the funding balances achieved for grants and loans to needy students in the years ahead.

2. The GSL Program should be maintained and enhanced to:

(a) assure the proper funding balance that should exist between available loan and grant funds to students as described in Recommendation # 1.

(b) protect the true entitlement concept of the Program,

(c) encourage private lender participation in the Program by maintaining the current special allowance rates.

(d) insure the continued state or private, nonprofit responsibility for administration of the Program, and

(e) maintain a stable environment in which to provide an adeuqate supply of loan capital.

3. Provide total access to student loan capital to meet determined eligible educational costs to all eligible borrowers in every state by:

(a) requiring a state-approved mechanism to provide a public or private lender-of-last-resort program to be made available in that state to assure access to subsidized loans.

(b) increasing the annual and aggregate loan limits according to the following schedule: as of the effective date of the legislation, the annual loan limits for undergraduate students shall be $4,000 and $8,000 for graduate students; the aggregate limits shall be $20,000 for undergraduates and $40,000 for graduate students. Congress should periodically review these limits.

THE NEED FOR GSL PROGRAM SIMPLIFICATION AND STABILITY

4. Incorporate all federal Title IV student loan programs into the GSL Program (NDSL and FISL). Since FISL is being terminated administratively by the Dept. of Education, it should be eliminated legislatively. For institutions participating in the NDSL Program, allow them to continue an institutional loan program (at the option of the institution), or as eligible lenders under the GSL Program, utilize NDSL funds in their need-based grant and/or a work-study program. This would provide additional assurances to the institutions of the continued availability of loan capital for students served by these programs and also provide a guarantee of the fund corpus which they do not now enjoy. The guarantee provided these loan funds would apply only to the new borrowers after the effective date of this legislation.

5. Restructure the legislation authorizing the PLUS/ALAS Programs to clarify the goals of what really are two separate programs and simplify the administration of these programs in order to increase the supply of loans available to meet the needs of both parents and students as follows:

(a) The current section authorizing the Auxiliary Loans to Assist Students Program (Section 428-B) of the Higher Education Act should be replaced with two sections: one authorizing a supplemental, nonsubsidized loan program for students and a second authorizing Loans for Parents. This new Supplemental Student Loan Program would have the followig features:

(1) The maximum interest rate would be 12%.

(2) Students, at the option of the lender, would be given a choice of paying the interest while they are in school or having the interest capitalized at the close of each calendar quarter.

(3) Dependent undergraduate students, as well as graduate students and independent undergraduate students, would be eligible for these loans.

(4) The annual loan limit would be $4,000 and the aggregate loan limit would be $20,000. These limits would be in addition to any amounts borrowed through the GSL Program, not to exceed the total cost of education minus other finanical aid, not including parent contribution.

(5) The loans would have the same repayment terms and grace periods as regular GSL loans. Special allowances would be paid. These loans should have the same consolidation provisions as regular GSL loans. In summary, the nonsubsidized supplemental loans should have exactly the same terms and conditions as the regular guaranteed student loans with two exceptions: the interest rate of 12% and the absence of the federal interest subsidy.

(6) Notwithstanding the annual loan limits of this new Supplemental Nonsubsidized Loan Program, any students who have received loans in the past under Section 428–B should be able to refinance those loans under the new program.

(b) The new Loans for Parents Program would have the following features:

(1) The maximum interest rate would be 12% and special allowances would be paid.

(2) Parents would be able to borrow $4,000 per year for a student limited to the total cost of education minus other financial aid, not including parent contribution. The student could be a graduate or undergraduate student. The aggregate borrowing limit would be $20,000 per student. These amounts would be in addition to any amounts borrowed by students.

(3) Other than the unemployment deferment, parent borrowers would not be eligible for any of the deferments available to student loan borrowers.

(4) When a parent borrows for a dependent child, the parent should be able to refinance any previous loans taken for that child and consolidate those loans with the new loan. This would include any loans previously taken out under the PLUS Program as previously authorized under Section 428–B. This consolidation opportunity should include old loans, including 14% loans, which would be refinanced at the 12% rate.

(5) The maximum repayment period on parent loans would be ten years from the time a loan is taken out or refinanced.

(6) All other terms and conditions of the new parent loan program would be the same as the program currently in law.

6. Determine the eligibility of a student to receive a subsidized GSL by the method described below:

For students with an AGI (adjusted gross income) of over $30,000, the maximum loan amount would be equal to total cost of education less financial aid received less a "credit eligibility index" (CEI). The CEI would be established by law, either by means of a formula or benchmarks for a table. The CEI would be used in the same manner as the current GSL Contribution Tables. Separate indices would be established for dependent students from one and two-parent families, independent students who are married, single, or single heads-of-household. The CEI would be based on family size and the AGI in the tax year prior to the academic year in which the loan is made; however, campus aid administrators could exercise professional judgment in amending the CEI in those cases where there has been exceptional changes in family circumstances.

Students with AGIs under $30,000 would not receive loans in excess of $2,500 for undergraduates and $5,000 for graduate students unless their eligibility is determined using the CEI. Any student eligible for less than $500 but more than $1 would receive $500. The amount of the loan in combination with other aid could not exceed the total cost of education.

7. Changes specific to the administration of the GSL Program which would simplify and/or stabilize it include:

(a) eliminating the maximum repayment rule of 15 years.

(b) allowing half-time students an in-school deferment.

(c) Standards for foreign school participation in the GSL Program should be established in statute.

(d) The intitial grace periods after the student's in-school period should be returned to a 9 month period. Borrowers with one or more loans eligible for a 6 month post-deferment grace period should receive the post-deferment grace on all their loans.

(e) Agencies should be permitted to retain a flat 30% of collections on accounts in default.

(f) The statute should provide that subrogation would not apply to an agency that, in any fiscal year, collects an amount equal to or greater than 4% of the total balance of loans in default at the close of the previous fiscal year.

8. Empower state-level secondary markets and/or direct lenders to generate student loan capital by use of public purpose, tax-exempt bonds to maintain an adequate and stable supply of loan capital.

REALISTIC DISTRIBUTION OF COST OF THE GSL PROGRAM

9. Eliminate the 5% loan origination fee.

10. Allow students with larger than average indebtedness to extend their repayment period beyond ten years, but be required to pay interest rates that periodically increase at such rates that the student and not the federal government would bear the cost of extended repayment periods. The repayment period could be extended to 15 or even 20 years, depending upon the size of the debt. The guarantee would cover the entire life of loan. An example of how this might work would be:

At the start of repayment or within three years, the borrower may select a repayment period of up to 20 years for retirement of the principal amount of the indebtedness plus interest. The interest during the first three years shall be at the average interest rate of the original loan(s), and the interest rate shall increase by one-half of one percent annually. The special allowance payment to the lender shall be reduced by a like amount until the borrower pays an interest charge which is equal to or exceeds the interest and special allowance costs which would have been paid to the lender if the extended repayment plan had not been selected. At this point the interest charges for the subsequent twelve-month period will be equal to the interest and special allowance the lender would have received in the quarter previous to this point if the extended repayment plan had not been selected. Annually thereafter the interest rate will be adjusted to reflect a rate equal to the interest and special allowance the lender would have received the previous twelve months if the extended repayment plan had not been selected.

Another alternative would be to charge a higher, but flat, rate of interest to borrowers who choose repayment periods that are longer than ten years.

11. Increase the minimum monthly payment to $75 for all new borrowers. It is unrealistic to recommend higher loan limits and longer repayment terms without corresponding increases to the actual minimum monthly repayment amounts.

12. Encourage and permit states to return all federal advances to the federal government within a reasonable time frame based on an independent determination of the overall financial condition of the agency's loan guarantee program. As state guarantee agencies become more firmly established financially, it is appropriate that some of the cost of the GSL Program be shared by them.

13. Limit the total fee charged to students (insurance premium) to 3% of the loan amount. Guarantee agencies shall be authorized to charge a flat fee to all students.

14. Allow for loan consolidaton by all eligible lenders and holders of loans in the GSL Program. In addition, guarantee agencies should have the ability to guarantee loans consolidated by eligible lenders within the state.

15. Federal income tax refunds due to defaulted borrowers, at the request of the guarantor, should be applied to their defaulted loan indebtedness. Similar requirements have been successfully implemented at the state level in some states. It is not unreasonable for the federal government to use such leverage, given the ample opportunity a student has to repay the loan before such action would be taken.

16. At the request of the guarantor, garnishment of wages would be allowed in any state.

17. In order to maintain a reasonable sharing of the cost of reinsurance between the federal government and state guarantee agencies, retain the current methodology for reinsurance.

18. For the administrative cost allowance (ACA), retain the existing ACA of up to 1 percent of loans guaranteed annually.

19. A statute of limitations of at least six years on defaulted student loans should be established in federal law. States with longer statutes would not be affected.

20. Guarantee agencies should be authorized to raise the interest rate on all defaulted student loans by 3 percent over the rate in effect at the time of default on all new loans.

[Revised as of February 14, 1984]

POSITION PAPER ON THE REAUTHORIZATION OF THE GUARANTEED STUDENT LOAN PROGRAM AND OTHER TITLE IV PROGRAMS PRESENTED TO THE NCHELP BOARD OF DIRECTORS—FEBRUARY 2, 1984, BY THE NCHELP REAUTHORIZATION COMMITTEE, PETER KEITEL AND JOE L. MCCORMICK, CO-CHAIRMEN

INTRODUCTION

This NCHELP position paper propose to make 20 specific recommendations around three major themes:

1. Reaffirmation of the fundamental soundness and effectiveness of the GSL Program.
2. Simplification and stabilization of the GSL Program.
3. Realistic distribution of cost for the GSL Program.

In reaffirming the soundness and effectiveness of the GSL Program it is important to emphasize that the GSL Program is the major source of financing postsecondary education today. It should also be pointed out that Congress has made throughtful decisions in order to make the GSL Program operate as a viable credit mechanism, depending primarily on private loan capital, and to promote effective decentralized, state-based program administration. Our position on reauthorization reaffirms the need for stability and Congressional commitment to protect lender incentives to participate and to maintain a high level of access to all eligible students in every state.

THE FUNDAMENTAL SOUNDNESS AND EFFECTIVENESS OF THE GSL PROGRAM

Since its beginning in 1965, the GSL Program has provided over $30 billion dollars in loans to students pursuing postsecondary education. During this same period, the Program has evolved into a decentralized, state-based mode of administration which has contributed much to the overall success of the Program. This success can be measured in terms of broader, more active lender participation, greater access to student loans, more viable secondary market activity, and lower default rates in state guarantee agency operations than occurred under the centrally-administered FISL Program.

In the coming months Congress will consider the reauthorization of all federal student assistance programs. Serious questions will be raised concerning the future role of the federal government to meet the nation's needs for trained manpower, to provide economic stability, to control inflation, to encourage excellence in our educational system, and to meet the everchanging demands of a rapidly developing technological society. Congress will re-examine its long-standing commitment to provide equal educational opportunities to the American people and hopefully move forward to renew that commitment and expand its support for all Title IV student assistance programs.

In the belief that the GSL Program is a cornerstone in the nation's effort to remove financial barriers to postsecondary education and that, overall, the GSL Program is fundamentally a sound and effective means of removing financial barriers, three major recommendations are offered:

1. Recognizing a need for a proper balance between grant funds and loan funds for needy students, substantial increases should be made to the federal grant programs to insure that needy students are not overly reliant on loans to meet their educational costs, particularly in the lower division undergraduate student population. GSL default experience will definitely be affected by the funding balances achieved for grants and loans to needy students in the years ahead.

2. The GSL Program should be maintained and enhanced to:

(a) assure the proper funding balance between available loan and grant funds to needy students as described in Recommendation #1,

(b) protect the true entitlement concept of the Program,

(c) encourage private lender participation in the Program by maintaining the current special allowance rates,

(d) insure the continued state or private, nonprofit responsibility for administration of the Program, and

(e) maintain a stable environment in which to provide an adequate supply of loan capital.

3. Provide total access to student loan capital to meet determined eligible educational costs to all eligible borrowers in every state by:

37-618 O—84——10

(a) requiring a state-approved mechanism to provide a public or private lender-of-last-resort program to be made available in that state to assure access to subsidized loans.

(b) increasing the annual and aggregate loan limits according to the following schedule: as of the effective date of the legislation, the annual limits for undergraduate students shall be $4,000 and $8,000 for graduate students; the aggregate limits shall be $20,000 for undergraduates and $40,000 for graduate students. Congress should periodically review these limits.

THE NEED FOR GSL PROGRAM SIMPLIFICATION AND STABILITY

Since 1958 the number of federal student aid programs has multiplied and evolved into a very complex, difficult to administer, highly over-regulated matrix we call the "student aid delivery system". At almost every legislative opportunity, attempts to simplify these programs have been debated, discussed, and ultimately discarded with few positive results. This continued proliferation, as well as the complexity of student aid programs, has made total access for students and the removal of financial barriers more difficult with the passage of time and regulations. If Congress and the higher education communities are serious about moving forward to fulfill our national commitment to provide equal educational opportunity for all eligible students, then meaningful steps must be taken *now* to simplify student aid programs. No less important is the need to reauthorize the programs within a framework that provides consistency and stability, assuring eligible students and their families that student aid funds will be available in the years ahead. In this context the following recommendations are made:

4. Incorporate all federal Title IV student loan programs into the GSL Program (NDSL and FISL). Since FISL is being terminated administratively by the Dept. of Education, it should be eliminated legislatively. For institutions participating in the NDSL Program, allow them to continue an institutional loan program (at the option of the institution), or, as eligible lenders under the GSL Program, utilize NDSL funds in their need-based grant and/or a work-study program. This would provide additional assurances to the institutions of the continued availability of loan capital for students served by these programs and also provide a guarantee of the fund corpus which they do not now enjoy. The guarantee provided these loan funds would apply only to new borrowers after the effective date of this legislation.

5. Restructure the legislation authorizing the PLUS/ALAS Programs to clarify the goals of what really are two separate programs and simplify the administration of these programs in order to increase the supply of loans available to meet the needs of both parents and students as follows:

(a) The current section authorizing the Auxiliary Loans to Assist Students Program (Section 428-B) of the Higher Education Act should be replaced with two sections: one authorizing a supplemental, nonsubsidized loan program for students and a second authorizing Loans for Parents. This new Supplemental Student Loan Program would have the following features:

(1) The maximum interest rate would be 12%.

(2) Students, at the option of the lender, would be given a choice of paying the interest while they are in school or having the interest capitalized at the close of each calendar quarter.

(3) Department undergraduate students, as well as graduate students and independent undergraduate students would be eligible for these loans.

(4) The annual loan limit: would be $4,000 and the aggregate loan limit would be $20,000. These limits would be in addition to any amounts borrowed through the GSL Program, not to exceed the total cost of education minus other financial aid, not including parent contributions.

(5) The loans would have the same repayment terms and grace periods as regular GSL loans. Special allowances would be paid. These loans should have the same consolidation provisions as regular GSL loans. In summary, the nonsubsidized supplemental loans should have exactly the same terms and conditions as the regular guaranteed student loans with two exceptions: the interest rate of 12% and the absence of the federal interest subsidy.

(6) Notwithstanding the annual loan limits of this new Supplemental Nonsubsidized Loan Program, any students who have received loans in the past under Section 428-B should be able to refinance those loans under the new program.

(b) The new Loans for Parents Program would have the following features:

(1) The maximum interest rate would be 12% and special allowance would be paid.

(2) Parents would be able to borrow $4,000 per year for a student limited to the total cost of education minus other financial aid, not including parent contribution. The student could be a graduate or undergraduate student. The aggregate borrowing limit would be $20,000 per student. These amounts would be in addition to any amounts borrowed by students.

(3) Other than the unemployment deferment, parent borrowers would not be eligible for any of the deferments available to student loan borrowers.

(4) When a parent borrows for a dependent child, the parent should be able to refinance any previous loans taken for that child and consolidate those loans with the new loan. This would include any loans previously taken out under the PLUS Program as previsouly authorized under Section 428-B. This consolidation opportunity should include old loans, including 14% loans, which would be refinanced at the 12% rate.

(5) The maximum repayment period on parent loans would be ten years from the time a loan is taken out or refinanced.

(6) All other terms and conditions of the new parent loan program would be the same as the program currently in law.

6. Determine the eligibility of a student to receive a subsidized GSL by the method described below:

For students with an AGI (adjusted gross income) of over $30,000, the maximum loan amount would be equal to total cost of education less financial aid received less a "credit eligibility index" (CEI). The CEI would be established by law, either by means of a formula or benchmarks for a table. The CEI would be used in the same manner as the current GSL Contribution Tables. Separate indices would be established for dependent students from one and two-parent families, independent students who are married, single, or single heads-of-household. The CEI would be based on family size and the AGI in the tax year prior to the academic year in which the loan is made; however, campus aid administrators could exercise professional judgment in amending the CEI in those cases where there has been exceptional changes in family circumstances.

Students with AGIs under $30,000 would not receive loans in excess of $2500 for undergraduates and $5000 for graduate students unless their eligibility is determined using the CEI. Any student eligible for less than $500 but more than $1 would receive $500. The amount of the loan in combination with other aid could not exceed the total cost of education.

7. Changes specific to the administration of the GSL Program which would simplify and/or stabilize it include:

(a) eliminating the maximum repayment rule of 15 years.

(b) allowing half-time students an in-school deferment.

(c) Standards for foreign school participation in the GSL Program should be established in statute.

(d) The initial grace period after the student's in-school period should be returned to a 9 month period. Borrowers with one or more loans eligible for a 6 month post-deferment grace period should receive the post-deferment grace on all their loans.

(e) Agencies should be permitted to retain a flat 30% of collections on accounts in default.

(f) The statute should provide that subrogation would not apply to an agency that, in any fiscal year, collects an amount equal to or greater than 4% of the total balance of loans in default at the close of the previous fiscal year.

8. Empower state-level secondary markets and/or direct lenders to generate student loan capital by use of public purpose, tax-exempt bonds in order to maintain an adequate and stable supply of loan capital.

REALISTIC DISTRIBUTION OF COST OF THE GSL PROGRAM

In recent years with the dramatic increases in GSL volume nationwide and the unpredictably high interest rates at certain periods, there has been growning concern over the questions of controlling the costs of the GSL Program and who should share in those costs. Recognizing the need to structure the GSL Program in such a way as to distribute the costs in a reasonable manner to all parties involved (lenders, students, state guarantee agencies, and the federal government), one must approach the distribution of costs in a realistic manner which maintains as much equity as possible without threatening the viable role of any one of the parties. It should be recognized first and foremost that the major burden of cost must be borne by the federal government for the Program to work effectively in all states and to maintain total loan access to all eligible borrowers. No less important, it should also be recognized that the major cost-contribut[illegible], interest rates, must be con-

trolled by the nation's overall economic and monetary policies and not by manipulation of the fundamental aspects of the GSL Program.

In meeting the challenge of providing a viable credit mechanism to remove financial barriers to postsecondary education in the years ahead, great care must be taken in the reasonable distribution of the cost of the GSL Program not to inhibit the Program's ability to:

(a) provide total loan access to all eligible students,

(b) maintain adequate and continued private lender participation,

(c) promote a stable environmental for maintaining an adequate supply of loan capital year after year, and

(d) control student defaults at reasonable levels. With these guiding principles in mind, the following recommendations are offered:

9. Eliminate the 5% loan origination fee.

10. Allow students with larger than average indebtedness to extend their repayment period beyond ten years, but be required to pay interest rates that periodically increase at such rates that the student and not the federal government would bear the cost of extended repayment periods. The repayment period could be extended to 15 or even 20 years, depending upon the size of the debt. The guarantee would cover the entire life of the loan. An example of how this might work would be:

At the start of repayment or within three years, the borrower may select a repayment period of up to 20 years for retirement of the principal amount of the indebtedness plus interest. The interest during the first three years shall be at the average interest rate of the original loan(s), and the interest rate shall increase by one-half of one percent annually. The special allowance payment to the lender shall be reduced by a like amount until the borrower pays an interest charge which is equal to or exceeds the interest and special allowance costs which would have been paid to the lender if the extended repayment plan had not been selected. At this point the interest charges for the subsequent twelve-month period will be equal to the interest and special allowance the lender would have received in the quarter previous to this point if the extended repayment plan had not been selected. Annually thereafter the interest rate will be adjusted to reflect a rate equal to the interest and special allowance the lender would have received the previous twelve months if the extended repayment plan had not been selected.

Another alternative would be to charge a higher, but flat, rate of interest to borrowers who choose repayment periods that are longer than ten years.

11. Increase the minimum monthly payment to $75 for all new borrowers. It is unrealistic to recommend higher loan limits and longer repayment terms without corresponding increases to the actual minimum monthly repayment amounts.

12. Encourage and permit states to return all federal advances to the federal government within a reasonable time frame based on an independent determination of the overall financial condition of the agency's loan guarantee program. As state guarantee agencies become more firmly established financially, it is appropriate that some of the cost of the GSL Program be shared by them.

13. Limit the total fee charged to students (insurance premiums) to 3 percent of the loan amount. Guarantee agencies shall be authorized to charge a flat fee to all students.

14. Allow for loan consolidation by all eligible lenders and holders of loans in the GSL Program. In addition, guarantee agencies should have the ability to guarantee loans consolidated by eligible lenders within the state.

15. Federal income tax refunds due to defaulted borrowers, at the request of the guarantor, should be applied to their defaulted loan indebtedness. Similar requirements have been successfully implemented at the state level in some states. It is not unreasonable for the federal government to use such leverage, given the ample opportunity a student has to repay the loan before such action would be taken.

16. At the request of the guarantor, garnishment of wages would be allowed in any state.

17. In order to maintain a reasonable sharing of the cost of reinsurance between the federal government and state guarantee agencies, retain the current methodology for reinsurance.

18. For the administrative cost allowance (ACA), retain the existing ACA of up to 1 percent of loans guaranteed annually.

19. A statute of limitations of at least six years on defaulted student loans should be established in federal law. States with longer statutes would not be affected.

20. Guarantee agencies should be authorized to raise the interest rate on all defaulted student loans by 3 percent over the rate in effect at the time of default on all new loans.

Mr. SIMON. Our final witness is Dr. John Corrozzi, the executive director of the Delaware Postsecondary Education Commission.

STATEMENT OF JOHN CORROZZI, EXECUTIVE DIRECTOR, DELAWARE POSTSECONDARY EDUCATION COMMISSION

Mr. CORROZZI. Thank you, Mr. Chairman, and members of the subcommittee.

I am director of the Delaware Postsecondary Education Commission. Today I am here as a member of SHEEO and speaking on behalf of SHEEO, the State higher education executive officers.

SHEEO recognizes the importance of a Federal role in and encourages stronger Federal support of higher education. The Federal Government, through the Higher Education Act, has accomplished a great deal, and we believe has even greater potential for ensuring access to postsecondary education, for supporting the maintenance of quality and innovation, and promoting national priorities.

SHEEO appreciates the direction that you have taken, Mr. Chairman, in the proposal for reauthorization of the Higher Education Act, and has comments and positions on each of the titles of that act. These will be submitted to the committee in writing in the very near future for your consideration.

Mr. SIMON. We will at this point enter into the record, your full statement, which contains at least a summary of those recommendations.

Mr. CORROZZI. Yes, sir.

Mr. Simon, in my short time here, I would like to discuss an issue that is central to SHEEO's position on each of the titles, and more generally to the State/Federal relationship in higher education.

Eleanor McMahon, commissioner of higher education for the State of Rhode Island, who shares the table with me today—Rhode Island and Delaware are both small States, very small States, and yet, our higher education system, the structure and the composition of institutions within our States, are very different. Our States are each very different in structure and context from those in Illinois and Texas and New York and Pennsylvania, and so on.

The State differences are not surprising, and I am sure are not surprising to Congress. Congress has traditionally—and it seems has increasingly—recognized the uniqueness of States and their need to exercise local judgment in the implementation of national programs.

It seems, however, a consideration of the State role in Federal higher education programs has been eroding. All States represented by SHEEO's are very different, but there is a common thread that runs through our very different States. This thread is that each State higher education agency must wrestle with the allocation of scarce State resources among the various segments and levels of our higher education systems. Increasingly, State higher education agencies are putting in place long-range plans for the orderly and effective development of higher education, plans that ensure against duplication and waste, while aiming to increase quality, equity and diversity.

The support of higher education at the State level constitutes a large share of total State fiscal resources. Its effective and efficient use is increasingly at issue.

Federal policy and Federal funds are a necessary and important part of higher education in all States. Federal higher education policy should recognize a responsibility of States to plan and coordinate the provision of higher education within their boundaries, including the establishment of priorities unique to each State. Federal policy should stress flexibility in the promulgation of laws and regulations that recognize the differences among States and the limitations they face when attempting to respond to changes in Federal requirements.

The State higher education agencies have responsibilities that must be integrated into Federal higher education legislation to ensure the Federal programs are, in fact, consistent with the concept of Federal/State partnership and the primacy of States in providing education. The role of the State higher education agency should be considered as each Federal program is evaluated.

While there are clearly programs for which State involvement is unnecessary, it is SHEEO's position that certain of the existing Higher Education Act programs require more direct State agency involvement. As a State official is charged with the oversight and coordination of higher education, the members of SHEEO do not seek displacement of the Federal role; rather our proposal is intended to bring the relationship between our agencies and the Federal Government into harmony as required for the accomplishment of the objectives that we all agree must be achieved.

An example of the Federal/State partnership that we seek can be stated with relationship to title I of the Higher Education Act, adult education and training. The title, we believe, should be provided on a population-based formula to the State higher education agencies. Title I funds then should be distributed from the State higher education agency on a competitive basis to eligible entities within each State. Equitable treatment of public and independent institutions should be mandated. The funding of non-institutional providers should be authorized. Funds should be available to support statewide or regional adult learning information, counseling and testing services.

The provision of adult learning services is uniquely a locally oriented activity. It is closely related to the economic well-being of the State and its communities, and tends to encompass a broader range of providers, including the business community. A strong State role in guiding the utilization of the available resources, particularly taking into account the substantial State-level commitment to economic development, is essential to ensure both the effectiveness and the efficiency of programs aided.

Title II, support for libraries, is another example where relevant State interest must be considered. The increasing incidence of regional library systems within States and the allocation of State resources to library coordination makes essential the opportunity for review and comment at the State level.

Another case for review and in addition to review approval at the State level involves title III, institutional aid. Institutional support applications should require the review and approval of the

State higher education agency as to whether the proposed program is in compliance with State plans and has the requisite approval. As stated earlier, most States have a higher education plan in effect and, for that plan to be working at cross-purposes with Federal programs, would indeed be a waste.

In the interest of brevity, I will not review each of the titles of the act. Our message today is a simple one. The State/Federal partnership must be considered in higher education legislation.

In closing, Mr. Chairman, SHEEO appreciates the direction you have taken in the reauthorization of the Higher Education Act. In the context of these hearings and as reauthorization proceeds, SHEEO will provide further detail and comment toward the advancement of our mutual interests in supporting and furthering the goals of our Nation's system of higher education.

Thank you.

Mr. SIMON. We thank you. We thank all three of you for excellent testimony.

Commissioner McMahon, you say, "I do have one major concern regarding the Perkins scholarship proposed for title V," and so forth, and that is the cost to you. Rhode Island, presumably, would get around 25 scholarships. You would have to process, of course, presumably, several hundred applications for those 25. What kind of cost burden is this? Is this unrealistic to simply ask you to assume that, or is it a burden that—we are trying to keep costs down, obviously, as we put this thing together.

Ms. MCMAHON. Right. It is a problem for an agency such as ours. We simply don't have any play in terms of our staff resources to take on that additional activity.

Now, it would be obviously a much larger problem to larger States, but it is proportionate.

Mr. SIMON. Yes. So that even if we could work out—and I am thinking out loud here now—if we could work out some kind of a population-based, assuming maybe it would cost you $100 or $200 to process each scholarship——

Ms. MCMAHON. Yes, some kind of formula that would allow us to bide the time necessary. Probably in this case some kind of part-time assistance to do this would be of great assistance.

Mr. SIMON. All right.

Dr. Cronin, you made a number of intriguing suggestions. One is the 3-percent penalty on default, which I think makes some sense all the way around.

Another that I think we ought to be looking at is that half percent increase, graduated increase, after 3 years out. Again, there would be some savings to the Federal Government on that.

Our reason for not going to a higher figure on GSL's, really, is a dual one: one—even though some of my colleagues here will not believe it—I am trying to keep the cost of this program down; and two, we really want to shift to a grant emphasis rather than a heavy loan emphasis in the program, for a great variety of reasons.

But I was interested, as I went through your written testimony, in your supplemental student loan program suggestion. Do you want to expand on your idea here at all?

Mr. CRONIN. Yes. We have had a number of experiences on the graduate side with taking the Plus Program and trying to make a

program designed for parents to fit the need of graduate professional students. Frankly, it has been very awkward, frustrating and difficult to make it work. Gradually, we are finding ways to do it. But it has been difficult, and it hasn't reached the growth of the popularity that the folks at OMB, or even some of our people who have been advocates of the Plus Program, thought it would go.

Many of the seasoned old hands say that back in the 1970's, we had some semisubsidized programs and we had some unsubsidized programs that really worked. Some people who were not eligible, and what they got was, in effect, a close-to-market-level loan, and it was guaranteed, but there was no huge cost to the Federal Government. So we have some people in the middle-income brackets and we have some graduate professional school students whose spouses may be working who would be eligible for an unsubsidized but guaranteed supplementary program.

The other problem is that if you hold down the loan limits, given the cost of graduate professional education, which is moving up $12,000, $15,000—we have a veterinary medical school in New England that costs $19,000 a year. To an extent, they are eligible by HEAL, but that program went up to 17, 18 percent at one point. Someone said it shouldn't be called HEAL, it should be called gash or maim or wound at those interest levels.

So we are looking at a program that would be in the 12 or 13 percent bracket that would be available to middle-income students and would not cost the Federal Government that much money. So this would be, looking at it conservatively, bringing back the old guaranteed but unsubsidized loans of the 1970's. It will modify it a little bit for the 1980's.

Mr. SIMON. And that would be available in addition to whatever GSL or Pell grant or whatever else that the student might have.

Mr. CRONIN. That is correct, yes.

Mr. SIMON. That is an intriguing idea.

I don't quite understand the point two here: "At the lender's option, the student would be given the choice of paying interest while in school or of having the interest capitalized at the end of each calendar"—that interest, at the end of each quarter then becomes part of the principal of the loan then.

Mr. CRONIN. That is correct. For a 2-year master's program, you might borrow $4,000 a year and, by the time you finish accruing and capitalizing, you might owe $9,000 at the end of 2 years. But you would have understood that. The alternative is to go find someone else in your family or a friend who would pay the quarterly payments, and that may be several hundred dollars each quarter. That is the alternative.

Mr. SIMON. That is an intriguing idea.

The special allowance. One alternative that has been suggested to what is now in the bill is that we allow 3½ percent the first year and then 3 percent after that.

Mr. CRONIN. I would advise the committee and staff to check with some of the larger bankers. We have three or four lenders who deal in many States, New York City, California, and the like. They should find out what they think the impact would be on the continued participation of the program. That would be step one.

Second, we have 28 State secondary markets, including the Illinois designated account program. Also, you ought to consult with Sallie Mae and find out whether or not they would be able to finance the purchase of these loans to make banks liquid 3 or 4 or 5 years down the road in case there is another liquidity crisis which we have just come out of. In 1984, banks looked pretty healthy. But the savings and loan associations and the savings banks of this country in 1980 and 1981 were suffering severe problems of liquidity. It just sounds so modest, 0.5 percent interest. But in some cases, that is the margin that we keep them or drive them out of continued student and parent loans.

So do consult with the State secondary markets, the larger banks, and some of the other associations as well.

Mr. SIMON. Dr. Corrozzi, you have one statement in here that grant programs for undergraduate facilities and graduate facilities should be consolidated into a single program. Do you have any specific problems that you are concerned about with that statement?

Mr. CORROZZI. One reason for that, again going back to the issue of State planning and State flexibility, is to be able within a State to utilize State funds and Federal funds for the construction of academic facilities, and to have the flexibility to use those where they are properly needed at that time.

Mr. SIMON. Mr. Owens.

Mr. OWENS. I have a question of Dr. Cronin. I am troubled by a sense of guilt that seems to run through some of your proposals, being apologetic about the fact that the Federal Government and the taxpayers are subsidizing students, some of the proposals to take back, to block, some of the interest deductions from students—you know, less generous than we are to corporations in terms of deductions and the kind of subsidies we permit.

If you look at people who receive higher education as being a national asset, an educated populace being the Nation's greatest asset, should we not be a little more generous, having gone to the loan format as one of the ways to finance higher education, since we cannot afford to give all grants?

I just wondered if you could comment on just one thing that you didn't comment on, and maybe you considered that not within your purview, and that is the forgiving of loans to those students who are engaged in activities which meet some national priority. For instance, forgiving loans to teachers, given the crisis in teaching and the lack of good teachers. That has not been discussed at all, and I wondered if you would comment on that. The national priority is for teachers today, it might be rocket experts tomorrow or some other category. But if you view those folks as being an asset and the activity they are engaged in fits in with some national priority after they have graduated, if you can let them know ahead of time, within periods of 10 years, students going in would know that if you go into teaching, your loan is going to be forgiven. That becomes a very important stimulus in terms of getting more good students into teaching. Could you comment?

Mr. CRONIN. Yes. At least two dozen States have either enacted or are in the process of putting into place loan forgiveness programs for math, science and, in some circumstances, computer teachers, bilingual teachers, to meet shortages in their States. In a

way, it is going back to the old NDSL program which had those forgiveness provisions.

I testified before the Massachusetts Legislature about 2 weeks ago, and I was asked the same question, Mr. Owens: What did I think about it? I said, No. 1, the problem of recruiting teachers and holding them in our professions is not going to be solved by forgiving a $2,500 or a $4,000 loan. It is going to be solved by getting teachers' salaries up from $10,000 and $12,000 to $18,000 and $20,000, and let's not use loan forgiveness program, an old solution, as an adequate response to a program that is much more substantial.

I know that Congressman Perkins and Congressman Simon and others who have served on the committee are looking at merit pay and the adequacy of compensation for teachers. I don't want to say that loan forgiveness programs are a band-aid, because they can be helpful as part of a package, but I would much rather see the kind of Perkins scholarships and grants that are in your bill as of this moment as a way to support their education while they are in school, and I would much rather see some kind of national commitment or State-by-State commitment to get beginning teachers' salaries up, it not to doctors and lawyers, at least to accountants and engineers and other in the kind of middle-range professionals. That is the solution that we need.

The idea of eliminating income tax deductions for GSL borrowers, this we don't think is a very useful proposal either. There are some major things the States and local school systems, with a little stimulation from the Federal Government, should do. The loan forgiveness may work in some States, it may work for 5 years on some shortages, but there is no substitute for adequately raising teachers' salaries.

Mr. OWENS. Raising teachers' salaries, an instrument of State and local school board policy, you have a network of voters to go through there, and the resistance to raising teachers' salaries is quite considerable. Are you saying that we should not push harder for some national policy actions which would encourage teachers?

Mr. CRONIN. I am excited about what California has done recently in knocking out the first three or four steps of the teachers' salary schedule and getting it up to $17,000 or $18,000. I am impressed by what the New York State Legislature did early this week in putting in $450 million into education. I see States like Tennessee and Maryland considering ratical changes in the way they are financing education. All of these are very, very positive.

I would not want the Congress unintentionally to put in a couple of proposals NDSL style that would water down the absolute priority of getting teachers' salaries up.

If school boards or State legislatures can say why should we pay these teachers any more money, they are getting their loans forgiven—but it would only be several thousand dollars—it may not be a powerful enough strategy is my concern.

Mr. OWENS. Thank you.

Mr. CRONIN. By the way, my oldest daughter is a teacher in the second grade in the public schools of Massachusetts, so I know she would rather see her salary up than her loan forgiven.

Mr. SIMON. Mr. Penny.

Mr. PENNY. Mr. Chairman, I would like any of the panelists to discuss their concept of a private partnership in meeting some of our education needs.

I apologize if you have covered that in some of your testimony. I had to go greet a group of constituents. If we are traveling the same ground, then abbreviate your remarks so that you don't bore my colleagues with the same stuff you have already told them.

Ms. MCMAHON. You are referring to the business/industry partnership?

Mr. PENNY. In terms of meeting training needs and equipment needs, following up on the kind of comments that were made by our first speaker today.

Ms. MCMAHON. If I may?

Mr. PENNY. Yes.

Ms. MCMAHON. I think that that is a critical priority and it should be at the State and the national level.

In New England, New England has had a historic commitment to higher education, and has had a significant edge in funding higher education over the years. It is losing that edge. It is our belief in New England that it is critical we forge a partnership between business/industry and higher education, both in terms of training and retraining, of those in industry as industry changes and moves toward more technologically supported levels, and also in terms of gifts of equipment, funding of faculty chairs, that kind of thing.

I think we have a mutuality of interest in Rhode Island in exploring that under the rubric of a strategic development commission, which is a commission stimulated by a report from the education sector of the New England Board of Higher Education, but comprised of 19 members, including education leaders as well as leaders of business and industry. In the process of undertaking a comprehensive review of the State's economy, it has become apparent to that commission that there is a symbiotic relationship between the health of the economy and the health of higher education, and that we must be about the business of that partnership.

More specifically, what we are looking at is the State support for training, onsite training, for business and industry to be conducted by our vocational schools, and our community colleges in particular.

Also, as I mentioned earlier, we have introduced some legislation at the State level for forgiveness loans—excuse me, for a corporate tax credit for gifts on the part of business and industry to institutions of higher education in the science and technology area. We also are asking for State support for the establishment of research greenhouses, which would be a partnership between the research in universities and business and industry.

So I consider this a particularly important area, and feel that there must be a complementary kind of activity at both the State and Federal levels. Some States, such as Rhode Island, have very limited capacity to engage in this kind of activity. I think that the Federal role is to ensure that all States develop this potential.

Mr. CRONIN. Mr. Penny, you have been such a staunch advocate of student loans, both in the Minnesota Legislature and in the Congress, that I needn't remind you that the largest program of public/private cooperation is the Guaranteed Student Loan Pro-

gram whereby the banks can give you $7 billion and the cost to the Federal Government is $3 billion a year. That has been through the last couple of years, and probably will be true of the next few years.

The Greater Boston Area Chamber of Commerce has an education committee which I chair, and we recently took a stand in favor of making sure that the corporate tuition payments continue to be exempted from the earnings of their employees. I think we are going to see in the next 10 years even more corporate participation of continuing education, adult education, life-long learning, for their own employees. That has to be restored by the House and Senate in action, I think, very, very soon. So it is a very important priority.

In Massachusetts, we have had a lot of help from Digital and from IBM in terms of computer equipment in the schools. Computer literacy is absolutely vital, not only for the high-tech fields, but for insurance companies, banks, government, organizations such as our own who are increasingly reliant on data bases and the knowledge systems. So that kind of assistance, if not through this bill, then through the math and science legislation which is wending its way through the Congress, is terribly important.

Mr. PENNY. Mr. Corrozzi, did you want to respond to that?

Mr. CORROZZI. Just a final point. I could go on and talk about some of the things happening in my State and some of the programs occurring across the country.

I think there is no doubt that States are attempting to forge these partnerships, that the Federal Government is attempting to bring programs that will facilitate them, and certainly individual colleges at all levels are attempting to establish business partnerships. Is there anything else to say but this is good and it seems to be mutually beneficial.

I do think, however, as we look at these programs, we need to be concerned about what their effect is sometime down the road, the equity issues. We know about business, the great sums of money that corporations put into education for their employees. Some studies recently conducted on that issue look at the distribution of employees being trained by institutions, that is, it may not meet the classic equity goals that the Federal Government has been looking for in postsecondary education in general. Corporations teaming with colleges will not necessarily team with all colleges, or certain kinds of corporations will establish relationships with other colleges.

So, all I am saying is this is good. There are a lot of programs happening, but I think we have to look at the total establishment of higher education and see what the differential effects of the various arrangements are. Certainly many of the things we have talked about here and in other hearings this year relate to the Job Training Partnership Act, its success, and as we are here talking about the Higher Education Act, I wonder what mechanisms there are through that to coordinate programs like that, as well as the other partnerships we seek.

Mr. PENNY. In particular, I would like to have Mr. Cronin respond to this question, but the others may want to add some thoughts from their perspective.

What would you advocate as a response to the financial needs of the growing population of nontraditional students, those who don't fit our current student financial aid criteria?

Mr. CRONIN. Nontraditional students is an umbrella word, and it includes almost anybody over 21 or 22 who doesn't have a family, or at least parents to support these students, but includes people who are ambitious but already on the way to becoming well to do and, in some cases, whose companies will pay for their education. So I don't think we need to design programs for them other than, as I just said, to make sure that that doesn't get taxes as a benefit for their corporation.

I suspect you are referring to the adult, which may include adult minority, an adult on public assistance, folks on AFDC, who would like to go to college to try it out maybe for one course a semester or two. Unfortunately, those folks are not eligible for student loans. For the most part, they aren't eligible for many of the State programs. Maybe we have got to have provision in this bill for some kind of pilot program—limited—whereby a person who has two or three children, is the sole supporter of that household, can go to college for a semester or two and take one course and try it out and get into a routine where they can possibly qualify for taking two courses the second, third, or fourth semester.

It may mean higher education or an associate degree or a technical education degree will take more than the usual timeframe. It may extend it by 2 or 3 or 4 years. But there has been some fantastic success in a number of States, including New Hampshire and Massachusetts, getting folks off public assistance and welfare, not through workfare, but through higher education and through technical training, getting their incomes up from $8,000 or $9,000 a year to $13,000 or $14,000, which is enough of a jump to make it possible to get off public assistance. We need to have a higher education policy that is compassionate and that enables that to take place.

The second thing to fight to preserve is the TRIO programs, the special assistance, the EOC counseling centers which, in our State and many other States, reach out to these adult students, nontraditional students, and provide advice on how to work their way through the maze of State and Federal programs, how to line up day care.

In fact, in a letter that I will send to the chairman of the committee, one of the features these nontraditional students may need is adequate consideration of child-care costs, day-care costs, in the cost of education. Having a babysitter for the one or two children at home, the young children may cost as much as $3,000 a year. So that should be an allowance factor in the cost of education. That would clearly help many of the adult women who would like to go to school, but have people at home and must pay a babysitter to come in.

Mr. PENNY. It seems to me that is a particularly crucial area, as women who have been at home and out of the work force decide that they want to pursue academic training or vocational training are not only saddled with the cost of the education, they are saddled with incidental costs like day care, and all of that is made even more difficult because of a family income situation that may

disqualify them from the financial assistance that is available to what we consider traditional students.

Mr. CRONIN. That is true. If there is another wage earner, and if there is another income, then our proposal for a supplementary student loan program may, under some circumstances be very, very useful to the adult learner.

Ms. MCMAHON. I would like to reinforce both points that Mr. Cronin made.

We have had extraordinary results with an EOC program in the inner city which has given access to people in that area to higher education, both at the associate level and at the baccalaureate level. It has been critical to that community.

In addition, one of the things we find in Rhode Island is that we have a larger percentage of women at entry-level jobs and a smaller percentage in management and professional jobs than the rest of the Nation. We find that that trend is being exacerbated. While, in the rest of the Nation, the number of women moving up in the management and professional jobs is increasing, in Rhode Island it is decreasing slightly, but, nevertheless, decreasing.

It is very important for purposes of equity for women in disadvantaged groups, minorities, to have this opportunity to access higher education initially, at least on a part-time basis. We initiated in our State college a performance-based admissions program designed just for that population. But the heartbreaking thing about it is the lack of aid for people who have got to start out on a part-time basis.

Also, one of the other things in the equity area that we are concerned about is the fact that job opportunities for women at the entry level often require more literacy than they do for men. There are frequently job opportunities for men that are basically manual labor, that kind of thing. So, again, I think the connection between equity and the provision of assistance for part-time students is very important.

Mr. PENNY. Thank you. I appreciate your comments.

Mr. SIMON. We thank the three of you for your testimony.

We will recess until 1:30 at 2261 Rayburn.

[Prepared statement of Douglas R. Seipelt follows:]

PREPARED STATEMENT OF DOUGLAS R. SEIPELT, DIRECTOR, COLORADO GUARANTEED STUDENT LOAN PROGRAM

Mr. Chairman and Members of the Committee: I am Douglas R. Seipelt, Director of the Colorado Student Loan Program. It is a pleasure to speak to you concerning the reauthorization of the Higher Education Act as embodied in HR 5240 and specifically the sections which deal with the Student Loan Program.

The reaffirmation of the Guaranteed Student Loan concept is most important to anyone concerned with financing educational cost, both today and in the future.

Federal involvement in all forms of financial assistance is the cornerstone of educational access for thousands of needy students and is a responsibility that cannot be delegated. This bill reallocates major federal resources for needy students through expansion of the Pell System and increased borrowing capacity for eligible students under the Guaranteed Loan Program.

I believe that regardless of what the need may be for educational credit, a balance of federal resources available must be struck between loan and grant funds. This bill recognizes that balance and makes additional grant funds available for the needy students, thus reducing the necessity for those students to borrow money.

The federal role in financing educational costs for needy students has, in my opinion, been well thought out in this legislation. However, one major gap remains: we must also recognize the credit needs of middle class families.

As you know, the original target for the subsidies provided in the Guaranteed Student Loan Program was the so called middle class family. The intent of the program was to allow students and families with cash flow problems to borrow their education costs now and pay later with income that was expected to increase as a result of the educational experience. This philosophy existed from the start of the program in 1965 until 1981.

In 1981, a major shift of congressional policy took place concerning the loan program. This was due to two major factors:

(1) Increased federal deficits causing program cutbacks and,

(2) Increasing pressure from the Financial Aid Community to flow more grant and work funds to qualified needy students instead of loan subsidizes for the middle class.

As a result, the impact of the 1981 reconciliation was a change in the concept of the Guaranteed Loan Program. It became a need based Financial Aid Program, and income limits were established for program eligibility.

Simply stated, we now ration GSL credit on the basis of the need for subsidy as defined by the same system with which we allocate grant resources. The program no longer serves most of those families whose earnings exceed $30,000 per year. We can justify the use of scarce federal resources to assist needy families by providing interest subsidies for educational credit. However, we have been unable to defend such expenditures to provide access to credit for those families that lack discretionary income, and thus disregard the original cash flow concept totally. The new policy of "across the board need" for GSL Credit will deny most middle class families the necessary credit for educational goals.

That is where the new reauthorization falls short in my opinion. We must recognize the credit needs of middle class families who are ineligible because of rationed federal resources. The most important arpect of the GSL for years was the theory of students borrowing now and paying later with future earnings. I disagree with those people who believe that the PLUS Program has accomplished this need. The last three years have shown that the PLUS Program has not become a nationally accepted credit instrument. At best, it is a regional credit instrument confined to the more expensive institutions and borrowed by wealthy families who can make the monthly payments. Truly middle class families cannot afford the monthly payments on a $10,000 debt instrument for higher education costs out of current income. Further, many of them will still be responsible for those debts in their retirement years.

I believe that for a system of National Higher Education credit to work it must have three major components:

(1) It must be reasonably priced.

(2) It must look to future income for its payback and

(3) Someone must be responsible for making current interest payments.

To make my point more clear, I would like to refer to a study recently done by my agency which explored the educational credit demands of Colorado families. We based our assumptions on the collection of data in two categories that are defined in nationally recognized terms; unmet need and expected parental contributions. We consider unmet need to be that documented need which remains after all other aid is granted. In short, the study resulted in a conservative estimation of more than one hundred million dollars of documented unmet need in Colorado families that were eligible for financial aid. The need for credit becomes much greater when we consider that a proportion of the expected parental contribution would generate a need for borrowing funds also. I would be more than happy to make the study available at your request.

We have therefore concluded that federal aid, both in grant resources and GSL eligibility, is falling significantly short in providing the assistance needed as defined by an evaluation that we all believe in called needs analysis. Secondly, as we progress through the 1980's, we are expecting increasingly large cash contributions from our middle class families without a widely accepted instrument to help defray cash contributions. We must find alternative financing mechanisms to respond to the increasing amount of unmet need and expected parental contributions or we will face a major crisis in educational finance during this decade.

I respectfully propose that this Committee take a hard look at authorizing a guaranteed, non-subsidized GSL loan which will help meet this need. In times past this type of loan was authorized under the GSL concept.

The new supplemental GSL should have the following characteristics:

(1) A maximum interest rate of 12%.

(2) Interest would be paid current by the student or family.

(3) Dependent undergraduate and graduate students would be eligible.
(4) Annual loan limits to be $4,000 and be in addition to any GSL eligibility.
(5) Loans would have the same terms as GSL.
(6) Special allowance would be paid under the formula of (91 day T-Bill + 3% − 12%).
(7) No deferrent should be granted except in school status.
(8) Fully Guaranteed.
(9) Loan to be made as a family loan with cosigners.

This new program should replace ALAS and reduce the burden of middle class families to make immediate repayments under PLUS. If we are to face the hard facts, higher education costs have outstripped the ability of students, most families, State Governments, and the Federal Government to pay those costs in cash from current income or available resources. Thus, if we are to maintain the ability of all students to seek and secure higher education opportunities, we must continue to utilize a solid system of credit which looks to future earnings for its repayment.

I believe the Federal Government has a responsibility to provide access not only to needy students, but to all its constituents. To accomplish this, alternative sources of credit must be available to finance higher education costs irrespective of the actual federal dollars allocated for grants and interest subsidies. The GSL is a firm building block for such a program. I believe the need for an expanded GSL program must be recognized immediately to avoid a major crisis in educational finance in this decade.

I thank you for your time and consideration.

[Whereupon, at 11:55 a.m., the subcommittee recessed, to reconvene in room 2261, Rayburn House Office Building, at 1:30 p.m., this same day.]

AFTERNOON SESSION

Mr. SIMON. The subcommittee will resume its hearing.
I will enter my statement in the record.
[Opening statement of Congressman Paul Simon follows:]

OPENING STATEMENT OF HON. PAUL SIMON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ILLINOIS AND CHAIRMAN, SUBCOMMITTEE ON POSTSECONDARY EDUCATION, MARCH 28, 1984, AFTERNOON

This afternoon we will hear from witnesses regarding the teacher preparation title of the Higher Education Act Amendments. As you know, the current provisions have either been removed from Title V (in the case of teacher centers), been repealed, or been left unfunded. I believe this is a real opportunity to rewrite the title and to address some major issues facing American education.

The Merit Pay Task Force, which I chaired, recommended a comprehensive approach to improving teacher preparation and professional development. In this title I have attempted to develop a comprehensive legislative approach in these areas as well as attracting the best and the brightest to the teaching profession.

Let me describe briefly the proposals in Title V.

First, H.R. 5240 incorporates, with some modifications, H.R. 4477, introduced by my colleague Ron Wyden that creates a program of scholarships for outstanding students who want to be teachers, and a national fellowship program for classroom teachers for study, travel and academic improvement. These programs are designed to encourage a higher quality of teacher candidates and will enable classroom teachers to expand their intellectual achievements and upgrade their skills.

The Merit Pay Task Force acknowledged the success of summer institutes and workshops for educators sponsored by the National Science Foundation and other agencies, and suggested that a similar program be instituted for teachers generally. The goal would be to have all of the 2 million teachers in the country attend an institute in the next 10 years, at the rate of 200,000 per year. The institutes and workshops in H.R. 5240 would improve the knowledge and skills, and instructional and administrative methods, in addition to evaluation techniques.

Title V of the bill also provides for grants to establish programs such as mentor support for beginning teachers and professional development resources centers.

The bill also includes a program of grants to colleges and universities to make improvements in their teacher training curriculum and for developing exemplary programs.

From teachers, school administrators and university officials, the Merit Pay Task Force heard that there need to be more effective partnerships between schools and institutions of higher education. This is especially true in the sharing of technological resources and faculty and in consultation on management and administration, and for cooperative projects among universities.

Finally, H.R. 5240 provides for studies of teacher supply and demand and for research on teacher evaluation, teacher education and professional development.

Our witnesses today have substantial experience in teacher education issues. They are Dr. Patricia Graham, Dean of the Harvard Graduate School of Education. She will be joined by Dr. Sharon Robinson, Director of Instruction and Professional Development of the National Education Association, and Dr. Robert Saunders, Dean of the College of Education of Memphis State University and President-Elect of the American Association for Colleges of Teacher Education.

I welcome you today, and I look forward to hearing your testimony.

Mr. SIMON. What we are talking about today is title V. Among other things, title V incorporates basically the thrust of a suggestion of my colleague, Ron Wyden, who has mentioned it and has in a separate legislation that would encourage really superior students to go into teaching. In incorporates the whole idea of summer institutes and workshops and, among other things, also incorporates something that I think can be effective, and that is to encourage partnerships between elementary and secondary schools and institutions of higher education.

As I look at the Chicago scene, for example, somehow we ought to be pulling the great resources of the University of Chicago, the University of Illinois, Northwestern University, Chicago State University and mesh them with the obvious huge needs of that urban school system where, clearly, a great many young people are not receiving a quality education. I say that meaning no disrespect to the many fine teachers and administrators in the Chicago school system.

Anyway, we are going to take a whole look at title V this afternoon. I am pleased to call as the first witness my colleague from the State of Oregon, Ron Wyden, who, I might add, in addition to everything else, his other contributions, was probably more responsible than any one person for the creation of the Task Force on Merit Pay that really went much beyond simply merit pay that reported back—I can't remember—3 months ago or 4 months ago, whenever it was. We are pleased to have you here.

STATEMENT OF HON. RON WYDEN, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF OREGON

Mr. WYDEN. Thank you very much, Mr. Chairman. It really is a pleasure to be here. I think it is fair to say no one in this country has done more to support the kind of educational programs that we are talking about today than you have. Frankly, I am kind of sorry to see you getting ready to move over to the other side of Capitol Hill, the other body. I guess it is a sacrifice that people like me ought to make for the good of the country. We will be anxious to work with you over there.

Mr. SIMON. You are an outstanding witness, obviously. [Laughter.]

Mr. WYDEN. Mr. Chairman, I would ask unanimous consent that my prepared testimony be entered in the record.

Mr. SIMON. It will be entered in the record.

Mr. WYDEN. Let me just, if I might, try to summarize a little bit and be brief here today.

I think it is pretty obvious that we face literally a surfeit of reports and studies in the last few months, extending over the last few years, that indicate to us very clearly that we got to take some action to improve our schools in this country. I think what your legislation does is it takes the recommendations of these reports and turns them into a comprehensive workable Federal policy. While not the be-all and end-all of educational reform—we all know that there are a variety of areas we have to look at to pull that off—I think that your legislation, Mr. Chairman, is going to produce a qualitative difference in higher education in this country. I want to make that very clear at the outset.

As you mentioned, I had the pleasure of serving with your and our colleagues, Mr. Goodling and Congressman Colemen, as a member of the Task Force on Merit Pay. We were charged, of course, by Chairman Perkins to explore the question of merit pay specifically while looking at the broader context of teachers' pay and working conditions in this country. I just think as a result of that task force, which included leaders of almost every national education constituency, we really are in a position to do what your legislation does, Mr. Chairman, and that is to essentially enact the key recommendations of our committee's work in the legislation for us.

What I would like to do is focus just for a second on the question specifically that I tried to look at at some length, and that is the question of how we attract sharp people into the teaching profession, and then how we retain them.

I think that what we found on the task force is that effective schooling starts in the classroom and, though teacher pay is essentially a local and State matter, there are ways for the Federal Government to provide leadership and encouragement in this area. I think that is exactly what your bill does, Mr. Chairman, part A and part B of title V specifically, where we see created the Carl D. Perkins Scholarship Program and the talented teacher fellowships. As you mentioned, these provisions are very much like the legislation that you and Congressman Goodling, Congressman Coleman, and I all introduced at the end of last November, H.R. 4477, the Talented Teachers Act.

I think, Mr. Chairman, again trying to be brief, it was the clear finding of the task force that the status of teaching in this country and the prospects for its future were really very seriously imperiled. The profession faces traditionally low pay, distinct lack of rewards, low public esteem, and requirements of teachers in and out of the classroom, of course, are enormous.

The statistics, what we found in the task force, really bear that out. Recent studies by the Carnegie Foundation for the Advancement of Teaching and others show that teachers on the average are paid less—from the start to the finish of their careers—than others in the private sector such as accountants, drafters, engineers, attorneys, programmers, a variety of different professions.

What has happened, particularly between 1972 to 1980, is that there has been a 50 percent decrease in the number of students entering teacher education programs.

I think more importantly, again citing the recent report by the Carnegie Foundation, fewer than 5 percent of the high school seniors who took the scholastic aptitude test in 1982 are expected to major in education. That is half the number of students who chose teaching in 1973. In addition to that dropoff, of course, we saw reductions in the average teacher's salary as well.

The question that we face, as we did when we looked at the earlier bill and today's legislation, as why in the world would somebody choose to become a teacher in this country? Clearly, some talented individuals, despite the barriers I just mentioned, are still choosing to try to surmount those in some way and become teachers. But many—I do want to emphasize many—just are not. I think it is a particularly serious matter at this time when the National Center for Education Statistics is forecasting a shortage of 37,000 teachers by 1987.

They also go on to say that they are greatly troubled by the length of time that good teachers are staying in the classroom. Between 10 and 20 percent of the teachers are leaving the profession after just 1 year on the job. Even words, half the teachers call it quits after 7 years. Again, the evidence shows that the people who are leaving are cream of the crop.

Mr. Chairman, I particularly appreciated what you said in your opening statement about the need to try to address the crisis with partnership. I think we saw that come up again and again in the Task Force on Merit Pay, a partnership of teachers, administrators, parents, all the people who have an interest in this working together to overcome the obstacles facing American teachers.

I think what your legislation does is exemplifies that the Federal Government absolutely must be part of that partnership. The teacher scholarship and fellowship provisions help us address in a modest way two fundamental problems where the Federal Government can play a role: first is the lack of incentives for outstanding students to become teachers; and second, lack of rewards and recognition, once we get these superior individuals, to stay in the classroom.

The Carl D. Perkins Scholarship Program would provide 10,000 scholarships to encourage the best and the brightest high school graduates from across the country to enter the teaching profession. Scholarships of not more than $5,000 each—or the cost of the student's education, whichever is less—would be awarded by the States to applicants who have graduated at the top of their class. Awardees would agree to teach for a period of time in return for the scholarships.

The Talented Teacher Fellowship Program, part B of title V, would provide incentives to keep talented teachers in the classroom. Under this part of the act, fellowships of not more than $25,000 would be provided to two outstanding teachers in every one of our congressional districts. These awards would be used by recipients for up to 1 year's sabbatical leave for study, research, travel or curriculum improvement, and fellows could pursue a wide

variety of different areas ranging from curriculum development, model teacher programs and the like.

In return for the fellowships, which would be awarded by a national panel, an awardee would agree to teach for at least 2 more years.

I would like to add here, Mr. Chairman, that the Talented Teachers Act, embodied in parts A and B, has received overwhelming support from the key education leaders and policymakers across the country. Among those who have applauded the bill are, of course, members of the Merit Pay Task Force; 50 Members of Congress of both parties who have already signed on as sponsors; leaders such as Gov. Thomas Kean of New Jersey; Ernest Boyer of the Carnegie Foundation; Dean Patricia Graham, here today from Harvard's Graduate School of Education; Robert C. Wood, a member of the 20th Century Fund Task Force; Derek Bok, president of Harvard University; and I believe the subcommittee has a rash of newspaper editorial boards that we have accumulated in support of the legislation, as well.

Let me, if I might, Mr. Chairman, just talk about a couple of areas where I think we still have some room for debate and could discuss a little bit further.

Specifically I want to talk about the eligibility pool, portability of benefits and the payback provisions for the scholarship. I do want to say that I think that this is all really very modest in the context of the overall effort, and I want my remarks seen in that regard.

First, with regards to the applicant pool, the Talented Teachers Act originally discussed that those eligible for the teacher scholarships come from the top 10 percent of their graduating high school class. With the bill before us today, we are talking about a pool of about 5 percent of the class.

Although it is impossible, based on current data, to ascertain exactly where students graduating in the top 5 or 10 or even 25 percent of their high school classes are going after graduation, I would hope that it might be possible to work out a way, Mr. Chairman, that we could go up to the 10 percent figure.

Currently, students in the top of their class are heavily recruited by colleges, businesses and others to pursue various opportunities. The recruitment pressure increases exponentially from the bottom of the class to the top. It is my feeling that, if we stayed with 5 percent, we might be looking at a pool that was just a little bit too small. I also think it is fair to assume that most in this top 5 percent may not be as sympathetic to teaching, and may be a little more likely to choose a little more high-paying field. So, I think if there is a way we can work it out so we can go a little bit higher than 5 percent, that might be helpful.

Second, with regard to the portability of the scholarships and the service payback provisions, under the Talented Teachers Act, as originally put together, scholarship recipients could attend any college or university and then teach in any State of the Union. The service payback provision was 1 year for each year the scholarship was awarded.

Under H.R. 5240, the awardees would be required to teach in an elementary or secondary school in the State that actually awarded

the scholarship, and the service payback required is 2 years for each year the scholarship was awarded.

I would say in this area, Mr. Chairman, that my concern might be that the approach could create a problem by restricting recipients to teaching only in their home State. We could face a situation where, for instance, in a particular State, the awardee was unable to find employment in the fields in which he or she was instructed. We might also face the question of what would happen if someone was instructed in history while preparing to become teacher and most of the jobs available were in physical education or mathematics. Possibly we could even face a predicament that if a particular State had no teaching shortage, but another State in the Union might.

One last point, Mr. Chairman, with regard to the 2-for-1 service payback provision. I wonder if perhaps we have been a little restrictive in that area as well. Though there is a substantial reward to each of the recipients, it would require those teachers to work almost twice as long as the average teacher, and we may face the question of then having the opposite effect of what we had originally intended.

Again, Mr. Chairman, I consider all three of these points in the broad context of Western civilization and the legislative process to not exactly be monumental.

I would conclude, as I stated earlier, that we are all trying to figure out a way to get these very bright and gifted people to go into the profession. I think Herbert Kohl, in his new book "Growing Minds: On Becoming a Teacher," really hits the nail on the head when he writes, "Wanting to teach is like wanting to have children or to write or paint or dance or invent or think through a mathmetical equation that only few have been able to solve." There is no gauging this desire. It is one that has provided us excellent teachers in this country, and it has done so even though we haven't done a great deal to encourage their entering the profession.

So I am just very pleased to be here, Mr. Chairman. As I said, I think it is a national sacrifice to have to give you up here in the House, but I guess it is for the broader good for you being in the Senate. I look forward to working very closely with you when you are over there.

[Prepared statement of Congressman Ron Wyden follows:]

PREPARED STATEMENT OF HON. RON WYDEN, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF OREGON

Thank you, Chairman Simon, for inviting me here today to testify before the subcommittee on HR 5240, reauthorizing the Higher Education Act.

I would like to commend you, Mr. Chairman, for your fine work in the House of Representatives on behalf of higher education and for the improvement of education in America. It is due in large part to your outstanding work in the Congress that many students today are still eligible for federal financial assistance and are able to prepare for their futures at colleges and universities.

These efforts to improve higher education have not stopped in 1984. A surfeit of reports and studies have all told us that we have to take some action to improve our schools. Well, this bill takes the recommendations of those reports and turns them into sensible, workable federal policy. While not the be-all and end-all of educational reform—and while there is room for some minor fine tuning in a couple of areas—the bill will qualitatively improve the federal role in higher education.

Last summer and fall, I had the pleasure of serving with you and Congressmen Goodling and Coleman as a member of the Task Force on Merit Pay. That committee was charged by Education and Labor Chairman Carl D. Perkins to explore the idea of merit pay for teachers, while looking at the broader context of teachers' pay and working conditions and the preparation of teachers in America.

As a member of that task force, which included leaders of almost every national educational constituency, I would like to concentrate my testimony today on Title V of the bill before us, which would enact all of the federal recommendations in our report.

Specifically, Title V takes action—action which is urgently needed—on the task force's recommendations for:

(1) The inauguration of an expansion of the summer institutes and inservice training opportunities for teachers;

(2) The upgrading of colleges of teacher education;

(3) The encouragement of professional development of teachers and administrators in our schools;

(4) Directing federal agencies to assist in developing ways to judge teachers' performance that could be used in a performance based pay system.

(5) The inauguration of a talented teacher scholarship program to recruit students into the teaching profession; and

(6) The institution of a talented teacher fellowship program to recognize outstanding teachers in classrooms across the country.

The Task Force on Merit Pay recognized the need to lift the standards of instruction in this nation—that effective schooling starts in the classroom and that, though teacher pay is a local and state matter, there are ways for the federal government to provide leadership and encouragement in this area. Those avenues are provided in HR 5240.

I'd like to focus this afternoon specifically on Parts A and B of Title V, which create the Carl D. Perkins Scholarship Program and the Talented Teacher Fellowships. These provisions were included in a bill which I introduced with you and Congressmen Goodling and Coleman last November, HR 4477, the Talented Teachers Act of 1983.

Mr. Chairman, the status of teaching in America—and the prospects for its future—are imperiled. The profession is imperiled by traditionally low pay and rewards, low public esteem, and tremendous requirements in and out of the classroom.

The statistics bear this out. Recent studies by the Carnegie Foundation for the Advancement of Teaching and others show that teachers on the average are paid less—from the start to the finish of their careers—than others in the private sector such as accountants, drafters, engineers, attorneys, programmers, or podiatrists.

In fact, between 1972 to 1980, there has been a 50 percent decrease in the number of students entering teacher education programs.

According to the recent report by the Carnegie Foundation, fewer than 5 percent of the high school seniors who took the Scholastic Aptitude Test (SAT) in 1982 are expected to major in education—that's half the number of students that chose teaching in 1973. Also, the average teacher salary dropped from $10,164 to $8,926 between 1973 and 1983, a loss of 12 percent of an individual's purchasing power. Finally, after teaching 15 years, a teacher can expect to earn about $25,000 per year, compared to the $40,000-$50,000 their college roommate might earn as an accountant

The question is, why, will all of these disadvantages, would someone choose to become a teacher? Clearly, some talented individuals, despite these barriers, are still choosing to become teachers. However, many—and I emphasize many—are not. And this comes at a time when the National Center for Education Statistics is forecasting a shortage of 37,000 teachers by 1987. The length of time good teachers stay in the classroom is also troubling. Between 10-20 percent of teachers leave the profession after one year on the job. Even worse, half of all teachers call it quits after 7 years—and studies show that it is the cream of the crop who are leaving.

The Merit Pay Task Force recognized that addressing the crisis facing the teaching profession will take a partnership—a partnership of teachers, administrators, parents, local school boards, and state and federal governments acting together—to effectively overcome the obstacles facing American teachers. I have been pleased to see this partnership forming in state after state, where committees, legislatures and school boards are meeting the challenge of the "rising tide of mediocrity" that the National Commission on Education in America warned us about.

Title V of the bill before us today exemplifies that the federal government also is answering that call. Specifically, the teacher scholarship and fellowship provisions would help us address two of the fundamental problems facing the teaching profes-

sion: lack of incentives for outstanding students to become teachers and lack of rewards and recognition to stay in the classrom.

The Carl D. Perkins Scholarship Program would provide 10,000 scholarships to encourage the best and the brightest high school graduates from across the nation to enter the teaching profesion. Scholarships of not more than $5,000 each—or the cost of the student's education, whichever is less—will be awarded by the states to applicants who have graduated at the top of their class. Awardees will agree to teach for a period of time in return for the scholarships.

The Talented Teacher Fellowship program, Part B of Title V, would provide incentives to keep talented teachers in the classroom. Under this part of the Act, fellowships of not more than $25,000 would be provided to two outstanding teachers in each congressional district. These awards may be used by recipients for up to a year's sabbatical leave for study, research, travel, or curriculum improvement. Fellows can pursue development of curriculum improvements, develop innovative programs, or implement model teacher programs and staff development.

In return for these fellowships, which will be awarded by a prestigious national panel, fellows would agree to teach for at least two more years.

I would like to add that the Talented Teachers Act, embodied hear in Parts A and B, has received overwhelming support from education leaders and policymakers across the nation. Among those who have applauded the bill are members of the Merit Task Force, which included representatives of teachers, administrators, school boards and others; 50 Members of Congress of both parties who have cosponsored it; leaders such as Governor Thomas Kean of New Jersey; Ernest Boyer of the Carnegie Foundation; Dean Patricia Graham, here from Harvard's Graduate School of Education; Henry R. Luce Professor Robert C. Wood, a member of the 20th Century Fund Task Force; Derek Bok, President of Harvard University; and newspaper editorial boards including the Sacramento Bee and others.

In addition, the 20th Century Task Fund Task Force, the Task Force for Economic Growth, and the National Commission on Excellence in Education have all called for increased incentives for teachers. The 20th Century Fund and the National Commission each also called for programs along the line of Title V Parts A and B.

I would like to submit for the record a sampling of the letters that I have received from around the country endorsing these proposals. I would also like to submit an article on teacher incentives.

Mr. Chairman, as I mentioned when I began this filibuster, I want to take a moment to talk about some differences between the bill before us today and the Talented Teachers Act of 1983, which we introduced last November. Specifically, I want to talk about the eligibility pool, the portability of the benefits and the payback provisions for the scholarships. I believe a few small changes in these areas could make what is already an excellent bill even better.

First, with regards to the applicant pool, the Talented Teachers Act provided that those eligible for the teacher scholarships come from the top 10 percent of their graduating high school class. Under the bill before us today, that pool has been reduced by one-half, with awardees having to come from the top 5 percent of their class.

Although it is impossible based on current data to ascertain exactly where students graduating in the top 5 or 10—or even 25—percent of their high school classes are going after graduation, I am concerned that limiting the scholarship pool to 5—as opposed to 10—percent may effectively rule out any applicants to this program.

Currently, students in the top of their class are heavily recruited by colleges, businesses and others to pursue various opportunities. The recruitment pressure increases exponentially from the bottom of the class to the top. Thus, those in the top 5 percent—which is a relatively small pool of people—are being recruited harder than those in the top 10 percent. I also think it's fair to assume that most in this top 5 percent are likely to choose the medical and science professions, or other high-paying fields, to pursue above the teaching profession. Thus, it is my belief that we should keep the applicant pool at 10 percent.

Second, with regards to the portability of the scholarships and the service payback provisions, under the Talented Teachers Act, the scholarship recipients could attend any college or university and then teach in any state of the union. The service payback provision was one year for each year the scholarship was awarded.

Under HR 5240, the awardee must teach in an elementary or secondary school in the state that actually awarded the scholarship, and the service payback required is two years for each year the scholarship was awarded.

I am concerned that this approach may create a problem by restricting scholarship recipients to teach only in their home state. What if, for instance, in that particular state, the awardee was unable to find employment in the fields in which he

or she was instructed? What if someone was instructed in history while preparing to become a teacher, and most of the jobs available were in physical education or mathematics? Worse yet, what if that particular state had no teaching shortage, but another state, such as Arkansas, did?

Finally, with regards to the two-for-one service payback provision, I am concerned that HR 5240 may be too restrictive in this area. Though it provides a substantial award to each of the recipients, it would require those teachers to work almost twice as long as the average teacher. I am concerned that this may result in the opposite of what was intended.

These three differences in our two bills, the eligibility pool, the portability, and the payback provisions for the scholarships are ones that I believe should be considered further by the subcommittee and I would be pleased to work with you to that end.

As I stated earlier, we have many talented teachers in our classrooms today—and no matter what the effects of these programs are, many of these individuals will continue to enter the teaching profession. Herbert Kohl, in his new book Growing Minds: On Becoming a Teacher hits the nail on the head when he writes, "Wanting to teach is like wanting to have children or to write or paint or dance or invent or think through a mathematical equation that only few have been able to solve." There is no gauging this desire. It is one that has provided us excellent teachers, even though we've done little to encourage their entering the profession.

Title V, which we examine here today would, at the federal level, start to provide some encouragement. In concert with initiatives at the local and state level, it will go a long way towards promoting improved education for all our children. I urge its favorable adoption by all those on the subcommittee.

Again, thank you, Mr. Chairman, for allowing me to testify today.

STATE OF NEW JERSEY,
OFFICE OF THE GOVERNOR,
Trenton, February 28, 1984.

Hon. RON WYDEN,
House of Representatives,
Washington, DC.

DEAR CONGRESSMAN WYDEN: Thank you for your letter describing H.R. 4477, the Talented Teachers Act of 1983. The purposes of your bill are certainly consistent with the frequent and overwhelming reports of Task Forces and Commissions which have recommended incentives to attract talented teachers into the public schools.

In New Jersey, as in many other states, we have launched several initiatives which focus on the challenge of attracting and maintaining the best cadre of teachers for our students. Some of the financial incentive approaches we have recommended include a more attractive minimum salary for teachers ($18,500) and a master teacher program which recognizes outstanding teachers and grants them a $5,000 award. In addition, we have improved the standards for teacher preparation programs in colleges and proposed a rigorous alternative to those programs to encourage talented candidates from business and industry to consider employment in the public schools.

The scholarship and fellowship provisions of your bill constitute a further incentive for teachers. Although I have not examined the details of the proposal, it represents an incentive strategy which is consistent with needs identified in many reports.

I appreciate your bringing these proposals to my attention and am especially pleased at the congressional interest in this very important educational issue.

Sincerely,

THOMAS H. KEAN,
Governor.

THE CARNEGIE FOUNDATION,
Princeton, NJ, January 5, 1984.

Hon. RON WYDEN,
House of Representatives,
Washington, DC.

DEAR CONGRESSMAN WYDEN: Thanks for your recent letter notifying me that you have been joined by Chairman Paul Simon and Congressmen Goodling and Coleman

in introducing the Talented Teacher Act of 1983. Thanks too for sending a copy of this legislation.

As you know, my own commitment to the improvement of the teaching profession includes emphasis on ideas that connect closely with those emphasized in your legislation. I believe that federal initiates will be important and necessary in securing outstanding students for careers in teaching. And I agree that talented teachers must be recognized—for what they have done and for what they can do as role models for their peers.

I will follow the progress of this legislation with special interest and high respect for what you and your colleagues are doing to help improve our schools.

Cordially yours,

ERNEST L. BOYER,
President.

AMERICAN ASSOCIATION OF SCHOOL ADMINISTRATORS,
Arlington, VA, January 24, 1984.

Hon. RON WYDEN,
U.S. House of Representatives,
Washington, DC.

DEAR MR. WYDEN: On behalf of the American Association of School Administrators, I would like to express our support for H.R. 4477, which would provide scholarship assistance to outstanding high school graduates to enter the teaching profession.

The American Association of School Administrators (AASA) will contact members of the House of Representatives urging them to join you in this effort by co-sponsoring the legislation. Further, we will contact our state associations across the country, informing them of this legislation and urging their support. I would like to thank you on behalf of the members of the American Association of School Administrators for introducing this legislation, and if I can be of further service, please don't hesitate to contact me.

Sincerely,

JOSEPH J. SCHERER, Ph.D.,
Associate Executive Director.

HARVARD UNIVERSITY,
Cambridge, MA, January 12, 1984.

Hon. RON WYDEN,
Member, U.S. House of Representatives,
Washington, DC.

DEAR CONGRESSMAN WYDEN: Thank you for your letter of December 19 informing me of your introduction of the Talented Teachers Act of 1983. You and your colleagues are to be congratulated for taking this important step, both in terms of addressing two of the more critical problems confronting contemporary education, and in terms of understanding what we on the Twentieth Century Fund Task Force considered the overriding federal interest in their prompt and successful resolution.

I hope that this legislation continues to receive bipartisan support. If possible, please keep me informed as to your progress. Best wishes for the new year.

Sincerely,

PATRICIA ALBJERG GRAHAM,
Dean.

WESLEYAN UNIVERSITY,
Middletown, CT, January 25, 1984.

Congressman RON WYDEN,
House of Representatives,
Washington, DC.

DEAR CONGRESSMAN WYDEN: Thank you very much for your letter of December 19 bringing me up to date on Congressional activity with respect to Federal educational policy. I have followed developments in a general way since I testified before the Perkins Committeee last Spring, but I am particularly pleased to have more information about the Talented Teachers Scholarships Fellowships. They parallel in important respects with the major themes of the Twentieth Century Fund Task Force.

Ever since the avalanche of reports last Spring, I have been impressed at the public and political reaction. I continue to present Twentieth Century Fund findings to a wide variety of audiences nationwide; and I am persuaded that despite the Federal deficit and the opposition of the present administration, we can move forward in defining a coherent and important Federal role. I will be glad to support your efforts in any way that I can and to so indicate that to my old Congressional friends in Massachusetts and to my new ones in Connecticut. Again, I appreciate your writing to me.

With every good wish,

ROBERT C. WOOD, *Professor.*

HOUSE OF REPRESENTATIVES,
STATE OF OKLAHOMA,
January 17, 1984.

Hon. RON WYDEN,
House of Representatives,
Washington, DC.

DEAR MR. WYDEN: Thank you so much for sending me a copy of H R 4477. The enactment of this bill should be a real boon for the efforts to improve quality in education and to attract bright, lively people to the field of teaching.

I would really appreciate your asking the appropriate staff member to keep me apprised of the bill's progress for any major revision.

Once again, many thanks for the enormous contribution the passage of this bill should make to raising the level of literacy in America today.

Sincerely,

PENNY WILLIAMS,
State Representative.

OREGON STATE UNIVERSITY,
Corvallis, OR, January 4, 1984.

Hon. RON WYDEN,
Member of Congress,
P.O. Box 3621,
Portland, OR.

DEAR CONGRESSMAN WYDEN: I was delighted to learn that you have submitted the Talented Teachers Act of 1983 to Congress. Given my perception of the urgent needs of American education, this legislation would be an important contribution.

If there is anything I can do to assist you in gaining approval of the Talented Teachers Act, please let me know.

Sincerely,

ROBERT D. BARR,
Dean OSU-WOSC School of Education.

UNIVERSITY OF WASHINGTON,
Seattle, WA, January 11, 1984.

Representative RON WYDEN,
House of Representatives,
Washington, DC.

DEAR CONGRESSMAN WYDEN: Thank you very much for your letter of December 19, 1983 telling me about your bill, HR 4477.

The bill certainly sounds to be a very fine step in the right direction and appears consistent with what we were trying to do. I hope that Congress will act on legislation of this type soon. I would appreciate very much receiving a copy of the bill and of any report or hearings coming out of the committee. I would also appreciate it very much if your office could send me a copy of the report of the Merit Pay Task Force to which you refer in your letter.

At the Twentieth Century Fund we are continuing to follow the important policy issues raised in our Task Force and which have now been at the center of public and media attention for several months. We are also talking here in the state about holding some kind of a meeting between leaders of teachers organizations and others to develop a consensus on next steps. It certainly sounds as if the Merit Pay Task Force recommendations are very much along that line. We have also had a small group meet at the Fund to search for agreement as well. My impression from talking to teachers union people is that while they are firmly on record against

merit pay as such or bonus systems, there is very strong support for some sort of merit-based personnel system for teachers if it can be enveloped within the rubric of collective bargaining.

Thank you again for thinking of me.

Best personal regards.

Sincerely yours,

BREWSTER C. DENNY,
Professor.

AMERICAN ASSOCIATION OF COLLEGES FOR TEACHER EDUCATION,
Washington, DC, January 5, 1984.

Hon. RON WYDEN,
House of Representatives,
Washington, DC.

DEAR RON: Thank you for the work that you have done in introducing the Talented Teachers Act of 1983. I appreciate the commitment and work that you have directed toward the improvement of education. Also, I appreciate your sharing with me the progress that is being made. Do know that I shall welcome the chance to support your efforts and any additional exploration which you may wish to do in this area. I look forward to your calling on me. Until that time, good wishes.

Sincerely,

ANNE FLOWERS, *President.*

P.S.—I have written and shared a copy of this bill with Congressman Lindsay Thomas.

COMMUNICATIONS WORKERS OF AMERICA,
Washington, DC, January 4, 1984.

Hon. RON WYDEN,
House of Representatives,
Washington, DC.

DEAR CONGRESSMAN WYDEN: Thank you for your kind praise concerning the Task Force on Education for Economic Growth. I'm very pleased to be the labor representative on the task force, which is doing some very constructive work.

I am also quite pleased about this legislation you are proposing for talented teachers. As you correctly cited, it was one of the recommendations of the task force, and I think is a preferable form of reward for talented teachers over merit pay.

The only concern I might have with your legislation is that various requirements and restrictions be placed on the recipients of the awards. The one stipulation you mentioned in your letter is perfectly fine with me, but I think it should be up to state and local bodies to decide on any other requirements.

Thank you for introducing this timely legislation, and please keep me informed on its status.

Sincerely,

GLENN E. WATTS,
President.

HARVARD UNIVERSITY,
Cambridge, MA, December 19, 1983.

Mr. RON WYDEN,
Member of Congress,
Washington, DC.

DEAR MR. WYDEN: Thank you for sharing with me your mailing of December 19, describing your initiative in introducing HR 4477, the Talented Teachers Act of 1983. The Act seems to me well designed to meet a good part of the problem of attracting good teachers from among the talented young people who have other, perhaps otherwise more attractive options.

As you correctly indicate, this Act is not a cure-all for the educational system; but it seems to me one of the most promising portions of the needed task of upgrading the system.

With best wishes,
Sincerely yours,

GERALD HOLTON,
Mallinckrodt Professor of Physics,
and Professor of History of Science.

ILLINOIS ASSOCIATION OF SCHOOL BOARDS,
Marion, IL, December 22, 1983.

Re H.R. 4477.

Hon. RON WYDEN,
U.S. Congressman,
Washington, DC.

DEAR CONGRESSMAN WYDEN: I will contact as many people that I can think of concerning co-sponsoring H.R. 4477 which I think is an excellent Bill.

Thank you for taking your time to write to me and we will see if we can get the necessary sponsors for this.

Very truly yours,

JAMES W. SANDERS,
Past President.

JAMES A. GARFIELD HIGH SCHOOL,
Los Angeles, CA, December 16, 1983.

RON WYDEN,
Member of Congress,
House of Representatives,
Washington, DC.

DEAR RON: I received your letter dated December 12, 1983 and a copy of H.R. 4477. I wish to thank you for sending me a copy of the bill. I feel this is a worthwhile piece of legislation and all efforts should be made for its successful passage.

I will encourage all my colleagues to support you in your efforts.

Sincerely,

JAIME ESCALANTE,
Math Dept. Chairperson.

COMMONWEALTH OF PENNSYLVANIA,
DEPARTMENT OF EDUCATION,
Harrisburg, PA, January 10, 1984.

Hon. RON WYDEN,
Member, House of Representatives,
Washington, DC.

DEAR CONGRESSMAN WYDEN: Governor Thornburgh forwarded your recent letter concerning the Talented Teachers Act to my office and asked that I respond on his behalf.

In reviewing your proposed legislation it became apparent that the recommendations you cite regarding teacher recognition, made by the Task Force on Economic Growth, also influenced the direction Governor Thornburgh took in developing his educational initiatives for Pennsylvania. Your Act appears to respond to the same need and has an identical intent as does our effort to improvement the effectiveness of teachers and administrators. I am enclosing a copy of the Governor's Agenda for Excellence in Pennsylvania Public Schools so that you may note these parallels and be aware of the specific approach we will be taking in this area.

Federal assistance for the ablest teacher candidates and the most talented classroom teachers will very positively complement our Scholars in Education and Excellence in Teaching Awards. I commend you and the co-sponsoring Congressmen for taking this step to improve the quality of education and I strongly support your efforts.

Thank you for providing this information and for the kind words about Governor Thornburgh's participation on the Task Force.

Sincerely,

ROBERT C. WILBURN, *Secretary.*

AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE,
MOUNT HOLYOKE COLLEGE,
South Hadley, MA, January 11, 1984.

Hon. RON WYDEN,
Member of the House of Representatives,
Washington, DC.

DEAR RON: Thank you for your letter concerning The Talented Teachers Act of 1983, HR 4477. Two comments

1) I applaud your action in this matter, and
2) I hope that it receives favorable action.

Sincerely yours,

ANNA J. HARRISON, *President.*

COMMONWEALTH OF KENTUCKY,
STATE SENATE,
Richmond, KY, September 15, 1983.

Hon. RON WYDEN,
U.S. House of Representatives,
Washington, DC.

DEAR REPRESENTATIVE WYDEN: I regret exceedingly that the state of my health for this summer made it impossible for me to serve on the Merit Pay Task Force, but I thoroughly agree with the work which you have done. You have proposed legislation on two problems that I think are very pertinent to the improvement of the quality of education, namely, the recruitment and retention of excellent teachers. The legislation which you have proposed attacks these two problems and I think should be considered by the Congress if it is serious about improving education.

My very best wishes for you and your efforts.

Cordially yours,

ROBERT R. MARTIN, *Senator.*

HARVARD UNIVERSITY,
Cambridge, MA, January 3, 1984.

Hon. RON WYDEN,
Congress of the United States,
Washington, DC.

DEAR MR. WYDEN: Thank you for your letter of December 22 which was prompted by my statement before the Senate Labor and Human Resources Committee. You are most kind to comment and to send me a copy of your bill, The Talented Teachers Act of 1983. I have read the materials with interest and commend you for what you are trying to do. Such efforts are encouraging. Let us hope that the kinds of improvements that we both are seeking will soon be forthcoming.

With best wishes,

Sincerely,

DEREK BOK, *President.*

INTERNATIONAL BUSINESS MACHINES CORP.,
Armonk, NY, January 9, 1984.

Hon. RON WYDEN,
Congress of the United States,
Washington, DC.

DEAR MR. WYDEN: It is very encouraging to see action being taken to address the serious concerns expressed in the reports on primary and secondary education published by the Task Force on Education for Economic Growth and many others.

I believe that attracting the best possible talent we can into the teaching profession may be the single most important objective we can collectively address. I am delighted to see that you are addressing it.

As you noted, your proposal alone will not "fix" the problem, but it does sound like a constructive step in the right direction. I trust that your legislation will motivate these new teachers to teach where they are most needed.

Sincerely,

FRANK T. CARY,
Chairman of the Executive Committee.

[From the Fresno Bee, Jan. 2, 1984]

Investing in Teachers

With a shelf-full of recent reports bemoaning the state of American education, the topic has become a political excitement. But thus far precious few good ideas have emerged, either from President Reagan—who eschews additional federal aid in favor of restoring old-fashioned values, as if a choice between the two had to be made—or his Democratic opponents, who have contended themselves with urging "more."

Now comes a modest and sensible proposal for federal aid in one area where it can do some good: enticing able college students into teaching careers. Legislation introduced by Rep. Ron Wyden, D-Ore., would provide scholarships of up to $5,000 a year, awarded regardless of financial need, to would-be teachers graduating in the top 10 percent of their high school classes. Those who received scholarships would be obliged to teach a year in a public school for every year of scholarship support—or reimburse the federal government, with interest.

The need for abler young teachers is evident, for the best and the brightest these days are generally not being attracted to public education. The average prospective teacher scores 394 (out of a possible 800; 500 is the average for all students) on the verbal portion of the Scholastic Aptitude test, 419 on the math exam. And those scores, lower than those recorded for almost any would-be professionals, have been dropping during the past decade. Although the test scores are not determinative of teaching ability, the fact that relatively weak students are opting for the classroom reflects the prevailing—and quite wrong—attitude that the quality of public schools doesn't much matter.

Offering college scholarships sends a different and more positive signal about the national concern. The plan should attract better teachers—as many as 10,000 a year—into the schools. The success of the National Health Service Corps scholarships, which offer comparable aid and to health professionals who commit themselves to stints in underserved areas, offers reason to believe that the program might work.

Not even generous scholarships will turn these recruits into career teachers however. That will require higher salaries, better working conditions, and a commitment to excellence on the part of the schools. But at $75 million, this measure is a blue-chip investment in American education.

[From Education Week, May 4, 1983]

Incentives, Not Tests, Are Needed To Restructure the Teaching Profession

(By Gary Sykes)

Teaching is an imperiled profession. Recent research indicates that at every point of choice—from selection of a college major through the decision to remain in or leave the classroom—the most academically able eschew the teaching profession. Moreover, while in recent years declining student enrollments have meant a teacher surplus, shortages in such critical areas as mathematics and science are already upon us. Within a decade, more general shortages are likely, due to a drastic decline in the number of education-school graduates (down 50 percent from 1972 to 1981), and to the retirement of a sizable portion of an aging teacher workforce. To be sure, effective teaching is measured by more than academic ability reflected in scores on standardized tests. Yet parents in most communities desire for their children bright, articulate teachers, with a strong grasp of subject matter.

To date, the response of policymakers to the decline of the teaching profession has been largely symbolic, emphasizing regulatory measures that misconstrue the problem. Mandating competency tests for prospective teachers and otherwise tightening licensing and certification requirements may screen out the least academically able teacher candidates, but such actions will not contribute to the more important task of attracting bright, committed young people to teaching, nor will they sustain them throughout a career in the classroom.

Furthermore, to raise entry standards considerably will serve by itself only to induce a teacher shortage. One study estimated, for example, that a requirement to score above the median on tests like the Scholastic Aptitude Test (S.A.T) or the National Teachers Examination would exclude between 70 to 75 percent of all prospective teachers. In fact, if those scoring below the lower fifth of all students on the S.A.T. were denied admission to teacher-education programs, approximately 35 per-

cent of those enrolled would be excluded. (This, by the way, is a strategy that the chief state school officers have recently recommended in a draft report as a means of raising teacher salaries through market pressure. I'm not sanguine about the prospects. A more expedient response to the threat of teacher shortages is to waive entry requirements rather than to raise salaries.)

Policymakers at all levels must take steps to make teaching more attractive as an occupation. And since the spate of recent state regulations don't address the problem more attention must be given to incentives. We must develop an incentive-based teacher policy system, which, over time, can restructure the teaching occupation, making it competitive once again. In an era of fiscal austerity and public accountability, however, we must utilize incentives selectively, tying them to indicators of quality whenever possible. Specifics of an incentive-based approach should be tailored to individual circumstances in particular locales, but there are several general issues to consider.

Policymakers must carefully weigh what purposes incentives might serve. There are several, including recruiting high-caliber candidates; identifying and rewarding excellence; retaining effective teachers in the classroom; encouraging professional development; and providing an efficient, equitable distribution of teachers within a school system.

Efforts to recruit teachers with scholarship- and loan-forgiveness programs are already under way. In several areas, notably the state of Tennessee and the Charlotte-Mecklenberg School District in North Carolina, "master-teacher" schemes have been proposed as a long-range strategy for retaining good teachers. Other districts have utilized sabbaticals and small-grant programs for teacher-initiated projects to stimulate professional development. (A notable example of a small-grant program is the Exxon Education Foundation's Impact II program in New York City.) And many jurisdiction's announce "teacher of the year" awards with fanfare, a practice whose value could be increased by making rewards more plentiful and varied. Also, some districts, including those in Houston, Los Angeles, and Miami, now offer extra pay to teachers willing to work in inner-city schools.

Given the lack of opportunities for career advancement in teaching and the profession's meager start-to-end salary ratio of one to two, as well as the rising average age of the nation's teachers, incentives that help good teachers "stay fresh" over a career are particularly important.

Incentive size is a second major issue. How much of what sort of incentive is necessary to attract, sustain, and retain teachers? On this matter, economists should be able to assist policymakers, but there is little information to draw upon.

A number of locales, though, have experimented with pay increases. Los Angeles has offered an 11-percent increase for teaching in the city center. Houston offered an initial bonus of $800 on a $16,000 starting salary for mathematics and science teachers, increasing it in 1982-83 to $2,000. Since Houston also offers a $2,000 bonus for teaching in its inner-city schools, beginning mathematics and science teachers there can now earn $20,000, a salary that is 25 percent above the district's base. In England, a series of national reforms in the 1970's provided so-called "school-of-exceptional-difficulty" allowances of 5 percent to 10 percent above the base for teachers working in urban schools.

The evidence available on these experiments suggests that modest salary incentives in the 10-percent range affect the supply, turnover, and distribution of teachers only marginally. The influence of salary incentives on teacher quality is even less clear. Ideally, we would like to know something about the relationship between marginal increments of salary and the behavior of effective teachers or promising teacher candidates. Lacking such knowledge, we must experiment as Houston is doing, adjusting incentives, then observing their effects.

Third, in the face of limited resources and increased pressure for accountability, policymakers must consider how best to link incentives to performance. The prevailing pattern in education links incentives to status (such as gaining tenure or earning a master's degree), not to performance. Such a system has some obvious advantages. It is easy to operate, equitable, and harmonious. All teachers are treated alike in a perfectly unambigous fashion, preventing discord and making administration quite simple. However, these advantages have a price: When the exemplary and the incompetent receive the same rewards, excellence goes unrewarded.

But the history of what is often called "merit pay" in education and in other fields suggests that it seldom works as planned. Either merit increases are routinely distributed to all or extraneous factors such as favoritism and political control enter, producing resentment among those who must work together on a daily basis. The key, of course, is to develop valid, objective criteria with behavioral or other

indicators for performance. While this task is technically possible, the costs of systematically collecting such information are great.

Another altenative is to use a nominations process for the distribution of awards. A panel of teachers, administrators, and others could develop criteria and make award decisions. Such a plan would at least serve to recognize outstanding teachers, without introducing the adverse consequences of merit pay. The performance base for incentives will always be a difficult problem, but localities should begin to consider schemes to introduce links between performance and incentives.

A uniform salary scale tied to status instead of performance also inhibits school systems from selectively introducing incentives to meet delimited problems, such as those currently posed by the shortage of mathematics and science teachers and the inability of inner-city and rural schools to attract and hold teachers. Because we cannot afford to raise all salaries to deal with these problems, the solutions of hiring unqualified teachers, reassigning teachers to part-time work outside their areas of certification, and increasing class arise all reduce the competence of the teaching force.

The introduction of pay differentials would likely produce some ill will among teachers, rising questions about the value of one subject as opposed to another. But salary differentials have long been accepted in other occupations, including university teaching. The stakes are high enough today to warrant at least experimenting with this idea.

Another issue concerns the relative merits of individual versus collective incentives. Most discussion of incentives has focused primarily on those aimed at recruiting and retaining individual teachers, but much recent research has stressed the school as the critical unit of learning and reform. This and other literature also suggest that effective teaching is dependent on the context in which it occurs. In fact, the various characteristics of schools probably are as potent an influence on teacher effectiveness as are teachers' personal qualities or the training they receive. Perhaps then, attention should be paid to incentives operating at the school or department level (such as summer employment to work on school-improvement efforts or release time for cooperative curriculum planning), which might augment individual income while encouraging collective responses to professional matters.

Incentives also offer an opportunity to reallocate existing resources. Certain school districts are beginning to explore ways to alter the distribution and balance of rewards and incentives to make teaching more attractive. For example, the San Francisco school district currently offers teachers a choice between class size and salary. Teachers who accept larger classes are paid more. And the Ogden, Utah, school district has recently shifted from a nine month to an 11-month salary for teachers, increasing the average annual salary by a substantial amount. In return, teachers accepted larger classes and engaged in curriculum development and other professional work during summer months. There is more room for innovation within existing budget constraints than might be expected and any district could begin the search for alternatives immediately, without passage of a school bond or additional state funds.

The removal of disincentives should also be considered. In addition to the absence of attractions, teaching has features that discourage capable people from entering it and staying in it. Some contend, for example, that state licensing and certification laws prevent capable liberal-arts graduates from teaching because they have not taken the requisite courses in schools of education. The same applies to knowledgeable people in business and in the community who, their lack of "credentials" notwithstanding, might teach part time.

Finally, there is the question of who should determine and distribute incentives. One choice here is between centralized and decentralized decisionmaking. If there is widespread agreement about a problem that affects the members of a large jurisdiction, or if individual rights and compliance with the law are involved, then centralization is preferable. A state, for example, could establish a scholarship program for prospective teachers (as in fact several states recently have done for prospective mathematics and science teachers), or it could supply grants to local districts to invent ways to attract and retain teachers. On the other hand, if responsiveness to a variety of local conditions is desirable, then a more decentralized approach has appeal. A school district could establish a centrally administered program to involve teachers in program development or could supply small grants to teachers to invent their own curricula.

A second choice involves the use of public- versus private-sector incentives. Given the growing interest in bringing the private sector into school-reform efforts, public incentives—such as tax breaks—could be used to encourage corporations to provide part-time employment for teachers or to make their employees available for part-

time teaching duties. Also, the growing number of savvy superintendents who are cultivating networks with influential community and corporate leaders can use such contacts to address the fundamental problems of teacher quality.

I am under no illusion that public policy alone can restore the satisfactions of teaching. Such a matter lies beyond policy's reach. Yet for all its instrumental value, policy also serves expressive purposes and can articulate our ideals. There is today no more vital role for educational policy than to affirm the value of teaching and the importance of holding teachers to high standards of commitment and conduct. Policies linked to a rhetoric of excellence that emphasize rewards and incentives can make a critical contribution to the renewal of teaching as a deeply fulfilling and uniquely valuable enterprise.

But we must depart from the *status quo* we must begin to broadly reconfigure the teaching occupation if it is to remain viable. And we must begin now.

Mr. SIMON. With those final words, we accept all your recommendations. [Laughter.]

Let me first, just in a general way—and you alluded to this, this coming shortage of teachers—if we do not take some steps to see that we attract and keep more of the brightest and best, there is a real danger that our already severe problem is going to become more severe; is that correct?

Mr. WYDEN. Absolutely. I think that on the task force, what we found is the brightest are the ones who are most likely to leave the profession, and a lot of them in even course subjects that are particularly important, such as math and science.

Mr. SIMON. Your point on working within the State. Let me just give you the background of why we did it. In fact, the State you use is an illustration in reverse of why we did it. Your statement says, "Worse yet, what if that particular State had no teaching shortage, but another State such as Arkansas did?"

The reason for putting it—and I don't feel that strongly—is if you got trained in Arkansas and we have worked out this dispersal, we ought to keep some of those bright teachers in Arkansas and not have them go to Oregon or California or some equally attractive State like Illinois to teach, there ought to be some impact within that State of the program.

Do you have any reaction to that?

Mr. WYDEN. I think that is a good point. I think we both want to do the same thing. Maybe even a kind of triggering mechanism where if two States needed, you first were in your home State, and then somewhere else. I think we ought to be able to figure out a process so that we do exactly what you are talking about. That is something that I would support. If a triggering mechanism or something else was used to send you somewhere else, we might be able to balance the two interests. We certainly don't want States to come up short on their own people.

Mr. SIMON. Let me mention one other suggestion that has been made. We say that they have to teach in a public education program. Our friends who are representing the Roman Catholic schools here have suggested there is also a very real need and, if that public service is provided in a nonpublic school, that also ought to be credited.

Do you have any reaction?

Mr. WYDEN. I would very much like to see that, Mr. Chairman. I have visited at length with friends in Portland from the Catholic Sentinel and others there in my home district, and they persuaded

me that that would be a good policy change as well, and I would very much like to see that done.

Mr. SIMON. I thank you very, very much for your testimony, and even more for your leadership.

Mr. WYDEN. Thank you so much, Mr. Chairman.

Mr. SIMON. I am proud to have you as a colleague.

Mr. WYDEN. Thank you very much.

Mr. SIMON. We now have panel of witnesses with Dr. Sharon Porter Robinson, director, instruction and professional development of the National Education Association, a frequent visitor to these halls back some years ago; Dr. Patricia Albjerg Graham—in fact, she has moved up in the world, and not only is she dean of Harvard University Graduate School of Education, but she used to be just Dr. Patricia Graham, and now she has added that Danish name—and Dr. Robert Saunders, dean of Memphis State University College of Education. We are pleased to have all three of you here.

Dr. Robinson, we will start with you.

STATEMENT OF SHARON PORTER ROBINSON, DIRECTOR, INSTRUCTION AND PROFESSIONAL DEVELOPMENT, NATIONAL EDUCATION ASSOCIATION

Ms. ROBINSON. Good afternoon, Mr. Chairman. I am pleased to have an opportunity to comment before the subcommittee on title V of the Higher Education Act, and particularly to talk about the issues related to the training of teachers.

Mr. SIMON. If I may interrupt you just for a moment, all three statements will be entered in the record in full, and how you want to proceed, you may summarize or whatever you want to do.

Ms. ROBINSON. Let me say that we have stated previously, before this committee as a matter of fact, that we believe strongly there are three issues that affect the quality of education in public schools: One, the talent attracted to the teaching profession; two, the quality of training that these teachers receive; and three, the environment and conditions in which these teachers practice and provide educational services.

We believe that title V can indeed provide some leadership in each of these areas. It can do much to help to enhance the esteem and respect afforded the profession.

Let me talk briefly about attracting the talent pool. You have already discussed the Carl Perkins scholarship and the general fellowship program. We will submit some comments on these programs, changes that we would suggest to make them perhaps more effective, including a look at the requirement of the 2-year payback.

We are concerned about this particular requirement because of a concern for the pressure this might place on the young people who are making very difficult decisions about career options and career opportunities, and to have to commit 8 years of service at a very young age might be asking a bit much. That would be a rather imposing decision to have to make.

Also, we would suggest that you consider expanding the eligibility pool to include the prospect of talented college freshmen and

sophomores who might make a later decision to consider entering the teaching profession and have them have this opportunity to get some support in their education.

We feel that these provisions, however, do convey a sense that the Nation feels strongly that entering the teaching profession is an honorable and admirable career choice, and it is to be encouraged.

We are also encouraged by the degree to which features of the bill encourage the partnership between K-12 teachers and faculty in higher education. I would like to provide a couple of examples of how the NEA is at work encouraging that kind of collaboration and partnership to improve teacher education, as well as to improve the quality of educational services offered at the local level.

By using the document, "Excellence In Our Schools, Teacher Education," which I have provided the Chair for the committee, we have several affiliates working with schools of education to upgrade the quality of teacher preparation. One project in particular will result in a kind of assessment model for students throughout the preparation program, which we think will indeed be exemplary.

Working with Radford College in Virginia and the Virginia Education Association, the NEA is supporting this project which we will publish this spring or summer, and in this publication, we will describe a comprehensive, qualitative and quantitative assessment program that will support all teacher preparation students throughout in courses that they take in the college of education, as well as they take in the courses that they take across campus, in arts and sciences or in other colleges.

The system that we are encouraging is a uniform system of assessment, evaluation, and evaluation which holds as a very key feature preparation to teach, as well as competent content expertise.

Other projects that we will be initiating involve collaboration with community colleges and 4-year institutions in a single community with the teachers in the public schools in order to address some significant instructional problem. I thought to mention this based on some of the comments made by Congressman Wyden, because I want you to understand that we do feel that we have to reach out and demonstrate a willingness to work with our colleagues in the institutions of higher education, and that we must be more assertive about finding ways to apply the particular expertise in the research universities, in the technical universities, to the instructional problems of our community, which began to be addressed in the K-12 public schools.

The issue of retaining teachers, we feel, is being addressed admirably in the concept of the professional development resource centers included in this bill. I can't begin to tell you how strongly we feel about this, because that is a feature of professional development and a feature of professional practice which we feel needs to be enhanced and understood better.

The professional development resource centers have the potential for fostering independence, creativity and interdependence among teachers as colleagues, and among educators within a given community to support the continued professional growth of practicing teachers. It is no less than we should do, and indeed we should do

much more in order to provide support for professional development among the K-12 teachers and not have it be regarded as a fringe benefit or a perk. This is a process which is necessary in order to enhance the basic system. It is one that should be supported with public funds. We feel that the proposals here offer some leadership in that regard. We feel that the need is so great that indeed perhaps we may consider at some point reallocating some funds here so that we are addressing the bulk of the need in terms of the teaching work force, and look at ways of addressing some additional problems another way.

The term "educator" as the way of describing eligibility for participation in the development and implementation of professional development resource centers is probably a bit too nebulous to be very meaningful. We feel that the focus should be on teachers, and that some effort should be made to clarify the role of the teachers themselves in organizing these programs on behalf of their continued professional development and enhancing our understanding of just how they are supposed to operate.

Let me close by pointing out some findings from the 1983 national teacher opinion poll conducted by the NEA. A majority, about 52 percent, indicated some dissatisfaction with the quality of inservice education provided by their school systems.

Further, a study conducted by Chapman and Lowther measuring teacher satisfaction with teaching produced interesting information on the importance of professional growth opportunities. Among numerous factors that respondents had to select, teachers rated opportunities to learn new things highest in importance in judging professional success. Having such opportunities had a more powerful effect on reported job satisfaction and career satisfaction than any other form of achievement considered in this study.

The effective teacher, Mr. Chairman, is not only a continuing learner, but one of whom our society places a vast responsibility, which is the instruction of the next generation.

I wish to commend you and the subcommittee for working on developing some proposals, concepts and ideas that might help to advance the support necessary for this important enterprise.

Mr. SIMON. We thank you very much for your testimony.

[Prepared statement of Sharon Robinson follows:]

PREPARED STATEMENT OF SHARON ROBINSON, DIRECTOR OF INSTRUCTION AND PROFESSIONAL DEVELOPMENT, NATIONAL EDUCATION ASSOCIATION, WASHINGTON, DC

Mr. Chairman: My name is Sharon Robinson. I am Director of Instruction and Professional Development for the National Education Association. It is a great pleasure for me to appear before this distinguished Subcommittee once again and to share with you today our views regarding several issues of vital interest to the NEA and the over 1.7 million elementary, secondary, and postsecondary members we represent.

The federal role in—and commitment to—postsecondary education has long been of deep and continuing concern to our Association. This is not merely an outgrowth of our being the nation's largest organization representing postsecondary faculty and staff. Rather, it stems from our unalterable view that higher education—like its elementary and secondary counterparts—is a basic and fundamental cornerstone of our society. It helps to provide the very underpinnings for our economic life, our national security, and our quest for equity, equality, and opportunity. This is our view as higher education faculty members, as educators, as parents, as concerned and active citizens.

HIGHER EDUCATION IN OUR NATIONAL LIFE

The quality of postsecondary education has been important in the past but it has never been more critical to our survival than it is today. Indeed, America's destiny is tied directly and inextricably to how well we educate our country's children. It will be our colleges and universities—building on our system of universal free public elementary and secondary education—which will train the scientists and researchers who will help our nation advance; educate the scholars, artists, and philosophers who will enrich our national life; and provide us with the skilled workers who will fuel our economy. Consider the fundamentals.

(1) *Higher education is vital for America's economic growth and vitality.* Our work force is going through an enormous transition—a revolution really—that is shifting traditional patterns of employment, accelerating the pace of already dizzying technological change, and placing tremendous new demands on the skills and abilities of our people. As Peter Drucker has noted "Knowledge has already become the key to productivity, competitive strength and economic achievement." By investing in higher education, we invest in our future.

(2) *Higher education is crucial to a strong democracy.* A vibrant and responsive democracy depends upon an educated and informed population. It was this underlying fact that helped spur the great American experiment to provide a free public education of high quality to each and every one of our citizens. Today, as our society becomes larger and more complex, the demands on our people to understand the issues before them in our democracy are becoming increasingly more difficult and urgent. Clearly, to participate appropriately in the decisions which affect our own lives requires an increasingly better educated and sophisticated population. Higher education—which has been so essential in transmitting the history and value of ideas—provides the means by which we can meet this challenge.

(3) *Higher education is essential for social justice.* Education is, quite simply, the ladder of opportunity for the vast majority of our people. For most, it is more than just the key to a fair chance, to individual advancement, to better jobs, to greater success, even to self respect, it is the key to the very future itself. Higher education can provide the difference between a lifeline of opportunity and a lifetime of struggle. Or colleges and universities can—and must—play a pivotal role in providing the equity and access requisite to a just society.

Mr. Chairman, these thoughts are not new. Their roots go back to the earliests days of our nation. And out of them has grown a firm federal commitment to the support, expansion, and improvement of postsecondary education. From the Northwest Ordinance of 1787 through the Morrill Land Grant Act of 1862, from the GI Bill in 1944 through the National Defense Education Act in 1958, from the Higher Education Act of 1965 through the Middle Income Student Assistance Act in 1978, America has rededicated itself to this commitment. We commend you and the Members of this Subcommittee for your leadership in beginning once again to build on this base, to look toward the future, and to seek new and substantial ways to extend and enhance the federal partnership in higher education. Your leadership is particularly reassuring in light ot the environment of the last four years.

The current Administration has shown a callous disregard for the well-being of our students, the vitality of our schools, the importance of American education. Its record speaks for itself. This Administration has attempted:

to undermine virtually every major advance mandated by the enactment of the Middle Income Student Assistance Act of 1978 and the 1980 reauthorization of the Higher Education Act;

to eliminate the Supplemental Educational Opportunity Grant program; the State Student Incentive Grant program; assistance for cooperative education, teacher education, international education, libraries, and campus programs serving veterans; graduate fellowships for women and minority-group students; and aid to states for higher education planning;

to slash the budget for the Pell Grant program and to reduce federal student assistance to middle income students;

to limit the Guaranteed Student Loan program and to increase the costs to those who participate in it;

to stop any new funds for the National Direct Student Loan program, reduce support for education research, and cut funding for science education;

to gut the law barring sex bias in federally assisted educational programs;

to end Social Security Survivor's benefits for students;

to dismantle the United States Department of Education;

to create new expensive programs for tuition tax credits.

We are all indebted to this Subcommittee and to the Congress for its leadership in resisting some of the most draconian of the Reagan Administration's proposals. At the same time, we must recognize that very severe damage has been done.

The number of participants in the Pell Grant program—the basic federal program to promote access to postsecondary education for those in need—has fallen dramatically. There will be, in fact, some 124,000 fewer grants awarded in the current fiscal year than there were in FY 1980. And the purchasing power of those Pell grants which remain has eroded as well. This year there will be over 200,000 fewer grants awarded under the National Direct Student Loan program than four years ago and there will be 50,000 fewer participants in the TRIO programs. As many as a half million formerly eligible students are now ineligible for Social Security education benefits. Program after program of institutional support has had its budget reduced by outright cuts or the effects of inflation.

It is, thankfully, possible for us to repair the damage done to our educational system by these policies. We can pass new laws, add additional resources, develop more appropriate and beneficial rules and regulations. The real and unrelenting tragedy, however, is not the one facing our schools and colleges. It is the human waste these actions may have caused. For many of the tens of thousands of young people who have been directly affected by these policies, there will be no second chance, no way to rebuild the wreckage. For these individuals—invisible to most of us, without a voice and without much hope—the Reagan Administration's education policies will mean lives of lessened opportunities or heightened dispair.

REAUTHORIZATION OF THE HIGHER EDUCATION ACT

We believe that it is well beyond the time to reverse the tide that has been eroding the federal role in postsecondary education. Now is the moment to begin to fortify once again the national commitment to higher education—to assure equality of educational opportunity, to promote research and the pursuit of knowledge, to accelerate the development of our country's intellectual and human capital, and to preserve the diversity of our educational institutions.

Over the years no statute has been more important in advancing these goals than the Higher Education Act. It stands as the very foundation of America's postsecondary programs and policies. And its reauthorization provides us with the opportunity not only to recommit ourselves to a full and appropriate federal partnership in higher education but to strengthen each of those programs encompassed within it.

We recognize that the complexity of the issues involved and the importance of this legislation require that the process for reauthorization be a careful and deliberate one. We stand ready to work with this Subcommittee to assure that the Act that finally emerges meets the test of the finest possible public policy.

It is with this in mind that we offer the following preliminary comments on the reauthorization of the Higher Education Act. Inasmuch as the full 356-page text of H.R. 5240 has been available only for the past forty-eight hours, we would hope to have the opportunity to expand on these observations after we have had an adequate amount of time to study the legislation. For the sake of simplicity, my comments today will be structured for the most part around the twelve program titles delineated in the current Act.

Title I: Continuing education

Under the existing law, Title I (Continuing Postsecondary Education Program and Planning) is subdivided into two parts: Part A, the Commission on National Development in Postsecondary Education, and Part B, Education Outreach Programs. Neither of these Parts has ever been funded and, in fact, the authority for Part A has expired. We believe that Congress now has an appropriate opportunity to restructure this title in order to better meet the needs of so-called "nontraditional" students.

Over the past two decades, the proportion of such nontraditional students—including the disadvantages, the disabled, displaced workers and homemakers, older students, veterans, the incarcerated, refugees, those who can attend school only part-time—has increased dramatically. Indeed, those students with characteristics that had been considered as "nontraditional" in the recent past are rapidly becoming the mainstream in American educational life. Yet, despite the fact that the number of these individuals is nearly equal to the number of their more "traditional" counterparts, programs to meet their often unique educational needs are scarce. Therefore, NEA believes that postsecondary institutions should be encouraged to develop and reward the establishment of programs to promote equal access and high achievement by nontraditional learners and to increase the opportunities for life-

long learning. To this end, we are encouraged by the general concepts contained in H.R. 5240 to provide discretionary grants to demonstrate alternative approaches to meet the needs of underserved adults; to increase literacy training; to expand programs in correctional facilities; and to better serve veterans.

Title II: Library resources

Libraries are a central element in the promotion of educational excellence and advancement, yet many—due to severe financial constraints—have been unable to keep up with the rapidity of technological, scientific, and curricular change and with the ever-increasing need for books, periodicals, and equipment. This situation, endangering the vitality of our postsecondary institutions and the quality of the educational experience, has been made all the more serious by the substantial cutbacks in federal assistance for current Title II programs. Part A (College Library Resources) received no federal appropriation for fiscal year 1984; the three programs under Part B (Library Training, Research, and Development) received a total of less than $900,000; and Part C (Strengthening Research Library Resources) was funded at a mere $6 million. The President has requested no money for any of these programs for fiscal year 1985.

NEA believes that both undergraduate and graduate libraries and information networks must receive sufficient support to ensure a high quality educational environment. We support the retention and extension of the current authorization with appropriate increases in the potential levels of funding and we are prepared to endorse the concept of the addition of a need factor in terms of the distribution of funds under Part A. At the same time, we urge the Subcommittee to consider the inclusion of a new Part E to authorize the Secretary of Education to make grants for technological equipment necessary for strengthening library resources.

Title III: Institutional aid

It has long been our view that priorities must be maintained for categorical programs directed at the specific need to strengthen developing institutions, including our nation's historically Black colleges. We believe that colleges and universities which serve primarily disadvantaged students and which struggle to provide quality education must be provided special assistance to strengthen their academic programs and management.

Title III of the Higher Education Act has done precisely that; it has played a substantial role in improving the academic quality, institutional management, and fiscal stability of eligible institutions in order to increase their self-sufficiency and strengthen their capacity to make a contribution to the nation's higher education resources. This Title deserves to be retained and expanded.

We believe the federal government can play an appropriate part in helping to strengthen historically and traditionally Black colleges and universities. It is important to recognize and to foster the significant role that such schools have played in assisting a large—and often otherwise underserved—segment of our population attain academic achievement and excellence and in furthering the intellectual and cultural capacity of our nation.

At the same time, we believe that it remains important to recognize and support the central role of our country's two-year community, junior, and technical colleges in serving vast numbers of nontraditional and disadvantaged students. Founded in an attempt to increase postsecondary opportunities for all of our citizens, many of these colleges are still struggling to find their place in the mainstream of American academic life. The community college set-aside in Title III is a response to this reality. We urge that it be continued.

Title IV: Student assistance

Mr. Chairman, for the past twenty-five years, our government has honored and built upon a basic commitment to assist young Americans to finance their postsecondary education. The National Education Association has firmly supported and encouraged the maintenance and growth of this commitment. We believe that the primary goal of federal student aid programs must be to guarantee access to postsecondary education for all of our citizens, while at the same time encouraging the pursuit of the type of educational opportunity that is best suited to each individual's need and desires. Access to American colleges and universities should not be restricted for any student because of financial necessity.

It is with this in mind that we make the following recommendations.

1. The authorization of appropriations of federal student assistance programs—including grants, low-interest loans, and work-study—must be sufficient to allow all qualified students to pursue postsecondary education. In our view, moreover, the

principal form of federal financial aid should be grants first, then low-interest loans and work-study to enable disadvantaged and middle income students to attend postsecondary institutions.

We believe it is particularly important for the Pell Grant program to be expanded, with award levels increased and the program becoming a true undergraduate entitlement program. In the new world ahead of us, our people should be entitled to an appropriate postsecondary experience just as they should to a quality elementary and secondary education.

2. The half-cost provision of the Pell Grant program should be eliminated. This provision serves only to discriminate against the most disadvantaged students attending low-cost schools. We further believe that the limits on the cost-of-attendance provisions should be eliminated, so that students who live off-campus will not have their non-tuition expense limited by an arbitrary figure.

3. It is essential that student aid reach nontraditional students, including those who can attend school only part time. Restrictions in current programs, should be removed so that these individuals can become eligible for all student assistance programs.

4. We believe it is inappropriate to continue the present policy of treating tuition for private and parochial elementary and secondary education as a non-discretionary expense in the Pell Grant program.

5. The current delivery system of federal student financial aid programs must be simplified to allow students and their families to take full advantage of postsecondary education programs.

6. There should be greater stability in aid formulae; frequent changes through either legislative or executive action must be avoided so that students and their families, as well as institutions, can engage in reliable financial planning.

7. The income cap on Guaranteed Student Loans (GSLs) should be raised. The in-school interest subsidy for GSLs should be maintained, and student loan origination fees should be eliminated. The annual and cumulative loan maximums for both undergraduate and graduate students should be increased. Moreover, grant programs must be sufficiently authorized and funded to ensure that student loans are supplemental, and that students are not forced to incur a high debt burden in order to obtain an advanced education.

8. We believe that campus-based funding under the SEOG program and the NDSL program should be continued. Increased flexibility is welcomed. However, it must not undermine the basic purposes of equity, access, and choice which have been the foundations of these programs.

9. The TRIO programs which provide valuable outreach, counseling, tutoring, and remedial services should be strengthened and expanded. These programs—Educational Opportunity Centers, Special Services for Disadvantaged Students, Talent Search, Upward Bound, and a training program for TRIO staffs—have been tremendously successful in encouraging youth and veterans with academic potential to enter postsecondary education where they otherwise would not. In so doing, they have afforded low-income students a realistic opportunity to escape cycles of poverty and dependence and to achieve the potentials offered by higher education.

10. The HEP-CAMP program for migrant students should be expanded. The current authorization level is inadequate to meet the enormous need of this vulnerable and often overlooked population.

Title V. Teacher preparation

This title of the Act forms the basic link between the interdependent activities of elementary and secondary schools and institutions of higher education.

NEA believes that three primary factors affect the quality of education in our public schools today: 1) the talent attracted to the teaching profession; 2) the quality of training teachers receive; and 3) the environment and conditions in which teachers practice, including the degree to which professional development is fostered. Title V can provide leadership and assistance in each of these areas. When making an occupational choice, students are influenced by the degree of esteem accorded to an occupation. This esteem is gauged by salary, professional respect, and the working conditions which serve as a central foundation for professional practice. Recent reports make this clear.

One of these, Mr. Chairman, was your own Merit Pay Task Force report which notes: "Too often we are not attracting the finest students to teaching, and too often we are not keeping the finest teachers . . . The key role played by teachers suggests that the most rapid improvement in education may be made by upgrading the profession." We believe the following components can serve to focus the federal effort on some critical areas that need to be addressed.

Talent Attracted to Teaching

There are three important extrinsic conditions which can attract men and women of intelligence, spirit, and capacity for leadership to teaching careers. They are: 1) adequate salaries; 2) assistance with financing postsecondary education leading to teaching certification; and 3) a climate which accords teachers a greater measure of professional respect and growth including the opportunities afforded them for professional development. The salary issues are vital ones which can currently best be addressed at the state and local level. I will discuss professional development opportunities later in my testimony.

With regard to assistance in financing postsecondary education, NEA believes that merit scholarships such as the Carl D. Perkins Scholarships as proposed in H.R. 5240 are a good framework for attracting outstanding high school graduates into the profession.

NEA is pleased to note the recognition in the bill that a potentially fine teacher is more than a student with high grades. Other indicators of teaching potential include teacher or principal recommendations, leadership qualities or creativity exhibited, and community service, particularly in areas which involve working with children and youth (such as tutoring or organized recreational activities). No single standard measuring an individual's knowledge can demonstrate whether that knowledge can be taught to others. For this reason, where the bill provides for scholarships to be awarded to talented high school seniors in the top 5 percent of their classes, we would like to see it broadened to seniors in the top 10 percent of their graduating class.

Further, the candidate pool for such scholarships should be broadened to permit them to be awarded to meritorious college freshman or sophomores since the choice of a career is often not made until these years. In the case of college undergraduates, a composite picture should be developed including the candidates' class standing as well as other indicators of teaching potential such as those I have discussed. Consideration should be given to the appropriate level of academic standing to be used for college undergraduates. The top 20 percent of freshmen and sophomores should suffice since this population is generally of a proven academic caliber.

One additional concern we have with the proposed scholarship program is its requirement that recipients teach two years for every one year of assistance. This would mean that a teacher scholarship would carry with it an eight-year obligation for a student assisted for four years of undergraduate education. We are concerned that asking a young person to make a commitment for this length of time might discourage otherwise excellent candidates. As anxious as we are to see good people remain in the profession we believe this requirement is unrealistic and should be reduced to one year of teaching for each year of assistance.

Mr. Chairman, we are very pleased to see H.R. 5240 transmit this positive signal to our nation's youth: that teaching is an admirable and important career to embark upon and deserving of national attention.

Quality of Teacher Education

Let me now turn to the quality of education which teachers receive. There has been much criticism by NEA and other groups that the quality of postsecondary education for teachers is not as demanding as it should be. While not true in every instance, there are considerable problems—insufficient or low standards for students; the lack of strong, clear standards of professional education to prepare teachers in the more than 1300 higher education institutions with teacher education programs across the country; and a lack of collegial or institutional support for teacher education programs within the university or college.

NEA believes, and our experience confirms, that teacher education programs must be strengthened, and that a key element of that is better connections between faculty in colleges and departments of education and practicing K-12 teachers. We must value and use the knowledge of the practicing teacher in the development of the best preparatory programs. An awareness of the mutual goals of teachers and higher education faculty must be fostered. Opportunities for joint endeavors and collegial exchanges should be provided regularly. The relevance of education courses to effective teaching is enhanced when teachers in today's classrooms are involved in advising on course content and offerings or serve as lecturers or visiting faculty. Faculty members, in turn, can alert classroom teachers to the latest pedagogical research.

NEA has recommended a full program for excellence in teacher education which I have provided the Chairman today for the benefit of Committee members. It includes a professional standards board of teachers and other education professionals

which would monitor and assess programs of teacher education in each state, coupled with accreditation from the National Council for Accreditation of Teacher Education (NCATE). In addition, field experiences must be sequenced throughout the preparation program so teacher trainees may be adequately prepared and so that potentially ineffective teachers may be steered into other occupations. Furthermore, programs must provide each prospective teacher candidate with a continuous, comprehensive assessment of progress. Incentive grants to encourage exemplary teacher education programs which embody these ideas should be made to institutions of higher education and state agencies for accreditation.

As an example of the organized profession working with teacher educators to improve teacher preparation I would call your attention to a project currently being conducted jointly by the Virginia Education Association and the Radford University faculty. This project will provide a model for institutions of higher education in the development of a comprehensive quantitative and qualitative assessment of teacher education students which can serve as a basis to determine their ability to begin practice.

Title V, Part E of H.R. 5240 is a good beginning which would be enhanced by combining what are now three separate grant programs for Teacher Education, Exemplary Programs, and School/College Partnerships into one. The activities in Sec. 541 are important and valuable ones but are essentially insular in nature. They lack some important ingredients to promote outreach activities by colleges and universities to elementary and secondary schools and their teachers, or the reverse—thereby breaking beyond the confines of the campus. These activities are expressed in Sec. 542, Exemplary Programs, and Sec. 543, School/College Partnerships. Exemplary or model programs should be viewed as those that bridge the gap between the training they offer and the real and everchanging world of the classroom.

The Environment in Which Teachers Practice: Continuing Growth for Teachers in the Classroom

Finally, let me turn to the environment in which teachers practice and the need for continuing growth for teachers in the classroom. It is important to set the stage for this discussion by making the distinction between staff development and professional development. The former is other-directed training. The school district determines the program and requires a teacher's participation as a member of a school or school district team (for example, the introduction of a new math curriculum). Professional development is self-directed education. It derives from individually identified needs for development or growth in order to perform more effectively as a professional in the classroom and the selection of an appropriate means for meeting these needs. Unfortunately, most of the programs offered today are not professional development.

As your task force noted, Mr. Chairman, we must build into the system more adaptable means to renew and refresh our current teaching force. Professional development programs must be flexible, including such things as problem-solving by groups of teachers; the sharing of curriculum models and ideas for classroom improvement; a regular means to update skills and knowledge base; and multiple opportunities for exposure to intellectually stimulating education ideas. As an example, professional development activities might include an individual teacher seeking advice and assistance with diagnostic and prescriptive techniques for a learning disabled child in his/her classroom or learning a specialized reading technique for use with a gifted child. One of the best mechanisms to accomplish this within the school bureaucracy is to provide teachers a chance to voluntarily learn together with their colleagues in a collegial and sharing environment.

Teacher burnout is a real problem. As the Carnegie Foundation reported: "Strikingly, while performing these myriad duties, teachers spend little time in the company of other adults. This one condition may, in fact, separate teaching from most other professions . . . The combination of the self-contained classroom and a heavy teaching schedule gives teachers few opportunities to share common problems or sustain an intellectual life."

Among the contributing factors to teacher stress and teachers dropping out of the profession, Dean Corrigan of Texas A & M University points to the "treatment of teachers as executors of somebody else's orders rather than professionals capable of making educational decisions."

To respond to these concens, the NEA proposes a program of Professional Development Resource Centers (PDRC) for practicing teachers, which would provide year-round opportunities for personal professional development and collegial assistance in problem-solving. Teachers would be challenged to design programs to meet the

particular educational needs of their students and to share models for excellence. Professional Development Resource Centers could foster independence, creativity, and a team approach to problem-solving. The centers could use a variety of resources including faculty specialists, business representatives, and community leaders to assist teachers in group and individual activities.

As we work together for excellence in education, teachers in the 1980s will deal with an ever more diverse school population including disadvantaged youngsters, refugees, the gifted, handicapped, limited-English speaking children as well as abused children, drug users, and emotionally disturbed children. The demands of the classroom and the ability to teach all these youngsters successfully requires many ingredients and teachers stand to benefit enormously from working with their peers, through such mechanisms as Professional Development Resource Centers.

The Centers should be locally designed and driven. They should enable and encourage LEAs to offer a program which would be responsive to practicing classroom teachers' needs; it should be professional education which is developed by teachers for teachers.

Mr. Chairman, let me commend you for including the rudiments of Professional Development Resource Centers in HR 5240. We are anxious to see the seeds of this idea take root for we believe it could be the most important element for the professional growth of teachers in the reauthorization of HEA.

As it is presently designed, Part D of Title V permits the funding of four activities: seminars, training and support systems for beginning teachers, projects to apply education research to the classroom, and finally Professional Development Resource Centers. We feel that Professional Development Resource Centers should be the sole focus of this part for several reasons. We view the seminars as a repetition of what is contained in Part C, Institutes and Workshops. The grants for training and support systems for beginning teachers are already built into the school/college partnership as we discussed in Part E. Assisting projects to apply education research to the classroom is a critical issue but is too limited here, and therefore should be an integral part of the other activities of this Title including Professional Development Resource Centers.

Further, we believe that designating "educators" as the eligible participants under this part is too nebulous and is really a catchall term that does not accurately describe the target population. The focus for Professional Development Resource Centers, and indeed for all of Title V, must be on teachers. In the 1982-83 school year there were over 2.1 million teachers in school classrooms along with 136,000 principals and other administrators. The teachers face 35 to 150 impressionable young students daily, each an individual case study, each challenging the teacher to provide different forms of help, encouragement, and instructional creativity. These teachers need and deserve the broader, continuous support of an ongoing, dynamic center to assist them. Administrator training needs are frequently already addressed by school systems and can be met through shorter-term, more concentrated development models such as the workshops or institutes provided in Part C.

In sum, Professional Development Centers can use the skills of teachers for the improvement of education and provide an avenue to realize our society's avowed respect for teachers as professionals.

NEA believes that federal grants to operate summer institutes and/or workshops for teachers and college faculty are also useful elements in continuing professional development. They can be particularly valuable to focus on a few specific areas rather than the variety of areas that can be dealt with in Professional Development Resource Centers. Classroom teachers and/or faculty (depending on the target audience) should be consulted beforehand to help identify the objectives of the institutes. It is also important that adequate financial remuneration be offered so teachers will be able to attend. A public myth is that teachers have the summer off. The reality is that teachers must work in the summer for their economic survival. Further, if "educators" are to be served by these institutes, we suggest that a clear direction be given by designating 15 percent of the funds for administration and the remainder for teachers and faculty.

One final but most important point regarding the institutes. The resource allocation between this part and Part D, Professional Development Resource Centers, should be reversed. $75 million should be authorized for Professional Development Resource Centers and $25 million for Institutes and workshops.

The National Teachers Fellowship concept laid out in H.R. 5240 is an excellent idea which can serve to honor outstanding teachers and advance the view of teachers as professionals interested in continuing intellectual growth and study. Unfortunately the proposal only provides for the awarding of two fellowships per Congres-

sional District. Consequently, it can serve to supplement the other recommendations in this paper but cannot substitute for them.

As part of a comprehensive program of school/college cooperation, NEA believes the American Defense Education Act must be enacted. Title II of ADEA is devoted to encouraging coordination between institutions of higher education and local educational agencies. It is directed to meeting the need for improvements in mathematics and science education including equipping new and practicing teachers with the training needed to meet current demands in this area. This program though focused on specific content areas, can serve as a model to advance school/college partnerships in other areas as well.

In the 1983 Nationwide Teacher Opinion Poll conducted by NEA, a majority of respondents (52 percent) indicated dissatisfaction with the quality of inservice education provided by their school system. A study conducted by David Chapman and Malcolm Lowther measuring teachers' satisfaction with teaching produced some interesting information on the importance of professional growth opportunities. Among the numerous factors that their respondents had to choose from, they rated the "opportunity to learn new things" highest in importance in judging professional success; having such opportunities had a more powerful effect on reported employment satisfaction and career satisfaction than any other form of "achievement" considered in that study.

Mr. Chairman, the effective teacher is not only a continuing learner but also one in whom our society invests special responsibilities—the instruction of the next generation. The students who enter colleges and universities must be adequately prepared in their K-12 schooling or they will not be able to master the level of study required of them at institutions of higher learning. Teacher education and professional development are central to education excellence and should be a central concern of the Higher Education Act.

Title VI: International education

Never has the need for international understanding and education been more apparent nor more pressing than it is today. The vast technological changes which have swept the continents have caused the world to function as a global village. Yet the United States has been slow to realize fully the importance—indeed the necessity—of inderstanding and learning to function in and among other countries and cultures. International education, foreign language programs, and international exchange programs must be retained, expanded, and adequately funded.

Title VII: Academic facilities

Title VII, Construction, Reconstruction, and Renovation of Academic Facilities, authorizes both grants and loans to assist colleges and universities to meet the physical challenges so many are facing: to become more energy efficient; to bring their buildings into conformity with the requirements of the Architectural Barriers Act of 1968, Section 504 of the Rehabilitation Act of 1973, or other federal, state, or local environmental, health, or safety requirements; to detect, remove, or contain asbestos hazards. Yet despite billions of dollars of unmet need, funding for this program has been minimal. Clearly, there is a pressing federal responsibility to assist in the renovation and repair of academic facilities. Moreover, we believe that to be truly meaningful, such assistance must be in the form of grants as well as low-interest loans.

Title VIII. Cooperative education

Title VIII has provided the authorization for the Cooperative Education program. Under this valuable program, grants are awarded to postsecondary institutions in order to stimulate the development of cooperative education projects in conjunction with public and private employers. Such projects provide work experiences to students, either concurrent or alternating with periods of academic study, that are closely related to their career or academic objectives as well as provide earnings to help meet the costs of postsecondary education. Despite the relevance, the quality, and the effectiveness of the Cooperative Education program, this Administration has attempted to eliminate direct funding for it. NEA is opposed to any curtailment of this program. Rather, we believe that cooperative education should be retained and its authorization level expanded significantly.

Title IX: Graduate education

Currently authorized programs provide graduate and professional opportunities fellowships for minorities and women, public service fellowships, fellowships for minorities attending law school, and law school clinical experience grants. Despite the

importance and success of these programs, the Administration's budget proposes to eliminate each of these small programs. Such an effort flies in the face of good public policy. Graduate education, scholarships, and research comprise much of the basis on which our system of postsecondary education rests. Yet many talented students find it increasingly difficult to pursue graduate education. Thus we believe that the national commitment to graduate education should be expanded. NEA supports the continuation and improvement of Grants to Institutions of Higher Education, Fellowships for Graduate and Professional Students, the National Graduate Fellows program, Assistance for Training in the Legal Profession ("CLEO"), and the Law School Clinical Experience program. We further believe that a broad needs-based grant program for graduate students should be established.

Title X: FIPSE and MISIP

We urge the extension of the Fund for the Improvement of Postsecondary Education and the authorization of the Minority Institutions Science Improvement Program under the Higher Education Act. It is our view, however, that FIPSE must be strengthened and refocused to concentrate on current issues pertaining to excellence in education. While MISIP was transferred to the U.S. Department of Education from the National Science Foundation under the Department of Education Organization Act, its authority has remained with the National Science Foundation Act of 1950. We believe that incorporation of MISIP within the Higher Education Act is appropriate and will bring increased continuity and stability to the program.

Title XI: Urban grants

The Administration has not requested funding for Urban University Grants, authorized by the 1980 Education Amendments in order to help apply the knowledge and expertise of urban institutions to the service of their communities and to make their resources more readily and effectively available to the urban centers in which they are located. We believe this program should be reauthorized and implemented.

Mr. Chairman, America has a vital national interest in a healthy system of higher education—a system able to provide excellence in scholarship, research, and education, and which offers to all students the opportunity to reach the full potential of their interests and abilities. For the past two decades, the Higher Education Act has stood as the foundation of the federal partnership in this endeavor. It has helped to bring institutional vitality to countless colleges and universities and equity and access to quality programs for millions of young Americans.

Over the last four years, the programs encompassed by this Act have been under siege. And so too has been our commitment to the future of our educational enterprise. The reauthorization of the Higher Education Act provides a necessary opportunity to reverse this trend, to rededicate ourselves and our nation to a postsecondary education system second to none. We look forward to working with you, Mr. Chairman, with the Subcommittee and its staff, and with all others concerned about the future of American education, in a cooperative effort to fashion an appropriate and effective Higher Education Act.

Thank you.

National Education Association
Instruction and Professional Development

Excellence In Our Schools TEACHER EDUCATION

An Action Plan

Summary

The views of the united teaching profession about needed changes in teacher education are presented in *Excellence in Our Schools, Teacher Education: An Action Plan.* NEA's purpose is to provide guidance to its state affiliates in their efforts to bring about improved teacher preparation programs. The basis of the document is that teacher preparation programs must serve both the community and the profession. They must ensure that beginning teachers are fully prepared for effective classroom practice.

Teacher preparation programs should be based on what is known about teaching, should have more rigorous criteria for admission and graduation, and should provide substantial opportunities for education students to practice what is taught in the programs. The standards by which teacher preparation programs are judged should be based on clear and defendable characteristics of the practice of teaching. Initial certification for teaching should be based on several indicators of potential success. The application of standards to teacher preparation programs and the initial certification of teachers should be governed by the teaching profession.

Since responsibilities for teacher education are the province of states and the colleges and universities, the document does not speak directly to a number of issues. There are, for example, no recommendations about the required length of time for a student to complete a program, how the program should be organized, when it should begin in the student's college career, or exactly how education students' competence is to be judged prior to certification. These are issues best resolved at the state level with the advice of classroom teachers. Also, the document does not speak to matters beyond the initial certification of teachers.

Glossary of Terms Used in This Document

Approval. The process used and the judgments made about teacher education programs in regard to a set of standards. *Accreditation* is a synonym.

Certificate. A legal document that entitles its recipient to practice teaching in the schools of the state. Synonyms are *license* and *credential.*

Classroom Teacher. ". . . any person who is certified, where required, and a major part of whose time is spent in direct contact with students or who performs allied work which results in placement of the person on a local salary schedule for teachers." (NEA Bylaw 12-1.b)

College-Based Teacher Educators. Persons employed by the college or university in the department of education to teach education students and to provide a variety of other services related to preparing those students to become teachers.

College-Based Faculty. All persons employed by the college or university who teach or provide services to education students.

Criteria for Compliance. A more complete definition of a standard for approving teacher education programs; those things which must be characteristic of a teacher education program in order for the program to meet the standard. (See also, Evidence Questions and Standards for Approving College of Education Programs.)

Education Students. Persons enrolled in collegiate programs leading to recommendation for certification as a classroom teacher.

Evidence Questions. Suggested questions to be used by persons evaluating programs of teacher education. Such questions are designed to elicit information about the degree to which the criteria for a standard are met. (See also, Criteria for Compliance and Standards for Approving College of Education Programs.)

Field-Based Experiences. The opportunities provided to education students to work with students, teachers, other professionals, school-related agencies, parents, and the public.

Instruction. Refers to the presentation of information using a variety of techniques and not limited to the lecture approach. Specifically in the standards family (4.0) it refers to the presentation of information, in various ways, to education students.

Liberal Arts. Generally includes arts and humanities; physical, natural, social, and behavioral sciences; mathematics; technology; and physical and health education. A synonym is *general education* or *general studies.*

Majority National Teachers Organization. The National Education Association, including its state and local affiliates.

NCATE. Initials for the National Council for Accreditation of Teacher Education, the organization that accredits programs in teacher preparation institutions from a national perspective. The governing body of the Council is composed of eight members chosen by the president of the National Education Association, eight members from the American Association of Colleges for Teacher Education, eight members from other professional constituencies, and two public members.

School-Based Teacher Educators. Fully certificated and tenured practicing teachers and other school professionals who supervise and in other ways work with education students to provide field-based experiences.

Standards for Approving College of Education Programs. A set of exemplary statements against which to judge teacher preparation programs. (See also, Criteria for Compliance and Evidence Questions.)

State Teacher Education Agency. The legally constituted body in the state that approves programs of teacher education and certificates teachers. In this document it is proposed that the agency be autonomous, i.e., that it be delegated full powers for those two functions. The NEA also calls for a majority of classroom teachers to govern the agency. Teachers are defined as those persons who must be certificated by the agency in order to practice.

Students. K-12 pupils.

Introduction

Teacher education is an issue of vital concern to today's practicing teachers. They believe that beginning teachers should be able to start their careers with a background of experiences which allows them to handle classroom situations comfortably. They believe that education students in college, along with exposure to the appropriate knowledge base, should have extensive opportunities to apply their acquired knowledge and skills to classroom practice.

Teachers are not alone in voicing concern that teacher education programs respond to societal and technological changes. Colleges of education, various levels of government, and the public also have expressed concern. Clearly, political, economic, and social issues have affected decisions about teacher preparation, ranging from budgetary concerns to the status of colleges of education within the university hierarchy. But one essential factor has always been missing from the decision-making process about teacher education: the expertise of the practicing teacher. Decisions about what teachers need to know and the types of experiences they need to have in order to function effectively on the first day of school have been based on research and scholarly judgment, not on experience. Approval of teacher preparation programs has been based on what should be taught, not on its relationship to initial practice. The agency for approving programs and certificating teachers at the state level has been composed largely of representatives of interest groups concerned with political, administrative, and community issues, not with the practitioner. The National Education Association believes that in order to ensure that beginning teachers can provide high quality instruction, the following must occur:

- Admissions to college of education programs must be based on various types of evidence indicating potential success as a classroom teacher.
- Teacher education programs must be designed and developed based on what the practitioner says needs to be known and done for beginning effective practice.
- Teacher education must be structured so that the beginning teacher can apply the knowledge base to the classroom situation.
- Recommendations for certification of graduates must be based on several types of information which is accumulated over the entire program and demonstrates the graduates' capability to practice effectively.
- Standards for approving teacher education programs must reflect attention to the above issues.
- The state agency for approving teacher education programs and certificating teachers must be autonomous and governed by a majority of teachers.

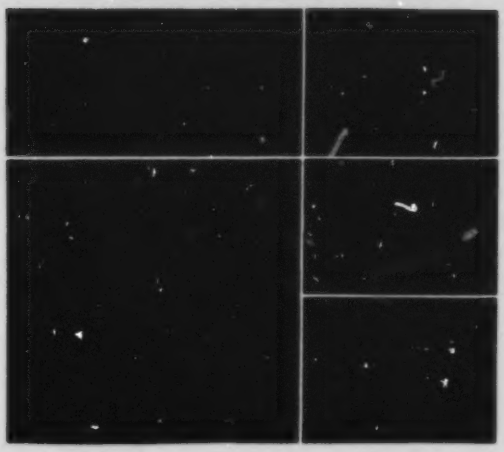
This document reflects substantive input by NEA members and represents what practitioners know must occur at all levels to ensure appropriate teacher preparation. But it is not enough to call for program changes without having the basis for determining whether the changes have occurred. It is, therefore, essential that an autonomous agency for applying appropriate standards be established.

The assumptions basic to the above changes regarding teacher education are:

- Teachers are the most critical part of the schooling process.

- In order to enhance the quality of public schooling, teachers must be given appropriate recognition — legal, financial, and professional.
- Effective instruction is dependent on teachers receiving substantial support services that are consistent with the purposes of schooling.
- The ability to provide quality instruction in the initial years of practice is directly related to the preservice preparation a prospective teacher receives.
- Decisions about teacher preparation must be made by the profession and supported through the political system which influences the operation of schools.

A Profile of Excellence for Teacher Education



A Profile of Excellence for Teacher Education

The National Education Association is committed to the following essentials for preservice teacher education:

- Requirements for entry to college of education programs should be rigorous yet flexible enough to allow admittance to those who demonstrate potential for effective practice. Admission to any program should be based on multiple considerations such as recommendations of faculty (liberal arts and education), grade point average, personal interviews, and recommendations of persons in related fields.
- All teacher education programs should have three integrated components: liberal arts, at least one subject or teaching level specialty, and a professional curriculum. Both the professional curriculum and the teaching specialty must be derived from what it is practicing teachers say must be known and actually done in order to be effective in the classroom. The professional components should focus on classroom practice. Field-based experiences related to all components should be provided throughout the preservice program.
- Education students should be evaluated throughout their program, with multiple techniques. Recommended measures include observations, oral and written exams, videotapes, and products from projects. Only students who have demonstrated that they can effectively begin practice should be graduated from teacher education programs. Others should be counseled into more appropriate career study.
- Teacher education programs must be approved by the state based on standards which ensure that teachers can be effective when they begin teaching. The standards must specify that education students are provided opportunities throughout the program to apply the learnings and skills in field-based experiences.
- An autonomous, legally established agency, governed by a majority of practicing teachers, must be established in each state to approve teacher preparation programs, using the standards called for in this document, and to initially certificate practitioners.

Major Functions of Teaching

Teachers perform three critical functions in the classroom: they (1) facilitate learning, (2) manage the classroom, and (3) make decisions. These functions are essential for successful practice and must be the basis for the design, development, and implementation of any college program committed to preparing effective beginning teachers. Following is a *sample* of actions undertaken by teachers pertaining to the three functions.

1. **Facilitating Learning**

   Teachers —

   - Know the unique characteristics of their students and draw on this knowledge to promote learning
   - Identify students' levels of achievement in subject matter and provide instruction and activities appropriate to those levels
   - Identify students' learning problems and provide instruction for overcoming them
   - Identify student interests and use them to promote learning
   - Work with students individually when appropriate
   - Organize groups which enhance learning
   - Draw on a variety of techniques, materials, and technology to accommodate different learning styles
   - Use questioning techniques and plan learning experiences which encourage thinking and problem-solving skills
   - Present subject matter.

2. **Managing the Classroom**

   Teachers —

   - Organize the classroom to stimulate learning and to foster discipline
   - Evaluate classroom conditions and make adjustments when necessary
   - Provide opportunities for communication with parents and the community
   - Communicate with special service personnel and call upon them when necessary
   - Use community agencies and refer students when appropriate
   - Maintain student records for instructional purposes
   - Facilitate the work of classroom aides, volunteers, and paraprofessionals.

3. **Making Professional Decisions**

   Teachers —

   - Decide what to teach within and across subject areas within the context of available curriculum guides
   - Select and present/use materials and equipment
   - Plan priorities for the day
   - Reorganize activities as necessary
   - Use student assessment materials for instructional purposes
   - Anticipate the need for and draw on the abilities of special school service personnel such as school nurse, psychologist, social worker,

librarian/media specialist, and guidance counselor

- Decide when, where, and how to work at the local, state, and federal levels for educational improvement
- Decide how to work with professional organizations, the school community, and the public-at-large to promote action on educational problems
- Decide how to deal with the external conditions which impact their role as a teacher
- Decide how to deal with political, economic, social, and professional factors that affect their ability to function in the classroom.

Learnings, Skills, and Field-Based Experiences

Immediately upon beginning practice, teachers are called upon to function in all the ways discussed above. Although these are only some of the major considerations a teacher daily brings to the classroom, they constitute a strong basis for the redesign and reorganization of teacher education programs. The core of an effective teacher education program should be the way the knowledge base is organized and presented. It must ensure that the beginning teacher is able to apply what is learned immediately upon entering professional practice. The following learnings, skills, and field-based experiences derive from the three major functions of teaching and are meant to provide teacher preparation institutions with the foundation for reorganizing their programs.

Learnings	Skills
Knowledge of human growth and development — emotional, social, physical	How to diagnose children for appropriate instructional placement
	How to respond to and respect the emotional needs of students
Thorough knowledge of one or more subjects	How to translate knowledge of subject(s) into sequenced, grade appropriate instructional activities
Knowledge of human behavior	How to observe students for planning and implementing instructional activities
Knowledge of intellectual growth and development	How to use a variety of techniques which foster inductive and deductive thinking
Knowledge of learning — needs, problems, attitudes, variation of styles, variation of abilities	How to recognize needs of students for planning instructional activities
	How to select alternative materials and resources to accommodate different learning styles
Knowledge of exceptional children — types, remediation	How to work with special service personnel to plan, implement, and evaluate learning activities for exceptional students
Knowledge of the development of critical thinking and problem-solving skills	How to form questions that require higher level cognitive responses
Knowledge of assessment measures: uses, interpretations, abuses, construction	How to construct and/or administer a variety of measures to assess student achievement
Knowledge of social and cultural impact on learning	How to set appropriate goals based on the unique characteristics of students
Knowledge of environmental impact on students	How to organize and maintain an environment conducive to learning
Knowledge of communication	How to communicate with students about learning, with parents about students, and with colleagues, the community, the public-at-large, and policymakers

Learnings	Skills
Knowledge of instructional design and technology	How to operate technological equipment, recognize its usefulness for instruction, and incorporate its use in lesson planning
Knowledge of resources and materials	How to critically review new materials according to established criteria and resist pressures
Knowledge of curriculum design and development	How to plan, implement, and evaluate learning activities
Knowledge of legal responsibilities — liabilities, constraints	How to plan, implement, and evaluate learning based on legal considerations
Knowledge of community agencies and referral processes	How to establish rapport with community agencies, and how to refer students through the proper channels
Knowledge of the history and foundations of public schooling in the United States	How to compare goals of the school district with the history and philosophy of education
Knowledge of group dynamics as it relates to communication with all significant role groups	How to develop rapport and communicate with significant groups, i.e., students, colleagues, and community
Knowledge of the impact of public policy on schools	How to anticipate and have influence on political and economic decisions and their impact on instruction
Knowledge of the interrelationships between schools, governments, and the public-at-large	How to identify instructional issues and organize for action at local, state, and national levels
Knowledge of what types of records should be kept; understanding of the importance of accurate records; knowledge of state and district policies about record keeping and of legal implications.	How to organize and maintain student records for instructional purposes
Knowledge of the labor movement and its impact on schooling.	How to participate in the collective bargaining process to benefit education
Knowledge of educational research	How to interpret research findings and translate them into practice

Field-Based Experiences

The NEA calls for field-based experiences beginning with the first education course and continuing throughout the entire program. Experiences should be sequenced starting with observations, then working under direct supervision, in teams, and independently. The following are among the field-based experiences education students should have:

Observation

- Education students should have opportunities to observe when and where appropriate —

  an individual student
  small groups of students in a variety of settings
  total classrooms at many levels
  parent-teacher conferences
  parent meetings
  school board meetings
  activities at the state education agency
  the state legislature
  professional and learned organizations
  the united teaching profession.

Microteaching

- Education students should be videotaped teaching small groups of students and an entire class in a variety of situations, e.g. —

  presenting a lesson
  dealing with students
  changing from one activity or class to another.

Developing Case Studies of Individual Students

- Education students should have opportunities to observe an individual student in a variety of settings, use available school records, and talk with teachers and parents and, from these, identify strengths and weaknesses and develop a plan for working effectively with the student.

Translating Theory into Practice

- Education students should be provided with strategies and opportunities for applying the theories they are taught to classroom practice. The strategies should focus on and cover those conditions which affect planning, implementing, and evaluating instruction.

Curriculum Design and Development

- Education students should be provided opportunities to identify how disciplines of knowledge are organized and structured, the way they are sequenced, and what value and constraints curriculum guides have for them. They should have opportunities for sequencing knowledge and planning for immediate, intermediate, and long-range activities.

Instructional Technology

- Education students should have opportunities to learn about instructional technology — current and emerging — how to use it, and the relationship between curriculum and instruction.

Classroom Experiences

- Education students should have broad and extensive experiences in classrooms throughout their program. There must be several opportunities to assume full responsibility in classrooms throughout the program.

Setting Standards for Approving College of Education Programs

Teacher education programs should be approved at two levels: nationally through the National Council for Accreditation of Teacher Education (NCATE), and at the state level through an agency such as a professional standards board. The national accreditation system concerns itself with evaluating all aspects of teacher education programs, including facilities, governance, available resources, personnel, and budget. The state approval system should concern itself more specifically with the content — its organization, substance, and the provision of experiences which will ensure that beginning teachers have the capability to begin practice within that state. The difference between the two types of approval systems is that the national system concerns itself with broader issues and the state system reflects more specific concerns of its constituency — the kinds of experiences, knowledge, and skills their newly employed teachers will have. The NEA calls for state approval being coupled with NCATE approval to ensure that all aspects of teacher education programs will be considered at the appropriate level of specificity. Further, the NEA recommends that the procedures for approving teacher education programs follow the NCATE processes. That is, a team proportionally representing the constituency of the state approval agency should be assembled; on-site visits should occur; historical, descriptive, and observational data should be collected, reviewed, and critiqued; and the team should recommend approval or disapproval.

The standards presented on the following pages are standards the NEA believes should be adopted by state agencies which approve teacher preparation programs. They provide the basis for determining what and how learnings necessary for effective initial practice are presented. The standards are divided into five families: (1) Program Planning, (2) Program Implementation, (3) Program Personnel, (4) Program Content, and (5) Membership in the Profession. Within each family are several standards which will ensure the appropriate programmatic effort. Accompanying each standard are a set of criteria for compliance and a set of evidence questions. The evaluation team should use the criteria for compliance to determine if the standard has been met. The evidence questions are suggested ways for the team to verify that the criteria have been met.

Standards for Approving College of Education Programs

1.0 Program Planning

1.1 *The purpose of the program is to prepare beginning teachers to function effectively when beginning practice.*

Criteria for Compliance

1. The stated goals of the program, as evidenced in the plan, are to prepare beginning teachers to function effectively.
2. The objectives of the program, derived from the goals, include providing field-based experiences and ways to apply the knowledge base to classroom activities.
3. The program plan includes providing content and skills which teachers have identified as being necessary for beginning practice.

Evidence Questions

1. Does the plan include classroom application strategies accompanying each set of learnings offered?
2. Does the plan include opportunities to practice what is being taught?
3. Does the plan include sequenced field-based experiences throughout the program?
4. Does the plan provide for education students to participate in direct classroom activities throughout the program?
5. Does the plan identify the number of teachers (and their specialty areas) and the teacher organizations the college of education consulted with in developing the plan?

1.2 *The program plan is based on an established knowledge base derived from what teachers do in a classroom.*

Criteria for Compliance

1. The program has been designed and developed on the basis of up-to-date research, input from practicing certificated K-12 teachers, and observations of K-12 classrooms.
2. The program has specific stated objectives which are based upon current practice.
3. Each component of the program is related to the stated objectives.
4. The program plan is continually evaluated and modified based on input from practicing certificated teachers, students in the program, graduates, and college-based faculty.
5. The program is designed to enable prospective teachers to learn what they need to know to be effective in their particular teaching situation.

Evidence Questions

1. Does the program plan include input from practicing certificated K-12 teachers?
2. Does current research by the education faculty include attention to what teachers are doing in the classroom?
3. Have practicing certificated K-12 teachers been involved in evaluation and modification of the program plan?

4. Does the program plan allow for feedback from currently practicing certificated teachers, including recent graduates?
5. Does the plan articulate all the roles a teacher plays during the course of a day/year, e.g., academic, behavior management, interpersonal relationships, record keeping?
6. Is the plan revised frequently to reflect changes in what teachers must do as a result of new legislation or education codes?
7. Have program changes been based on input and observations from practicing certificated teachers?
8. Does the program provide opportunities for the education student to explore not only what teachers do now in the classroom but what they should anticipate for future practice?
9. Does the program plan call for college-based teacher educators to practice and/or demonstrate methods and materials in the classroom with K-12 students?

1.3 *The program is systematically planned and there is coordination among the liberal arts, teaching specialty, and professional curricula.*

Criteria for Compliance

1. The program includes liberal arts study.
2. The liberal arts study includes arts/humanities, mathematics/science/technology, social and behavioral sciences, and physical and health education.
3. Program activities are derived from the stated goals and objectives.
4. Program activities are internally consistent, comprehensive, and sequential
5. The teacher preparation curriculum includes a coordinated and sequential series of professional learnings.
6. The program includes field-based experiences and opportunities to learn how to apply all learnings to classroom situations.

Evidence Questions

1. Is there a published set of learnings which indicates inclusion of liberal arts?
2. Do the planned learnings include study in arts/humanities, mathematics/science/technology, social and behavioral sciences, and physical and health education?
3. Does the program have a clear sequence that allows education students to build on knowledge gained in the program?
4. Are activities designed so that the entire program is unified and integrated?
5. Have planners attended to the relationship between program activities and successful classroom practice?
6. Is there documentation that stated goals have been used to design program activities?
7. Do the planned learnings include professional studies and field-based experiences?
8. Is application considered an essential part of the planned learnings?

1.4 *The program is designed and developed primarily by persons expert in pedagogy, practice, and academic specializations.*

Criteria for Compliance

1. Professors of education, practicing certificated K-12 classroom teachers, and faculty from other college/university departments design and develop the program.
2. Program planners consult with students, graduates of the institution, employers, representatives of the public, and practicing certificated K-12 teachers in the local area.
3. Planners are representative of their constituencies and fields of expertise.
4. A balance exists within the planning group among the constituencies and fields of expertise.
5. The planning group has authority to plan the program.

Evidence Questions

1. Have professors of education, practicing certificated K-12 classroom teachers, and faculty from other departments participated in the planning process?
2. Has there been comprehensive consultation with students, graduates of the institution, employers, representatives of the public, and practicing certificated K-12 teachers in the planning process?
3. Does the process of establishing the planning group specify a method of selection to ensure that planners will be representative of their constituencies and fields of expertise?
4. Does the planning group have balance among the contituencies and fields of expertise?
5. Has sole authority for planning the program been clearly delegated to the planning group?

1.5 *The overall program design reflects planned opportunities for acquiring knowledge and skills essential for successful classroom functioning.*

Criteria for Compliance

1. The program plan includes the knowledge and skill areas necessary for successful classroom functioning.
2. The program plan includes planned opportunities for acquiring and applying the knowledge and skills in a variety of settings.
3. The program plan provides for regular updating of knowledge and skills through interactions between higher education faculty and teachers in the field.
4. The program plan includes sequenced field-based experiences necessary for classroom functioning.

Evidence Questions

1. Is the body of knowledge and skills deemed essential for successful classroom functioning specified?
2. Does the program provide students with supervised field-based experiences?
3. Does the program provide for theory and practice being explicitly related to the field-based experiences?
4. What evidence exists that the program uses expanding knowledge,

increasingly complex understandings, and advancing skill development in preparing teachers?

5. What evidence exists that the knowledge and skills are actually updated?

2.0 Program Implementation

2.1 *Program implementation is consistent with program purposes and design.*

Criteria for Compliance

1. All aspects of the curriculum are geared toward preparing teachers to function effectively.
2. Field-based experiences are part of every set of learnings offered education students.
3. Every set of learnings offered education students has an application component.

Evidence Questions

1. Is the knowledge base offered education students grounded in current and in some cases future practice?
2. Are field-based experiences part of the entire curriculum?
3. Are application strategies part of the entire curriculum?

2.2 *Procedures for student admittance, continued enrollment, and graduation are consistent with program purposes.*

Criteria for Compliance

1. There is minimally a comprehensive semiannual counseling and evaluation of students preparing to be teachers.
2. There are clearly defined criteria for continuing enrollment in the teacher education program.
3. All requirements are applied equitably and without discrimination to all students, including transfer students. Such processes are consistent with institutional affirmative action policies and goals.
4. The college has developed clearly delineated procedures for probation and dismissal.

Evidence Questions

1. Has a program for counseling and evaluating education students been established?
2. Is the counseling/evaluation program in operation?
3. Are the criteria for continuing enrollment in written form and readily accessible to all education students?
4. Are affirmative action policies and goals in written form and distributed to all students upon entry into the program?
5. What are the provisions for due process within the evalution procedures?
6. Are probation and dismissal procedures written and distributed to all students upon entry into the teacher education program and to all students who are in jeopardy?

2.3 *College-based teacher educators demonstrate practical knowledge of schools and classroom teaching.*

Criteria for Compliance

1. College-based teacher educators have continual, direct contact with schools and classrooms.
2. College-based teacher educators use instructional techniques that reflect the methods advocated for practicing teachers.
3. College-based teacher educators teach a wide range of instructional models and techniques to education students, use those models and techniques throughout the program, and provide opportunities for education students to use them as well.
4. College-based faculty demonstrate an understanding of current educational practice, including curriculum, organization, staff roles, and the external forces that affect them.
5. College-based faculty demonstrate an awareness of future practices and incorporate them into the curriculum where appropriate.

Evidence Questions

1. Do college-based faculty use the same methods in teaching education students that education students are taught to use in classrooms?
2. Do college-based faculty draw on their experiences in schools, research expertise, and sound instructional theory in instructing education students?
3. What proportion of the assigned time of college-based teacher educators is spent in schools? As scholars? As supervisors of education students? As consultants to classroom teachers and schools?
4. Does the program provide education students with various models such as individualized instruction, microteaching, laboratory situations, tutoring, and lecture?
5. Are there proper facilities to implement the teaching and learning methods used in the program?
6. Are education students encouraged and required to continually practice the methods they are being taught to use? Does this practice take place in a variety of settings?

2.4 *The program provides sufficient opportunities for education students to practice what they are learning.*

Criteria for Compliance

1. The program provides many opportunities for the education student to observe, plan, and practice in a variety of classroom settings all of the knowledge and skills learned in the program.
2. The school-based experiences provided for education students take place in a variety of settings.
3. School-based educators have received sufficient training for their role of supervising prospective teachers.
4. College supervisors of student teachers are assigned supervisory loads which permit observation of each student teacher on a regular and systematic basis for a full lesson presentation.
5. There is a systematic coordination of efforts between school- and college-based educators during the student teaching experience.

6. School-based experiences are sequenced and occur concurrently with the college curriculum, providing opportunity for analysis and evaluation so that theories and practice in schools are related.
7. Student teachers have a full-time supervised teaching experience of at least three months duration.
8. School-based teacher educators are provided sufficient resources (particularly time and compensation) to work effectively with education students.

Evidence Questions

1. Does the program provide for early and frequent observation and involvement in the school community? Is this done in conjunction with related course work?
2. Are clinical experiences provided throughout the program and supervised by practicing certificated K-12 teachers?
3. What systematic experiences for analysis are provided education students so that they can examine their school-based experiences?
4. How much time is devoted to simulation in the program? To school-based experiences? To nonschool field experiences? Is the proportion to the total program consistent with the purpose of the program?
5. Are college experiences integrated with school-based experiences so that each contributes to a deeper understanding of the other and of teaching?
6. Have teacher education students been provided experiences in –

   Urban, rural, and suburban settings?
   Regular education and classes with mainstreamed students?
   Classrooms with students who have multicultural backgrounds?
   Agencies providing special services to schools?

7. What information shows that school-based teacher educators are trained in supervision of education students and are committed to the task of educating teachers?
8. What is the ratio of education students who are student teaching in schools to college-based teacher educators?
9. Are meetings and/or written communications from school- and college-based teacher educators scheduled on a regular basis?
10. Is a sequence of school-based experiences available in written form?
11. Do education students follow the suggested sequence?
12. Does the education student have teaching experiences which extend over at least a three-month period?

2.5 *The program coordinates specific teaching methodology with subject matter specialties.*

Criteria for Compliance

1. Specific methods are taught which are directly related to the academic specialties education students are studying.
2. College-based faculty give attention to the types of methods which are called for in presenting a specific academic discipline and how it varies from other disciplines.
3. College-based teacher educators give attention to the quality of content as well as to the variety of teaching methods to be used by education students.

4. College-based faculty and teacher educators work together in planning and implementing learnings in the subject matter specialty component to ensure the integration of knowledge and methods.

Evidence Questions

1. Are methods taught along with the subject matter specialties?
2. Does the presentor of subject matter refer to specific teaching methods when discussing various parts of the knowledge base?
3. Are field-based experiences provided to education students which allow them to practice specific methods for a specific discipline?
4. Are education students given opportunities to compare the effectiveness of methods for one discipline with their effectiveness for other disciplines?

3.0 Program Personnel

3.1 *College-based teacher educators and school-based teacher educators model attitudes and behaviors desired of education students.*

Criteria for Compliance

1. College- and school-based teacher educators belong to and are active in professional organizations.
2. College- and school-based teacher educators accept and value differences in student backgrounds and learning styles and use that knowledge to plan and implement their programs.
3. College- and school-based teacher educators work effectively with support personnel (e.g., aides, special service personnel, and administrators).
4. School-based teacher educators use effective instructional strategies in teaching education students.
5. College- and school-based teacher educators systematically assess their own instructional and professional behavior, modify their behavior on the basis of that assessment, and share the process with their education students.

Evidence Questions

1. Are the following attitudes and behaviors expected of college-based teacher educators: (a) active participation in professional organizations; (b) acceptance of individual student differences; (c) rational and professional decision-making ability; (d) positive attitudes toward teaching, the profession, and the future; and (e) effective relationships with support personnel?
2. What processes are established to encourage these attituoes and behaviors in school-based teacher educators?
3. Are the instructional strategies used by school-based teacher educators effective models of the teacher education program?
4. Are there written procedures for college- and school-based teacher educators to evaluate their own performance?

3.2 *College-based teacher educators and school-based teacher educators have in-depth preparation, training, and experiences in their instructional fields.*

Criteria for Compliance

1. College- and school-based teacher educators have specialized training and demonstrated expertise in their areas of specialization.
2. College-based teacher educators engage in continual study and/or personal research in their areas of specialization.
3. College- and school-based teacher educators translate theories from their areas of specialization into school practice.
4. College-based teacher educators have had experience supervising, consulting, and working in an elementary or secondary school in contact with public school students and classroom teachers within the previous two years.
5. School-based teacher educators who volunteer to work directly with student teachers are fully certificated tenured teachers employed within the district.

Evidence Questions

1. What process is used to select school-based teacher educators? To what extent is selection based on their competence in their fields of expertise and their performance as classroom teachers?
2. Do the criteria for selection of college-based teacher educators stress their competence and experience both in their fields of expertise and as teachers?
3. Do college- and school-based teacher educators incorporate new knowledge from their areas of specialization in their instruction?

3.3 *College-based faculty are evaluated on appropriate criteria, and personnel decisions are consistent with the results of the evaluation.*

Criteria for Compliance

1. Performance expectations for college-based teacher educators are consistent with objectives of the teacher education program.
2. College-based faculty participate in the development of personnel evaluation criteria and procedures, incorporating information and views from education students and practicing certificated K-12 teachers.

3. Personnel decisions are based upon the results of the evaluation process.
4. There are written statements of expectations of college-based faculty which describe successful performance.
5. Necessary evaluation procedures are administered in a fair and equitable way.

Evidence Questions

1. What is the relationship between the expectations describing successful performance and the goals established for the teacher education program?
2. What processes are established for college-based faculty, education students, and practicing certificated K–12 teachers to participate in the development of evaluation criteria and procedures? Is there evidence that these processes are followed?
3. What evidence is there that personnel decisions are based on the results of the evaluation process?
4. What are the provisions for due process within the evaluation process?
5. Are carefully developed, written guidelines for evaluation of college-based faculty being utilized consistently?
6. Has each college-based faculty member participated in developing specific criteria for his/her evaluation?

4.0 Program Content

4.1 Subject Matter Content

4.1.1 *The program provides for improving education students' proficiency in basic skills if related admission requirements have not been met.*

Criteria for Compliance

1. The college of education is provided evidence of proficiency or potential proficiency in the basic skills of those who apply for admission.
2. The program offers instruction in the basic skills that college students need in order to succeed in a professional school.

Evidence Questions

1. Is proficiency in basic skills defined to include all of the following: reading, writing, speaking, listening, and mathematics?
2. Does the college/university provide remedial instruction during the first two years for those admitted with deficiencies in the basic skills?
3. Does the college of education receive from arts and science instructors clear, precise evidence of the level of proficiency in the basic skills of those who apply for admission to teacher education?

4.1.2 *The program provides instruction in the liberal arts.*

Criteria for Compliance

1. The program provides instruction in all the liberal arts: the humanities, the arts, sciences, mathematics, technology, and physical and health education.
2. The program requires that education students have a balance of studies among the liberal arts.

Evidence Questions

1. Are students required to take courses in the liberal arts?
2. Are students required to balance their selections in the liberal arts?

4.1.3 *The program provides instruction in critical thinking, problem solving, and creativity.*

Criteria for Compliance

1. The major schools of thought on critical and creative thinking are part of the instructional program.
2. Critical and creative thinking processes are modeled and taught in both liberal arts and professional sequences.
3. The program provides opportunities for education students to develop their higher-level cognitive abilities and problem-solving techniques.
4. The program provides opportunities for education students to incorporate thinking and problem-solving skills in their clinical experiences.
5. All aspects of the program demonstrate teaching and learning that reflect high-level thinking and problem solving.

Evidence Questions

1. Is there instruction in both inductive and deductive thinking processes?
2. Are students introduced to the processes of analysis for criticism, essay review, and debate?
3. Are students instructed in the knowledge bases about creativity?
4. Are a variety of teaching methods employed within the program that require higher level thinking skills?
5. Is there evidence that the general curriculum demonstrates teaching and learning opportunities directed at higher cognitive thinking?

4.1.4 *The program provides in-depth instruction in the subject matter specialty(ies) the education student proposes to teach, as well as in closely related fields.*

Criteria for Compliance

1. The program provides instruction in the teaching specialty(ies) of sufficient depth for the education student to teach it to students.
2. The program provides instruction in fields closely related to the teaching specialty(ies) so that the education student's knowledge is enhanced.
3. The program provides instruction in methodology as used in the classroom.

Evidence Questions

1. Are education students required to complete a subject major?
2. Are education students who will teach in elementary schools provided substantive instruction in the major branches of the curriculum they will be required to teach in nondepartmentalized settings?
3. Are education students provided instruction in and experiences which relate their teaching specialty(ies) to other disciplines? For example, are prospective teachers of physics provided in-depth instruction in chemistry and mathematics?

4.1.5 *The program provides instruction in human growth and development.*

Criteria for Compliance

1. The major research findings and schools of thought on human growth and development are included in the curriculum.
2. The curriculum includes implications of human growth and development studies for working with students in schools.
3. The curriculum includes strategies and opportunities for applying knowledge of human growth and development to classroom situations.

Evidence Questions

1. Is there instruction in the various developmental stages of children and youth?
2. Is there instruction in how some children and youth vary from normal growth and development patterns and in how to identify the variations?
3. Is there instruction in the relationships, and in the implications of those relationships, between growth/development and accomplishable learning tasks?

4.1.6 *The program provides instruction in how humans learn.*

Criteria for Compliance

1. Knowledge of theories of learning is required of all education students in the program.
2. Education students are instructed in all major schools of thought on learning.
3. Instruction in learning theory and the psychology of learning is related to the role of the teacher in promoting learning through formal schooling.
4. Strategies for applying learning theories to planning, implementing, and evaluating instructional activities are an integral part of the curriculum.

Evidence Questions

1. Are the major schools of thought in behavioristic, developmental, and social psychology clear and distinct parts of the instructional program?
2. Are education students required to study several kinds of learning theories?
3. Is the emphasis in learning theory and the psychology of learning on applying the knowledge to classroom instructional activities?
4. Is the emphasis in the psychology of learning based on how the teacher can use the knowledge to analyze and respond to students' learning needs?

4.1.7 *The program provides opportunities for education students to acquire and apply appropriate knowledge and skills effectively for teaching students of varying racial, cultural, linguistic, religious, and socioeconomic backgrounds.*

Criteria for Compliance

1. The program provides opportunities for understanding and appreciating the unique contributions, needs, similarities, differences, and interdependencies of students from varying racial, cultural, linguistic, religious, and socioeconomic backgrounds.

2. The program provides experiences related to the implications of racial, cultural, linguistic, religious, and socioeconomic differences for student behavior and classroom instruction.
3. The program provides experiences in developing instructional techniques and curricula suitable for students of varying backgrounds.
4. The program provides strategies and opportunities for applying this type of knowledge to classroom situations.
5. The program is aware of and provides for the varying racial, cultural, linguistic, religious, and socioeconomic backgrounds among its own student population.

Evidence Questions

1. Does the program provide opportunites for education students to develop or enhance positive attitudes toward understanding and appreciating the contributions, needs, similarities, and differences of students from varying racial, cultural, linguistic, religious, and socioeconomic backgrounds?
2. Does the program specifically address the attitudinal variations and diverse learning styles of students due to their varying backgrounds?
3. Does the program provide opportunities for education students to design instructional activities for pupils of varying racial, cultural, linguistic, religious, and socioeconomic backgrounds and to implement them in the pupils' own school environment?
4. Does the program provide for the teacher education faculty and education students to confront and modify existing prejudices and stereotypes?

4.1.8 *The program provides instruction in the physical and intellectual development of students from varying backgrounds and with a wide range of abilities.*

Criteria for Compliance

1. The program provides opportunities for the education student to recognize differences in physical and intellectual development of students.
2. The program provides systematic opportunities for the education student to understand and work with students of varying learning styles, achievement levels, and special physical, emotional, and learning needs.
3. The program provides opportunities for the education student to apply the knowledge of individual needs and differences to classroom situations.

Evidence Questions

1. Does the program provide for education students to systematically have contact with a variety of student differences?
2. Does the program make provisions for education students to work with pupils of varying learning styles and achievement levels such as the academically talented, the gifted, the learning handicapped, and the physically or emotionally handicapped?
3. Does the program provide opportunities for education students to design instructional activities for pupils with exceptional needs and to implement them in varied and appropriately selected settings which address those needs?

4.2 The Teaching Process

4.2.1 *The program provides instruction in planning for teaching.*

Criteria for Compliance

1. The program includes instruction in how to use educational goals and objectives to plan instructional activities.
2. The program provides instruction to familiarize education students with a variety of print and nonprint materials for accomplishing particular objectives.
3. The program provides instruction in selecting among instructional strategies for accomplishing particular objectives.
4. The program provides instruction in allocating time for accomplishing both short-range and long-range objectives.

Evidence Questions

1. Is there instruction in various models for developing instructional goals and objectives?
2. Is there instruction in assessing the relative strengths and weaknesses of particular print and nonprint materials for instructional purposes?
3. Is there instruction in daily, weekly, grading-period, semester, and annual planning?
4. Is there instruction in developing and applying lesson plans?

4.2.2 *The program provides instruction in teaching strategies known to promote student learning.*

Criteria for Compliance

1. The program draws on the most current research and development in how instructional strategies contribute to specific learnings.
2. Education students are taught a broad range of cognitive, affective, and psycho-motor instructional strategies.

Evidence Questions

1. Does the program include strategies for direct instruction of students?
2. Does the program include instruction in how to achieve maximum student time-on-task?
3. Does the program include instruction in how to provide immediate feedback to promote and reinforce learning?

4.2.3 *The program includes instruction in the decision-making role of the teacher.*

Criteria for Compliance

1. There is instruction in decision making as a major function of teachers as professionals and experts in their teaching specialties.
2. There is instruction in the full range and variety of decision-making activities required of teachers on a daily basis.
3. Education students are introduced to several decision-making models.

Evidence Questions

1. Is there instruction in decision-making roles concerning the selection of content?

2. Is there instruction in decision-making roles concerning the selection of instructional techniques?
3. Is there instruction in decision-making roles concerning classroom management?
4. Is there instruction in decision-making roles of evaluating student learning?
5. Are the authority roles of teachers as decision makers taught by comparing them to authority roles in other professions?

4.2.4 *The program provides instruction in using print and nonprint materials and emerging technology.*

Criteria for Compliance

1. Instruction is provided in the use of the full range of available print and nonprint materials and emerging technology.
2. Instruction in print and nonprint materials and emerging technology emphasizes the appropriate use of specific materials and technology for particular instructional purposes.
3. Hands-on experience is provided in using print and nonprint materials and emerging technology to accomplish specific instructional purposes.

Evidence Questions

1. Is instruction in a variety of print materials provided, including the critiquing of materials?
2. Is instruction in a variety of nonprint materials provided, including opportunities to learn how to use and critique them?
3. Is instruction in emerging technology provided, including uses and limitations?

4.2.5 *The program provides instruction in developing procedures for working with and promoting learning for students with exceptional behaviors.*

Criteria for Compliance

1. Instruction is provided in the basic methods of teaching students with different learning, physical, and social/emotional disabilities.
2. Instruction is provided in methods of identifying exceptional behaviors.
3. Instruction is provided in the process of making referrals.
4. Instruction is provided for working with special service personnel.

Evidence Questions

1. Is there direct instruction in methodologies for working with learning disabled students?
2. Is there instruction in how to recognize exceptional behavior?
3. Is experience provided in processing referrals?
4. Is experience provided in understanding the Individualized Education Program (IEP) process?
5. Is experience provided in working directly and intensively with K-12 students with a wide range of exceptionalities?

4.2.6 *The program includes instruction in classroom management.*

Criteria for Compliance

1. There is instruction in the variety of management roles teachers must perform.
2. There is instruction in several models of classroom management.
3. There is instruction in how to manage a major activity or activities and concurrently monitor several ancillary activities.
4. There are opportunities for trying out several management models and selecting among them for particular purposes.

Evidence Questions

1. Is there instruction in time allocation and moving from one activity to another?
2. Is there instruction in managing activities concurrently?
3. Is there instruction in a variety of models of classroom control?
4. If state policies do not prohibit, is there instruction in record keeping, reporting, managing, and accounting for classroom-related finances?

4.2.7 *The program provides instruction in learning to practice a broad range of interpersonal and group-process skills.*

Criteria for Compliance

1. The curriculum includes a broad range of interpersonal and group-process skills.
2. There is instruction in identifying effective interpersonal and group-process skills for particular audiences.
3. There is opportunity to practice and perfect the most essential interpersonal and group-process skills.

Evidence Questions

1. Is there instruction in interpersonal and group-process skill development models?
2. Is there instruction in chairing and in other ways facilitating both large and small groups?
3. Is there instruction in how to function as part of a team?
4. Is there instruction in individualizing learning experiences?
5. Is there instruction in conflict management?

4.2.8 *The program provides instruction in a broad range of communication skills as they relate to the professional role of the teacher.*

Criteria for Compliance

1. There is instruction which identifies and describes appropriate audiences for communication.
2. There is instruction in the unique requirements of various audiences for communication.
3. There is instruction in the levels and types of communication most appropriate for various audiences.
4. There are opportunities to practice communicating with a variety of audiences.

Evidence Questions

1. Is there instruction which identifies and describes different characteristics unique to students, colleagues, parents, the general public, policymakers, and mass media groups?
2. Is there instruction in the nature of communication that various audiences want and should receive?
3. Is there instruction in various levels of communication ranging from notes to parents, to speaking before public groups, to informing policymakers about the professional knowledge and skills which undergird particular policy decisions?
4. Are simulation, role playing, and actual communication with various audiences used as instructional techniques?

4.2.9 *The program provides instruction in a broad range of processes for evaluating student learning.*

Criteria for Compliance

1. There is instruction in the various theories of student evaluation, both subjective and objective.
2. There is instruction in the criteria and processes available for evaluating student learning.
3. There is emphasis on learning to use multiple approaches to student evaluation, with no one approach having the major role.
4. The program includes the study of specific processes and instruments for evaluating student learning.
5. Education students are provided experiences in using a broad range of criteria, processes, and instruments for evaluating student learning.

Evidence Questions

1. Are education students taught various theories of student evaluation, including their reported strengths and weaknesses?
2. Are the major processes for student evaluation included in instruction: teacher judgment, teacher-made tests, standardized tests, norm-referenced and criterion-referenced tests, observation, interview, student work products, simulation, role playing, contracts, self- and peer evaluation, expert panels?
3. Is there instruction in the relative merits of diverse evaluation processes for various purposes?
4. Are there opportunities for education students to experience devising, administering, and interpreting teacher-made tests; interviewing students; and using simulation, role playing, and other evaluation techniques in classroom situations?
5. Are there opportunities to experience using the results of student evaluation to plan instructional activities?

4.2.10 *The program provides instruction in the unique role, significance, and contribution of schooling in American democracy.*

Criteria for Compliance

1. Education students are instructed in the variety of goals for schooling, how the goals have evolved, and how they contribute to productive citizenship in a democracy.
2. The program emphasizes how schooling has changed over time in

response to societal and other needs, and the implications of the changes for teachers entering practice.

3. The program provides instruction in the role schooling has played in the integration of people of diverse ethnic backgrounds in American society while accommodating pluralism.

Evidence Questions

1. Are education students instructed in the various goal statements for education adopted by various states?
2. Are education students instructed in the relationship between the goals of education and the roles of citizens in a democracy.
3. Are education students provided instruction in the evolution of the American school system?
4. Is there instruction in how social change and current social issues impact on the classroom teacher, e.g., working mothers, single-parent families, teenage pregnancy, bilingual education, alternative schools?
5. Is there instruction in the pluralistic nature of American society and its implications for schooling?
6. Are education students required to have firsthand experience in relating to groups different from their own?

4.2.11 *The program provides instruction in how American schools are supported, governed, and organized.*

Criteria for Compliance

1. The program includes instruction in the financing and organizing of schools of all levels.
2. The program provides instruction in the implications of locus of school control and its relationship to the American political process.
3. Education students have direct experiences in observing or becoming involved with school governing agencies.

Evidence Questions

1. Does instruction emphasize state and local school district authority, responsibility, and structure for schooling?
2. Is there instruction in the federal role and structure for schooling as it affects the classroom teacher?
3. Is there instruction in how state and federal legislative processes impact the classroom?
4. Is there instruction in how resources for American schools are obtained and allocated?
5. Is there instruction in the relationship of the organization and governance of K-12 schools to that of higher institutions, and in the implications of that relationship for K-12 teachers?
6. Are opportunities provided education students to observe school central office functions and attend local school board meetings and state legislative sessions?

4.2.12 *The program provides instruction in the rights and responsibilities of teachers and students.*

222

Criteria for Compliance

1. There is instruction in the policies which guide teachers in their various

roles and their relationship with students.

2. There is instruction in the resources available to teachers for exercising their rights and discharging their responsibilities.
3. There is instruction in the legal rights of teachers.

Evidence Questions

1. Is there instruction in state laws, court rulings, and other policies protecting the rights of teachers, e.g., liability, save harmless, academic freedom, due process, safety standards, immunization?
2. Is there instruction in state laws, court rulings, and other policies on certification, contract mandates, evaluation, and tenure?
3. Is there instruction in state laws, court rulings, and other policies which deal with the rights of education students in relation to teaching practice?

4.2.13 *The program provides instruction in the concepts and differences between governance of education and governance of the teaching profession.*

Criteria for Compliance

1. There is instruction in the governance responsibilities delegated by the public to official education agencies as well as the governance responsibilities of the organized teaching profession.
2. There is instruction in appropriate mechanisms for governance of the profession.

Evidence Questions

1. Is there instruction in the public's role in determining resources, structure, and management of schools?
2. Is there instruction in the role of the organized profession in determining who shall prepare for teaching, how preparation institutions and programs will be approved, and how teachers will be certificated and inducted into the profession?
3. Is there instruction in the concept, role, and structure of professional standards and certification bodies as appropriate mechanisms for achieving governance of the profession?
4. Are education students aware of standards by which their college program is judged and how these standards are enforced?

5.0 Membership in the Profession

5.1 *The program provides instruction in how the profession is organized, the functions of a variety of professional organizations, and the responsibilities of being a member of the profession.*

Criteria for Compliance

1. The program provides instruction in the responsibilities of membership in the profession
2. Opportunities are provided for education students to explore the nature of various professional organizations.
3. The program provides knowledge about the major professional associations and their activities at state, local, and national levels.

4. The program provides knowledge about specialized professional organizations and the role they play in improving instruction and curriculum.
5. The program provides information on professional conduct and includes codes of ethics.

Evidence Questions

1. Does the program teach education students or provide them information about the existence of professional organizations at the university level and at local, state, and national levels and how they are governed?
2. Does the program explore the advocacy role assumed by professional organizations through lobbying; bargaining; participation in developing curriculum, designing in-service programs, setting standards for the profession, and approving/accrediting teacher education programs; conducting research; and publishing?
3. Does the program explore the concept of professional conduct and examine existing codes of ethics? Is there evidence of commitment to continuing education as a means of enhancing professionalism?
4. Do the program goals allow for examination of the various professional journals available for teachers, administrators, and school boards, including special-interest journals?
5. Does the program provide information on specialty organizations and learned societies and how to become involved in them?
6. Does the program provide information on and opportunities to observe how the professional associations impact instruction.

5.2 *The program provides instruction in the relationship of the profession to governance of public school systems.*

Criteria for Compliance

1. The program provides instruction in the structure of the school, the local school system, and state and regional agencies.
2. The program provides instruction in the roles and functions of all school-related personnel.
3. The program provides instruction in the rights of teachers within the governance structure of the schools.
4. The program includes study of the school employee-employer contractual relationship and the process through which it is determined.

Evidence Questions

1. Does the program provide instruction and field-based experiences in staff meetings, school board meetings, and state education agency and legislative sessions dealing with educational issues?
2. Does the program provide instruction and field-based experiences relating to the work of various school personnel, e.g., principal, special service personnel, superintendent, practicing teachers at different levels?
3. Does the program provide instruction in what laws and policies exist within the state and various school districts which impinge on the practice of teaching?

State Teacher Education Agency

The NEA calls for the establishment in each state of an autonomous agency such as a professional standards board, governed by a majority of teachers who are members of the majority national teachers organization, to approve teacher preparation programs and certificate prospective teachers. The agency should have the following characteristics and powers:

- It should be legally autonomous.

  It should be directly responsible to the legislature.

  No other state agency should have veto power over it.

- It should be governed by a majority of K-12 teachers who are members of the majority national teachers organization.

  Other educational interest groups — such as those representing teachers K-G, higher education, and administrators — should have representation on the governing board.

  To be eligible for appointment to the board, a person should be fully certificated for the position he/she holds and have five years of teaching experience in the state, including two years immediately preceding the nomination and appointment.

  Nominations for teacher representatives on the board should come from the state affiliate of the majority national teachers organization.

- Its budget should be separate from that of other state education agencies and should be sufficient for the agency to carry out its functions.

  If fees are generated by the agency, they should support the work of the agency.

  The fees collected should not limit the agency's functions. If they are not sufficient, additional funds should come from general state revenues.

- It should use the NEA standards for approving teacher education programs at the state level.

- Its powers and responsibilities should be to:

  Establish procedures for using NEA standards to approve teacher education programs.

  Approve teacher education programs

  Award certificates to all eligible graduates of approved teacher education programs

  Set and administer its own budget

  Conduct hearings for the adoption of policies and rules

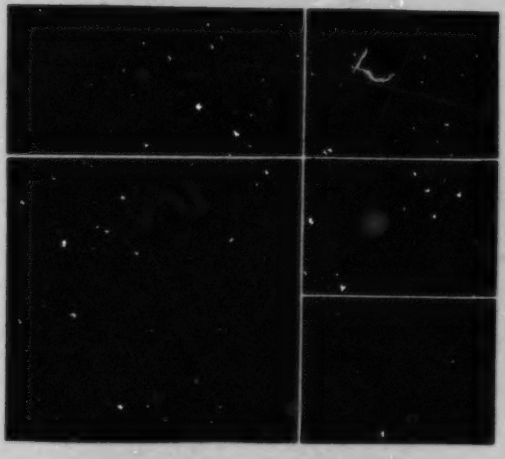
After hearings are conducted, adopt policies, rules, regulations, and procedures

Conduct hearings for due process and appeal

Monitor existing standards, change them when necessary, and investigate the need for additional standards

Hire an executive director and approve employment of the executive staff.

Achieving Our Purposes: Organizing For Action



37-618 O—84——15

Achieving Our Purposes: Organizing for Action

There are two phases to bringing about improvements in teacher education: (1) specifying the changes that need to take place, and (2) taking actions to ensure that improvements are made. The previous sections have described the essential components and skills to be acquired from teacher education programs, the standards for approving teacher education programs, and the guidelines for establishment of an autonomous state agency for approving programs and certificating teachers. This section will deal with the procedures affiliates should take to ensure that changes in teacher education actually occur.

The focus of action for the improvement of teacher education is the state agency which approves preparation programs. It is this agency that will make decisions about the quality of programs, the approval of programs, and the subsequent certification of teachers. Such determinations as the criteria used to approve teacher education programs, the conduct of the approval process, and the procedures employed for rendering judgments for approving programs lie within the structure and authority of the agency. The NEA believes that establishing such an agency or making changes in an existing agency to function in the ways described in this document will create a positive structure that can bring about the necessary changes for teacher education.

The Action Process

The first step in the action process is for the state affiliate to determine procedures currently used in the state for approving teacher education programs and certificating teachers. The instrument which follows allows the affiliate to (1) identify the system for program approval and teacher certification already existing in the state, (2) compare it with the system called for in this document, (3) identify discrepancies between what is and what ought to be, and (4) set priorities.

The second step is to develop a plan for taking action on each of the identified discrepancies. It was noted earlier that the role of the National Education Association is to articulate what should be achieved through changes in teacher education programs. It was further noted that the state affiliate needs to make decisions about what should be done immediately and what can be done on a long-range basis, how it can be done most effectively within the state, and what specific planning and implementation must occur to ensure success. Such decisions should be based on the political, economic, and professional characteristics unique to the state. The action plan in this section should be viewed, then, only as a guide.

Assessment Checklist: State Teacher Education Agency

This instrument is designed for use by NEA affiliates to assess the state agency which currently approves teacher education programs. Whatever the agency's designation — board, commission, or council — it is the unit with responsibility for approving teacher education programs within the state.

The purpose of the instrument is to help Association members determine the extent to which the agency functions in ways consistent with those proposed in this document. To achieve this purpose, objectives appropriate for state teacher education agencies are identified under four categories: Composition and Teacher Representation, Legitimacy, Authority and Power, and Budget. In each category, respondents should indicate whether the objectives as stated are true or false for the agency that approves teacher education programs in the state. They should also rate the acceptability of the state approval agency in light of the objectives.

Information gathered with this instrument may be used to estimate the discrepancy between the existing state agency and the kind of agency advocated by this document. The information can also be used to identify desirable and possible changes and to promote discussion of the structure and function of state teacher education approval agencies.

Category and Objectives	True	False
IA. Composition of the Governing Board		
1. The membership of the board reflects appropriate geographic distribution.	____	____
2. There is an appropriate balance of men and women on the board.	____	____
3. The membership of the board is racially balanced.	____	____
4. The majority of the board are practicing certificated K-12 teachers.	____	____

• • •

To what extent is the existing governing board in your state acceptable in light of the objectives for Composition? (Check one.)

____ Very unacceptable ____ Acceptable

____ Unacceptable ____ Very acceptable

Category and Objectives	True	False

IB. **Teacher Representation**

1. The governing board includes practicing certificated K-12 teachers. ____ ____
2. Teacher representatives are currently employed as teachers. ____ ____
3. Elementary and secondary teachers comprise the majority of representatives. ____ ____
4. Elementary and secondary teachers are proportionately represented. ____ ____
5. Qualifications for teacher representation are public record. ____ ____
6. Qualifications for teacher representation are maintained. ____ ____
7. Procedures for nominating and appointing teacher representatives are public record. ____ ____
8. Procedures for nominating and appointing teacher representatives are followed. ____ ____
9. The state affiliate of the majority national teachers organization is the vehicle for the nomination of teacher representatives to the governing board. ____ ____
10. The K-12 teacher majority of the governing board are members of the majority national teachers organization. ____ ____

• • •

To what extent is the existing governing board in your state acceptable in light of the objectives for Teacher Representation? (Check one.)

____ Very unacceptable ____ Acceptable

____ Unacceptable ____ Very acceptable

Category and Objectives	True	False

II. **Legitimacy**

1. The agency is recognized in state education policy. ____ ____
2. The agency is authorized through state legislation. ____ ____
3. The agency is legally autonomous. ____ ____
4. The legitimacy of the agency is recognized by professional education groups in the state. ____ ____
5. The agency conducts hearings and has written rules. ____ ____
6. The agency maintains records of its proceedings. ____ ____
7. Documents pertaining to the operation of the agency are publicly accessible through hearings and upon written request. ____ ____

* * *

To what extent is the existing agency in your state acceptable in light of the objectives for Legitimacy? (Check one.)

____ Very unacceptable
____ Unacceptable
____ Acceptable
____ Very acceptable

Category and Objectives	True	False
III. Authority and Power		
1. The agency has the authority or power to:		
a. Establish procedures for using standards to approve teacher education programs	____	____
b. Approve teacher education programs	____	____
c. Award certificates to all eligible graduates of approved teacher education programs	____	____
d. Set and administer its budget	____	____
e. Adopt policies, rules, regulations, and procedures	____	____
f. Monitor and investigate current standards for teacher education and establish new ones if necessary	____	____
g. Hire an executive director and approve employment of the executive staff.	____	____
2. The agency uses formal standards for approving teacher education programs in the state.	____	____
3. The standards for approving programs are consistent with those proposed by the NEA.	____	____
4. The standards for approving programs are consistent with NCATE standards.	____	____

* * *

To what extent is the existing agency in your state acceptable in light of the objectives for Authority and Power? (Check one.)

____ Very unacceptable

____ Unacceptable

____ Acceptable

____ Very acceptable

Category and Objectives	True	False
IV. Budget		
1. The agency is funded for continuous operation.	____	____
2. The funding source is reliable.	____	____
3. Funds are adequate to carry out the functions of the agency.	____	____
4. Funds are separate from other state education agencies.	____	____
5. The budget is publicly available for examination.	____	____
6. The agency is responsible for setting the budget.	____	____
7. The legislature authorizes the budget.	____	____
8. The agency sets fees for approving programs and certificating teachers.	____	____
9. Fees collected are used only by the agency.	____	____

• • •

To what extent is the existing agency in your state acceptable in light of the objectives for Budget? (Check one.)

____ Very unacceptable

____ Unacceptable

____ Acceptable

____ Very acceptable

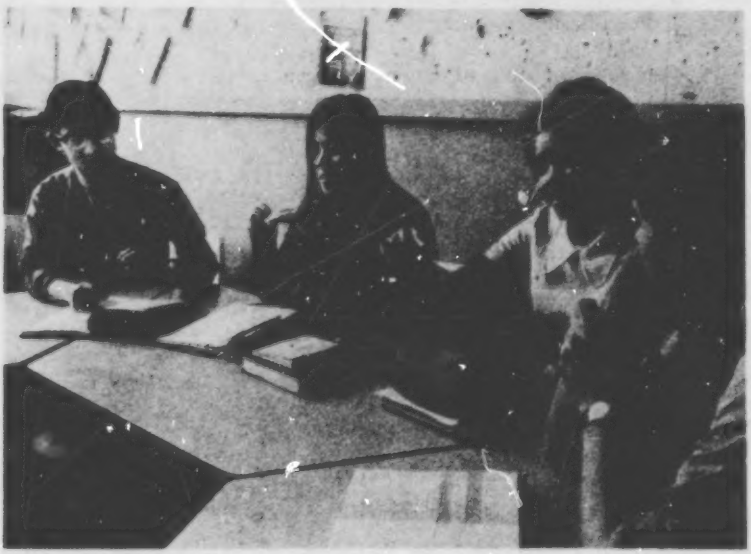
Developing an Action Plan

Analyzing the data from the Assessment Checklist is the basis for setting priorities:

- What can be changed immediately and with minimal effort
- What can be easily accomplished on a longer range basis
- What changes will be difficult to accomplish without exceptional effort.

Once these three levels of priority are established, it is important for the state association to determine the action necessary to achieve its purposes. Affiliates of the NEA have an extensive history of successful organizing in instructional, political, and legislative arenas and they can use this expertise to bring about substantial changes in teacher education programs. Consideration should be given to unilateral action, coalition building, organizing members, public relations, and political legislative actions. Timelines and budget considerations for such a program are critical.

The NEA will provide technical assistance to any of its affiliates choosing to participate in implementing the proposals set forth in this document. As states develop and implement their action plans, case studies will be made available by the NEA to document efforts to improve the quality of teacher education in the United States.



Mr. SIMON. Dr. Saunders, since you are next in line, we will just have you next.

STATEMENT OF ROBERT SAUNDERS, DEAN, MEMPHIS STATE UNIVERSITY COLLEGE OF EDUCATION

Mr. SAUNDERS. Thank you very much, Mr. Chairman.

I am Robert Saunders, dean of the College of Education at Memphis State University. I also am president-elect of the American Association of Colleges for Teacher Education. My statement today will reflect the views and recommendations of American Council on Education and, we hope, the higher education community.

I had the privilege a few months ago of appearing before the Task Force on Merit Pay, and I am equally privileged this afternoon.

We believe that the new title V of the Higher Education Act should focus on preservice teacher education and professional development activities with an emphasis on school-college and university partnerships, a point that was made already this afternoon. The higher education community has developed a position paper on this matter that reflects our consensus and our stated views for several years, and we share that as an appendix to this statement.

We commend you and members of the committee for your leadership in the development and consideration of this legislation. It reflects an understanding of the problems surrounding teacher recruitment, preparation and retention; and it is a statement that the Congress of the United States believes that a quality education for our teachers is important. We concur with the implicit premise of H.R. 5240: that the best possible candidates must be attracted into teaching; that they must receive the best education possible, both pedagogical and subject content; and that professional development opportunities must be available for all educators.

To adequately address these needs will require the cooperation of teachers, administrators, citizens, State, local, and Federal Government. It will require the serious efforts of the higher education community and our colleagues in the elementary and secondary community.

There can be no argument that we must attract additional bright young people into education careers. Financial aid for students with an interest in teaching is appropriate and a good strategy. It works in other fields, and it will work in education, too.

As you know, Mr. Chairman, traditionally the position of the higher education community has been that student assistance should be based on need. However, we believe that in this situation, scholarships for students with a commitment to teach should be based on academic merit as well as financial need. The Carl D. Perkins scholarships outlined in part A of title V provide an excellent mechanism to attract people into the profession and to honor the achievements of outstanding high school students.

The next part deals with the expectation of colleges and universities, and we would like to say that we believe that schools of education, colleges, and universities, should not be expected to graduate professionally mature teachers. We feel that many times that is the expectation, and it is an unrealistic one. Rather, we believe

that we should be expected to graduate persons who have entry-level preparation adequate to begin a career. But how much they grow professionally and how competent they become will be, in large part, the functions of on-the-job professional development, the professional nurture that they receive, the availability and quality of inservice programs. There is a great deal of concern concerning the inadequacy or the relatively adequacy of professional development programs. We believe that summer institutions as described in part C, and other professional activities described in part D estabish a good framework for the delivery of staff development opportunities.

Some questions have been raised concerning the usefulness of the National Science Foundation Summer Institutes, and those findings might relate to the proposed institutes in title V. I would like to share with you some of our observations about these institutes.

Twenty-five years ago, the NSF program was designed to update teachers' scientific background—their knowledge base, if you will—build interest in science, and improve communication between teachers and researchers. Conducted primarily through academic departments of science, the emphasis was upon advanced subject matter training.

College and university-level disciplines, however, such as mathematics or science or history, are traditionally organized to prepare researchers and—I ought to be careful of the way I phrase this—high-level scholars, which may not be necessarily the kind of preparations that many teachers will need. A fundamental problem with the NSF institutes was the lack of pedagogical component. Consequently, when these teachers returned to the classroom, they brought with them new knowledge often more advanced then they were able to use in their classrooms, except for the most able and gifted students, and further, the teachers had acquired no new practical skills to teach their subject to typical junior high or high school students.

The NSF institutes provided no incentives for teams of teachers. We feel that this was a great flaw. When only one individual from a school or district participates in this kind of activity, it is very difficult for that person to subsequently implement new ideas and new programs. In addition, these teachers must have a commitment from their schools to support innovations. Without that commitment from the school, without some role that they would be expected to play with preferably a team of teachers, chances are that, while one individual might improve his or her performance in the classroom, the impact on the overall educational establishment and on education for all the boys and girls will be somewhat limited.

The involvement of both schools for education and arts and science faculty and administrators in planning and followup is, according to this viewpoint and our belief, is essential. The purpose of the institutes should be twofold: to increase the subject matter knowledge that the teacher is responsible for teaching; as well as pedagogical training, new skills, new strategies, new techniques, the use of additional resources and how to relate material to varying levels of youngsters in the classrooms with different backgrounds and different levels of motivation.

Without that, again we would make the point that we believe that the teacher, while it is commendable that they might have increased dramatically and substantially the teaching field content, the frustration would be there that they would not be able to impact or to benefit from that as much as they would like, and that, not only would they not be carrying out the total purpose of the provisions of the legislation, but it also would make these people prime candidates for leaving the classrooms and going into business and industry.

Summer institutes can be an appropriate means for staff development when they are well designed, when they involve groups of teachers rather than individuals, when they have appropriate followup activities at the school site, and are recognized as part of a teacher's continued growth.

Let me move next, and toward the end, to the section that we believe is the central component of title V, and that is part E, institutional assistance for teacher training and school improvement. It is a rather small part of the bill, both in terms of language and funding. We have a recommendation to share with you on that in a moment.

But it is the foundation upon which all the other parts depend. Unless we can be assured that all preservice teacher education programs are of the highest possible quality, reflecting and exemplifying the most current research on teaching and learning, balanced in subject matter and pedagogy, even 4-year scholarships would not attract the best and the brightest. Without a strong institutional commitment to professional teacher education, our colleges and universities cannot be the resource for staff development and ongoing research that our schools systems require.

The higher education community is committed to continued revitalization of programs to prepare teachers. The NCES statistic that has been widely publicized, I think, bears evidence of that. Ninety-four percent of schools, colleges, and departments of education have made some change in recent years in their programs.

Research of the 1960's and 1970's increasing the knowledge base of teacher training has helped a great deal in this regard. While we feel that there is a great deal yet to be done, we believe that the track record is beginning to look pretty good, and we believe that the motivation and desire to do even more are certainly there. Programs such as Teacher Corps and Deans Grants, funded under part D of the Education of the Handicapped Act, brought modest amounts of money to colleges and universities, but did a great deal in the way of program improvement and modification addressing the serious problems that existed.

Your subcommittee and the House Committee on Elementary, Secondary, and Vocational Education have been given strong bipartisan support on behalf of adequate funding for elementary, secondary and postsecondary education, and know better than most of us the extent to which we have suffered losses in the Federal program support.

However, with the inclusion of the previous title V programs into the chapter 2 block grant, and accompanying cuts in other personnel preparation programs, during the last 4 years, Federal support for teacher training has declined over 25 percent. Coupled

with this is a situation documented by Peseau and Orr in 1980 and highlighted in the report by the Merit Pay Task Force: professional schools and departments of education are traditionally funded at significantly lower levels than other higher education programs.

I read just a day or so ago that that probably is the best explanation of why we have almost 1,300 institutions with teacher education programs, because it takes so little money to get one started, according to the popular view.

We believe that modest grants to institutions of higher education to stimulate program change will generate long-term benefits. This strategy has been used successfully, we submit, by FIPSE, and through the deans grants under the Handicapped Education Act.

I can testify personally, if you would like for me to, concerning the impact to the modest grant that our institution, called the deans grant, made in terms of a program change that we are still capitalizing on and benefited from manyfold in terms of what you would expect for a fairly modest amount of money. FIPSE grants are another example of that. They average between $75,000 and $100,000 a year, and the deans grants average $50,000 a year, but they require that the deans be project directors and put the responsibility, as you know, in that office to make the program changes.

Even if the Appropriations Committee would fund part E at the full $15 million authorization level, this would only translate to two or three awards per State. The elements for change in our school systems are present in H.R. 5240. However, we believe the emphasis is out of balance. This is the recommendation that I alluded to earlier.

Substantial resources will be necessary for the Perkins scholarships and $75 million is proposed for staff development activities, yet only very modest sums are suggested for the institutional programs that bind the other parts together. The foundation of the teacher preparation system isn't the place to skimp on resources. We recommend that the subcommittee look closely at this imbalance and adjust authorization levels for parts E and F accordingly.

Thank you, Mr. Simon, and members of the committee.

Mr. SIMON. Thank you.

[Prepared statement of Robert Saunders follows:]

PREPARED STATEMENT OF DR. ROBERT SAUNDERS, DEAN, COLLEGE OF EDUCATION, MEMPHIS STATE UNIVERSITY, MEMPHIS, TN, ON BEHALF OF AMERICAN COUNCIL ON EDUCATION

Good afternoon Mr. Chairman and members of the Subcommittee. I am Dr. Robert Saunders, Dean of the College of Education at Memphis State University. I am pleased to be with you to discuss provisions in H.R. 5240 to reauthorize Title V of the Higher Education Act. I am president-elect of the American Association of Colleges for Teacher Education, however my testimony today is also on behalf of the American Council on Education and reflects the views of the higher education community.

We believe that a new Title V of the Higher Education Act should focus on preservice teacher education and professional development activities with an emphasis on school-college and university partnerships for program design and implementation. The higher education community has developed a position paper that reflects our consensus and I would like to share it with you as an appendix to my testimony.

Let me commend you, Mr. Chairman, and the members of this Subcommittee for your leadership in the development and consideration of this legislation. It reflects an understanding of the problems surrounding teacher recruitment, preparation, and retention; and, it is a statement that the Congress of the United States believes

that a quality education for our teachers is important. We concur with the implicit premise of H.R. 5240: that the best possible candidates must be attracted into teaching; that they must receive the best education, balanced in subject matter and a strong professional component; and, that professional development opportunities must be available for all educators.

To adequately address these needs will require the cooperation of teachers, administrators, citizens, state, local and federal governments. It will require the serious efforts of higher education and our colleagues in the elementary and secondary community.

There can be no argument that we must attract additional bright young people into education careers. Financial aid for students with an interest in teaching is appropriate and a good strategy. As you know, Mr. Chairman, traditionally the position of the higher education community has been that student assistance should be based upon need. However, we believe that in this situation, scholarships for students with a commitment to teach should be based on academic merit as well as financial need. The Carl D. Perkins Scholarships outlined in Part A of Title V provide an excellent mechanism to attract people into the profession and to honor the achievements of outstanding high school students.

Colleges and universities cannot and should not be expected to graduate professionally mature teachers. Rather, they should be expected to graduate persons who have entry level preparation adequate to begin their career. But how much they grow professionally and how competent they become in time are functions of on-the-job training, professional nurture, and the availability and quality of inservice programs. We believe that summer institutes as described in Part C and other professional activities described in Part D establish a good framework for the delivery of staff development opportunities.

Recently, questions have been raised about the usefulness of the National Science Foundation Summer Institutes conducted in the late 1950s and early 1960s. I would like to share some observations on these institutes with you. Twenty-five years ago the NSF program was designed to update teachers' scientific background, build interest in science, and improve communication between teachers and researchers. Conducted primarily through academic departments of science, the emphasis was upon advanced subject matter training.

College and university-level disciplines such as mathematics or science or history are traditionally organized to prepare researchers and scholars rather than teachers. A fundamental problem with the NSF institutes was the lack of a pedagogical component. Consequently when these teachers returned to the classroom they brought with them new knowledge often too advanced for all the brightest high school students, and further, the teachers had acquired no new practical skills to teach their subject to typical junior high or high school students.

The NSF institutes provided no incentives for teams of teachers from a school to attend. When only one individual from a school or district participates in this kind of activity, it is very difficult for that person to subsequently implement new programs or ideas. In addition, these teachers must have a commitment from their schools to support innovations. Change is often slow and is more easily effected by groups of people than individuals.

The involvement of both school of education and arts and sciences faculty and administrators in planning and follow-up is essential. The purpose of these institutes should be to upgrade teaching skills of education personnel in elementary or secondary schools. To conduct institutes that provide only advanced work in a particular discipline carries the danger of producing frustrated teachers who are highly skilled in subject matter, but cannot translate it appropriately into a classroom setting. These people will then become prime candidates to leave the classroom for positions in business or industry.

Summer institute can be an appropriate means for staff development when they are well designed, involve groups of teachers rather than individuals, have appropriate follow-up activities at the school site, and are recognized as part of a teacher's continued growth rather than the sum of it.

This brings me to what I believe is the central component of Title V: Part E, Institutional Assistance for Teacher Training and School Improvement. It's a rather small part of the bill, both in terms of language and funding, but it is the foundation upon which all the other parts depend. Unless we can be assured that all preservice teacher education programs are of the highest possible quality; reflecting and exemplifying the most current research on teaching and learning; balanced in subject matter and pedagogy, even four-year scholarships won't attract the very best students. Without a strong institutional commitment to professional teacher educa-

tion our colleges and universities cannot be the resource for staff development and ongoing research that our school systems require.

The higher education community is committed to continued revitalization of programs to prepare teachers. A recent NCES report indicated that 94% of schools, colleges and departments of education had made changes in their teacher preparation programs within the last five years. This is in large measure the result of an expanding knowledge base undergirding teaching and learning. Research of the 1960s and 1970s has helped institutions initiate program innovations that make teacher education of today considerably different from teacher education a decade ago. Much of this was a result of stimulus from, and support by, the federal government. Programs such as Teacher Corps, and Deans Grants funded through Part D of the Education of the Handicappted Act, brought modest amounts of institutional support to help us design and institutionalize new and innovative programs.

Your Subcommittee and the House Committee on Elementary, Secondary and Vocational Education have been given strong bipartisian support on behalf of adequate funding for elementary, secondary and postsecondary education and know better than most the extent to which all of us have suffered losses in federal program support. However, with the inclusion of the previous Title V programs into the Chapter 2 Block Grant, and accompanying cuts in other personnel preparation programs, during the last four years federal support for teacher training has declined over 25%. Coupled with this is a situation documented by Peseau and Orr in 1980 and highlighted in the report by the Merit Pay Task Force: professional schools and departments of education are traditionally funded at significantly lower levels than other higher education programs.

We believe modest grants to institutions of higher education to stimulate program change will generate long term benefits. This strategy has been used successfully by FIPSE, through the Education of the Handicapped Act, and under Title VII of the Elementary and Secondary Education Act. Such grants might support cooperative efforts between faculties of liberal arts and faculties of education to revise and strengthen general studies and professional education programs; they could be used to develop alternative professional preparation programs for non-traditional teacher education students, such as adults who are interested in career changes; or, they could be used by consortia of institutions within a region to coordinate teacher education programs.

FIPSE Grants are between $75,000 and $100,000 per year. Deans Grants averaged $50,000 per year for each of five years. Even if the appropriations committee would fund Part E at the full $15 million authorization level, this would only translate to two or three awards per state. The elements for change in our school systems are present in H.R. 5240, however we believe the emphasis is out of balance. Substantial resources will be necessary for the Perkins Scholarships and $75 million is proposed for staff development activities, yet only very modest sums are suggested for the institutional programs that bind the other parts together. The foundation of the teacher preparation system isn't the place to skimp on resources. We recommend that the Subcommittee look closely at this imbalance and adjust authorization levels for Part E and F accordingly.

Thank you, Mr. Simon and members of the Committee.

APPENDIX

American Association of Colleges for Teacher Education

HIGHER EDUCATION ACT

TITLE V

Preservice and continuing teacher education is a cooperative effort that must recognize the needs of students, parents, teachers and principals, as well as and the capabilities of colleges and universities, school districts, and government to meet those needs. The higher education community believes that a new Title V of the Higher Education Act should focus both on preservice education and professional development activities with an emphasis on school, college and university partnerships for program design and implementation. Discussion of strategies for educational reform within this framework follows.

PROFESSIONAL DEVELOPMENT AND SCHOOL, COLLEGE AND UNIVERSITY PARTNERSHIP ACT

Part A - Data Collection and Research

(1) The Secretary shall utilize the legislative authority under the General Education Provisions Act, Part A, Sec. 406 (b) to annually assess current and future supply and demand for teachers with particular attention to: long-term and short-term shortages of personnel in various areas of specialization, shortages in particular states or regions, and the number of minorities and women entering teaching. This analysis may include assessment of other educational needs identified by the Congress such as, for example, the need for instructional equipment and materials in elementary and secondary schools and in postsecondary institutions. These data should then be used to direct federal resources for program improvement activities described in Part B of this Title and for scholarship and loan programs described in Part E. In undertaking the data collection, the Secretary shall take action to reduce reporting burden through voluntary responses and sampling techniques. The Secretary may reimburse respondents for any extraordinary costs incurred in the provision of information to assist the Secretary in complying with the data collection under this Part.

(2) The Secretary of Education is authorized to award grants for research consistent with programs authorized in this Title.

One Dupont Circle, Suite 610, Washington, D.C. 20036 — (202) 293-2450

(3) At least 5% of the funds allocated for this Title shall be reserved for activities described in this Part.

Part B - Institutional Support for Teacher Education Programs

The Secretary of Education is authorized to make grants to institutions of higher education to encourage high standards of quality, a commitment to professional teacher education, and rigorous admission for entry standards into teacher preparation programs.

Examples of such programs include, for example:

- designing and implementing programs with rigorous admission standards, and in attracting talented students into these programs;

- designing teacher education programs involving consortia of institutions to help members of the consortium diversify and redirect teacher education programs and curricula;

- supporting cooperative efforts involving faculties of liberal arts and faculties of education to revise and strengthen general studies and professional education programs including, for example: strategies to incorporate clinical experiences throughout the preparation program, and extension of teacher preparation programs beyond the traditional four-year period;

- integrating current research, including practitioner identified research, more fully into teacher education programs and sharing such research with elementary and secondary education teachers and administrators;

- developing alternative professional preparation programs for non-traditional teacher education students;

- preparing teachers for shortage areas identified in Part A;

- designing and implementing staff development projects for faculty members of collegiate departments of education to acquaint faculty with new research on teaching and learning and innovative teaching practices;

- designing and implementing teacher education programs geared to meet the needs of historically under representated populations and institutions with large numbers of such populations as identified

from data collected in Part A;

- developing programs to train existing or new school personnel in new technologies.

Part C - Summer Institutes

The Federal government shall inaugurate a program of summer institutes for educators at the elementary, secondary, and postsecondary levels to include advanced instruction in subject matter and teaching techniques, including research on student learning, effective teaching, and school-site improvement. The summer institutes are intended to provide staff development opportunities for education professionals as well as to provide an opportunity for non-educators who are seeking entry into the profession to earn the credits necessary for a position as an elementary or a secondary school teacher. The institutes, which will include both subject matter and teaching skills components, are intended to complement not replace an undergraduate or graduate program of studies, must meet or exceed the academic standards of the institution or institutions at which they are conducted, and should expand state and local efforts rather than duplicate or replace existing programs. Institute grants shall be awarded to institutions of higher education, consortia of colleges and universities, or constoria that include institutions of higher education and appropriate state agencies and/or local professional development units.

Part D - School, College and University Partnerships

Federal funds, through a system of discretionary grants from the Secretary of Education, shall be awarded to serve as a catalyst to encourage and facilitate school, college and university partnerships to focus on a number of critically important areas.

These grants shall be used to support jointly developed and executed projects involving schools, local school districts and institutions of higher education that demonstrate partnership in addressing teacher preservice and staff development needs. It is the intent of this Part that these partnerships not be limited to institutions of higher education, schools, and and school districts, but may also include teachers, administrators and appropriate state agencies. Partnership awards under this Part are established under three broad categories of activities: IHE focused grants; LEA focused grants; and other partnership awards.

(1) IHE focused grants. Awards under this section shall be awarded to institutions of higher education for programs developed and administered in partnership with local education agencies and other eligible groups as described above. Projects supported under this Part might include, for example, joint arrangements between elementary or secondary schools and institutions of higher education to provide programs of assistance for beginning teachers; joint arrangements between elementary or secondary schools and IHEs to provide expanded clinical experiences for teacher education candidates at the school

37-618 O—84——16

site while using teachers from those schools to work with education students at the college or university; design and conduct of staff development units to allow teams of teachers and/or administrators an opportunity to work together on school-site projects; and, projects involving college/university and elementary/secondary school faculty in the practical application of educational research and evaluation findings.

(2) LEA focused grants. Awards under this section would be to local education agencies for programs developed and administered in partnership with institutions of higher education and other eligible groups as described above. Grants could be used to create professional development centers for teachers which would encourage exploration and sharing of new research, ideas and materials to be applied in the classroom. Such centers would bring together a variety of resources including teachers from various school sites and/or school districts serving as resources for their colleagues, collaborative activities between K-12 teachers and faculty at institutions of higher education, and a variety of institutional and community resources which could be applied to improving instruction.

(3) Other Partnership Grants. Awards under this section would be to institutions of higher education, schools, or local educational agencies in partnership with other appropriate education agencies or units to conduct education policy studies; use timely research and development data to design and implement curriculum improvements; conduct collaborative research involving university faculty and classroom teachers and school site administrators; and upgrade instructional systems and technology in schools and local school districts.

Part E - Teacher Recruitment

Scholarships

It is the purpose of this Part to make merit-based grants available to outstanding high school graduates and college students, who demonstrate an interest in teaching to enable and encourage those individuals to pursue elementary or secondary teaching careers. Up to 10,000 grants will be made available with awardees selected from the top 10% of high school graduates. Funds for these awards shall be allocated to a state on the basis of the ratio of persons in that state to persons in all states. Awards to indivduals will be made by the state. The amount of such grants shall be based on need and may not exceed an amount equal to tuition and fee expenses, exclusive of other scholarships or awards, of any recipient for up to four academic years and may be paid only upon proof of satisfactory achievement the preceding academic year. Students are encouraged but not required to attend a college or university the state where the grant is awarded.

Within five-years after completing the postsecondary education for which the grant is made, recipients will be required to teach in an elementary or secondary school in any State for a period of not less than one year for each year of financial assistance under this Title.

Teacher Fellowships

To encourage outstanding teachers to remain in a school system, a program of talented teacher fellowships would be established. Two fellowships would be awarded to public school teachers teaching in each Congressional district of the United States. Selection of awardees would be made by a national panel.

Each outstanding teacher would be given one year's sabbatical and a $5000 stipend. These stipends may be used for study, research, travel, consultation with other school districts, development of special programs, development of model teacher programs, or other activities related to the individual's professional assignment and needs of the school system. School districts would be reimbursed for the actual cost of the teacher's salary during the year that teacher is absent from his/her duties.

Fellowship recipients will be required to return to the same school district to teach for at least two years following the one-year fellowship.

Part F - Authorization of Appropriations for Parts A,B,C,D, and E

There are authorized to be appropriated such sums as may be necessary for the conduct of programs authorized in Parts A, B, C, D, and E of this Title.

AACTE

3/15/84

Mr. SIMON. Our final witness is Dean Pat Graham, Harvard University Graduate School of Education.

STATEMENT OF PATRICIA ALBJERG GRAHAM, DEAN, HARVARD UNIVERSITY GRADUATE SCHOOL OF EDUCATION

Ms. GRAHAM. Thank you very much, Mr. Chairman. It is a pleasure to be back here.

I thought what I would like to do today is to summarize very briefly the observations that I gave in a little greater length in my prepared testimony. I would like to talk first a little bit about teaching, and then talk a little bit about how I think that the proposals you have in title V are addressing those issues.

Overall, I am delighted to see title V. I think that it speaks in very persuasive ways to a very important problem we face in America today.

I would like to begin by saying that I think that teaching itself in this country is, at this moment, more difficult, teaching is harder, than it has ever been before in your history. I think it is harder for three reasons. First of all, it is harder because we now expect elementary students and high school students to master a greater body of material on a greater variety of subjects than we have expected in the past.

Second, and most importantly, we no longer expect just a few children who are academically proficient to master it, but it is vital for the welfare of our society that all children master it, even those who have in the past found mastery of academic material very difficult, and teachers—particularly high school teachers—have not been at their best in the past in helping youngsters who have not done well in school begin to reverse that pattern in high school.

Third, teaching today has lower prestige than it has ever had in the past. One of the reasons that teaching has lower prestige is that it no longer benefits from the discrimination that has existed in this society that has kept teaching a haven for minorities and women. Teaching got by in the past by benefiting from what the society was depriving the rest of, of the talents of women and minorities, and no longer does and, therefore, teaching itself is much maligned.

Those three factors together seem to me to make teaching more difficult today than it has been in the past.

I would like to make six general points that I think are essential for a comprehensive plan for improvement in the quality of this country's teachers.

The first that I would argue is that a broad-based liberal education is the sine qua non in the academic training of teachers. Such a liberal education provides insight into the world and, at its best, challenges our assumptions about it. It exposes teachers to a disease, and I think it is a disease that I hope is both contagious and enduring, and that disease is namely a rigorous curiosity.

A good case of rigorous curiosity about the world, its humanistic endeavors, its scientific and technological activities, its artisitic components--rigorous curiosity about those matters can and should result from a liberal education, and such rigorous curiosity can enhance a teacher's likelihood of being effective, especially if that rig-

orous curiosity remains contagious. For persons planning to become specialists in subject matters, intensive training in those subjects is essential as well.

So our first argument is for contagious liberal education.

Second, I believe that beginning salaries are at rock bottom and must be raised immediately in order for teaching to become competitive with other fields. I think that is a point that is well understood by many.

Third, I would argue that we need career ladders for teachers, and I think that they are career ladders for which there should be differential pay for differential kinds of work. This is an issue which, of course, Mr. Chairman, you considered in your task force at some time.

Fourth, I would argue that we need to encourage nontraditional candidates to go into teaching, including both midcareer professionals who are often eager for such opportunities, as well as those young people who might excell in the classroom for, say, 4 or 5 years before they might go on to some other field.

This year at Harvard, we are beginning a program of teacher training, which we haven't done in a while and are back doing again, for midcareer math/science teachers. We are finding that, in this first year of a pilot program, we had over 300 inquiries for about 8 spaces in that program of people who are experienced engineers and scientists who, at the age of 50 or 55, are eligible for early retirement from their company and believe that they would like to pay back a debt to a society that gave them a good education to allow them to be successful in their company.

We find, on the basis if this year's experience, that these people have the capacity to be outstanding teachers. They rank very high in academic preparation, and they have a commitment to try to learn to be effective in the classroom with children, which we find very appealing. And they also have a great deal more experience with the wide world, which we think is an added virtue to bring to the schools as well.

I am also extremely enthusiastic about having gifted undergraduates of the kind provided for by the Carl Perkins scholarships to enter teaching. We at Harvard are beginning to try to put together a program for undergraduates at Harvard to be able to do this as part of their undergraduate education program. We believe that is a feasible alternative for a number of undergraduates, but probably many of them will not intend to stay in teaching forever, but that they should get good preparation for it as part of their undergraduate program.

Fifth, I think we need to consider requiring administrators to spend part of their day teaching. That I recognize is a controversial observation. I make it simply because, if the working conditions issue for teachers is very important, there is no way that I know of and within most schools today to get leverage to improve working conditions like having administrators to have to work there, too. That provides an opportunity for a unified front between teachers and administrators that has not always existed in the public attention in the last decade or so.

Finally, given the choice, I think that we need to focus greater attention on the development of high-quality, attractive and perti-

nent inservice teacher programs, rather than concentrate all of our resources at the preservice level. We have sometimes tended to believe that preservice teacher training had the quality of a vaccination, in which once you go this, you got it for life. I believe, rather, it is like a flu shot; it may help you the first year, but you need get something again the next year you are into it. So I believe that it is very important to concentrate attention on the inserve part of the dimension.

You will recognize, of course, that these general points that I have made about teaching are very well dealt with in your bill.

Part A, which talks about scholarships, seems to me to be an excellent idea, although I share the view that was expressed earlier today that it might be wise to think about the top 10 percent rather than the top 5 percent in terms of eligibility for these fellowships.

One way of dealing with the in-State/out-of-State question, that also deals with whether 1 year versus 2 years is the proper payback period, is to say it is 1 year each year you teach in your State, 2 years for every year you teach out of your State. I offer that for the consideration of all of the bodies who must think about this.

I am delighted to see part B on the Talented Teacher Program, which certainly has my endorsement, and is similar to some of the concerns of the Twentieth Century Fund Task Force on Elementary and Secondary Education policy, on which I serve.

I am delighted to see also parts C and D which will fund summer institutes, workshops, and other avenues for teacher development, and highlight the importance of the in-service State development approach which I just discussed, and with the provision to act jointly with school systems. I think the day is long gone when those of us in the universities can think that we can provide answers for the so-called beknighted practitioner. The practitioners and the university people have a great deal to say to each other, and fostering that kind of communication—which is not always easy to achieve—fostering that kind of communication through Federal funds, it seems to me, is a very, very worthy task.

I am glad to see part F, including data collection and evaluation activities, so I am pleased to see this material.

Let me just conclude by saying that I believe that the wit and character of the American people are this Nation's most valuable resource. While many institutions in this society have responsibility for nurturing such wit and character, the preeminent responsibility for fostering the development of wit and character of the American people rests with the teachers of our schools, colleges, and universities. No government can afford to ignore its most precious resource, particularly when there is ample evidence as there is now that that resouce is not being adequately developed.

Therefore, to protect and to promote this basic resource, the wit and character of the American people, I believe that the Federal Government must increase its efforts in education in general, and in teacher programs in particular, and I believe that title V does this.

Thank you very much.

[Prepared statement of Patricia Albjerg Graham follows:]

PREPARED STATEMENT OF PATRICIA ALBJERG GRAHAM, DEAN, HARVARD GRADUATE SCHOOL OF EDUCATION

My name is Patricia Albjerg Graham. I am the Charles Warren Professor of the History of American Education and Dean of the Graduate School of Education at Harvard University. I would like to thank the Subcommittee for the opportunity to testify on a topic so important to use all, to our country as a whole.

I do not need to remind anyone here today that over the past year we have witnessed another round of profound criticism of our public school system. During this time the public has been told in a dozen well-publicized reports and a half dozen widely reviewed (if not read) books that the American high school, and its teachers, leave a great deal to be desired. Beginning with the National Commission on Excellence fervent report, A Nation at Risk, and moving to the Twentieth Century Fund assessment of federal elementary and secondary education policy, Making the Grade, the documents acculumated and proliferated throughout the summer. The College Board told us what the essentials of the high school curriculum were. The Education Commission of the States group included both state and business leaders and expressed grave concerns about current educational practice in the high schools. By Labor Day the National Science Board Commission revealed that extant mathematics and science instruction was inadequate in American schools.

In fact, one of the several common threads running through these reports is that teachers are both the root of the difficulty and the primary means of solving the problem of poor student achievement. Another commonality among the reports is the view that principals, the heros of the effective school literature of the late 1970s, must become instructional leaders, not just bureaucratic managers. Their role in the current reports generally appears less central than that of teachers.

To a remarkable degree, however, the focus of the reports is upon teachers. In previous years we have hesitated to square our shoulders forcefully and say that in teachers lay both the failure and the solution. We have looked either to curriculum or technology, either separately or together, to compensate for the "teacher problem." In these reports we recognize that without the support of teachers, no fundamental improvements will occur. It is noteworthy that, say, 75 years ago, teachers were criticized for being too formalistic, too rigid, too strict, and not compassionate enough with their students; rarely were they criticized for a lack of academic competence. Now we are not concerned with the moral fiber of teachers, as we were in earlier decades, but rather with their working conditions, their cognitive achievements, their pedagogical skill.

Another common element in the current reports which represents a sharp departure from prior analyses and efforts to enhance our educational arrangements is the emphasis placed upon improving the education of all children, not just the college bound or technically talented. This time the academic deficiencies are seen as more fundamental, affecting the entire population, embedded more deeply in the society, than were the problems of the past. Previously, as in the late 1950s, remediation could focus on one segment, namely the scientific and technical personnel, while generally improving the college preparatory curriculum. Now we worry at least as much, if not more, about the repairman who is a high school graduate but who is unable to read his instructional manual. He, too, must receive a better high school education, as well as those high school valedictorians whose SAT scores are lower than those of their predecessors.

This additional and appropriate concern makes the solution or improvement of schooling immensely more difficult. Before the attention concentrated upon youngsters who in general were not disaffected from school, who were accustomed to doing reasonably well, if not well enough. Now we are undertaking efforts to reach students for whom school in general and often high school, in particular, has been an unsatisfactory and disheartening experience. That is an altogether different task, to help them to learn effectively, and requires many more skills than simply transmission of academic material. The challenge to educators, and especially to teachers, is immensely greater than simply developing a curriculum for children who have already been successful in learning.

The issue for the future, therefore, rests upon recognizing the centrality of teachers, and not believing that they can be obviated through curriculum reform or tricky technologies. Both improved curriculum and technology can augment their effectiveness, but both must be oriented to augment, not obviate.

Further, we have nearly two and one-half million teachers in the United States, and it is the height of folly to believe that only the "best and the brightest" can be recruited to teaching. To expect to recruit and keep the best and the brightest in a field that is regularly maligned through criticism, where average annual salaries for

experienced persons with master's degrees are less than $20,000 and where the work is very hard strikes me a highly unlikely. We must be able to actively recruit able persons to the field of teaching, not necessarily expecting all to remain for their entire professional lives. Most of all, we must provide working conditions, including forms of career ladders, that will make teaching substantially more attractive for the long career than it now is. One simple but effective incentive for improving working conditions of teachers would be to require that all administrators spend a portion of their day in classroom teaching. This is an unorthodox notion, to be sure, but one which I am equally sure would focus greater attention upon the problems of teacher working conditions, and lead to their more rapid resolution, than has occurred in the past.

There are, broadly, six points which I would advocate as essential to a comprehensive plan for improving the quality for our nation's teachers:

(1) I believe that a broad-based liberal education is the sine qua non in the academic training of teachers. Such a liberal education provides insight into the world, and, at its best, challenges our assumption about it. It exposes teachers to a disease that we hope is both contagious and enduring, namely rigorous curiosity. A good case of rigorous curiosity about the world, its humanistic endeavors, its scientific and technological activities, its artistic components—rigorous curiosity about those matters can and should result from a liberal education and such rigorous curiosity enhances a teacher's likelihood of being effective, especially if that rigorous curiosity remains contagious. For persons planning to become specialists in a subject, intensive training in that subject is essential.

(2) Beginning salaries are at rock bottom and must be raised, immediately, in order for teaching to become competitive with other fields.

(3) We need to develop career ladders for teachers, with differential pay structures for various activities.

(4) We need to encourage nontraditional candidates for teaching, including both midcareer professionals who are often eager for such opportunities as well as those young people who might excell in the classroom for, say, three to five years, before moving on to other occupations. I will return to this point later in my testimony.

(5) We need to consider, as I have previously mentioned, requiring administrators to spend part of their day teaching.

(6) Given the choice, we might focus greater attention of the development of high quality, attractive, and pertinent in-service programs, rather than concentrate all our resources at the pre-service level. I fully agree with my colleagues at the Harvard Graduate School of Education Harold Howe II, when he notes that, "We traditionally divide efforts to improve learning by helping teachers into pre-service and in-service categories. Both are important, but for the next ten years in-service training is more important. A very high proportion of the teachers in today's classroom will be there ten years from now—probably close to 70 percent."

Turning to the reorganization of Title V of the Higher Education Act of 1965 (which has recently been introduced as H.R. 5240), I congratulate Representative Simon and his co-sponsors for the thoughtful manner in which they have constructed the proposed reauthorization, which balances legitimate federal concerns with the opportunity to address longstanding issues thwarting real advances in our nation's teacher training agenda.

Although Parts A and B, the Carl D. Perkins Scholarship Program and the Talented Teacher Fellowship Program, respectively, will likely garner much of the publicity, I believe most educators will recognize the value and import of the remaining sections. Part E, for example, in addressing "Institutional Assistance for Teacher Training and School Improvement," will allow schools of education to strengthen their programs, establish innovative models of teacher training and improvement, and allow for much needed opportunities to develop school-college collaborations. Likewise, Parts C and D, which will fund summer institutes, workshops and other avenues of teacher development, highlight the importance of the in-service staff development approach I mentioned previously, with provisions, I am pleased to note, to act jointly with local school systems in applying research findings to classroom settings (see Part D, Sec. 532(a)(3)). Part F also emphasizes valuable data collection and evaluation activities.

I am especially heartened that, on the whole, the proposed reauthorization of Title V implicitly endorses and encourages many of the newer initiatives we have implemented at the Harvard Graduate School of Education. Over the past several years, the Harvard Graduate School of Education has established: (a) a Principal's Center, which seeks to overcome the often debilitating isolation of school personnel by fostering communication among school administrators, allowing them self-structured means to exchange ideas and engage in professional growth; (b) a tremendous-

ly innovative Mid-Career Science and Math Program, a certification program which allows established professionals in technical fields—the nontraditional teaching candidates to whom I referred earlier—to bring their expertise into the classroom in key academic areas marked by nationwide shortages. This program, I might add, is coordinated in conjunction with other faculties at Harvard University; (c) a variety of summer institutes for superintendents, principals, classroom teachers, and specialists, which allow them to renew their enthusiasm for education while learning new skills and up-to-date content.

The Harvard Graduate School of Education is quite proud of these initiatives, which we believe are consistent with both the spirit of the national reports, and with an awareness that we in the universities do not have the only answers to the needs of the practitioner. Hopefully, over the past twenty-five years or so we have finally learned that the issues are more complicated than we originally thought, and that simplistic solutions or even complicated ones devised in our libraries require substantial modification in the arena of practice. Collaboration between researchers and practitioners in the understanding and resolution of dilemmas of education practice is never easy, but it is necessary. To the extent that the proposed Title V furthers this essential conception in strengthening teacher, and I believe that it does, I applaud its direction and emphases.

With regard to Parts A and B, both have the potential to reinvigorate substantially the teaching profession. The Twentieth Century Fund Task Force, of which I was a member, proposed a program quite similar in all essentials to the Talented Teacher Fellowship Program. As presently structured in the proposed legislation, this Part has the added advantage of fostering valuable school-based improvement projects.

The scholarship program in Part A is a valuable model, though it might benefit from some minor adjustments. Certainly it is essential to attract academically sound candidates to the teaching profession. Yet, it is not to denigrate the judgment of high school seniors or their advisors and counsellors to think that their interests, and those of the teaching profession itself, might be better served by delaying a final decision on entering the field of teaching until one's sophomore or junior year in college. By that time a student has been exposed to the wide range of possibilities present in their college or university curriculum, and therefore make a more informed—and firm—decision. I would also add that I believe it would be wise to broaden the base of eligibility for this scholarship from the top five percent of a graduating class to the class to the top ten percent of that group. Granted both are somewhat arbitrary measures of achievement, but I believe a more inclusive figure runs less risk of a divisive stigmatizing of talent and ability.

To conclude, the wit and character of the American people are this nation's most valuable resource. Many institutions in the society have responsibility for nurturing them—families, communities, religious organizations—but the preeminent responsibilty for fostering the development of the wit and character of the American people rests with teachers in our schools, colleges, and universities. No government can afford to ignore its most precious resource, particularly when there is ample evidence that the resource is not being adequately developed. Such is now the circumstance for the federal government in relation to its educational institutions. To protect and to promote this basic resource, the wit and character of the American people, the federal government must increase its efforts in education in general and in teacher programs in particular. That federal support for American schooling should supplement, not supplant, state and local efforts makes its need no less pressing. Only the federal government can assert and emphasize the national interest in teachers of high quality and in assuring that all children have access to them. The wit and character of all Americans need support, and the federal government has the responsibility to provide assistance to teachers in meeting this preeminent national need.

Mr. SIMON. We thank all three of you.

Incidentally, this is not the point of what we are doing here, but I like your suggestion—it is the first time I have heard it mentioned by anyone in your kind of position—of having administrators teach.

I have been on two college boards, and I pushed for having a college president teach 1 hour a week, simply to keep in touch with what is going on.

May I ask the three of you, did any of you start off after getting out of college as either elementary or secondary teachers?

[Show of hands.]

Mr. SIMON. All three of you. OK

When did you—and I realize this is the quick Gallop Poll here now—when did you decide to become a teacher, if I may ask each of you?

Ms. GRAHAM. I will begin.

I decided to become a teacher when I got engaged, when I was 18 years old, and realized I was going to get married as soon as I graduated from college, and I thought I better have some means of supporting my husband through graduate school.

Mr. SAUNDERS. I decided between the sophomore and junior year when I had a 15-month stay in Japan in occupation duty, and I was trying to put my transcript together and sort out my interests. It was then I decided I wanted to be a teacher.

Ms. ROBINSON. My decision was very, very pragmatically motivated. I am the eldest of five children. I entered college intending to go into pharmacy, and then I realized the prospect of graduate requirements and, knowing that there were two others following quickly, I thought to find a training program that would afford entry into a job. That is the reason I decided to go into teaching.

Mr. SIMON. The reason I ask you is you made the suggestion, Dr. Robinson, that we open up this Perkins Fellowship also to freshmen or sophomores in college. Two of the three of you would have not made the decision to become teachers prior to graduation from high school.

Let's just assume we take that suggestion—I guess I will toss this to any of you—right now we have the top 5 percent and some of you are suggesting it ought to be the top 10 percent, how do we make sure we are really getting the superior freshman or sophomore in college? What kind of standard do we devise?

Ms.GRAHAM. There are lots of possibilities.

Ms. ROBINSON. Grade point average. Looking back at requiring some application process which requires documentation of a wide range of criteria, such as demonstrated leadership potential, demonstrated commitment and interest in working with young people, working in more or less public service enterprise. I think we would have to generate a bit of creativity in order to develop some standards that would be flexible enough to be broadly applicable, but I think it could be done.

Having to make that kind of long-term decision at 16, 17, or 18 is a pretty formidable kind of prospect, and just to open it up a bit would just give us access to more potential.

Mr. SAUNDERS. I would like to suggest that we need to keep all the doors open if we can. I think that it is not going to be highly efficient immediately for us to attract high school seniors unless we can get the image of education to the higher level of respectability and get it more money. That is not going to come very quickly.

We are making at our institution, for example, a conscious effort now to attract people out of the arts and sciences into a post-baccalaureate training model in teacher education, based on the premise that Ms. Graham mentioned here just a moment ago of the extreme importance of a good sound liberal arts on which you build a

good, strong pedagogical preparation program, not unlike what medicine and law have benefited from through the years. That gives you a longer period of time to observe student progress, it gives you a better data base to use in selecting those who truly are academically able, as opposed to making that decision when they are 17 or 18.

As we, I guess, all know, in many institutions, ours included, the attrition rate is very high as they are coming in, both from the standpoint of interest, sometimes financial problems, and sometimes academic limitations. So if we can elevate the preparation program, have a better data base to select people from, and benefit more from a better baccalaureate base than we have in the past, I think that we will be making some progress.

Scholarships, it seems to me, ought to be available for those people who decide as a junior that they want to direct themselves toward teacher education—or as a senior, even if they have been out several years, to come in then and attract those people, with a good solid academic base as a prerequisite.

Ms. GRAHAM. I would agree with the notion that we ought to be thinking imaginatively about how to recruit good people into teaching at all different stages of the game.

But I think I would say that on the particular instance of the Carl Perkins Fellowship, that one way to think about it might to be to say that, if one is going to use grade point averages for high school graduation, one might use also grade point averages for college and, instead of 5 or 10 percent of rank in the high school, one might say in the top 20 percent of the college class that one is then eligible.

Mr. SIMON. The two of you—witnesses to either side of you—suggest that we make it 1 year instead of 2 years on the repayment. Do you have any reaction to that, Dean?

Mr. SAUNDERS. I think we need to find whatever way we can to make the scholarship a delayed one—at least for the next few years—to elevate the compensation so that we will actually get people out of preparation programs into the profession and keep them there.

I think that perhaps the higher the scholarship level and the more quickly they can repay that will be viewed as an incentive and, therefore, will be encouraging for those people to go into it.

I hope I am answering your question on that.

Mr. SIMON. I think you are.

Mr. Coleman.

Mr. COLEMAN. Could you respond to the phenomenon that teachers going into teacher education gravitate toward teaching careers in physical education, music and art, areas where there seem to be a large number of teachers, and not just general preparation for elementary or secondary teaching? Why do you suppose that is?

Mr. SAUNDERS. I think there tend to be more specialized areas. Physical education requires different kinds of interests, different kinds of skills, different kinds of preparation. Many elementary teachers really do not want to deal with physical education, and they do not, according to my observations—there is just generally free-play in many cases.

Communities have been reluctant to fund the specialist at the elementary level, and you see physical education in elementary schools many times in a very subpar status.

It is more of an aptitude, it is more of a psychomotor—music the same way.

I think that is the best I can do with it.

Ms. ROBINSON. I recently net the Alaska Teacher of the Year, who is an elementary PE coordinator. This teacher was explaining his program, and the prospect in this small community would be that he would have these children for 6 years because he is the only PE coordinator in the school district. The program ranges large-ball, small-ball activities, to swimming in a community pool not in the same building with the school, and just a wide variety of activities.

I listened to this teacher explain the program and the activities, and I was enthralled by the kinds of techniques used to manage these large classes with diverse activities, and I was intrigued with the precision with which he was addressing learning objectives and the precision that he used in describing what he was doing with these students. I was saddened a bit because I was concerned that not many people would understand what he was doing. I think that there might be some intuitive appreciation for what he was doing, and probably a good deal of community support based on the kind of equipment that he had available and that sort of thing.

But I wish that more people could understand that and experience that. I wish there were more like him, more people who were willing and who had the kind of support to do that kind of job.

He had a set number of students, all the students in that community, but he was able to describe what he was doing in a way that conveyed the enthusiasm, not just for the learning objectives, but for the recognition and respect for those students and what they could accomplish. It was a very gratifying experience for me.

But I don't think many people understand all that that entails and, therefore, you kind of shrug your shoulders when you think of it.

Mr. COLEMAN. I am all for a strong body, but I think we ought to have strong minds, too. And if we are not somehow attracting people who are going to be teachers, who have made that commitment because of the size of the salary, low prestige, and all of the other things that you mentioned, I would like to attract them into areas that are a little bit more critical perhaps. It seems like we have a number of people going into these, shall we say, nonhard science and mathematic areas, languages, and so forth.

I just wonder, do you think we ought to gear some of these scholarships toward more critical areas instead of funding, let's say—theoretically, we could have 10,000 scholarships going to PE majors and nobody else. Should we break it down? Shall we try to channel this into different directions?

Ms. ROBINSON. I would just respectfully point out that what is going on in the development of very young learners physically is an important foundation in preparation for what will follow in terms of their academic preparation. While I appreciate the concern—and we are all concerned about the need for more academic

rigor at some point in these students' careers—it is very, very important to have those students prepared——

Mr. COLEMAN. These are also secondary teachers.

I am just concerned that we not just attract bright people in certain segments of education. Perhaps we can—if you want to say this—manipulate people's responses through public policy to attract them into areas of need.

Ms. GRAHAM. I suspect that if the scholarship are given to students who are ranking with very high grade point averages, whether they are high school or whether they are in college, the people who receive those scholarships, by determining them on that basis, will be very different in their academic orientation than is the case with a number of the people who are currently in teacher training programs. As you have been listening to all this testimony, you know that the people who go into elementary and secondary school teaching right now are not people who, as a group, rank high academically.

I suspect that one of the reasons that some of these people go into the fields of physical education, music and art is that those fields are themselves less academic, which is not to denigrate them, but simply to recognize that they call for different sets of skills than calculus or foreign language or science or literary analysis.

Mr. COLEMAN. Very good.

Ms. GRAHAM. Therefore, I think that if the group is selected on the basis of success in schooling, they are likely to be successful in schooling in the academic subjects, not just in these others.

Mr. COLEMAN. Good point, and you were very diplomatic in your response.

Mr. SAUNDERS. I want to add one observation. I think that when you get outside the teacher education population and look at university population in general, you will still those kinds of disparaties that you were talking about. You will find some programs producing many more graduates in what you might call the soft areas as opposed to the hard ones.

Mr. COLEMAN. Right.

Mr. SAUNDERS. That is not unique to teacher education, I suspect.

Mr. COLEMAN. Dr. Robinson, in your testimony you mention teacher professional development centers. I wonder how you would envision these being set up and administered, such mundane things as would teachers be taken out of the classroom for it, would they have a leave of absence, would it be before or after class? Could you elaborate on how you might perceive these things might be set up?

Ms. ROBINSON. I think a teacher's work day should include time for instruction and time for planning and time for professional development and time for community service. So the day would include all of those functions, or the contract or the job includes all of those functions.

But as it is presently organized, the public views teachers as being paid to conduct instruction within the confines of the classroom or the hours the schools are in progress.

If we use the teacher centers as an example of the model or the concept, the time that the programs are available would be

planned for times the teachers find convenient, after school, on weekends, and so forth. That is not the desired way, that is probably the way it will happen first as the most practical way of providing access.

The teachers would, through some process, select those to represent them. They would conduct needs assessment. They would work with the higher education community and administrators to identify resources that might help address some of those needs. They would organize program opportunities and make those opportunities known to their colleagues.

Further, they could offer—teachers would offer to support the center by offering to devote their talents and their expertise to others, and they would share. They could provide opportunities for issue seminars, which would be sessions for teachers to come and discuss matters of instructional importance, they could share ideas and learn from one another and learn in an informal way. It would be a place that fosters professional growth in a wide variety of activities. Some of them could be very formal, some of them could be very informal.

Mr. SIMON. If I may take the Chair's prerogative, one of the points you made, Dr. Robinson, was that we do not define "educator." I have just been checking, and you are correct, we do not. It could be school board member, it could be any variety of things.

I would be interested in your putting something together for us to define "educator." All right?

Ms. ROBINSON. Yes.

Mr. SIMON. Mr. Penny.

Mr. PENNY. Thank you, Mr. Chairman.

I am interested in learning more from each of you about the adequacy of current teacher education programs. Why don't we just start with that. Then I want to ask as a follow-up how you feel the credit load per teacher education program should compare to the credit load in other areas.

Ms. GRAHAM. Let me begin by saying I have iconoclastic view on this subject which is not shared by a number of my colleagues who are teacher educators. I should warn you of that in advance.

Mr. PENNY. I found from the testimony in your presentation that it seems to conflict with some testimony in Dr. Saunders' presentation. Maybe it doesn't, but I am just going to give you a chance to explain where you think the mix ought to be.

Ms. GRAHAM. My sense is that the most important thing for a teacher, before that person begins teaching, is to have mastered an academic body of knowledge that is taught at school. Therefore, I believe that that is imperative for a high school teacher who is expected to teach an academic subject, and I would argue—and this is part of my idiosyncrasy—that an elementary school teacher should have mastered—by mastered, I mean having majored in—an academic subject that is taught at the elementary school level, whether that is geology or English or history or some mathematics—not psychology and not education.

The reason that I would argue that as the first issue is that a teacher needs to have had the experience himself or herself of having become truly competent in one academic area. They need to have had that experience of feeling they really got to know one

thing well. That is why I push for that rather than coverage, which is the justification for many programs. Their argument is that the elementary school teacher has to teach everything and, therefore, they have to have a little of this and a little of that and a little of the other.

I think that if they have learned how—if they really become proficient in one subject, they can learn other things as well—maybe a little something else, but I would argue for that kind of proficiency.

Now, I do not subscribe to the notion that just a bright undergraduate can go be a teacher and begin to learn on the job. I don't believe that. I think that—and I would agree with the testimony that has been given earlier this afternoon—over the last 20 years, we have learned an enormous amount from educational research—some of it funded by the Federal Government I am happy to say, the National Institute of Education—about how children learn and how teachers can teach more effectively. We have not yet codified that information that we have gotten from research and incorporated it as thoroughly as we might in teacher education programs, but it is there to do.

I would commend a paper done by David Berliner of the University of Arizona to the Arizona State Legislature to you in talking about how this can be done.

So I would argue that we should have preservice education courses. But my own judgment is that they probably do not need to take up as many credit hours as currently exist in some institutions.

Now I am a very heavy believer in a teacher who has experience teaching coming back and studying in a university setting, or some other kinds of settings as well, because at that time, a teacher knows what he or she doesn't know, and then is in a mood to learn, that most undergraduates are not in a mood to learn. Certainly in my experience—I started teaching in 1955 and have been teaching all but 2 or 3 years since them at one level or another—my experience is that it is the person who has had contact in the classroom day in and day out who, if that person is a good teacher, is desperate to learn how to be more effective. That is the moment when they are the most fun to teach, and not the bright undergraduate who thinks that he or she knows it all. You got to do a little something with them. But the person, when they are really in a position to learn, is when they know what some of the problems are they are facing.

Mr. SAUNDERS. I don't see any substantial disagreement in our presentation on that

A minor point is I don't know how many elementary teachers are going to feel comfortable with a respectable major in, say, geology, when they have to teach music, art and physical education and arithmetic and those things, too. As a grandparent, I might be real pleased with you in teaching to my grandchild, but not like the way you are handling language art.

It is an interesting phenomenon, I think, in this country, in how we view methodology in teacher education—or in any profession. Every profession that I know of has methodology built into it. I guess they are wiser than we, they don't call it that. But it is inherent in every profession.

If methodology is not taught well in teacher education, it ought to be, and we ought to come down very hard on that. I don't think, frankly, that we have come down hard enough on it. But again, with 1,300 approaches to it, various degrees of commitment, and so forth, you have problems in that area.

It makes a lot of difference, also, at where the student is in what you are trying to do from a methodological standpoint. If we are teaching at the sophomore level dealing with many marginal students, again from the standpoint of commitment to academic achievement up to that point, and you are trying to teach learning theory, it is going to be extremely difficult to make that a highly sophisticated course and to deal with highly sophisticated concepts. Yet, they are there and they could be dealt with.

If you are dealing with that at the graduate level, after the person has been in the classroom for a while, or you are dealing with it in a good sophisticated MAT program—which I like personally—then you can deal with it differently. That methodology, I would submit, would be every bit as sophisticated as the methodology you find in medicine, in law, in business, in engineering, in journalism, in any of the professions.

But we are dealing with different populations many times on that, and I think we tend to overlook that.

Ms. ROBINSON. The NEA sidestepped your question, but we answered another one that we thought was important.

We answered the question of, what is it that the beginning teacher must be able to do well? By answering that question, we went on to describe some standards of a program that would likely equip the person with the knowledge and skill necessary to do these things well. So we listed the skills and the knowledge base that a beginning teacher must have, then we developed program standards. And now we are saying to the institutions of teacher preparation, "You develop the program." Rather than tread on their turf and tell them how many courses and credits you need in human growth and development and that sort of thing, we have identified the learning outcomes, based on what teachers say you need to be able to do when you go into the classroom. These are standards for beginning practice, safe beginning practice.

There are also standards that we believe provide a foundation for continued professional growth. They provide the foundation that will allow one to recognize areas of need and issues upon which you might want to embark on some concerted effort to develop a knowledge base or whatever.

So what we have tried to do is not prescribe to the various institutions the precise program, but we have attempted to develop the program standards that we think are important, the standards that would lead to the knowledge and skills which define the profession.

We also say that the program has to be supported with a comprehensive, continuous assessment procedure that will result in a kind of profile on every student who is going through the program, the profile designed to identify those who are approaching precision with the knowledge and the skill base, those who are not so that they might be counseled to pursue some other options.

So we didn't really answer your question, but we approached it a different way.

Mr. PENNY. It seems to me that, in meeting those standards, we could have a tremendous variance from one campus to another in terms of the number of credit hours they require in order to accomplish those proficiencies.

Ms. ROBINSON. Well, the completion of the program is supposed to enable one or make one eligible for a certificate. That certificate is offered by the State. And we are saying that the State should take a much greater interest in the integrity of that certificate by making sure all the programs meet a set of uniform standards, and we should let students know those programs which fail to meet those standards are programs which will likely not allow them to be eligible for certification.

We are not pleased with the level of vigilance and commitment and concern States have shown for the integrity of the license, and we have offered a proposal to address that as well.

Mr. PENNY. Thank you for your answers.

Mr. SIMON. Mr. Gunderson.

Mr. GUNDERSON. Thank you, Mr. Chairman.

Thank you all for your testimony.

I just have one question that I think has not been totally addressed in the discussions and questioning that followed. That is that title V, as it is written in the bill, really calls for about five different things. It calls for scholarships to students pursuing teaching degrees, scholarships for current teachers, institutes, workshops, professional development resource centers, and institutional assistance to teachers colleges.

I would be interested in your ranking of those different elements in terms of priorities. Are there any of those, in your opinion, that are more important than the others?

It sure is fun to be questioning rather than taking the exam.

Ms. GRAHAM. Speaking for my institution, we need the last ones. Speaking for the field of education, I think the Perkins scholarships are the most important.

Mr. SAUNDERS. I think part E—I will be suspect, I am sure on that one—but I think part E is terribly important. The scholarship program is very important. I would put those at the top. I don't know that I could sort the others in 1, 2, 3. I could eventually, but I don't think I want to on the spur of the moment.

Ms. ROBINSON. You probably won't believe this, but it is not just because our members are practicing teachers, but I really do believe that we need to help those who are in the profession to do a better job. That is a critical need as of this very moment. I think those procedures such as part D and the internships would help us. I see that as a priority.

I also see almost competing right there, nip and tuck, really, is a need to help the institutions, a need to provide incentives and support and recognition to teacher training so that it is enhanced in terms of its capacity, but also in terms of its stature among the higher education entity.

Mr. SAUNDERS. Could I just come back just a moment on that?

Mr. GUNDERSON. Go ahead.

Mr. SAUNDERS. I would put professional development in there in a very high order also.

I think we tend to overlook the importance of the fact that the beginning teacher is a beginning teacher. While you want that beginning teacher to be absolutely competent, we know that, typically, that is expecting too much. No other profession holds the beginning person as accountable for the hardest part of the job from day 1 as education, which is, I think, one of our shortcomings.

If I might take just a moment to illustrate that. Once when we were having commencement and we were graduating about 85 lawyers that day—and this was back when the young people were dressing in ways that bothered some of the older people—the engineering dean leaned to me and said, "Bob, if you got in serious legal difficulty, would you hire one of these people to defend you?" I thought about that for a bit and I said, "No, not likely. I would look for an experienced person who had learned on the job, irrespective of where their training had been, a person who had established a reputation someone who had experienced success and failure and who had learned from it."

But what do we do with the beginning teacher? We put that beginning teacher typically in the toughest classroom where the most skillful person would be required, and we hold that person every bit as accountable as we do for the 20-year person who has, through the seniority, been able to get a little choicer assignment perhaps or something like that.

So the professional development, the nurture that a person goes through, the attention given to that importance, is seriously overlooked, I think, in our business.

Mr. GUNDERSON. I agree with both of you in that regard.

I use the analogy of a medical facility not too far from my home where, on the one hand, there is a new young doctor just out of medical school who knows all of the latest state of the art in medicine. There also is a very experienced doctor who has done little or no continuation in terms of studies and update. Of those two, I would take the younger. I think professional development is absolutely key to make experience a worthwhile asset.

Thank you, Mr. Chairman.

Mr. SIMON. We thank you. And we thank the three of you for your testimony.

This concludes our hearing.

[Whereupon, at 3:05 p.m., the subcommittee was adjourned.]

HEARINGS ON THE REAUTHORIZATION OF THE HIGHER EDUCATION ACT

THURSDAY, MARCH 29, 1984

HOUSE OF REPRESENTATIVES,
COMMITTEE ON EDUCATION AND LABOR,
SUBCOMMITTEE ON POSTSECONDARY EDUCATION,
Washington, DC.

The subcommittee met, pursuant to call, at 9:30 a.m., in room 2261, Rayburn House Office Building, Hon. Paul Simon (chairman of the subcommittee) presiding.

Members present: Representatives Simon and Gunderson.

Staff present: William A. Blakey, staff director; Marsha Wice, legislative assistant; and John Dean, Republican assistant counsel.

Mr. SIMON. The subcommittee hearing will come to order.

I will enter my statement in the record.

[Opening statement of Congressman Simon follows:]

OPENING STATEMENT OF HON. PAUL SIMON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ILLINOIS AND CHAIRMAN, SUBCOMMITTEE ON POSTSECONDARY EDUCATION

This morning we are continuing our hearings on the reauthorization of the Higher Education Act of 1965. The focus of today's hearing federal support for graduate education.

Title IX of H.R. 5240 addresses, a number of the needs of graduate education outlined in the report of the National Commission on Student Financial Assistance, "Signs of Trouble and Erosion: A Report of Graduate Education in America."

The report of the Subcommittee chaired by Dr. John Brademas warns that the number of minority and women graduate students is shrinking not growing. The Graduate and Professional Opportunities Program is designed to recruit these talented students into fields in which they are underrepresented. The reauthorization will raise the fellowship award from $4,500 to $9,000, with priority given to students with greatest financial need.

In addition, the bill designates the National Graduate Fellowships as the Jacob Javits Fellowships to honor the former Senator and champion of education. The fellowship will be raised to $9,000, and extended to students in the arts, humanities, social sciences and other areas of National interest.

The CLEO and the Law School Clinical Programs of Title IX will be extended, and the institution support for graduate programs will be raised.

While Title IX is specifically targeted for graduate education, other titles of H.R. 5240 extend aid to graduate students. These include the presumption of self-sufficiency (independence) for graduate students, allowing graduate student eligibility for Pell Grants, and raising loan limits for guaranteed student loans.

The bill also increases support for college and university libraries, a program of great interest to graduate students and faculty.

Today's witnesses are particularly able to comment on my approach in this bill. The first witness is Dr. John Brademas, President of New York University and Chair of the National Commission on Student Financial Assistance Subcommittee that reported signs of trouble and erosion in graduate education.

The panel that follows includes Dr. Craufurd Goodwin, Vice Provost and Dean of the Graduate School of Duke University, Dr. Jaime Rodriguez, Dean of the Gradu-

ate School of the University of California at Irvine; and Dean Helen Cairns of the Graduate School of Queens College of the City University of New York.

I welcome you today, and I look forward to your testimony.

Mr. SIMON. The report, "Signs of Trouble and Erosion, a Report on Graduate Education in America," really outlines where we're headed and why we have to pay more attention to graduate education in the United States, and what we're attempting to do in the Higher Education Reauthorization Act, is to focus more attention in very practical ways on higher education, on graduate education.

And we're pleased to have our witnesses here. I might say that the first witness was scheduled to be John Brademas, the president of New York University, and former member of this subcommittee. But John is—the weather kept him from coming. He was at the airport this morning, I talked to him on the phone this morning, and he extends his regrets, and we will try to work in his testimony later.

We will—our panel consists of Dr. Craufurd Goodwin, the vice provost—do you pronounce it provost?

Mr. GOODWIN. Yes.

Mr. SIMON. OK. At the University of Chicago they pronounce it prah-vust.

Mr. GOODWIN. We accept either one.

Mr. SIMON. Either one. OK. And dean of the graduate school of Duke University. Dr. Jaime Rodriguez, the dean of the graduate school at the University of California at Irvine, where a frequent witness to our hearings here, Jack Pelteson, who is going to become the chancellor, and Dean Helen Cairnes of the graduate school of Queens College of the City University of New York.

We're pleased to have all three of you here and we'll have some wisdom from North Carolina first here.

[Prepared statement of Craufurd Goodwin follows:]

PREPARED STATEMENT OF CRAUFURD D. GOODWIN, DEAN OF THE GRADUATE SCHOOL, DUKE UNIVERSITY

I am delighted to have the opportunity to testify concerning the reauthorization of the Higher Education Act of 1965. I will address principally, but not entirely, issues raised in connection with Title IV and Title IX.

My discipline is economics and I cannot help seeing the questions you have before you through an economist's eyes. I perceive the function of graduate education to be substantially the contruction of human capital, the foundation on which our future economic and cultural growth must rest. The graduates of our master's and doctoral programs this year will become the college teachers of tomorrow, the brains behind our scientific and technical advances, the public servants who will make and administer enlightened public policy, and the custodians of cultural traditions and values. The question must be asked, however, will not the market work satisfactorily without Federal intervention to arrange for the training of a sufficient number of these persons in the right way? Will not the universities supply the right amount of graduate education for those who want to purchase it? I think the answer is clearly "no." Graduate education, if left alone, would not take place at a pace which is best for our society. This is a serious case of what economists call "market failure," calling for public intervention through the kind of programs you have supported under the Higher Education Act. Let me suggest some reasons why.

First, just as today we worry about the reindustrialization and recapitalization of America, and incentives are appropriately provided to encourage this process, so we should worry about the revitalization of the intellectual base on which this growth will occur. The market is slow—too slow—to generate the signals which will attract the young scientists and engineers we will surely need. The contributions which graduate education and research make to our industrial growth and modernization can hardly be exaggerated. I see these contributions and work with them every day

in the vibrant Research Triangle of North Carolina. There the state and private industry work closely with the graduate schools of the three research universities in the region. But the Federal Government makes essential contributions.

The second reason why the Federal Government should be present in Graduate Education is to help the universities sustain areas of scholarly inquiry which for reasons of fashion do not attract private support yet are of unquestioned social value. Here I include at this point in our history the humanities and the arts, together with parts of the social sciences and some professional areas. If we allow the advanced study of, say, history or philosophy to decline in our culture we will all be impoverished as a result.

Finally, I believe there is an exceptionally strong case to be made for Federal assistance to Graduate Schools for the education of women and minority students, groups in our society which have not traditionally participated fully. Affirmative action is a commitment of most graduate schools, as it is of my own, but programs with teeth cost money, and money is exceptionally hard to find from internal sources today.

Let me now review for you the major challenges that face us in the graduate schools on a daily basis. Two seem to dwarf all others. The first is how to maintain the equipment and other support systems which are absolutely essential for an up-to-date graduate education. The first part of this problem involves scientific "instrumentation." It makes no sense to train a graduate student in science or engineering on incomplete or obsolete equipment; yet in many fields the base price, rate of obsolescence, and cost of maintenance of this equipment are simply impossible for us to cover from our own resources. Some large research grants and generous private donations help to ease the instrumentation problems. But such sources by themselves are unpredictable and can skew the teaching programs in directions which may be undesirable. A major federal commitment to support instrumentation in graduate school of research universities must have, in my view, a very high priority.

The sky-rocketing costs of libraries produce for the humanities and social sciences the equivalent of the instrumentation crisis in the sciences and engineering. Multi-million volume research libraries have long been the glory of the best American graduate schools. Today they are also like an open vein. We find ourselves slipping steadily backward.

Second, we have heartbreaking needs today for additional student aid. At Duke we have approximately 1500 students enrolled in our Graduate School and practically none of them receives support equivalent to what we find to be genuine "need." Very nearly all of them are truly independent from their parents and in consequence they live in varying degrees of poverty or increasing indebtedness. This is the season for greatest anguish and frustration for a graduate dean. During these months of spring we roam around our institutions begging and cajoling our administrative colleagues to cut loose just a little more university hard money, to place a few more advanced graduate students on the undergraduate teaching budget, to allow us a little more access to loan funds, and so on. On the one hand we see our continuing graduate students forced either to withdraw or slow their course because of the lack of funds. On the other hand we see perfectly splendid potential new entrants discouraged from entering graduate school because of fear of financial pressures and the far more attractive opportunities elsewhere.

We see the brilliant applicant to computer science, who with advanced training might help to develop the fifth generation of computers for American industry, drift off into a routine job in business with a bachelor's degree. We see the spectacular young biologist who might help to give this nation the edge in biotechnology take employment in banking or insurance. We see a young person who might help us to understand the nature of international conflict or the breakdown of the world economy become yet another of the burgeoning entrants to law school. Repeated first hand exposure to what I think is such a national misuse of very scarce and precious talent is perhaps the most discouraging feature of my job.

Federal programs of support are without doubt one of the few bright spots in the bleak picture of support for graduate students. Both loan and college work-study funds play very important roles in our capacity to keep our students going. Overall about fifteen percent of our students at Duke are able to continue only because of these funds. Three of our truly excellent programs at the master's level, in health administration, physical therapy, and public policy studies, would be severely jeopardized by disappearance of the loan programs. Upwards of half the students in these programs are dependent upon either NDSL or GSL loans or a combination of the two. In several of our Ph.D. programs a common pattern is for students to be supported in their early years on loans funds and in later years on research grants. Many of our programs use college work study funds to accomplish a variety of criti-

cal teaching and research tasks while supporting their graduate students at the same time.

In order to give you some first-hand feeling for just how important the federal funds can be to individual students I picked out virtually at random the records of two students who have made excellent use of these funds. The first is a female completing a Ph.D. in Forestry and Environmental Studies. She decided to come to our high-cost private university because of the unique program we have in this field. She is now completing a doctoral dissertation on now pine trees can be made to grow in wetland areas. She had already accumulated over six thousand dollars in NDSL and GSL loan obligations as an undergraduate. After paying tuition she receives $67 per month net from the stipend the university is able to award her. In consequence loans are essential and she has accumulated over $8000 additional NDSL loan obligations during her graduate years. She will graduate and take her first job in teaching, research, government, or the forest industry with a loan obligation of more than $15,000.

The second student is a minority female in our truly outstanding graduate program in religion. Like most scholars of religion she has had a long road to travel through undergraduate college, seminary, and the Ph.D. program. She will emerge with a superb capacity to enable us to understand our religious heritage, but also a combined debt of approximately $40,000.

I regard both these dedicated students as bound on a course which will yield benefits to our society far in excess of the cost to society of their training. I am also virtually certain that they could not have accomplished their goals without the loan programs authorized under the Higher Education Act of 1965. Accordingly, I consider the reauthorization of the Act to be absolutely essential to the national interest.

I would like finally to offer a few comments about particular features of the proposed reauthorization. I have already implied my strong support for Title II and I have reported how much we depend now on NDSL, GSL, and College Work-Study authorized under Title IV. I would welcome an increase in the loan limits for graduate study and an increase in the availability of workstudy funds for graduate students. I support the proposed statutory definition of independent student which comes far closer to reality than does the present definition. I also favor the provision for loan consolidation and flexible loan repayment. Although I was not asked specifically to address myself to Title VI I have spent much of my career concerned with international education and I would have to endorse enthusiastically the farsighted program contained therein. I have recently completed a study for the Institute of International Education on the value of study abroad and I am more persuaded than ever of the immense value of exchange programs at both student and faculty levels. The federal support for foreign language and international students is essential for the maintenance of our national competence in this area. Title VIII strikes me as providing an excellent program of infrastructure support which would help us to respond to some of the problems I have mentioned above.

In Title IX I would have to give top priority to Title C which is the best device I can think of to attract back to graduate schools the absolutely first-rate talent which the nation needs and deserves. Title B is a good program which I would like to see continued. Title A is an imaginative scheme which should be given a period of trial.

Finally let me offer my enthusiastic support for FIPSE, authorized under Title X. This fund has provided us at Duke with seed money for probably the most innovative program in our graduate school over the last decade, a broadly-based masters of liberal arts degree aimed at the exceptional population of adult professionals in the Research Triangle area.

It is hard for me to think of a piece of legislation whose reauthorization is more important for the national welfare than the Higher Education Act and I am most grateful for the opportunity to offer my comments upon it.

STATEMENT OF CRAUFURD GOODWIN, VICE PROVOST AND DEAN OF THE GRADUATE SCHOOL, DUKE UNIVERSITY

Mr. GOODWIN. Thank you very much.

Mr. SIMON. Yes, let me just add, yes, however you want to approach this. We will enter your full statements in the record. If you want to summarize them or expand or however you wish to approach it.

Mr. GOODWIN. Thank you very much, Mr. Chairman.

First let me say how pleased I am to be here. It's a great privilege to be able to testify in this important reauthorization.

I think it may be most useful for me simply to supplement my prepared statements rather than to read segments of them or even to summarize. In fact, I thought it might be most interesting for you to hear some impressions from the trenches, so to speak, reactions of a graduate dean at this particular season in our school year, to give you some sense of what it's like out there and the impact that the Federal legislation has upon it, and I've picked out a number of impressions that have come to me over the last several weeks.

The first is with respect to undergraduate. Most of us who teach graduate students also teach undergraduate, and that's certainly the case with me. I'm very struck at this season to be writing references and to be discussing with our very best undergraduates their entry to law school, to business school, and to employment, directly after their bachelor's degree.

This is in very sharp contrast to the situation I can remember 15 years ago, when the top students in my own discipline, which is economics, would typically be talking about graduate school. We, sadly, seldom see that these days. And I think that's one important impression I bring away.

A second impression comes from serving on the fellowship committee at my university, where we looked at the very best applicants who come to us and apply for our top fellowships, which I think will be the equivalent of the fellowships you envisage under title IX in terms of prestige and importance.

We have about 15 of those to bestow each year, through the endowment we have for that purpose. We have 37 graduate programs and we have, I would say, something like 150 absolutely first-class applicants in those various fields, and it's truly a heartbreaking experience to have to go through those 150 applicants and try to identify 15 who should be picked out.

Now, I don't know what happened to the other 135, but I suspect that a substantial proportion drift off into other occupations. And again, it's a sad situation.

My third impression is with respect to our continuing graduate students, those who are working on their degrees and approaching completion. This is the time of year when we're trying to piece out their survival through another year, and we have to do this with the greatest cunning and cleverness. We put them on undergraduate teaching budgets. We find scraps of money here and there. We allow them, frequently, to reduce their course load so that they can take employment. In some cases we see them drop out.

So, it's a sad situation and a time of great anguish for us, to try to work with these students.

The next impression I bring away is of some of our programs which have a long history and a distinguished history, which are now striving to maintain some sort of critical mass of graduate study. I speak of departments like our language department, classics, philosophy, which have such small groups of graduate students that it's very difficult for them to keep alive a vigorous program. And I think this is another subject of real concern for us.

The next impression is with respect to the sciences mainly where I see almost daily a time of great struggle to maintain instrumentation. We see frustration from our scientists, both in their teaching and in their research in operating at the frontier of their discipline. They come to me regularly, looking for university funds, somehow to buy that extra piece of equipment, to match funds that are provided by industry, in some way to catch up. And the sense that many of them have is that they are falling steadily behind.

Finally, I would point out the last impression and that is the difficulty we have in pursuing our affirmative action goals, and that is to increase the number of women and minorities in our programs, with the funds that we have available. At Duke we have five fellowships reserved particularly for minorities, and we try our very best to find funds elsewhere for them.

But with the pressures for teaching assistants, for particular participation in research programs, we have very little loose money that we can direct to this purpose, and the concern is very real and we feel that we aren't making anything like the press we should in that direction.

Now, the place of the Federal programs in this is what I'd like to just very briefly mention. I think that some of the few bright spots that we see on our horizon come from the Federal programs that are available to us. First of all, the loans. About 15 percent of our students are genuinely dependent on NDSL's and GSL's and I think that if anything were to happen to those programs, at least that proportion of our students would disappear.

Our college work-study is another extremely useful program for us. It enables us to keep many of the students going at a higher level of activity than would occur otherwise.

The few remaining training grants we have, mainly in the medically related biological sciences, permit us to attract absolutely first-rate students. But, unfortunately, they are small in number and declining.

And finally, I would mention FIPSE, which has helped us in our particular case with innovation in the graduate school, and at this time, when we're so short of funds for support of graduate students, to have a little loose money for innovation is remarkably valuable. I think the most interesting innovative program we have had in the last decade or so has been assisted with a FIPSE grant which we received 2 years ago, for a new degree program.

So, maybe I can just then summarize what I think we need in the years ahead. First of all, I think we need the means to attract the very best graduate students to graduate schools, in relatively modest numbers, and I think the proposal in title IX is absolutely first rate on that point. I think we need, second, the means to support the population of graduate students who are, perhaps, not of that preeminent quality, and I think that the loan programs and college work-study do that particularly well.

Third, I think the instrumentation and library problem is really critical for us, and I applaud your attention to that in the reauthorization. And then, finally, I want again to mention this opportunity that's presented through innovation. Whether FIPSE is the only mechanism, I wouldn't like to say.

But I think that this is a time when we can be creative and imaginative in graduate education, and I think that if any means can be afforded to help us with that, that's very worthwhile. I refer particularly to the opportunity for new degrees, which can appeal to a changing population of older Americans, for example. That, in particular, is what FIPSE enabled us to do, to be very creative in that direction.

Cooperative degrees with professional schools, we have attempted that for the first time, over the last several years, to tap into the student body that's going into the professional schools and kind of wean them away, indirectly.

And finally, cooperative activities with industry and other parts of the private sector. I think that if we have the means to experiment in that direction, there are opportunities that we can pursue.

Thank you very much.

Mr. SIMON. Great. Thank you for your testimony.

Dr. Rodriguez.

[Prepared statement of Dr. Jaime Rodriguez follows:]

PREPARED STATEMENT OF PROF. JAIME E. RODRIGUEZ, DEAN OF GRADUATE STUDIES AND RESEARCH, UNIVERSITY OF CALIFORNIA, IRVINE

My name is Jaime E. Rodriguez, and I am both Dean of Graduate Studies and Research and Professor of History at the University of California, Irvine. The University of California is a nine-campus system which enrolls over 130,000 students and is recognized internationally as the largest university in the world and a leading institution in the areas of graduate education and research. As you are aware, federal assistance is a vital and integral part of the nation's graduate and professional educational system, particularly in the area of doctoral preparation, the area upon which I intend to focus my comments.

The Irvine campus of the University of California is located 45 miles south of Los Angeles in the city of Irvine. Total enrollment is approximately 10,500 students, which includes 8,500 undergraduates, 500 medical students, and approximately 1,500 graduate students. My responsibilities include the oversight and administration of over 36 graduate programs which span the range of traditional disciplines as well as innovative multidisciplinary programs. I am also responsible for the administration of the campus' research functions. UCI conducts approximately $26 million of research each year and as of the 1980 National Science Foundation survey, ranked 67th among major research universities. Graduate education and research are closely linked and interdependent, and therefore have been combined in the Division of Graduate Studies and Research. My responsibilities as Dean of Graduate Studies and Research at Irvine provide me with the perspective necessary to evaluate potential impacts of student support decisions at both the state and federal levels.

The importance to the nation's health and welfare of graduate education in all fields and specifically doctoral preparation cannot be overstated. Graduate research education provides the training required for future generations of scholars, scientists, and professionals, and is the principal source of new scientific, technical, and cultural knowledge. There is a misperception on the part of some legislators and agencies at both the state and federal level that the university is producing more scholars and researchers than society demands. The vast majority of graduate students are in fields of high demand by employers. The University of California has shown considerable flexibility in meeting the changing needs of the state and nation: graduate enrollment figures for the last decade show that changing demands have been met, and continue to be met, by responsive shifts in enrollment from some disciplines to others, rather than new resource demands. The state and nation have been well-served as a result of their support of graduate education. Direct benefits stemming from graduate education in the natufal sciences, agriculture, engineering, social sciences, the arts, and the humanities are widely recognized.

It is important for the Commission to understand the nature of graduate education at the doctoral level and to distiniguish it from Master's programs and professional education. Doctoral research training requires sustained effort over an extended period of time, and must be approached intensively if the student is to succeed. While Master's programs admit part-time students, doctoral study by nature is

full-time study with an integral research orientation. Research-oriented professional programs, such as engineering and computer science, train Ph.D.s and possess the same goal and orientation as other doctoral programs.

It is also important to comment at the outset on the current climate of support of graduate education. While the statements which follow are specific to the University of California, they more than likely apply to research universities nationwide, both private and public. The climate of support for graduate education can be characterized by diminishing federal direct support, federal cutbacks in research which fund a good number of research assistantships and training grants, diminishing support for graduate education by the California state legislature, and intense competition for the best students resulting from a limited pool of applicants. Competition for qualified students interested in pursuing graduate work is particularly acute with regard to minority applicants. To some degree, the shortage of potential students is a result of the lack of emphasis on graduate education within our society. Increasingly, however, individuals cite high cost and a difficult job market as major reasons for not continuing their education. It is alarming that many of the very best students do not pursue a Ph.D. because of high costs or lack of sufficient support. To the extent that this occurs, the individual loses, and society, as well, because our brightest citizens are not reaching their full potential.

The federal government plays a key role in the interlocking structure of graduate student support in that resources can be applied in meaningful amounts to those areas which need them most and for which substitutes are not readily available. This applies to public as well as private institutions in that most public institutions like the University of California are state assisted, not state supported. Less than half of the University of California's budget comes from state general funds. The federal government, through support of research and various education programs, plays a major role in non-state support. Without federal support, significant programs would crumble. Since the Commission's topic is student financial assistance, it should be emphasized that students at the University of California also contribute a substantial amount to the costs of their education.

I am pleased to see that the federal government is concerned about the implications of its actions in student financial support and that it has created this Commission to carry out fact-finding activities. With the above points in mind, I would like to address the range of questions posed by the Commission and the implications of any significant changes in graduate student support by the federal government.

1. What is the condition of graduate education in your system/institution? How would you assess the health of the various disciplines?

Generally, at the University of California, Irvine and throughout the system as a whole, the quality of graduate programs has been maintained. This is borne out by the series of recent reports published by the Conference Board of Associated Research Councils, which assessed research doctoral programs across the United States. UCI is particularly healthy in its areas of specialization. There is solid applicant demand for UCI's graduate programs and for graduates of those programs. To sustain quality requires continued support, however, and it has become clear that in the University of California and in other research universities we are reaching the crisis point. Further cuts in support are certain to adversely affect the quality, breadth, and depth of our university graduate education programs.

2. Has the quality of graduate education in your system/institution suffered in recent years in terms of the type and number of students being attracted and the programs being offered? If so, what have been the causes? Have certain fields been affected more than others, e.g., the social sciences and humanities?

The quality of graduate education within the University of California has been maintained to date but it is increasingly more difficult to attract outstanding students. I believe this situation exists because fewer individuals are deciding to enter graduate school and there is intense competition for those qualified students who do decide to avail themselves of the opportunities for a graduate education. Although the shortage of excellent graduate students is a general problem, it is particularly acute in the case of minorities. The student's decision on where to attend graduate school is often dependent on the package of financial assistance available. There is evidence that some of the very best students are not entering graduate schools because of the high cost. This is widely evident in all fields but is particularly acute in the humanities and the social sciences. In response to the crisis in the humanities, the Mellon Foundation has just established the National Fellowships in the Humanities, on whose selection committee I serve. In some fields such as engineering and computer science an inverse set of problems exist in that rewards are so significant and immediate that few students pursue graduate studies beyond the Bachelor's and Master's degrees. As a result, in order to maintain quality graduate programs and

research excellence, universities have turned to higher enrollments of foreign students. It is important to underscore the fact that this problem is not one of increasing foreign enrollments but one of decreasing numbers of U.S. students who want to attend graduate school. The net loss to the United States in advances in science, technology, innovation, and scholarship attributable to its own citizens is reason for serious concern.

Finally, it is important to point out at this juncture that the current level of state support and the quality of graduate programs in the University of California has been sustained because other parts of the system have borne the cost of maintaining graduate programs by various cutbacks. For example, faculty and staff have foregone cost of living increases in recent years. While this shows commitment to graduate education on the part of the institution, these are conditions which clearly cannot continue to exist.

3. Has the pattern of support for graduate students shifted in recent years in your system/institution? What have been the effects on the size and quality of your programs?

The pattern we have noticed within the University of California is that students are receiving less grant, fellowship, and work study support and are relying more on loans. This loan aid is becoming more expensive to the student as interest rates increase and payback periods and forgiveness clauses decrease. The result is that those students who persevere and attend graduate schools are accepting greater amounts of indebtedness which they will find difficult to repay. The implication of this situation for the future is that graduate education will continue to diminish in attractiveness. The damage to the size and quality of our programs has not yet been too great because the University has placed high priority on graduate programs and sustained them through various subsidies. We are approaching some very difficult times, however, if incentives including creative federal graduate student support programs, are not restored.

I have two comments about specific federally-supported loan programs. One alternative proposed for graduate and professional student financial aid is the ALAS program, requiring the repayment of interest on student loans by the student during the in-school period. Graduate students have, as a group, even more limited resources and greater financial need than undergraduates. It is unreasonable to expect a graduate student, who qualifies for loan aid on the basis of financial need, to make high interest payments while in school. I do, however, support the new Options program, another proposal which is not only creative in its utilization of available loan resources, but also practical. By supporting the consolidation of a student's outstanding loans, Options offers appropriate means for the management of individual student indebtedness, and enhances the availability of loan funds for other students and programs.

4. What do you consider to be the appropriate federal role in financing graduate education? Are alternative sources, e.g., state and corporate sources able to take up the slack of reduced federal funding?

The federal government plays a key role in supporting all graduate programs, since the education of scientists, scholars, and professionals and the new technical and cultural knowledge that graduate research provides are vital to the national interest. The nature and recognized benefits of graduate education are national in scope, and require broad-based national commitments which attend to the health and well-being of the entire country. While California legislators are generally concerned with the quality of graduate education, they have taken the view that benefits specific to the state must be clear to win their full support.

All major research universities, whether public or private, are dependent on the federal government. When considering federal support for public institutions such as the University of California, it is important to re-emphasize that these institutions are state *assisted* and not state *supported*. At this time, the state of California is seriously considering reducing support for graduate education and the private sector has not demonstrated a willingness to take up the slack in either state or federal funding, even in areas such as engineering and computer science where clear and direct benefits obtain.

5. Are certain types of federal support, e.g., fellowships, research assistantships, loans, more appropriate for some fields and types of study than others (e.g., arts and sciences compared to professional schools, sciences compared to humanities, master's compared to Ph.D. students)?

With respect to Ph.D. programs in all fields at research universities, federal support should be granted as research assistantships, fellowships, and loans, in that order. Research assistantships, whether in the humanities or the sciences, are the most desirable because they lead the student toward involvement in the research

that is the substance of graduate education. Such federal agencies as the National Institutes of Health and National Science Foundation have made considerable funding available for research assistants through their ongoing research support programs. Similar structures and support mechanisms need to be created in such agencies as the National Endowment for the Humanities and the National Endowment for the Arts. These institutions should begin to focus their attention more on support to graduate education rather than public performing arts and exhibitions which are areas that have recently enjoyed increased support from the private sector. Again, I emphasize the necessary orientation of graduate education to full-time study, and the difficulty of self-support in unrelated work. It is important to point out that research assistantships are not only integral to the educational process, but also may be considered self-support of the most positive kind. Research assistantships provide essential overlap of work and study and should be supported by the federal government in one way or another in all fields. Fellowships are also an important and useful source of graduate student financial assistance, but they do not provide the educational and self-help benefits of research assistantships. Since the financial rewards in many fields are not great, loans, particularly if utilized as a significant component of student financial aid, often function as a disincentive to seeking graduate training.

6. To what extent should students be responsible for financing their graduate education? What part should loans play in this financing? Has the growth in graduate student indebtedness caused your institution/system problems in terms of attracting and keeping able graduate students?

As noted above, doctoral study requires full-time attention. Unlike the majority of undergraduate students, most graduate students are independent adults and responsible for their own support. Graduate students are already living at or below the poverty level and many have loan indebtedness related to their undergraduate education. Loans should play a minor role in their support and when given, they should be low interest with long payback periods. For those fields which meet certain national interests. loan agreements should have forgiveness clauses to encourage students to enter research and scholarship fields which are important to the nation's breadth and depth of science, scholarship, and other intellectual pursuits. The present loan situation is having deleterious effects on the accessibility of graduate education to many segments of our society. To the extent that minorities make up a larger proportion of the group most dependent on financial aid, small changes in the conditions of financial aid, access and cost will have disproportionately large impact on minority graduate students. Small changes at the margin, therefore, should be carefully evaluated given this differential impact.

7. What programs or efforts have your system/institution found most effective in the recruitment and training of minority and female graduate students? What role should the federal government play in this effort?

This is a difficult problem and one which the University of California has wrestled with for a number of years. Much attention has been given to minority student recruitment but less attention has been given to minority student retention and success, particularly at the doctoral level. More money and more support programs will not solve the problem. Mechanisms are needed which build the minority student into the academic mainstream and ensure thorough and intimate involvement with research. It is this grounding in research, writing, analysis, and scientific inquiry that will give minority graduate students the opportunity not only to find a job upon graduation but to aspire along with their non-minority counterparts to important positions as scientists, scholars, and educators.

At the University of California, Irvine, we are conducting an experimental, three-year pilot program designed to address this central concern of minority retention and success at the graduate level. The project is called "A Faculty Mentor Program for Minority Graduate Students" and is being supported by a grant from the Fund for the Improvement of Post-Secondary Education. During each year of the project, minority student mentees in their second year of Ph.D. preparation are paired with faculty mentors based on their mutual research interests. The mentee's Research Assistant salary is paid by the project for the first year and it is expected that the student will develop essential writing and analysis skills as well as a better understanding of the academic milieu. A desired short-term outcome of this collaborative relationship is a high quality research paper potentially acceptable to a scholarly journal. In addition, it is hoped that the student will continue as a research assistant on the mentor's funded research projects and maintain close productive involvement with research activities over his or her entire educational career.

While fellowship support is an important part of minority graduate student support programs, it must be balanced with and augmented by research assistantship

support. If this is not done, the fellowship support may become a disincentive to the involvement of minority students in the research which is essential to their long-term success. As noted above, the support of research assistantships is the best mechanism the federal government can use in aiding all graduate students with the financing of their educations. This is even more important with regard to minority students because without encouragement and incentive, more minority students will not avail themselves of the essential experience of research involvement. Finally, to the extent that such programs reduce the feeling of alienation on the part of minority students, those students who are successfully recruited will have a greater likelihood of being retained and graduating. To facilitate the process of minority student involvement in research, I suggest that the amount of federal support for research assistants be increased in all fields and that the regulations pertaining at use of fellowship funds be revised to allow the redirection of a portion of these funds to Faculty Mentor Research Assistantship programs whenever practical. Programs modeled after the UC Irvine pilot program, I believe, will meet the goals for which the fellowships were established and can raise both the quality of the education provided and the level of success achieved throughout the graduate's career.

Mr. Chairman, I would like to thank you for the opportunity to testify before the Commission. I would be pleased to respond to any questions.

STATEMENT OF JAIME RODRIGUEZ, DEAN, THE GRADUATE SCHOOL, UNIVERSITY OF CALIFORNIA AT IRVINE

Dr. RODRIGUEZ. Thank you very much.

It's a pleasure for me to testify before this subcommittee. I have been very much concerned about the problems of graduate education and research for some time and I would like to echo some of the things that have been said before.

Particularly, I would like to echo the importance of innovative programs such as FIPSE. I, too, have obtained a grant to develop a program for minority students, and this has helped us tremendously at Irvine.

Today I'd like to talk about my experiences, both as a scholar of Latin American history, and my experiences as dean of graduate studies and research at Irvine. I am interested in many areas, but I would like to emphasize three. Title III institutional aid, title VI, international education, and title IX, graduate programs.

Before going into the details, let me emphasize that I think it's extremely important to support graduate education and research at all levels, particularly in the sciences. But today I would like to emphasize the disparity that exists between support of graduate education and of research between the so-called hard sciences and the social sciences and the humanities.

So, I would like to speak, first, about title IX, and to applaud the decision to propose a national graduate fellows program. If one compares the support the sciences have for graduate education, it's startling to see how well they are supported.

Now, I say this realizing that science too needs tremendous support. But in contrast to the support that exists for the humanities and the social sciences, science support is munificent. In the area of humanities and social sciences, graduate students really are becoming second-class students. Typically, in the area of sciences and biological sciences and medical sciences and physical sciences and engineering, a student can expect to receive fellowship support, research assistanceship support, and oftentimes dissertation research support. A student is part of the research enterprise of that area, so that typically the students that—at least the leading doctoral research universities—may expect more or less full support in the

area of the sciences. This is very different than in the humanities and in social sciences.

Typically, the humanities and social sciences have only the support that is available from their own institution and also support at the level of teaching assistanceships. Now, this is extremely important because most of our graduate institutions rely on graduate students, both for research support, as research assistants, and also for teaching support as teaching assistants.

But teaching does not provide the same sort of critical support for graduate education that research assistanceship does. In the areas where there are research assistanceships, those students are directly related with the research enterprise. They're moving directly into their doctoral research. They're, in fact, moving to become professionals.

In the other areas, after a year or 3 years of teaching assistanceships, those students have learned, more or less what they can learn as teaching assistants. Thereafter, they're providing relatively low-paid labor for our graduate programs. And this means that their own graduate study suffers. It means that in the areas of humanities and social sciences it is typical for students to spend 6 to 10 years in graduate study, as opposed to 4 to 5 years that's typical in the sciences, so that not only are students taking much longer; they're incurring considerable debt, and really, in some ways, they're receiving a second-class education, because they're having to spend so much of their time simply supporting themselves.

In addition to that, the support that is available for graduate students in the sciences, typically, is $2,000 to $3,000 higher than the support that is available for graduate students in the humanities and social sciences.

I refer, for example, to GPOP fellowship support for minority students, comparing the training grants that are available from such institutions at the National Institutes of Health, and NSF and other areas.

Again, in the area of humanities and social sciences, one finds that training grants, which are not uncommon in the sciences, are nonexistent. So that when graduate deans or graduate programs seek to find support both for research and for graduate training, in the areas of the humanities and social sciences, we find that this is not to be found.

And typically, the definition of what is supported varies widely. For example, the National Science Foundation, and I spent yesterday talking with the National Science Foundation, supports the area of economics. But it supports only some aspects of economics. It does not support other critical aspects such as economic history or the study of certain aspects of economic policy.

I personally, in my own scholarly interests, am concerned with the recent events in Mexico and am developing a research program in that area. But it's difficult to find support from the National Science Foundation, which supports economics, or from the National Endowment of Humanities, which would support history, because the support of the two are so different.

So that I think it's important not only to support graduate education in the areas of humanities and social sciences, but also in some meaningful way to provide the kind of support that is compa-

rable to those in the area of sciences, because we have excellent students, but students are beginning not to consider these areas, simply because not only is it more costly, not only are they second-class citizens, but they're being told that there is no room for them, later, when they complete their degrees.

I am particularly concerned because I'm also a member of the Committee for the Mellon Foundation on Humanities. And I'm struck by the high quality students who really do want to study the humanities, and are finding it very difficult to do so.

The second area that I'd like to talk about briefly is the area of international education in title VI. International education and research typically comes in the form of grants to the national resource centers and to the foreign language area study fellowship programs. Both of these programs should be expanded, if the United States is to maintain adequate knowledge of the world. And as the Brademas report indicates, there is a tremendous lack of knowledge in many areas of the world, not only in areas that are little known, but even in the areas that are supposedly well known.

I speak, for example, of the fact that we have a shortage of specialists on the Soviet Union, a shortage of specialists in such areas as Latin America, where I have expertise.

Part of the problem is not simply that there is little support for international programs, but also that many of these international programs are linked with special restrictions. For example, right now priority in area programs is given to those programs which have linkages between language and area studies and professional schools. This means that the area of study centers across the country, whether they be Latin American study centers, whether they be Asian study centers, are being encouraged not to train professionals in the different disciplines, but really to train people who are going to become professionals in business and other areas, where there is already adequate support, or where support can be found in the public sector.

So that when a crisis occurs in some part of the world, we find that we lack specialists in economics and history and sociology of these countries.

In addition to distorting the academic purposes of the area study centers, these restrictions also have another effect, which is that they emphasize little-known languages. In my area, Latin America, for example, the emphasis is on developing expertise in little known Latin American Indian languages, such as Nowat in Mexico and Kechua in Spanish. Now, these languages are important. But it's not important for large numbers of people to specialize. The critical language in the area is Spanish, or the second critical area is Portuguese, and yet because of restrictions in these programs it is very difficult to obtain support for them.

But most importantly, these programs are really very inadequately funded. For example, I stopped by to visit Mr. Joe Belmonte, who's in charge of the area programs and he, unfortunately, had a difficult time talking to me, because he lacked a secretary. There is very little support of his office. He almost has difficulty reading proposals. That's not to say that he's not extremely upportive. It's just that there's a limit that a person can—to the amount of work that a person can do.

In my opinion, the support of international programs is critical and I think that for reasons that are totally unclear to me, we seem to be abandoning international programs and we waiver greatly in their support.

If international programs are developed in institutions, institutions have to expect some consistency in the support. It's unreasonable to expect that an institution will invest resources in the form of faculty positions, in the form of space and equipment, and then suddenly the next year be told they will not be funded. This, for example, just recently happened because of cutbacks in international programs so that in the area of Latin American studies a joint program between Yale University and the University of Connecticut ceased to be funded.

In the United States there are no federally funded area studies programs in New England, for example. That seems to be totally unreasonable.

Related to this question is the title III, part A, the strengthening of institutions program, which will provide grants to eligibile institutions. This aid has, in the past, been used to support historically black institutions. It's encouraging to me to see that the revised act provides a $10 million set-aside for Hispanic institutions.

I believe that support of historic black institutions must be continued. But it's also important to support institutions where Hispanics are to be found. It is sad, but nonetheless beneficial, that as a result of the social conditions of the past, a series of black endowed black colleges and universities developed. These institutions have supported the black community, have provided trained professionals and scholars. No such institutions exist for the Hispanic community, at least in the mainland of the United States.

The Hispanic community is very underrepresented in higher education. Less than 3 percent of graduate enrollments are to be found amongst Hispanics, and less than 1.5 percent of Ph.D.'s awarded go to Hispanics. In fact, there are almost as many Ph.D.'s awarded to foreign Hispanics as there are to American Hispanics. This is important to emphasize. Support for American citizens of Hispanic ancestry must be increased, and it is misleading to confuse Spanish Americans, who have grown up in Spanish America, who have been educated in Spanish America, with our American Hispanic community.

It is striking to see how little the American Hispanics are to be found in higher education. There are only two Hispanic graduate deans in the whole country, for example. I am one of them and wherever I go people know of me because I am one of the onlies.

But even more striking is how little we're doing now. The University of California, on its nine campuses, which is one of the largest doctrinal institutions in the world, graduates thousands of masters and doctoral students every year. In 1982, according to the figures that I have, 19 Hispanic graduate students received Ph.D.'s in all of the programs of the University of California. This is not a great advance.

So that this set-aside is extremely important, in my view.

In addition to that, however, I'd like to express concern about how this set-aside is being allocated. I'm concerned that only a limited number of institutions have been chosen for this set-aside,

mostly in Puerto Rico and a few mainland institutions. What this means is that the large Hispanic population in the Southwest and the West and in other parts of the country may not have support of these areas.

In my view, the closest Hispanic analogs to the historical black college system are the area studies programs, including Chicago studies, Puerto Rican studies. Cuban studies, Mexican studies, and Latin American studies. These are programs which have developed in the last few decades and which provide the American Hispanic community with strong support. It would seem to me that these programs are appropriate beneficiaries of the set-aside and should be considered in them.

In summary, I would like to emphasize that in all of student support legislation under consideration, graduate study and research should be supported as fully as possible. It is clear that graduate students are shouldering education costs entirely out of proportion to the expected lifetime earnings. In addition, the limited support they are receiving is not tailored to the different stages of doctrinal study. Support for graduate students is not only support for a nation's research capability but critical to the Nation's future, since graduate students of today become the researchers and scholars of tomorrow.

Thank you, Mr. Chairman.

Mr. SIMON. We thank you very much.

And do you pronounce it Cairns or Carns?

Ms. CAIRNS. Cairns.

Mr. SIMON. Cairns. Dean Cairns.

[Prepared statement of Helen S. Cairns follows:]

PREPARED STATEMENT OF HELEN S. CAIRNS, DEAN OF GRADUATE STUDIES AND RESEARCH, QUEENS COLLEGE OF THE CITY UNIVERSITY OF NEW YORK

I am Helen Cairns, Dean of Graduate Studies and Research at Queens College of the City University of New York, and I am delighted to be invited by Congressman Simon to speak to this subcommittee in support of the incorporation of the following proposals into the legislation reauthorizing the Higher Education Act:

1. There is a need for increased financial aid for graduate students. The extension of the Pell Grant Program to first-year graduate students would help meet this need.

2. A set-aside of College Work Study funds for the use of graduate students would provide further assistance.

3. The Cooperative Education program is of great potential benefit to graduate students, especially those in master's-level programs, and I would support the extension of such programs to make them more widely available to graduate students.

I will speak in favor of these three proposals from my particular experience at Queens College, but I feel confident that the positions which I articulate are shared by my colleagues at all CUNY colleges offering graduate programs.

A brief description of Queens College and its students. Queens College is one of the "four old senior colleges" of the City University System, which now includes 19 institutions. The college is the recipient of a Title III strengthening award for developing institutions, and about a third of our undergraduate students receive Pell awards. This Spring we have 15,934 students, of which 2,762 are graduate students enrolled in master's-level study, 2,023 of whom are matriculated in 49 programs leading to various master's degrees and advanced certificates. Only about 10 percent (250) of our graduate students attend full-time, the remainder being part-time students. Our students are far from affluent. A recent survey indicated that 75 percent work more than 20 hours per week (including 45 percent with full-time jobs). The same survey revealed that low tuition is one of the primary reasons for choosing Queens for 40 percent of the respondents, and professional and financial advancement is the primary reason for the pursuit of graduate study for 92 percent. Tuition

37-618 O—84——18

and fees for New York State residents are just under $1,000 per semester (or $81 per credit hour).

Queens has a number of high-quality, well-subscribed professional programs which offer a "terminal" master's degree. By this we mean that a program is self-contained dealing with an autonomous set of skills or domain of knowledge which is professionally useful to those students who do not plan to seek a higher degree. Among our strongest programs are our M.F.A. in painting and sculpture, our offerings in the Aaron Copland School of Music, programs to train speech-language pathologists and audiologists, and a host of excellent programs in our School of Education and in computer and information sciences (one of our largest and faster-growing programs). A new FIPSE-funded project to train teachers of literacy and ESL is a great success, and Queens has the only public Library School in the metropolitan area. The CUNY Law School at Queens College is in its first year and has as its emphasis public service law. We participate in doctoral education through a consortial arrangement with the CUNY Graduate Center. About a third of our faculty are active in doctoral programs, and many doctoral students work at Queens as teaching assistants and in research labs (the Graduate Center has no laboratory facilities). Doctoral programs are, however, administratively housed at the Graduate Center in Manhattan, and doctoral students register and receive financial aid through the Graduate Center.

The image of Queens that I would like to leave you with is that of a major urban commuter college providing high-quality, low cost professional education to upwardly-mobile people from lower middle or working class backgrounds. Some will go on to doctoral programs, but a substantial majority will either move from their present jobs to higher-level positions or will move up in their present organizations. A major problem for this population is that in the absence of adequate financial aid programs they must work to finance their graduate educations. This means that they must be part-time students and extend the time it takes to earn a degree. Obviously, this significantly reduces their life-time earning level as well as the period of time which both they and the society can benefit from the fruits of their education.

Financial aid programs available to graduate students at Queens. We offer only about one hundred scholarships and assistantships awarded through individual departments. Our available financial aid programs, in addition to the guaranteed student loan program, are the following:

1. The Tuition Assistance Program (TAP): This is a state program available only to full-time students, based on income from the previous year. The maximum award is $600 per year.
2. The National Direct Student Loan (NDSL) program
3. College Work-Study Program (CWSP)
4. Partial tuition waiver: This is a fund provided by the CUNY Central administration to provide need-based partial tuition waivers. This year Queens received $83,000 in tuition waiver funds for graduate students. The fund provides a $50–$500 tuition waiver per semester.

When a student applies for financial aid, our financial aid office performs a needs analysis based on estimated budget figures (different, of course, for independent and dependent students, but both notoriously meager), tuition and fees, and either student or family income. The resulting need level will determine the students eligibility for the aid programs disbursed through the college (2, 3, and 4 above), as well as the level of aid. The reality is that a student earnings much over $5,000 a year will have a computed level of need too low to allow eligibility. The low-income student is thus in a catch-22 stuation. He or she must work to be abie to stay in school, live, and frequently support a family; yet even a modest amount of work precludes the receipt of even a pittance of financial aid. Only a small percentage of our 2,000 matriculated graduate students receive any sort of financial aid (including a guaranteed student loan). This is because it is only the full time students (around 250) and the students who are working less than 20 hours a week who have any real prospect of being eligible. An estimate of the number of students served by the various programs in the 1983–84 academic year follows.

Of the 258 students who filed for CUNY-awarded programs (2, 3, and 4 above) 22 were denied aid of any kind. Of the remaining 236, 91 received NDSL awards, 64 received college work-study, and 210 were given partial tuition waivers. Ninety-four received TAP awards, and 71 took out guaranteed student loans.

A total of 226 TAP awards were made, for an average of $381.55 per year, a total of $86,232. Remember that only full time students are eligible for TAP awards, so this source of funds is not available to about 90 percent of our students.

Guaranteed student loans were secured by 392 (20%) of our graduate students, for a total indebtedness for the year of $1,279,632.00. The 91 students who received NDSL loans incurred an indebtedness of $156,200.

There is a major unmet need for financial aid among the graduate students at Queens College. Of the 258 students for whom a needs analysis was computed by our financial aid office, only 57% of the total need was met. Twenty-two students received nothing, and none received full aid. We must assume that the other students receiving TAP also have substantial unmet need, since the TAP award does not even cover tuition and a student must present a very bleak financial picture to receive TAP. NDSL and GSL recipients are, of course, trading a temporary (and undoubtedly partial) reduction of need for future indebtedness.

The CUNY Graduate Center reports that of its approximately 2,000 doctoral students, 1700 applied for financial aid, but only 1,060 awards were made. We can, thus, conclude that unmet need is not unique to CUNY master's students, but is a significant problem for doctoral students s well.

How an increase in the Pell program could help. Not reflected in any of the figures given above is the number of students who never enroll in graduate programs or who are forced to drop out for financial reasons. Increased support of graduate students through the Pell program could, therefore, increase access to graduate programs for the neediest of potential students. For the students who manage to come despite financial hardship, increased financial aid could allow them to take more credits per semester, thus finishing their degrees in a more timely fashion. It is not unusual for part-time students to take four or five years to complete a master's program). For some, Pell assistance would allow them to attend as full-time students, so the award would have the double value of allowing them to be eligible for the state TAP award. In many of our graduate programs, the major portion of the work toward a degree can be completed in one year of full-time work. Thus, an award of just one year could encompass a major portion of the graduate education of a master's-level student. In the case of doctoral students, frequently the first year is crucial in terms of assistance, with program-based or grant-related funding becoming available in subsequent years.

Thus, the extension of the Pell program to graduate students would serve your stated goals of expanding access to graduate programs and improving program efficiency. An increase in allowable Pell funding from 50 to 75 percent of educational expenses would clearly be desirable for our students. With tuition levels of $1,000 per semester, our students would be eligible for the maximum Pell award only if 75 percent were allowed. It would indeed be ironic to set a level such that the very students who need assistance most, i.e., those at low-tuition public institutions, are not allowed to receive the maximum award.

I would like to argue against the plan to limit graduate Pell awards to students who have had fewer than five years of Pell support as undergraduates. Again, such a constraint would harm the very population the legislation is designed to serve. Low-income students typically require longer periods of time to complete an undergraduate degree than do their more affluent peers. Our Registrar's office estimates that upwards of 70 percent of Queens undergraduates are in school for more than four years. I suspect that this figure would be about the same or even higher for other CUNY colleges. Since a substantial majority of our graduate students received their undergraduate degrees from Queens or another CUNY college, the five year limit would probably disqualify a substantial number of our graduate students, indeed, the neediest among them.

I would also urge that the "first year of graduate school" be defined in such a way that it is a full year equivalent (e.g. the first 12 credits). Otherwise, the working part-time student would be eligible for Pell aid for a fewer number of credits than would the (possibly) more affluent full-time student.

How a 10 percent set-aside of College work-study funds would help graduate students. Queens awards 16 percent of its College work-study money to graduate students. In the current academic year 64 students received an average award of $1,432. The Graduate Center had 110 doctoral students receiving work-study (since they have only graduate students, this represents 100 percent graduate awards). Thus, a set-aside would not provide a higher level of CWS funding than these two populations currently enjoy. I do, however, understand that many colleges limit eligibility for CWS funds to undergraduates. Our experience clearly indicates that graduate students do need such assistance and will avail themselves of it if given an opportunity. A setaside is probably not needed but rather a clear indication to graduate schools that graduate students are eligible and can make excellent use of this program.

Graduate level Cooperative Education at Queens. For just over two years Queens College has had a cooperative education program for graduate students, funded through Title VIII. Although the program has not been in operation long enough to evaluate its full potential, it is clearly a success. To date over 200 graduate students have been served in some manner, as the program provides a wide range of services such as career counseling and guidance in resume writing and interview skills. Approximately 50 students have been placed in academically relevant jobs for which they earn both salary and course credit. Although numerous other students await placement, we feel that only a fraction of the available population of students has yet been served. A recent survey conducted by the Coop Ed staff revealed that 75 percent of the respondents would be interested in a coop placement; 58 percent would be willing to travel to accept such a position; and 30 percent even indicated a willingness to relocate.

Cooperative Education has typically been thought of as a program for undergraduates—and frequently for more technically-oriented institutions. Such a program makes a lot of sense for graduate students such as those at Queens, however. A substantial majority must work anyway, so the opportunity to do so within an academically relevant placement that will increase the student's employability after graduation is very attractive. It is essential that graduate-level coop be conceptualized primarily as an academic program, as opposed to a source of financial aid. In such a program, however, a professionally oriented graduate student can simultaneously earn needed dollars and acquire a competitive edge in a tight job market. I would urge your committee to adopt any proposals that would increase access to coop programs for graduate students.

A recent report by the Graduate Education Subcommittee of the National Commission on Student Financial Assistance and a position paper by the Council of Graduate Schools have emphasized the importance to the nation of improving access to graduate education via increased federal support for graduate students. The implementation of the proposals discussed here would constitute an important step forward to provide support for just that segment of our graduate population which has the most serious financial need.

Thank you for inviting me to speak to your subcommittee. Should you need any further data regarding financial assistance or cooperative education for graduate students at Queens College, do not hesitate to call on me.

STATEMENT OF HELEN S. CAIRNS, DEAN, THE GRADUATE SCHOOL, QUEENS COLLEGE, CITY UNIVERSITY OF NEW YORK

Ms. CAIRNS. Thank you, Mr. Chairman. I, too, am delighted to be here. Thank you for inviting me.

Let me first tell you a little bit about Queens College, because I think it's rather different from the institutions, the other institutions, represented here.

We are a large, urban, commuter institution. We have only masters level programs at Queens. While the City University of New York has a graduate center, located in Manhattan, where the doctoral programs are institutionally housed, we have many of our faculty, about a third of our faculty, are doctoral—members of doctoral faculty, and we have doctoral students working on campus in our labs. But we have no doctoral programs. All of our programs are masters programs and the students that we have to be worried about providing financial aid for are masters students.

Queens has a title III grant. We also have a recent and very exciting FIPSE-funded program for training literacy teachers. We've also got a lot of programs in teacher education, speech and hearing sciences, computer sciences. We have the only public library school in a very large geographical area. We have teacher training for English as a second language, and we have very fine programs in painting and sculpture and music. So, we have a wide variety of masters level programs.

Now, our students are not affluent. They are from low- and middle-income families. A third of our undergraduates do receive Pell grants, and our graduate students come to us not just because our programs are good, but because we have a very low tuition, just about a thousand dollars a semester for New York State residents.

I want to talk to you particularly today about my concerns about the lack of financial aid for our students, and in particular, I wanted to address your ideas for a graduate level Pell program, for the College Work-Study Program for graduate students, and also to expand the Cooperative Education Program to include graduate students whenever possible.

We've got about 2,700 graduate students at Queens out of 1,600 registers students. About 2,000 of those are matriculated students. We've got 49 masters programs in which they matriculate.

Now, a major problem for these people is that they have to work in order to pay for their education. About 70—we had a recent survey that demonstrated that about 75 percent of our students work more than 20 hours a week and only a few over 10 percent are able to attend full time.

So, this part-time status is a major problem because, obviously, it extends the time it takes them. It's not unusual for a student to require 4 or 5 years to finish a 30- to 40-credit masters program. We have no way of really measuring the number of students who want to come, would be accepted into programs, but simply don't give it a shot because they don't have the money, or people who have to drop out for financial reasons.

We have four major financial aid programs. There's the NDSL, the College Work-Study, and then we have two local programs. There's the tuition assistance program, which is a State program, but it's available only to full-time students. So, most of our students aren't eligible.

Then we have a CUNY-funded partial tuition waiver program, based solely on need. Now, the reality is that when you do a needs assessment for our students, since tuition is low and the budget levels, allowed budget levels, are low, even a modest income from working prevents students from being eligible for any kind of financial aid. Consequently, only about 25 to 30 percent of our students receive any kind of aid.

To give you an idea of the magnitude of the problem, this year 258 students had needs assessments computed for them by our financial aid office. Only 57 percent of the total computed need was met for these students. None of them received full aid and several of them received absolutely nothing.

Furthermore, about 20 percent of our students incurred debts for the Guaranteed Student Loan Program of about $1.2 million, which is a very high level of debt to be incurred by students of this income level, who really don't expect very high salaries in the future.

Now, the expansion of the Pell Grant Program to first-year graduate students would represent a major opportunity for students such as ours, especially with an increase on the half-cost provision. More students would have access to graduate programs. The programs would operate more efficiently in that students would be

able to finish in a more timely fashion. And for a few students the award would have the double value of allowing them to be full-time students and thus eligible for the State tuition assistance program award.

I'd like to suggest that since our neediest students do take a long time, frequently, to finish their undergraduate program, the 5th year restriction would render ineligible some of our most needy and worthy students. Also, I'd like to suggest that the first year graduate school be defined as the first full-time equivalent year, or 24 credits.

We award about 16 percent of our college work-study money to graduate students at Queens. That's our masters students. So, we constitute proof that graduate students will avail themselves of these funds, if given an opportunity to do so. I understand, and I only just found out, that recently, that a lot of colleges don't even have graduate students eligible for college work-study funds. And so I would suggest that what you need is not so much a specific set-aside, but a clear statement of graduate student eligibility for that program.

Now, we also have at Queens a cooperative education program for graduate students, funded under title VIII. I think ours is the first purely graduate program ever funded. Other graduate programs are sort of offshoots of undergraduate programs. We haven't yet been able to evaluate its full potential because it's new, but it's very successful. We've served over 200 students and career counseling and that sort of thing. Over 50 have been placed in academically relevant jobs, for which they earn both salary and course credit.

Now, co-op ed has traditionally been thought of as the program for technologically oriented undergraduates, and it has had great success for that population. But it also makes a lot of sense for graduate students, like the ones we have at Queens, since a substantial majority have to work anyway. The opportunity to do so with an academically relevant placement that will increase the student's employability after graduation is very attractive. So, I would urge you to do anything that you can do to increase the access of co-op programs to graduate students.

We all know that recent reports by the Brademas committee and by the Council of Graduate Schools have emphasized the importance to the Nation of improving Federal support for graduate students, and I'm delighted to see that this committee has as its goal doing just that. Thank you very much.

Mr. SIMON. We thank you very much. On the Pell grant, and you made a couple of points that I hope we can modify the proposal on, and I think make a great deal of sense, in general, as you look at the legislation, how do we help that part-time student more, if I can ask you to be more specific?

Now, you have already suggested that we go to the FTE for that fifth year and I think that would clearly be a help.

Ms. CAIRNS. Yes; because a part-time student, 1 year for a part-time student, is going to be less than 1 year for a full-time student.

Mr. SIMON. Right. Yes. But are there other ways that we can be of assistance to that part-time student or the—my colleague from Wisconsin refers to it regularly as the "nontraditional student."

Ms. CAIRNS. Well, the Pell grants are available to part-time students.

Mr. SIMON. Right.

Ms. CAIRNS. Right? So, I'm suggesting that that would provide financial assistance for that population.

Mr. SIMON. Right.

Ms. CAIRNS. Whereas our State program does not.

Mr. SIMON. Yes.

Dr. Rodriguez, I appreciate your testimony also. This has nothing to do with why you're here today, but just out of curiosity, here you're a specialist in Latin American history. Does anyone from the State Department ever consult, as Latin American policy is formulated, with anyone with any knowledge of Latin American history?

Dr. RODRIGUEZ. Sometimes. I have not been consulted but I know of colleagues that have.

Mr. SIMON. All right. Well, there is a glimmer of hope there for us.

Dr. RODRIGUEZ. I should point out that many agencies of the Federal Government hire people who have been trained in the area studies programs, and over the last few years what has happened is that many students, people with Ph.D.'s, whom I have known personally, who have not been able to obtain positions in colleges and universities, have entered Federal employment, are working for private institutions such as banks, private companies, as wide ranging as Avon and Ford and other areas right now. I just learned that Ford, which is going to open up a plant in Mexico, is seeking trained scholars on Mexico, to assist their specialists.

So that area studies are important. The problem, I think, is not so much that there isn't—that the Federal Government and other institutions do not seek information. It's just that there aren't enough people who are trained and typically, when something happens we discover that that's an area that we haven't emphasized.

Mr. SIMON. And that leads me to your comments on title VI, and I am one of these strong advocates of title VI. I join you in that. This is an area where I hope Congress will—we face this constant uncertainty where an administration says we're going to zero this out and then we go back and fund it, but fund it woefully inadequately compared to the need, and you mentioned Soviet studies.

Just a few weeks ago I heard, and I have not checked out the validity of this, but I have no reason to believe it's not valid, that there is no place where Albania is now being studied. I have no reason to believe that Albania is going to emerge into the headlines. But Albania has an old leader, who isn't going to live too much longer. Who knows what's going to happen? And we simply are not developing the resources to cope with what may emerge in that very important part of the world.

So, I applaud your comments there.

Hispanics in higher education, we have had a series of hearings on this whole question, the first in the history of Congress. But you are correct that we have not—and here all of you, anything that can be done, whether at Queens or Duke or the University of California, that can be done to encourage greater participation, is desirable.

One of the things that we need, looking at it from a provincial perspective of the State of Illinois, is a faculty and administration presence of Hispanics so that Hispanic students feel some comfort in being on a campus. I just had checked at Southern Illinois University with about 40,000 students, we have one Hispanic instructor, in a State with a very substantial Hispanic population.

So, we clearly have a long way to go there.

You mentioned, Dr. Goodwin, your various problems. What is the endowment of Duke, if you happen to know?

Mr. GOODWIN. Well, you can't answer that easily. The university has an endowment which I think is about $250 million now. But it also has, by right, access to a portion of the Duke endowment, which is a separate, private, philanthropic foundation, set up by Mr. Duke himself. So, if you add the imputed value, it probably comes to between $350 million and $400 million.

Mr. SIMON. So that Duke would be among the top 10 or 15 schools in the Nation, probably, in terms of total endowment?

Mr. GOODWIN. Down toward the bottom of that list, yes.

Mr. SIMON. OK. But clearly, if Duke is having problems, then other schools are having even more severe problems, in confronting the very kind of problems that you're talking about?

Mr. GOODWIN. I have no doubt.

Mr. SIMON. We had a witness yesterday who mentioned the problem, and he was speaking specifically in the field of engineering, but the decline in the quality of faculty. Is this—we are addressing really primarily—we've been addressing the quantitative problem. Is there a qualitative problem that we somehow ought to be addressing in this legislation, or is there—I guess the most basic question, the more basic question, is there a qualitative problem, and if there is, should we be addressing this in some way that we are not?

If I may address that to all three of you.

Ms. CAIRNS. I'm sure we all three of us want to comment.

Mr. GOODWIN. I think there is, undoubtedly, a problem, and I really tried to imply that when I talked about how we see so few, relatively, of our very best undergraduates selecting entry to graduate school as opposed to entry to one of the professional areas now. I think at the same time you are addressing it in title IX, through the fellowship program that you're proposing, and I think that would go some distance toward attracting some of these absolutely first-rate students back to graduate school and then into the teaching professions.

More could be done but I think that's a marvelous first step.

Dr. RODRIGUEZ. That's a very critical problem. Irvin has a small school of engineering. We are seeking, as in all our programs, to obtain national standing. And it is very difficult for three reasons. First, the question of instrumentation. Despite the fact that we're a new institution, having existed for only 20 years, our equipment is woefully obsolete. We lack virtually everything.

The laboratories of private industry are so much more advanced than ours, as, parenthetically, are the laboratories in foreign countries. We have situations where faculty from Irvine, and graduate students, for example, are going to Switzerland to do experiments, and so we have faculty who have to wait in line in major international laboratories to do experiments.

That's a very serious problem and I think that if the question of instrumentation could be addressed, that faculty could be attracted to the university.

The very best engineering Ph.D.'s will want to go where they can do the best work. And if it's the case that private industry provides them more opportunities, they will go to private industry. Of course, there's the added incentive that private industry pays so much more.

The second problem is the problem of graduate students. I just recently had a discussion with a professor of engineering, who is developing a program to support engineering students at Irvine. He has been promised funds from local engineering firms, to provide fellowships for engineering students, at the level of $15,000 to $20,000 a year, because that's the only way that he feels that our school of engineering can be competitive with private industry.

People with bachelor's degrees in engineering can earn more money than associate professors at our institution. So, that's a very serious problem and that means what we have to do is invite foreign professors. We have, out of a faculty of about 27 engineering professors, we have about 5 people who received their training abroad, and who are not American citizens.

The same thing is true of students. In order to keep our programs functioning, and one of the realities of graduate education and research, is that one cannot develop a graduate program and suddenly cut it in half as far as student enrollment is concerned, because graduate students are integral to the graduate and research process. If a school of engineering or of any other area suddenly has a massive drop in the number of graduate students, that school is going to crumble. And the only way for engineering people to support their programs is to allow an increase of foreign students. So, our problem is not too many foreign students.

Mr. SIMON. If I could move aside from engineering, you asked the same question, if we have a problem with the quality of faculty and is there some way we should be addressing it that we're not, forgetting engineering for a moment.

Dr. RODRIGUEZ. I don't believe there is an overall—at least from the University of California and the other institutions that I personally know, I don't believe there is a specific problem of quality right now, that is, in the areas of sciences. I think we still have outstanding faculty in the humanities and in the social sciences we do as well.

The problem is in the future. That is, right now, particularly in the humanities and social sciences, but also, to some degree, in other areas, we are about to lose an entire generation of scholars, people who have obtained their Ph.D., people who have done their first work, and I could give you a very personal example. My wife has a Ph.D. in economic history. She has just had her first book accepted, which won a major prize. She has an appointment, a temporary appointment, which will come to an end at the end of this year. There are no faculty positions available for her and she has to make a decision on whether she's going to continue as an academic or enter private business.

I fear that she will probably have to enter private business. And that is true of a very large number of outstanding people. Part of

this has to do with the cutback in support. The Federal Government is too intricately involved in graduate education and research and many areas have, for years, supported Ph.D. scholars in the research areas.

At Irvine, for example, particularly in the physics and the other areas, we have a large number of people who are scholars, but who do not have faculty positions. They have research appointments and those research appointments are sustained through grants. There are people who are world class scholars, equivalent to full professors at our institution, but who do not have a faculty position. They have research appointments and they are happy to do so because they are able to work in their research.

These kinds of supports have been able to keep a large number of scholars in the research and in the graduate enterprise without the institution having to have faculty positions. That sort of support is being reduced, and that sort of support has never existed in the humanities and the social sciences. So that in a very real sense we face a crisis, I would say, in the next 5 to 10 years.

Ms. CAIRNS. About the problem of quality of engineering faculty.

Mr. SIMON. Yes?

Ms. CAIRNS. We don't have an engineering school at Queens. The school of engineering is located at City College, for the City University. But we do have a computer science department, and computer science in the doctoral program is part of engineering. However, we are getting, now, there has been authorized a new doctoral program in computer sciences.

Mr. SIMON. If I may interrupt, I'm not so much interested just in engineering, as such, as I am in the overall problem.

Ms. CAIRNS. OK. Let me talk about that. The problem is not so much quality as it is quantity. We can never get enough computer science faculty. The computer science department is the one department that's always hiring. We had a review committee down not too long ago. They were absolutely horrified at the number of students, and at the teaching load that our computer science faculty has to contend with. The students are absolutely overrunning us. I don't know how many undergraduate majors we now have, but we now have 200 masters students in computer science, and every semester the applicants are just booming.

Now, this means that the faculty, even though they are perfectly fine faculty, they cannot realize their potential in terms of quality because they teach—we're talking about people who teach a three-course-per-semester teaching load, to large numbers of students, lots of international students, lots of advisement.

So, the problem is that we can't really develop the quality of, the potential of, the faculty, because they are overworked.

Now, what you could do about that, I don't know. We also have an infrastructure problem. We don't have enough computers for all these kids to study computer science.

But in terms—you know, I guess the most important thing you could do is something about reducing the teaching load. But how could you possibly reduce the teaching load? The students are there and they have to be taught. It's very, very difficult to recruit adequate numbers of faculty.

Mr. SIMON. Mr. Gunderson.

Mr. GUNDERSON. Thank you, Mr. Chairman, and I thank all of you for your testimony. I was listening to the questioning and reviewing some of your prepared testimonies while you were talking. I'd like to ask just one question that deals with the issue of fellowships, and it looks like there will probably be some new initiative in the whole area of fellowships for postgraduate work. What ought they be based on? Should they be based on merit? Should they be based on financial need? Or should they be based on field study?

Mr. GOODWIN. Would you like roundrobin again?

Mr. GUNDERSON. Sure.

Mr. GOODWIN. This is simply a personal judgment. I think that this program should be based entirely on merit. I'd let the students select the field into which they'd like to go. I think that there is a good deal of justification for the other criteria you mentioned in other programs. I'd like to see these kept strictly on the grounds of merit.

Dr. RODRIGUEZ. I agree about the importance of merit. I think, in general, that the Fellowship Program ought to be based on merit. There should also be other sorts of support based on need. It's difficult to judge the quality of the graduate student. I am convinced, after being graduate dean for 4 years, that graduate record exams, that grades are really not very good predictors of success.

So, when we're admitting students, we are betting that they will succeed. And merit is a guess, an educated guess, but it's a guess, to be sure.

In addition to that, there is the problem that many students, both majority and minority students, both men and women, do not necessarily obtain the best undergraduate education, either because they were not mature or prepared enough for it when they were undergraduates or because they attended institutions which were inferior or did not provide them the kind of support that they should have had, so that later, when they discover their vocation, they have an opportunity to change, and this is one of the great advantages of the United States. Most other countries that I'm familiar with do not provide their citizens with an opportunity to recoup from earlier mistakes or from poor education. We have done an excellent job in that area and I think we have to have a program which supports needy people, who may not have had the best of grades to compete in this merit area.

The reason that merit is critical is that sometimes the most meritorious people are the people with the best potential, may either not need a specific need base as "need base" is defined and what we have to keep in mind is that need base is defined in a very strict way so that the best students may just miss qualifying for that. If need is the principal criteria, many of our students might not qualify.

I think that students are the best judges of the field and it's my impression and also, I think, a fairly widespread feeling among academics that students are, in fact, making the best choices. We don't have massive concentrations in areas that are not of interest both to the public and to the students.

Ms. CAIRNS. I think this is a real challenging question because, clearly, we would all want these fellowships to be based on merit. I mean, you don't want—I mean, this is a merit program. On the

other hand, you don't want students accepting these programs who could have been living off of clipping coupons, you know.

So I really think that the challenge to you is to figure out an intelligent combination of merit and need criteria because it's like Jaime said, a real needs assessment where you set a needs base very, very low and say this is a program only for meritorious, needy students is not the way you want to go. Neither do you want to say that this is for very meritorious students ignoring their need.

It seems to me that you have to develop some rational balance so that you really get the highest quality students you can find, but you make sure that they really do have some reasonable level of financial need. In other words, you want to find good students who couldn't make it without the program or who could only make it by going very, very deeply in debt or students who might otherwise have gone to private industry and left academia, the lost generation that Dean Rodriguez was speaking of.

But I don't think that it should be based on discipline. I agree that the idea is to find the students that we might lose in all disciplines—high quality, high potential students—and then try to help them and let them choose their areas.

Mr. GUNDERSON. I find your responses interesting and challenging because I am not sure I agree. It would seem to me that if we are promoting learning for the sake of learning then what all of you have said is absolutely correct. But I think if you must sit on this side of the table and look on Government's role as establishing programs and policies which serve the greatest public good. Because, after all, what is the justification of our involvement? Is it just learning for the sake of learning? Or do we have to have a concern also about the greater public good? I don't know how we can ignore field of study.

I agree with the chairman. He has challenged me over the last 3 years that we need to look at areas where it is in the interest of our country and, hopefully, our world that we make sure that those areas do not go by the wayside.

I must ask you all again from a public policy perspective now, not a dean of a graduate school, if you were a Member of the Congress, would you not take a little bit different angle in your response?

Ms. CAIRNS. But, Mr. Gunderson, just sitting here, what disciplines would you select as not socially useful? I mean, what disciplines would you select as the disciplines that we can allow to die? I mean, we have spoken just today about the sciences, we have talked about engineering and technical programs, we have talked about the social sciences, we have talked about the enormous importance of language studies and international studies of various kinds.

I don't think we have missed a single academic discipline just this morning, except the arts and I would like to put in a word for the arts. [Laughter.]

Mr. GUNDERSON. OK.

Ms. CAIRNS. So what's going to go?

Mr. GUNDERSON. Well, my concern is that some fields of study have adequate participation because they are, quote, "fat." They

are the thing of the times. I mean, look at the high tech. I don't think that we need to encourage people to get into high tech right now. Everybody wants to get into high tech. That's the neat thing to be in.

I think the chairman brought up Albania. I think you can look at a lot of foreign languages, a lot of foreign countries. If America, frankly, had had more interest in Iran in the 1960's and 1970's we probably never would have had the Iran hostage crisis and certainly not one that America didn't understand and didn't know how to respond to.

There are many areas like that. The areas that are not popular may be the areas where there is a role for Government to provide an incentive that equates to that choice among the students.

Mr. RODRIGUEZ. Could I ask for a clarification? When you are referring to fields, I assume you are talking about the National Graduate Fellows Programs, which I understood is for study in the arts, humanities and the social sciences. Now were you suggesting areas within that or those areas?

Mr. GUNDERSON. Oh, within those areas. The question started with, what ought the criteria be? Ought it be merit? Ought it be need? Ought it be field of study? You all pretty much came down in the area, first, of merit and, once in a while, a little bit of need. I guess I felt a little bit uncomfortable with that going back to my rural constituents in western Wisconsin and saying, "We are going to provide x amount of dollars for fellowships in areas that there is all kinds of interest in today and we are going to give to people who have no financial need, but a lot of interest and are pretty smart." I think from a public policy perspective I could defend the program and the need to do it, if we also included this area of field of study.

Mr. GOODWIN. Could I say a word or two on that?

Mr. GUNDERSON. Sure.

Mr. GOODWIN. I understand your motivation and I have a great deal of sympathy for it. I think the principal difficulty is in identifying what these fields will be at the time the students come out of the pipeline and I think that the history of our attempts to identify these fields has suggested to us that it probably can't be done and perhaps the best guide is the tastes of the students themselves.

These are students who, to begin with, will be the brightest students at the undergraduate level. They will have had an opportunity to understand the field to some degree and what they may well be responding to is the excitement, the opportunity that lies in different areas. My expectation is that those students will probably be better guides than a committee of deans or a committee of Federal employees or any other group that will attempt to say that applied mathematics is going to be what we need 10 years from now as opposed to econometrics.

I think that it's a fundamental problem of forecasting but I think that this device of allowing the student to pick is probably as good as we have got.

Mr. RODRIGUEZ. If I may clarify my answer. I was answering from the assumption that there would be no change in the general definition of the areas for the national graduate fellowships. I don't feel that these fellowships ought to go to the sciences, for example.

The sciences, relatively speaking, are well supported in comparison to the arts, humanities and the social sciences. So I would support restricting these national fellowships to those areas. But within those areas, I agree that we cannot really be the best judges.

The record of students, I think, is fairly strong. They have gone into the areas that appeared to be the areas of greatest need and greatest demand.

Mr. GUNDERSON. I appreciate your insight. One very quick final question. I think you can all give me quick answers to this.

Can you give me a breakdown, percentagewise, of the type of graduate student at your school? How many would you say are there as, quote, "academic professionals?" How many would be there for professional training or retraining? How many are there purely for personal enrichment? Are we looking at one-third, one-third, one-third? Fifty, 25, 25? How would you break down those three areas of your graduate students?

Mr. GOODWIN. Could you clarify the first two? Is the first category scholar?

Mr. GUNDERSON. I would use the doctor's wife as the example—right now I think he would allude to her as an academic professional and I mean that in the most positive sense. I would say, however, that someone who is working at Control Data and goes back for specialized training in computer science, mathematics, that type of science as a part of their professional role in the private sector; a doctor who comes back for graduate study would be one who is there from a professional need rather than there for studying academics for the purpose——

Mr. GOODWIN. Well, in our case, we are predominantly the first category and I would say maybe 10 percent of each of the latter two.

Mr. GUNDERSON. OK.

Mr. RODRIGUEZ. The same thing is true of the University of California. The State of California, as you may know, has the three-tier system and the State university provides masters level programs. The University of California principally emphasizes doctoral programs with only a few masters levels programs. I believe we have about 29,000 graduate students and I would say that of those 80 percent are doctoral students who expect to be either academics in the sense that they will go to other institutions to teach or research or who expect to be research professional in private or public laboratories.

Ms. CAIRNS. I happen to have data.

Mr. GUNDERSON. Aha. [Laughter.]

Ms. CAIRNS. Our cooperative education program conducted a survey of our graduate students and the respondents look demographically pretty much like our whole population. So here you go. For professional licensing, 27 percent. This is lots of teachers, which is, by the way, something we haven't talked about today that's awfully important, and that is graduate-level teacher training. So, these are people who need to get their masters degree to keep their teaching jobs.

Then, upgrade my career potential financially, 26 percent. Career change, 15 percent. Entry into career, 21 percent. Intellectual challenge and enjoyment, 8 percent.

Mr. GUNDERSON. That's astounding. If I calculated correctly, that's about 86 percent of yours that would be in the area of professional training and retraining.

Ms. CAIRNS. Right.

Mr. GUNDERSON. OK. Thank you, Mr. Chairman.

Mr. SIMON. Thank you. If I could just make one comment on the merit versus need thing. In fact, when you get to graduate school, the status of the students is such because of age and other factors that they are classified as "independent students" and, even if their parents may happen to be wealthy, they, in fact, would qualify as needy students. So that even a program like the Javits Program that is a merit-based program will, in fact, primarily overwhelmingly be helping students who would be classifed as needy students. So that when we get to graduate programs the distinction between what is a needy student and what is a merit-based student probably gets to be a pretty fuzzy kind of a delineation.

Ms. CAIRNS. Could I speak to that point because that whole issue is also important for women? Women frequently—so you have a wealthy husband and that makes you look not needy. Maybe you would like to leave him, you know. You would at least like to have the option. So, you know, it really is very difficult when you have—you cited an example of a statutorily needy student with a wealthy family. You can also look unneedy when really you are judged by your own merits. So it's real tricky.

Mr. SIMON. We thank the three of you very, very much.

And since we don't have any hearings this afternoon, the hearing stands adjourned.

Thank you.

[Whereupon, at 10:51 a.m., on Thursday, March 29, 1984, the subcommittee was adjourned.]

[Material submitted for inclusion in the record follows:]

AMERICAN MEDICAL ASSOCIATION,
Chicago, IL, April 25, 1984.

Hon. PAUL SIMON,
Chairman, Subcommittee on Post-Secondary Education, Committee on Education and Labor, U.S. House of Representatives, Washington, DC.

DEAR CHAIRMAN SIMON: The American Medical Association is pleased to submit the enclosed statement for the record of the recent hearings concerning financing for post-secondary education.

We appreciate the opportunity to express our view and urge you to carefully consider our comments.

Sincerely,

JAMES H. SAMMONS, M.D.,
Executive Vice President.

STATEMENT OF THE AMERICAN MEDICAL ASSOCIATION

The American Medical Association takes this opportunity to submit its comments for the record of the recent hearings concerning the financing of post-secondary education. The focus of our remarks is on the importance of continued availability of federal financial support for students seeking careers in medicine to ensure that qualified individuals are not deprived of a chance to pursue a medical career because of insufficient financial resources.

GENERAL COMMENTS

Medical education today is very expensive. The costs that an individual can incur can be overwhelming to all but the wealthy. Medical school tuition can cost as much

as $75,000 over a four-year period. That amount does not include ancillary costs and living expenses and costs incurred in obtaining an undergraduate degree. Moreover, it is likely that the cost of a medical education will continue to rise in coming years as medical schools' costs increase.

The AMA believes that access to a medical education must be available to qualified persons from all socio-economic backgrounds. The medical profession—and indeed all of society—benefit from a diversity of economic as well as cultural and ethnic backgrounds. In order to ensure that medicine does not become the province of the wealthy, a broad array of financial assistance programs must be available for qualified medical students. We do believe, however, that in light of the earning potential of physicians federal student assistance should as a general rule be in the form of loans and loan guarantees rather than grants.

GUARANTEED STUDENT LOAN PROGRAM

Currently, a primary source of financial aid for medical students is the Guaranteed Student Loan (GSL) program. During the 1982-83 academic year, nearly 58% of medical students relied on GSL funds and these funds provided approximately half of all financial aid to medical students.

The AMA strongly supports adequate funding for the GSL program and believes that medical students should be allowed to continue to participate in the GSL program. The future of our health care system depends largely on the ability of medical schools to attract the most qualified students regardless of economic background. If medical students were excluded from the GSL program, the opportunity to pursue a medical education would be put out of the reach of many students who lack private financial resources.

H.R. 5240

H.R. 5240 would reauthorize and amend the Higher Education Act of 1965, and this statement will comment upon a provision of the bill which represents a significant change from existing law.

LOAN LIMITS

Currently qualified medical students can borrow a maximum of $5,000 annually and an aggregate amount of $25,000 during their school career (including GSL funds borrowed as an undergraduate). H.R. 5240 would raise the maximum annual limit to $7,000 though it would keep the aggregate loan limit constant.

The AMA supports raising the current annual loan limit from $5,000 to $7,000 per year. The annual limit has not been increased in a number of years. During this period medical school tuition has increased by between 5 to 10% per year. Thus the AMA believes that an increase in the annual limit is needed to ensure that the GSL program continues to be a primary source of financial aid for medical students. We also believe that in order for the increased annual limit to be meaningful, the aggregate limit should also be raised. Otherwise it is likely that many medical students will use all of their GSL eligibility before they are able to finish medical school.

OTHER FEDERAL FINANCIAL ASSISTANCE PROGRAMS

The AMA also supports reauthorization of and adequate funding for the Health Professions Student Loan program and the Health Education Assistance Loan program. These programs provide valuable financial aid for many medical students.

Finally, the AMA supports the continuation of the National Health Service Corps with adequate field strength to assure the availability of health care in shortage areas. While we do not support funding of new NHSC scholarships, since other techniques (i.e. loan forgiveness, volunteers, etc.) could be made available to better advantage, we support continued funding for persons currently in the pipeline. The AMA would also support a program of loan forgiveness as a recruitment technique in order to meet future field strength requirements of the Corps.

CONCLUSION

The AMA believes strongly that qualified persons regardless of their economic background should be afforded the opportunity to pursue a career in medicine. We urge you to continue federal financial support of medical education through the GSL and other federal financial assistance programs as indicated above to ensure that qualified students have such an opportunity.

PREPARED STATEMENT OF DR. JOHN BRADEMAS, PRESIDENT, NEW YORK UNIVERSITY

Mr. Chairman and members of the Subcommittee, I should like at the outset of my testimony to extend a warm greeting to the distinguished Chairman of this Subcommittee and my valued friend of many years, Congressman Paul Simon of Illinois, and to all the Members of the Subcommittee.

It is, of course, a particular pleasure for me to be here today because, as you know, for the entire length of my own service in the House of Representatives—twenty-two years—I was a Member of this Subcommittee, and, if you will allow me to say so, I take continuing pride in having worked with some of you and all of your predecessors during those years to shape the policies of our national government in support of higher education.

Now that I have had the opportunity to serve for nearly three years as President of New York University, one of the foremost urban universities in the nation and one of the largest, private universities in the world, I must tell you that I am even more convinced of the wisdom of the judgments that you and I and our predecessors made over the last quarter of a century in adopting these policies.

You will not be surprised to learn that I have not lost my concern about public policy for higher education—a concern that goes beyond the needs and interests of my own university. During the past two years, I served on the National Commission on Student Financial Assistance, and chaired the Graduate Education Subcommittee of the Commission. As you know, the Commission last December issued its report on graduate education with the unanimous support of its 12 members.

This morning I should like, first, to report to this Subcommittee on the findings and recommendations of our Commission with respect to graduate education.

I should then like to put the report in the perspective of the current legislative proposals put forth by Chairman Simon as this Subcommittee considers the reauthorization of the Higher Education Act of 1965.

THE COMMISSION

Before summarizing the findings and recommendations of our Commission, I want briefly to describe its structure.

The Commission was created by the Education Amendments of 1980. Its twelve members were appointed, four each, by President Reagan, Speaker O'Neill, and the President Pro Tempore of the Senate, Senator Thurmond. My colleagues on the Commission included Members of Congress, leaders in higher education, business and the professions, Republicans and Democrats. I was one of Speaker O'Neill's appointees. (A complete list of the Commission membership is appended to this testimony).

The Commission was charged by Congress to examine some of the most pressing issues that affect Federal student financial assistance and to recommend modifications in existing programs. The Subcommittee on Graduate Education focused mainly on master's and doctoral programs in the arts and sciences because innovations and new knowledge depend most heavily on them. We also treated the question of student financial assistance in the context of the graduate enterprise as a whole because research, training and teaching are inseparable activities.

During the course of a year, our Subcommittee gathered testimony from witnesses from universities, industry, government and foundations. We commissioned research papers and solicited comments from a wide range of higher education groups and professional associations.

THE FINDINGS: SIGNS OF TROUBLE AND EROSION

Our inquiries led the Commission to several unanimous conclusions. First, we were convinced that the scholarship, skills, trained intelligence and historical perspective that our universities yield are vital to our national interests in three areas: security and diplomacy, economic growth and the quality of American life. Let me touch briefly on each of these dimensions.

Projected defense spending over the next five years of nearly $2 trillion will generate a gargantuan demand for advanced scientific knowledge and capabilities. It is doubtful that such a demand can be easily met. The Committee on Armed Services of the House of Representatives, for example, warned in April 1982 that ". . . critical shortages in a variety of skills continue to plague the military. Greater engineering shortfalls in the future will likely harm the U.S. defense posture."

Furthermore, American military strategy and technology, as well as our intelligence operations, depend on graduate-trained experts in a host of specialties, not

only in science and engineering but in the languages, cultures, geography, history, literature and religions of other peoples of the world.

Graduate research and training are also major sources of the new ideas and inventions that drive our economy. Wassily Leontief, Nobel Laureate in economics and professor at New York University, testified before the Commission on the needs of the economy for men and women with advanced training. He told us that, because of the characteristics of modern technology, our requirements for highly skilled scientists, engineers, managers, public administrators and teachers will, in the future, grow even faster than the economy.

With respect to the quality of American life, universities have contributed to our health and nutrition, to the organization of our domestic and work lives, and to our civic and aesthetic culture. The solutions to our most pressing problems in areas such as poverty, public education, energy and mass transportation in large measure will come from university graduates.

Even as the Commission became convinced that the nation's well-being depends on its institutions of advanced education, we heard testimony that led to our second unanimous conclusion: America's graduate programs in the arts and sciences are in trouble.

The Commission detected signs of trouble and erosion throughout the graduate enterprise. For example:

Between 1969 and 1981, the total number of stipends for graduate study awarded by Federal agencies fell from nearly 80,000 to approximately 40,000. During the same period, tuition and fees more than tripled.

Many highly talented students are not pursuing advanced degrees in the arts and sciences—leading universities report that applications for graduate schools have declined sharply in both quality and quantity.

Women continue to be dramatically underrepresented among doctoral recipients in the sciences and engineering, as are minorities in all fields. For example, blacks, who compose 12 percent of the population, received only 3 percent of the doctoral degrees awarded in 1981.

Universities are unable to keep pace with the need to renovate and replace outdated facilities, leading knowledgeable observers to describe the condition of university laboratories as "pathetic".

During the 1970s, despite a "knowledge explosion," escalating costs compelled university libraries to cut their acquisition rate by 20 percent.

Our capacity to train experts in foreign languages and cultures at the graduate level is deteriorating at a perilous pace.

There is an exodus from the campus to corporation of some of our best students and teachers in fields such as engineering and computer science.

A depressed employment market in the humanities and social sciences portends the loss of a generation of scholarship in those fields.

RECOMMENDATIONS: AN AGENDA FOR FEDERAL ACTION

These and other signs of erosion and distress led to the Commission's third unanimous conclusion: Urgent Federal action in support of graduate research and training is required to avert a crisis that endangers our national well-being.

Although financing graduate education is not the sole responsibility of any one sector of our society, it is the special obligation of the Federal government to ensure stable and continuing support of graduate research.

In the words of Simon Ramo of TRW, Inc., chairman of President Reagan's Transition Task Force on Science and Technology, "The government, and not competitive industry, is the proper and natural source for funding university basic research. Because it benefits all citizens in the end, it is right for all citizens to share its costs."

The Commission formulated an agenda of ten goals for Federal action on behalf of graduate education. Let me review first those that affect university training and research generally. Then I shall turn to the recommendations on student financial assistance.

The Commission urged the Federal government actively to support the research function of universities in three areas.

First, grants from the Federal government for basic and applied research at colleges and universities should be increased at a rate sufficient to keep pace with inflation. Moreover, because uncertainty about anticipated support can seriously undermine the entire research effort, granting policies should ensure stable, multiyear funding.

Second, the Commission recommended that the Federal government substantially increase funds in existing programs to improve university laboratories, equipment,

and instrumentation. Private business and industry should also be encouraged, through tax incentives, to donate new and used equipment to universities.

Third, the Federal government should increase grants for operating support to college and university libraries. It should also encourage contributions to libraries from business and industry, and should continue to assist libraries in their efforts to improve their research services, preserve materials and increase access to them.

In the area of faculty development, the Commission recommended that the Federal government provide support to universities in the form of multi-year salary stipends to attract and retain promising young scholars in all fields. The participation of minority and women faculty members should be especially encouraged.

Federal support should also be directed toward ensuring that our universities are able to meet national requirements for highly trained experts. In particular, funds for research, instruction and graduate study in foreign languages and cultures should be increased.

In preparing its report, the Commission found that there was very little basic information available about graduate students, how they finance their advanced study, and their career patterns. To enable universities and governments to develop sound policies, Commission members recommended that the appropriate Federal agencies gather the data needed to monitor the overall condition of graduate education.

In addition, the Commission urged the Federal government to establish a process for regular evaluation of the effect of Federal decisions, especially budgetary ones, on the nation's need for graduate trained men and women. "Educational impact statements" would enable universities, business and industry to meet those demands more readily.

I turn now to the recommendations affecting student financial assistance. Commission members were convinced that the quality of our graduate schools depends most directly on their being able to attract and sustain highly talented students. Therefore, we were most concerned by evidence that Federal support for advanced study in the arts and sciences is eroding rapidly, and that women and minority students are especially disadvantaged by this trend.

In light of these findings, the Commission made the following recommendations for action by the Federal government:

Both the number and stripend level of science and engineering fellowships in various agencies should be increased.

1250 new fellowships and dissertation awards should be created to support students in the arts, humanities and social sciences.

The number of research assistantships should be increased in all fields.

The College Work Study program should be substantially expanded, with a sizable portion of additional funds directed to graduate study.

Graduate students should be given increased access to Federal student loan programs.

Fellowships and research assistantship programs for women and minorities should be increased, especially in fields in which they are presently underrepresented. At the very least, all existing programs in NSF, NEA, NEH, NIH and the Department of Education that did minority and women students should be maintained.

Support should be expanded in those fields for undergraduate programs that help women and minority students prepare for advanced work.

The Federal government, universities, and colleges should work together to disseminate information to both women and minorities about opportunities for graduate support.

Let me make clear here the Commission did not regard these recommendations for Federal action on student aid, or the more general ones I discussed earlier, as measures that would create an ideal world of scholarship. Rather these steps are minimal measures that must be taken promptly to protect and enhance the research and training functions of our universities.

Let me turn now to examine, in light of the recommendations offered by our Commission, the bill introduced by Chairman Simon.

At the outset, I should like to applaud the efforts of Mr. Simon in introducing this bill. As one who served on this Subcommittee for nearly a quarter of a century, I share Paul Simon's commitment to the goals of assuring broader opportunity for higher education while at the same time enhancing its quality.

In my comments, I will proceed through the legislation, title by title, noting those sections relevant to the needs of graduate education.

Title II—Strengthening library resources

Excellence in graduate training and research is impossible without first-rate facilities. Yet our university libraries are struggling to keep up with the explosion of published knowledge and maintain access to their collections. For several reasons, libraries also find it difficult to take advantage of new technologies for bibliographic and indexing improvements and for cooperative arrangements to create networks of knowledge.

Title II of the proposed legislation addresses these problems in a number of key respects:

First, this legislation, by establishing a Library Unit within the Office of Postsecondary Education upgrades the status of all higher education library programs and reverses a trend toward neglect;

Second, funding for research libraries would increase;

Third, the bill places more emphasis on developing technologies and strengthening minority programs, two direct concerns of our Commission; and

Fourth, a foreign language periodical system would be authorized to support acquisition and lending of these expensive materials. [This initiative will then be transferred to Title VI, international education.]

Although I am encouraged by these provisions, I still want to underscore the urgent need for substantially more funding for libraries. For example, the "Strengthening Research Library Resources" program, on which major research libraries throughout the nation rely to maintain and expand their collections, was funded in 1983 at the pitifully inadequate level of $6 million for the entire nation. The Federal government should expand its efforts in this area.

Title IV—Student financial assistance

As I have said, the Commission was particularly concerned with the fall-off in Federal assistance for graduate students. I must emphasize that withdrawal of financial support represents more than an inconvenience to the student. Graduate training, the Commission observed, is intimately linked to research. It is not possible to reduce support for students without thereby threatening the basic research endeavor.

As you are no doubt aware, the College Board recently reported that postsecondary student aid from governmental sources, after increasing during the 1960s and 1970s, has declined by over 10% in the last three years. This trend would be sufficient cause for alarm, but the Commission found the specific figures on Federal support for graduate study still more distressing.

The number of Federal stipends awarded for graduate study rose during the 1960s, but since 1970 has decreased by nearly 50%. Moreover, the humanities and social sciences have been afflicted much more by this downswing than the sciences. The sciences benefit from Federal research assistantships, which have actually increased in recent years, while the humanities and social sciences rely on fellowships and traineeships, which have decreased by 66% in the last 15 years.

One area of graduate study recognized by the Commission of special national interest was foreign languages. Yet, according to figures in Jaroslav Pelikan's Carnegie Foundation study on the state of American scholarship, the proportion of foreign language students in doctoral programs supported by the Federal government dropped from 14.2% to 5.5% between 1978 and 1981—a decline of two-thirds in just three years.

There is another differential impact hidden by the overall figures. Women and minority students are concentrated in the fields hit hardest by the decline in Federal funding, so precisely the students who most need such assistance are most adversely affected.

The increased reliance of advanced degree students on student loan programs is directly related to the decline in Federal support for graduate study. Figures from Pennsylvania indicate that three times as many graduate and professional students borrowed under the Guaranteed Student Loan program in 1982 as in 1976. Their average total indebtedness rose in this period from $4,882 to $10,244, an effect not only of the decline of Federal funding but of the increased cost of graduate education.

The Commission was concerned about this trend both because it discourages the most talented students from graduate study and because minorities and women are most disadvantaged by it. The shift from aid through research grants, fellowships, traineeships and assistantships to loans penalizes all who choose to pursue graduate study with a burden of debt. It should not be surprising that many of the best students are moving directly into business and industry. Financing graduate study through loans works special hardship on women and minority students because, for

a variety of reasons, they generally take longer to complete advanced degree programs and hence accumulate a larger debt burden.

Let me here then summarize the major causes of concern that our Commission members concluded affect student financial assistance for graduate study in the arts and sciences.

First, there has been an absolute decline in Federal stipend support at the same time that national needs for advanced research and expertise are rising.

Second, there has been a shift from student aid through research grants, fellowships, traineeships and assistantships to loans, a shift that dissuades many of the best students from pursuing graduate degrees.

Third, both these trends especially discourage minorities and women from graduate work.

In light of these concerns, I offer these comments on Title IV of Mr. Simon's bill:

Pell grants.—The bill would permit any student up to five years of Pell Grant eligibility as an undergraduate and eligibility for the first year of graduate or professional school. This proposal was not a subject of discussion before our Commission, therefore, I can only give you my own view on the matter. Although one cannot be sure of the impact of allowing graduate students to qualify for Pell Grants, such a change would be in keeping with the general thrust of measures created by Congress in the last fifteen years to provide more assistance to able but needy students.

Of course, I need not remind members of this Committee, with respect to resources for higher education, there must be tradeoffs. The resources committed to Pell Grants must be weighed against the need for increased funds for fellowships and research support.

College work study.—The proposal calls for a flexible 10 percent set aside of college work study funds for use by graduate students. Currently graduate students may participate in college work study, but the set-aside will establish a floor for allotment of program funds. The Commission's report calls for increased funding of college work study with a "sizable portion of additional funds directed to graduate students."

Guaranteed student loan program.—Several of the changes proposed in the GSL program would aid graduate students. First, the limits would be raised on the annual amounts that students may borrow—from $5,000 to $7,000. The Commission expressed the concern that without some such modification of loan limits, students will find themselves unable to continue graduate work. The amounts students are allowed to borrow should keep pace with costs.

Further, the legislation would allow graduate students to consolidate loans and stretch out repayment at more realistic interest rates.

Finally, Mr. Simon's bill is responsive to a concern of the Commission. The bill changes the definition of "independent student" to allow graduate students to borrow immediately upon entering graduate school even if they were dependent on their parents in the previous year.

Campus-based block grants.—Under Mr. Simon's proposal, graduate students would continue to be eligible for campus-based grant, work and loan assistance.

Title VI—International education

In its report the Commission highlighted certain areas where the shortage of hightly trained experts threatened our national interest. One such area was a serious and growing lack of expertise in foreign languages and cultures.

We heard testimony from former CIA directors William E. Colby and Stansfield Turner, who attributed shortcomings in our past intelligence on Vietnam and Iran to our deficiency of experts in both areas. They went on to caution that our ignorance of Latin America is "almost boundless".

As the author of the International Education Act of 1966, I have long been convinced that our national capacity to understand and communicate with other peoples is seriously undermined by our ignorance of the languages and cultures of other nations. And, of course, the vision and intelligence with which Paul Simon has written and legislated in this area have marked him as a national leader on this issue.

In the face of these findings, I am pleased but not surprised to note that Mr. Simon's bill maintains and expands support for Title VI, particularly for the resource centers that provide graduate and faculty research support at major university centers.

Chairman Simon's bill also contains several new initiatives for international education that are in line with the Commission recommendations, including study abroad programs for faculty and graduate students.

The Simon bill also calls for a Center for International Education to be established within the Department of Education to provide strategic planning for area and foreign language studies, to assess the trends and needs for experts in foreign languages and cultures, and to serve as a clearinghouse for information regarding financial support for exchanges and foreign language study.

To the extent that such a Center raises the level of visibility for international education programs both within the government and among the public at large and stimulates increased financial support for such programs, I favor it. I also agree that such a Center as outlined in the Simon bill, could: monitor programs and advise the Secretary of Education on trends . . . that might portend shortcomings in future pools of regional experts and language specialists; the impact of international education programs on international business, foreign policy and educational needs; and languages and areas of the world . . . of special concern to the national security . . .

Having said this I must reiterate my conviction that international education will only come into its own, budgetarily speaking, when the American people and their representatives in Congress understand that nothing less than our nation's security and economic progress depend on increasing our knowledge of other peoples and cultures. Organizational changes such as the proposed Center can be most helpful in this process of enlightenment but in the final analysis is no substitute for adequate funding of existing programs. In fact, we must be careful to avoid interpreting organizational changes as solutions to the problem.

Title VII—Construction, reconstruction, and renovation of academic facilities

The costs of maintaining adequate, up-to-date research facilities, especially in the sciences, can be staggering. A recent survey of fifteen institutions concluded that their needs for scientific equipment over the next three years are almost twice what they would have spent in the last four years.

As the Commission stated in its report: Our investment in such sophisticated, expensive and powerful equipment and interests is inadequate. It is not simply a matter of not keeping pace—our penury has led to a situation in which many instructional laboratories and much of the equipment and instrumentation currently available are obsolete and insufficient to the tasks at hand.

Mr. Simon's bill proposes to authorize "such sums as necessary" for low-interest loans to institutions of higher education for construction, rehabilitation or renovation of academic facilities and $100 million a year over 5 years for matching grants to eligible institutions to purchase laboratory, research or other instructional equipment.

While important, such proposals should not be construed as a final resolution of this problem, The need is far greater. Over 13 years ago, a National Science Board study concluded that $200 million was needed at that time for new instrumentation. The accumulated cost today would probably be 5 times that amount.

It should also be noted, however, that various departments and agencies throughout the Federal government and not only the Department of Education have statutory authority to provide grants, loans, and subsidized private loans for construction of facilities and purchase of equipment. In fact, the National Science Foundation and the Departments of Defense and Energy have recently begun to expand their activities in this area. I would applaud the efforts of Chairman Simon as well as these other agency initiatives and urge continued and increased support to stem the deterioration of the infrastructure—the laboratories, equipment and instrumentation—that supports graduate research.

Title IX—Graduate education

Enrollments of talented graduate students in the arts and sciences are declining. The reasons are several: the depressed state of the academic job market, demographic changes, rapidly escalating costs and reduced financial aid.

As a result, many students who, thirty years ago, would have pursued advanced studies now avoid graduate preparation because they see little future in it alongside opportunities in law, medicince, business and industry.

The loss of talented students is especially marked among minorities and women. Both groups are still seriously underrepresented at the doctoral level.

Blacks, Hispanics and Native Americans constitute 19 percent of the population but are currently awarded only 8 percent of the doctoral degrees. Minority graduate students are heavily concentrated in education, and modest gains in other fields during the early 1970s are being rapidly eroded. Although women compose half the population, they received only 32 percent of the Ph.D.s awarded in 1981; in the physical sciences and engineering they received only 3.7 percent and 1.2 percent, respectively, of the doctoral degrees conferred.

Title IX of the Higher Education Act is specifically directed to graduate education. The title provides for grants to institutions of higher education to maintain, strengthen and improve graduate, professional and public service programs. Mr. Simon's bill would authorize "such sums as may be necessary" for this purpose, removing a prohibition on authorizations that has been in force for fiscal 1982 through 1984.

Jacob K. Javits Fellowship Program.—The Commission made a number of recommendations designed to increase fellowships and assure that sufficient numbers of talented young people enter graduate study in all disciplines. We believe such support vital, and Mr. Simon's bill responds to this need by establishing and authorizing funds for a National Graduate Fellowship Program named after one of the nation's greatest legislators, and former colleague, the distinguished Senator from New York, Jacob K. Javits.

Four hundred and fifty "Javits Fellowships" would be awarded annually, for graduate study in the arts, humanities and social sciences and areas of national interest as designed by your proposed Graduate Fellowship Board. These fellowships are to be awarded on the basis of merit.

Fellowship awards, such as those proposed in Mr. Simon's bill, are crucial to offset the decline in Federal support that has been underway for over a decade. Particularly important is the provision of fellowships in the arts, humanities and social sciences, where declining enrollments threaten the loss of entire fields of knowledge.

GPOP.—Chairman Simon's bill would also follow another recommendation of our Commission in substantially expanding the Graduate Professional Opportunities Program (GPOP), which is targeted to minorities and women, and in raising the size of a GPOP fellowship from $4,500 to $9,000. This increase brings the stipend to a more realistic level, and one that is comparable to other Federal programs. These fellowships will be awarded on merit, with universities to direct awards to the neediest students.

CLEO.—The Commission also called for support of programs that enhance minority student participation in professional studies. Mr. Simon's bill proposes increases for Assistance for Training in the Legal Profession (CLEO), authorizing $5 million in fiscal 1986 and adding $1 million each year thereafter for the next four years.

Mr. Chairman and members of the Subcommittee, allow me to summarize my testimony.

Chairman Simon's bill directly responds to key concerns of the Commission in the following ways:

1. It reverses the trend of declining Federal support for graduate students by providing for new Federal fellowships, by targeting some college work-study funds for graduate students and by altering Federal loan program and eligibility rules to make it easier for graduate students to borrow and repay.

Furthermore, Mr. Simon's bill attempts to shift support from loans to student aid which is important in order to a) attract the best students to pursue graduate degrees, and b) lessen the burden on minorities and women.

2. Mr. Simon's bill expands the grant programs available to women and minorities who pursue graduate and professional degrees.

3. The Simon bill maintains and expands support for international education programs to meet the need for highly trained experts in foreign languages and cultures.

4. The Simon bill recognizes a Federal commitment to ensure that graduate laboratories and libraries are of high quality. Although the proposed levels of funding are, still to my mind, inadequate to maintain and enhance university facilities, I recognize that only part of the problem can be addressed in the programs under the jurisdiction of this Subcommittee.

Mr. Chairman, in our report on graduate education, the National Commission on Student Financial Assistance notes the challenges facing our nation that call for a reinvigorated graduate enterprise and asks the question: 'Are we ready?"

Mr. Chairman, today we are not. But the passage of the legislation you propose would give me hope that we can be.

HEARINGS ON THE REAUTHORIZATION OF THE HIGHER EDUCATION ACT

FRIDAY, MARCH 30, 1984

HOUSE OF REPRESENTATIVES,
COMMITTEE ON EDUCATION AND LABOR,
SUBCOMMITTEE ON POSTSECONDARY EDUCATION,
St. Louis, MO.

The subcommittee met, pursuant to call, at 1:10 p.m., in Lopata Hall, St. Louis, MO. Hon. Paul Simon (chairman) presiding.

Members present: Representatives Simon and Coleman.

Staff present: Marsha Nye Wice, legislative assistant; John Dean, Republican assistant counsel; and Rose DiNapoli, Republican legislative associate.

Mr. SIMON. The subcommittee hearing will come to order.

I'll simply enter my opening remarks in the record. But let me add it's a real pleasure to be here at Washington University once again for me. I don't know that our subcommittee has formally ever held hearings here, but, Mr. Chancellor, we're pleased to be here. I'm particularly pleased to be with my colleague who is the ranking Republican on our subcommittee, Tom Coleman, who's been a very constructive, solid member of our subcommittee, and of the House of Representatives.

And we appreciate the contribution that he is making, and for those of you maybe from his district that you're making through him to educational policy.

When we talk about higher education we're really talking about where we're going as a country. And we are in that process now of starting to move on reauthorization of the Higher Education Act. The question is where do we go. Do we just tinker? Do we do some dreaming? Do we do the kinds of things that need to be done to really move this country ahead? Or do we just kind of drift with the status quo?

That's kind of—those are the kind of basic questions we face. But we also face very practical problems for those of you who've seen our bill. I don't know how many pages long it is.

Ms. WICE. It's only 350.

Mr. SIMON. Three hundred and fifty pages long. You're talking about a lot of details that are very important and so we're pleased to be here to have your testimony.

[Opening statement of Congressman Paul Simon follows:]

OPENING STATEMENT OF HON. PAUL SIMON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ILLINOIS AND CHAIRMAN, SUBCOMMITTEE ON POSTSECONDARY EDUCATION

I am pleased to be in St. Louis today to Chair this hearing on the Higher Education Act Reauthorization. Today's hearing continues hearings that we began in Washington this week, and my colleague Tom Coleman has arranged a very well balanced and comprehensive schedule of testimony.

While Tom represents the minority position on the Postsecondary Education, we have always worked together very closely in developing legislative initiatives. I have the greatest respect for his intellect and political prowess. I am extremely pleased too, that we represent two great midwestern states, Illinois and Missouri. I believe that we truly represent the heart of America.

I am looking forward to hearing today's witnesses and I am especially interested in receiving recommendations regarding the proposals in H.R. 5240 that make modifications in federal student financial aid programs, including making the Pell Grant program an entitlement, merging SEOG, NDSL and SSIG into campus-based block grant.

I am also very much interested in an assessment of my proposals for faculty and student study abroad and for support of international education programs.

H.R. 5240 addresses a number of the needs of graduate education outlined in the report of the National Commission on Student Financial Assistance. "Signs of Trouble and Erosion: A Report on Graduate Education in America." I am interested in hearing the testimony on these proposals, as well as the additional institutional support Tom Coleman is suggesting for graduate education.

In addition, I am interested in hearing suggestions of additional programs that should be included in the reauthorization.

Again, I'm pleased to be here, to see many of my old friends from the St. Louis area and across Missouri, and especially those of you from Washington University.

Mr. SIMON. Let me just say to all the witnesses before I call on my colleague, that your formal statements will all be entered into the record. If you wish to read them you may. If you wish to summarize we can devote more time to questions. That frequently is helpful.

Mr. Coleman, do you wish to add anything here?

STATEMENT OF HON. TOM COLEMAN, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MISSOURI

Mr. COLEMAN. Well, Mr. Chairman, I thank you for those kind words. I wrote them down to remind you when we get back to Washington.

It's a special privilege to have our hearings today on the campus of Washington University. As a graduate of the law school here, I spent 3, which seemed like 10 years at the time, short years in law school. I met Marilyn, my wife, on campus here as an undergraduate student.

So, we have many fond memories of the school and of the people involved. It's also appropriate that I was able to attend this law school as a result of student aid and assistance, which, as you know also, I have paid off in the meantime. But, I am a product of the very work that we're here to hear from you about today.

Paul mentioned some of the obvious concerns that you have and that we have. I think all of our remarks today and our questions, and indeed our very legislating, is being done in an atmosphere of budget restraint. We simply do not have adequate funds to do all the things that we all know that are necessary in higher education. Therefore, our wish list, while it might not be very long, is going to have to be somewhat restrained by circumstances.

Especially today we are going to hear about graduate education—about foreign language training in specific.

All are very important to the chairman and me, and I want to say that it has been very enjoyable for me to work with Paul Simon and the chairman of the subcommittee for the last 4 years. We've gotten much accomplished working on a bipartisan level. While Paul is going on to lesser things and leaving the House, we certainly want to continue that working relationship and the opportunity to work together.

So, I thank him for having our hearings here today, and he did ask if we wanted to come out to Missouri and I said "yes, I'd like to come to St. Louis." So that's why we're here, and I thank you for this opportunity to hear from people in this community. And I will also submit my statement for the record.

Mr. SIMON. I mentioned at a luncheon meeting we were at Tom claims to be the alumnus of every school we visit. I want you to know that.

For introductory remarks we're pleased to call on Dr. Shaila Aery, the commissioner of higher education with the Coordinating Board for Higher Education from Missouri.

STATEMENT OF DR. SHAILA AERY, COMMISSIONER OF HIGHER EDUCATION, COORDINATING BOARD FOR HIGHER EDUCATION, MISSOURI

Dr. AERY. Thank you, Congressman Simon, Congressman Coleman.

My comments today, introductory comments, will be limited to the areas of special interest to the State Higher Education Executive Officers Group, referred to as SHEEO.

Now, obviously there are all kinds of concerns that are unique only to certain States and no one position can address all these areas of concern, but I will focus on some of the common concerns that we have and use Missouri as an example where possible.

An important SHEEO goal in this whole reauthorization is to foster the restoration of the historical balance of the Federal and State relationship. And this is not to say the Federal Government does not have a role in insuring access to post-secondary education, supporting the maintenance of quality and innovation, and promoting national priorities.

There is a concern, however, among SHEEO that the balance of the Federal and State relationship may have been eroded to the detriment of the States. It is the State Higher Education Executive Officers' position that Federal higher education policy should seek to achieve the following:

1) Consistent as well as equitable access to student financial assistance;

2) recognition of the responsibility of the States to plan and coordinate the provision of higher education within their boundaries, including the establishment of priorities unique to each State; and

3) flexibility in the promulgation of rules and regulations that allow for the differences among States and the limitations they face when attempting to respond to changing Federal requirements.

The Missouri Board and other State higher education agencies have responsibilities that must be integrated with Federal higher

education legislation to insure that Federal programs are, in fact, consistent with the concept of the Federal/State partnership, and the primacy of the States in providing education.

The role of the State Higher Education Agency should be considered as each Federal program is evaluated. While there are clearly programs for which State involvement is unnecessary, it is the SHEEO position that certain of the existing Higher Education Act programs require more direct involvement.

As the State officials responsible with the oversight and coordination of higher education, the member of SHEEO do not seek the displacement of Federal Government. Rather, our proposals are intended to bring the relationship between our agencies and the Federal Government into harmony that is required for the establishment of agreed upon objectives.

Statewide boards have the unique responsibility for both statewide planning in the States, and as an instrument of public policy. They serve an important role of informed lay spokesman for the public interest with regard to higher education. Even in the most stable of times, it is a difficult task to recommend public policies which address a State's needs for higher education, to accurately forecast those needs, and to develop an adequate State master plan to meet those needs. This task becomes particularly difficult in a time of change and uncertainty.

Shifting demographics, changing enrollment patterns, changing programmatic demands, and discal constraints have to be accommodated in the statewise planning process. The fundamental shift in the environment, I believe, requires that higher education is operating in requires an equally fundamental shift in higher education policies and practices at the State and Federal level. And let me use Missouri as an example here.

To affect a positive change in the trends that we're seeing in Missouri and to improve Missouri's economic future, will require a significant amount of work and effort on the part of the State's citizens in general, and on the part of the higher education in particular. Affecting a competitive future of Missouri will require both of the following responses:

An improvement in Missouri's capacity to finance higher education with targeted investments by the State to respond to the State's needs for research and development, manpower, and technology transfer, and to assist the institutions or public institutions with inflationary increases.

Second, planned reallocations by institutions to concentrate resources in priority programs and to achieve a greater diversity in our State's system of higher education.

The Missouri Board has identified the following objective if the State is to build a more positive future than is depicted by the current trends.

Increasing the knowledge and skill level of a smaller entering work force by improving the rates at which all young people, and particularly minority youth, complete high school and enter and complete postsecondary education;

Improve the ability to Missouri higher education institutions to recruit and retain the most capacity faculty;

To increase the access of Missouri's agriculture, business, and industry to both basic and applied research and state of the art technology transfer opportunities;

To provide effective and efficient retraining for the older portion of the work force;

To maintain the structural and adequacy of our physical plants;

And to provide the library resources and instructional equipment necessary to the above.

With these goals in mind and with the information provided me by other SHEEO Executive Officers, I will address only five of the titles today, and, again, because of the importance to the State of Missouri, and also because what we believe, and I certainly believe in SHEEO, the outstanding need for simplification and clarification of the national policy. And some coordination with the State's role in education.

Title II is the first one I would like to address very briefly. And it's the SHEEO position that the purpose of this title should remain intact and that attention and resources should be focused on strengthening our investment in research libraries.

In Missouri we are developing library networks for the purpose of sharing resources between our academic and public libraries, and kind of Federal incentive funding to encourage such networks would be an appropriate use of expenditures.

With regard to title III, institutional aid, the SHEEO position is that it is time to simplify institutional aid with fewer categories of assistance and to provide the aid to the institutions which Congress intended to fund.

Missouri currently has give predominantly black or historically black institutions which would directly benefit from the proposals established. In the fall of 1983, 38 percent of all students enrolled in these five institutions were minority students. Because of the changing needs of the State, it is important that applicant institutions be required to demonstrate that their proposed use of title III assistance is consistent with the existing State plans and authorizations, or that an application for authorization is pending before the State Higher Education Agency.

In title IV, student financial assistance—and I know that the panel later will address this—we have a panel of experts to address this, but the student financial aids are an important part of financing higher education. And the Missouri Department of Higher Education, a coordinating board, has both the Guaranteed Student Loan Program, and the Missouri Grant Program.

We have had a rapid increase in fees in our State in the last 3 years. Over 70 percent in the public 4-year institutions, and over 50 percent in the public 2-year institutions. Our students have become more and more reliant upon financial aids.

The total volume of loans in Missouri Student Loan Program, which was began in October 1979, is approximately $423 million. The success of this loan program is directly related to 655 Missouri lenders who provide the capital for our students, although we know that students are becoming heavily reliant on loans, and we need to examine other alternatives to the loan program.

One existing alternative is the Missouri Student Grant Program. We have approximately 118,000 grants over the last 10 years. Of

the total, 58 percent have gone to students in the public sector, and 41 percent have gone to students attending Missouri's independent colleges.

In terms of dollars awarded, $13 million have gone to students attending public institutions, and $40.9 million to those attending independent institutions.

In the current year we were able to find only 20 percent of the eligible students for the grant program because of limited resources. In addition, I would say that if higher education is to remain a viable option for Missourians, the Pell Grant awards need to be increased so that the balance between loans and grants is reaffirmed.

With regard to loans, I want to congratulate Representative Simon, and I extend my support to the elimination of the 5-percent origination fee, higher loan limits, extended repayment terms, and the consolidation of all Federal loan programs.

The legislative improvements proposed for the collection of loans is also important and necessary in controlling the costs of the student loan program. I know that the student financial aid panel will more specifically address the following items, but I would encourage you not to reduce the special allowance provided lenders in the interim status of guaranteed student loans. All of our loans in Missouri are made from private commercial lenders. Nothing should be legislated to diminish those taxpaying organizations from participating in the loan program.

I would also encourage you to review and analyze NCHELP's proposal for needs analysis. Students with family incomes over $65,000 should not be automatically eliminated from the student loan program. In today's world of the necessary two income families, both incomes may be high, but that does not necessarily mean that $6,000 to $14,000, or more per student, can be set aside to meet the high cost of education. On the other hand, it also seems unreasonable to ask for an institution to have to complete a needs analysis for an income of less than $10,000 to determine eligibility.

Also included in the bill is a proposal to eliminate SSIG funds and create campus-based block grants. While the idea of block grants is extremely attractive, I must reaffirm that the elimination of Federal funds would result in the elimination of the Missouri Student Grant Program. And without the Federal incentive, there would be an attempt to target the State dollars provided for the grant program for other purposes. The importance of the grant program in Missouri, and to the Missouri board's goals, and to the State goals, is maintain diversity that we have in Missouri higher education, and through the independent institutions.

To go one step further, I would like to suggest that Federal funds be provided to States for a State administered college work study program. In Missouri such legislation has a very good chance of passing this year, but with few available dollars not enough students will be assisted.

And, finally, with regard to title IV, your efforts to simplify the student financial aid programs, and establish a master calendar, should reduce the public's confusion, and is to be applauded.

Title VII on academic facilities: The proposed changes for academic facilities will not meet the needs in Missouri. The State has

not been able to fund maintenance and repair needs in recent years, let alone have the ability to provide matching funds as provided in title VII.

There currently exist in Missouri's public 4-year institutions only approximately $46 million in critical maintenance projects with no funding in sight for fiscal year 1984.

It would appear that the new emphasis in title VII would have institutions provide a 50 percent match from State or private funds to reach the low interest loan, and few of our institutions in Missouri could avail themselves of this option.

Although there is a mention of the study conducted by the Association of American Universities in the draft paper, the proposal does not sufficiently address the lack of available resources to modernize science and engineering facilities. One hundred million dollars of matching funds simply will not address or begin the task at hand.

With regard to title IX and graduate education, the extension of graduate program funding with an emphasis on targeting those dollars to groups traditionally not pursuing graduate degrees is important. I support your efforts and believe for these groups having other resources of aid available, besides loans, will provide incentives to have more women and minorities attain post-graduate degrees.

In Missouri the minority population has leveled off in the 1970's and early 1980's in graduate programs and women's participation has increased.

I am also concerned, however, that all students have financial access to graduate programs. Currently, the primary source of financial assistance for most graduate students in Missouri is through loan programs provided in title IV, which could mean a $40,000 debt, or higher if loan limits are increased. Monthly payments for these large debts can be as high as $500 per month, requiring an income exceeding $60,000 if one assumes that educational debt comprises 15 percent of the pretax income.

There is also in this concern for students from middle-income families meeting the high cost of graduate education. Loan sources do not meet the total cost of education, which creates the need for parental financial support. If the students receive parental support, loan eligibility can be hampered. And this circular criteria for meeting eligibility results in students deciding not to attend graduate education, and can be particularly difficult, I think, if we do not encourage this in the fields in Missouri in engineering, agriculture research, health, and computer science. We think incentives need to be provided in these fields if we're to lose our best or new teachers and researchers.

In closing then, SHEEO believes there is a need for clarification of purpose and priorities of the Federal/State relationship in education. As we have found in Missouri, our student populations and their needs, and our State's investment needs in higher education, have changed drastically over the past 5 years.

In Missouri we believe that higher education is not only a worthwhile public value, but also that the investment in higher education is absolutely essential to future economic growth in our State. As our Nation and State undergo important structural changes in

the economy we will need more and better education to increase our Nation's productivity and competitive advantage. For institutions, that means they can no longer afford the luxury of "business as usual."

For the Federal and State governments, it means we must continue to invest in higher education but with greater clarity of purposes and priorities.

[Prepared statement of Dr. Shaila Aery follows:]

PREPARED STATEMENT OF DR. SHAILA AERY, MISSOURI COMMISSIONER OF HIGHER EDUCATION, ST. LOUIS, MO

My comments will be limited to areas of special interest to the State Higher Education Executive Officers (SHEEO). There are concerns that are unique to individual states and no one position can address all of them, but there are areas which are common to all states. I shall focus on these common concerns by using Missouri as an example.

An important SHEEO goal is to foster the restoration of the historical balance of the federal-state relationship. This is not to say the federal government does not have a role in ensuring access to postsecondary education, supporting the maintenance of quality and innovation, and promoting national priorities. There is a concern, however, that the balance of the federal-state relationship may have eroded to the detriment of the states. It is the SHEEO position that federal higher education policy should seek to achieve: (1) consistent as well as equitable acess to student financial assistance; (2) recognition of the responsibility of the states to plan and coordinate the provision of higher education within their boundaries, including the establishment of priorities unique to each state; and (3) flexibility in the promulgation of laws and and regulations that allow for the differences among the states and the limitations they face when attempting to respond to changing federal requirements.

The Missouri Coordinating Board for Higher Education (CBHE) and other state higher education agencies (SHEA) have responsibilities that must be integrated with federal higher education legislation to ensure that federal programs are in fact consistent with the concept of the federal-state partnership and the primacy of the states in providing education. The role of the state higher education agency should be considered as each federal program is evaluated. While there are clearly programs for which state involvement is unnecessary, it is the SHEEO position that certain of the existing Higher Education Act programs require more direct involvement. As the state officials responsible with the oversight and coordination of higher education, the members of SHEEO do not seek the displacement of federal government. Rather, our proposals are intended to bring the relationship between our agencies and the federal government into the harmony that is required for the establishment of agreed upon objectives.

Statewide boards have the unique responsibility for both statewide planning in the States for higher education while serving and as an instrument of public policy. They serve an important role of informed lay spokesman for the public interest with regard to higher education. Even in the best and most stable of times, it is a difficult task to recommend public policies which address a state's needs for higher education, to accurately forecast those needs, and to develop an adequate state master plan to meet those needs. This task becomes particularly difficult in a time of change and uncertainty. Shifting demographics, changing enrollment patterns, changing programmatic demands, and fiscal constraints have to be accommodated in the statewide planning process. The fundamental shift in the environment, I believe, requires an equally fundamental shift in higher education policies and practices at the state and federal level. Let me use the state of Missouri as an example.

To affect positive change in the current trends and to improve Missouri's economic future will require significant effort on the part of the state's citizens in general, and on the part of the higher education institutions in particular. Affecting the competitive future of Missouri will require both of the following responses:

An improvement in Missouri's capacity to finance higher education with targeted investments by the state to respond to the state's needs for research and development, manpower, and technology transfer, and to assist the institutions with annual inflation.

Planned reallocations by institutions to concentrate resources in priority programs and achieve greater diversity in the state's system of higher education.

The Missouri Board has identified the following objectives if the state is to build a more positive future than is depicted in the current trends and projections.

Increasing the knowledge and skill level of a smaller entering work force by improving the rates at which all young people, and particularly minority youth, complete high school and enter and complete postsecondary education;

Improve the ability of Missouri higher education institutions to recruit and retain the most capable faculty;

Increase the access of Missouri's agriculture, business, and industry to both basic and applied research and state of the art technology transfer opportunities;

Provide effective and efficient retraining for the older portion of the work force;

Maintain the structural and functional adequacy of the physical plant;

Provide the library resources and instructional equipment necessary to the above.

I am addressing five titles of the Higher Education Act in my remarks because of their importance to the state of Missouri, and because of the outstanding need for simplification and clarification of a national policy coordinated with the states' role in education.

TITLE II—LIBRARIES

The SHEEO position is that the purpose of this title should remain intact and that attention and resources should be focused on strengthening our investment in research libraries. In Missouri, we have developed library networks for the purpose of shared resources between our academic and public libraries. Federal incentive funding to encourage networks is an appropriate expenditures.

TITLE III—INSTITUTIONAL AID

The SHEEO position is that it is time to simplify institutional aid with fewer categories of assistance and to provide the aid to the institutions which Congress intended to fund. Missouri has five predominantly or historically black institutions which would directly benefit from the proposals established in the bill. In the fall of 1983, 38 percent of all students enrolled at these five institutions were minority students. Because of the changing needs of states it is important that applicant institutions be required to demonstrate that their proposed use of Title III assistance is consistent with the existing state plans and authorizations, or that an application for authorization is pending before the state higher education agency, if such would be required to carry out the program.

TITLE IV—STUDENT FINANCIAL ASSISTANCE

Student financial aids are an important part of the financing of higher education. With the rapid increase in fees, Missouri students have had to rely more and more on financial aids. The total volume of loans in the Missouri Guaranteed Student Loan Program is approximately $423 million. The success of the loan program is directly related to the 655 Missouri lenders who participate in the program. Students have had to rely so heavily on loans that we are beginning to see students accumulating long-term debt. We must continue to examine alternatives to loan programs. One existing alternative is the Missouri Student Grant Program. Approximately 118,428 grant awards have been made in the ten years of this program. Of the total, 58.4% have gone to students in the public sector, and 41.2% have gone to students attending Missouri's independent colleges. In terms of dollars awarded, $13.2 million have gone to students attending public institutions and $40.9 million to those attending independent institutions. In the current year, approximately 20 percent of the eligible students were awarded grants because of limited state resources. If higher education is to remain a viable option for Missourians, the Pell Grant awards need to be increased so that the balance between loans and grants is reaffirmed. Grants should especially be available to students attending the first two years of postsecondary education.

Representative Simon is to be congratulated and I extend my support to the elimination of the 5 percent origination fee, higher loan limits, extended repayment terms, and the consolidation of all federal loan programs. The legislative improvements proposed for the collection of loans is also important and necessary in controlling the costs of the student loan program. Although the student financial aid panel will more specifically address the following items, I encourage you not to reduce the special allowance provided lenders in the interim status of guaranteed student loans. All loans made in Missouri are from private commercial lending institutions. Nothing should be legislated to diminish these tax-paying organizations from participating in the guaranteed student loan program.

37-618 O—84——20

I also encourage you to review and analyze NCHELP's proposal for a needs analysis. Students with family incomes over $65,000 should not automatically be eliminated from the student loan program. With today's reality of necessary two-income families, both incomes may be high, but that does not necessarily mean $6,000 to $14,000 or more per student can be set aside to meet the high costs of education. On the other hand, it also seems unreasonable for an institution to complete a needs analysis for an income of less than $10,000 to determine GSL eligibility. NCHELP's recommendations fairly address these concerns while requiring students to demonstrate need.

Also included in the bill is a proposal to eliminate SSIG funds and create Campus Based Block Grants. While the idea of block grants is extremely attractive, I must reaffirm that the elimination of the federal funds could result in the elimination of the Missouri Student Grant Program. Without the federal incentive, there could be an attempt to target the state dollars provided for the grant program for other purposes. This is especially true in a time of fiscal constraint.

To go one step further, I would like to suggest that federal funds be provided to states for a state administered college work-study program. In Missouri, such legislation has a very good chance of passing this year, but with few available dollars, not enough students will be assisted. Your efforts to simplify the student financial aid programs and establish a master calendar should reduce the public confusion, and is to be applauded.

TITLE VII—ACADEMIC FACILITIES

The proposed changes for academic facilities will not meet the needs in Missouri. The state has not been able to fund maintenance and repair needs in recent years, let alone have the ability to provide matching funds as provided in the proposed Title VII. There currently exist in Missouri's public institutions approximately $46 million in maintenance projects with no funding in sight for FY 1985.

It appears the new emphasis in Title VII would be to have institutions provide a 50 percent match from state or private funds to receive a low interest loan. Few institutions in Missouri could avail themselves of this option. Although there is mention of the study conducted by the Association of American Universities in the draft paper, the proposal does not sufficiently address the lack of available resources to modernize science and engineering facilities. One hundred million dollars of matching funds simply will not begin the task at hand.

TITLE IX—GRADUATE EDUCATION

The extension of graduate program funding with an emphasis on targeting these dollars to groups traditionally not pursuing graduate degrees is important. I support your efforts and believe for these groups having other sources of aid available, besides loans, will provide incentives to have more women and minorities attain post-graduate degrees. In Missouri, minority participating leveled off in the 1970's in graduate programs whereas women's participating increased.

However, I am also concerned that all students have financial access to graduate programs. Currently, the primary source of financial assistance for most graduate students is through the loan programs provided in Title IV, which could mean a $40,000 debt, or higher if loan limits are increased. Monthly payments for these large debts can be as high as $500 per month requiring a starting income exceeding $60,000 if one assumes that educational debt comprises 15 percent of the pre-tax income.

There is also the concern for students from middle income families meeting the high cost of graduate education. Loan sources do not meet the total cost of education, which creates the need for parental financial support. If the students receive parental support, loan eligibility may be hampered. This circular criteria for meeting eligibility results in students deciding not to attend. Graduate education must be particularly encouraged in the fields of engineering, agriculture research, health, and computer science. Incentives must be provided if these fields are not depleted of future teachers and researchers.

There is a need for clarification of purpose and priorities of the federal-state relationship in education. As we have found in Missouri, our student populations and their needs, and our state's investment needs in higher education have changed drastically over the past five years. In Missouri, we believe that higher education is not only a worthwhile public value, but also that the investment in higher education is absolutely essential to future economic growth in our state. As our nation and state undergo structural changes in the economy, we will need more and better education to increase our nation's productivity and competitive advantage. For insti-

tutions, that means they can no longer afford the luxury of "business as usual." For the federal and state governments, it means we must continue to invest in higher education but with greater clarity of purpose and priorities.

Mr. SIMON. Thank you very much.

Dr. AERY. I apologize. I've had the flu and I didn't think I'd make it through.

Mr. SIMON. Thank you for your testimony. Let me just comment briefly on two of your suggestions. And we will be weighing your other suggestions.

We have not moved very heavily into the academic facilities, and the science and engineering aspects of it. Simply because you're talking about huge dollars and we are—the package we put together already is being criticized as too heavy in the dollar area. We recognize particularly the severe problem in the science and engineering area but our hope is that NSF may pick up some of the burden there, and that we won't have to weigh down our bill with that.

The other point you make that is a very valid point, and that is increasing the knowledge and skill level of those who are frequently dropping out of school now, making sure that they go on. Very interesting as you look at the demographics is right now we're projecting roughly a 20-percent drop, probably a little less than that over the next 10 years.

But, if we had the same percentage of Hispanics, blacks, and women who graduate from high school who would go on to college as we do, white males, there would be no drop in the student enrollment in the next 10 years. What we clearly have to do is to give more people a chance to make sure they can get to college. And if, on top of that, we could diminish the dropout rate, particularly in the Hispanic population, which is very heavy.

Black population also has a not quite as bad as Hispanic population, but a fairly high dropout rate, too. If we could lift those levels, and here we're obviously talking about elementary and secondary programs, that also obviously would have a major impact on the Nation.

Tom.

Mr. COLEMAN. Dr. Aery, thank you for your statement. What do you think Missouri's legislature's feeling would be?

You said that under the facilities section that you're not able to come up with matching funds in any form. What if there was a Federal merit-based student scholarship program which would require a matching base of 25 percent from a local government?

Do you think that Missouri would participate in such a program?

Dr. AERY. Yes; I think the General Assembly would favor such a program, but, we're talking about the same kind of thing of limited resources. I think it would be moved from some other part of the higher education budget. And I don't know what tradeoff we would make there.

Mr. COLEMAN. But, you——

Dr. AERY. But, I think they would be——

Mr. COLEMAN [continuing]. You think that they would be——

Dr. AERY. Yes, I do.

Mr. COLEMAN [continuing]. Responsive to that sort of thing?

Could you give me one outstanding example of how higher education in Missouri has reacted to this renewed interest in excellence in education? What would you point to, with pride, that has happened in this State within the last several years that encourages excellence in our institutions?

Dr. AERY. I think there are several very good examples. The one that comes first to my mind within our public 4-year sector is at Northeast Missouri State University in Kirksville, what we call a Value Added Program, and how they have demonstrated over the last 4 years particularly how much they have been able to add to the learning of our students and the outcome measures. It is an outcome measure.

We always focus on process in education, and much less looking at outcome measures. And we are looking more and more in that, but there are also efforts with elementary, secondary, raising admission requirements. The University of Missouri has just finished reexamining their admission requirements which will have incredible effect upon the public school system when the University of Missouri changes their admission credits.

Mr. COLEMAN. Thank you.

Mr. SIMON. We thank you very, very much.

Now, we're going to hear from a panel of college and university presidents. First, our host, Dr. William Danforth, the chancellor of Washington University.

STATEMENT OF WILLIAM H. DANFORTH, CHANCELLOR, WASHINGTON UNIVERSITY

Mr. DANFORTH. Chairman, Mr. Coleman, thank you very much. It's a great pleasure to welcome the two of you back to St. Louis and Washington University. It is a particular delight to welcome Tom Coleman. And if there is any doubt about his graduation, the legal counsel of Washington——

Mr. SIMON. Serious doubt.

Mr. DANFORTH. Well, if there's any challenge from any other institutions that would like to claim him, the legal counsel here is going to come and testify before this committee. And it's—

And it's a pleasure also to welcome back Chairman Simon who has been on our campus before, and is well known as a great friend of higher education, and a man of great insight into the needs of educating our citizenry. And I just might underscore his dedication to foreign language study which has meant a lot to us at Washington University.

I appear today as chancellor of an institution with 64 percent of our undergraduate and a large number of our graduate and graduate professional students on financial aid. I am very interested in the work of this committee. I can think of nothing more important to Washington University, or the long run interests of the Nation.

My testimony is an overview. Later on you will be hearing from Mr. Ben Sandler, the director of student financial aid, and Dr. Edward Wilson, dean of the Graduate School of Arts and Sciences, both of Washington University, who are more expert than I on various aspects of the bill.

Let me comment briefly on title IV, the centerpiece of the Higher Education Act. The parts of title IV express Federal policy that supports access to higher education, and also some degree of choice among institutions for students who require financial aid.

The array of Federal programs designed to secure these goals were sometimes thought to be very confusing. But they've been carefully and painfully hammered out to take into account both the needs of families and the differing types of institutions of higher education.

In the public sector, a large portion of the cost of education is, of course, paid by the taxpayers of the State, without regard for student need.

In the independent sector of higher education, for the most part, State tax funds are not available, and tuition charges have had to climb rapidly to meet mounting costs.

As this has happened, the gap between the tuitions charged by the public sector, in the independent sector, has widened over the last decade or so.

We, of course, don't ever expect the gap to be filled by financial aid, but the programs have achieved a balance that helps not only to insure access, but to meet these differing institutional requirements, and maintain some choice.

I think the balance in the programs have really served their goals quite well, and urge caution in making change in the existing program structures. And I am for improvement and not for the status quo, I think we could do things better, but I do like the essential framework.

The key to the framework is, of course, the Pell grant, primarily designed for access by needy students. Also, we have the campus-based programs that parallel the Pell grants.

These operate effectively on both public and private campuses, but their impact on independent higher education is critical. SEOG, NDSL, College Work Study Programs, are instruments of choice. They're allocated to institutions in such a way that each can make the wisest use of the funds in completing realistic award packages for needy students.

The importance of balance among all these programs I've been trying to emphasize. To complete the backdrop we're, of course, all aware of the Federal budget and the cloud that hangs over the Federal budget in the form of the deficit. If there weren't any concerns about the level of Federal funding we wouldn't have to pay so much attention to balance among programs.

The Pell Grant Program could be financed at a level high enough to solve our problems, but given finite resources, it seems to me a carefully constructed mix is necessary to achieve our long-range goals.

I am in the view, in the light of budgetary constraints, Mr. Chairman, somewhat concerned about the advisability of making Pell grants an entitlement, or of increasing the percentage of cost that they are permitted to meet. I applaud the motivation for these suggested changes. Pell grants are obviously—the draft bill is designed to make Pell grants more meaningful for the neediest students, and to assure the adequate appropriation of funds.

The fear, hopefully unfounded, if this goes through would be that the pressure then would be put on the other student aid programs, and they might receive a depressed level of funding as we discussed at lunch time.

I have some concerns about making campus-based programs a block grant. The creation of block grants might make an easier target for reduced appropriations. And the separate programs also are easier to defend. They offer more possibilities for sensible adjustments among the programs by Congress from year to year. And each type of campus-based program gives a different instrument which may be differently apportioned or differently used among institutions and among States from time to time to meet special circumstances.

I do emphasize again the, in my view, the present balance works quite well. Not perfectly, and that it's a good framework on which to begin.

On the Guaranteed Student Loan Program I reluctantly urge that the maximums on the loans be increased. They are just less and less able to provide for the needs of undergraduates and graduates as inflation in the past has crept up and the costs have continued to increase. To compensate in part for the increased costs of raising the ceilings I support an increase in the minimum monthly payment, and the application of a rigorous needs test for all prospective borrowers, not just those with incomes over $30,000.

At the same time I share Dr. Aery's concern about putting an arbitrary limit on GSL support to students whose families have incomes under $65,000. Many families with income over $65,000 do have demonstrable need for GSL support. I think a more flexible approach might work better.

I support the concern that's been expressed about student family debt. One indispensable mechanism for managing student debt is a loan consolidation and repayment extension program like the one recently managed by the Student Loan Marketing Association. I applaud this provision in the draft legislation.

Mr. Chairman, I would like to emphasize, as you and others have, the importance of retaining and strengthening the programs of special assistance to disadvantaged students, the Trio Programs.

At the graduate level we at Washington University have been especially impressed with the Graduate and Professional Opportunities Program, the G-POP Program, as being a valuable way of encouraging women and minorities to enter new fields of study. We've been very proud of our students and believe that the institutional support has been well developed.

I do, of course, give great importance to the support of students and resources for graduate and professional education.

Graduate student aid ought to be the area where merit is recognized along with need. It's terribly important to get some of our most able young people into graduate programs. A variety of programs might be considered.

Competitive fellowship programs, programs like the old NDEA fellowships with allocations to good graduate departments, seem to me particularly important.

Some programs would fit best within the Higher Education Act. Others should be the purview of the National Science Foundation or research supportive Federal agencies.

We generally support the recommendations of the Brademas Committee; certainly training in the House of Representatives. It's good training to be president of a university.

I note a very able person who's done a great job. He has underscored the need for not only graduate student support, but also the complimentary needs for improving facilities, laboratories, and equipment which are critical to graduate education.

Other initiatives have been proposed, as you know, for restoring the research capacity of American universities, and the budgets of the research supporting Federal agencies should reflect these needs.

Continuation of academic facilities authority in title VII of the Higher Education Act, and the renewal of its funding, could aid in the adaptation of older laboratories to the demands of more sophisticated contemporary research.

There are other programs that really have to be mentioned. The administration's proposed 1985 budget has no new funding for college libraries and research libraries. We believe that's a shortsighted view, and hope the proposals for reauthorization contain a different course.

Among your proposals, Mr. Chairman, I am attracted to the Carl Perkins scholarship to encourage bright high school students to enter teacher training programs.

Most particularly, all of higher education has for years appreciated your efforts to remedy deficiencies in the foreign language skills.

As I noted earlier in the proposed title VI on international education, will, I am sure, be widely supported.

Thank you for this opportunity to speak to you today.

[Prepared statement of William H. Danforth follows:]

PREPARED STATEMENT OF WILLIAM H. DANFORTH, CHANCELLOR, WASHINGTON UNIVERSITY

Mr. Chairman, it gives me great deal of pleasure to welcome this subcommittee to St. Louis and to Washington University. It is a particular delight to welcome Chairman Simon and Representative Coleman. Representative Coleman is returning to the campus where he received his law degree. Chairman Simon has long been a friend of Washington University and is known nationally as a great friend of higher education. Both have displayed a high level of bipartisan cooperation in forwarding the vital work of this committee. The issues in the reauthorization of the Higher Education Act are worthy of careful study.

I appear today as Chancellor of an institution with 64 percent of the undergraduate and many graduate and graduate professional students receiving financial aid. I am deeply interested. My presentation will be an overview. Later Ben Sandler, the director of student financial aid at this university, and Dr. Edward Wilson, Dean of the Graduate School of Arts and Sciences at Washington University, will speak to you on their areas of expertise.

Title IV remains the centerpiece of the Higher Education Act. The programs in Title IV are the expression of a federal policy that supports access to higher education, and the opportunity for some degree of choice among institutions, for students with financial need.

The array of federal programs designed to secure those goals has been carefully thought out to take into account both the needs of families and the differing types of institutions of higher education. In the public sector, a very large portion of the

cost of education is paid by the taxpayers of the state, without regard to student need. In the independent sector of higher education, for the most part, state tax funds are not available, and tuition charges must play a much more important role in meeting costs.

As costs of all institutions have risen, tuitions in the independent sector have had to rise to meet those costs. As a result, the gap between tuitions charged in the independent sector and tuitions or fees charged in the public sector has become larger and larger. Although this gap will never be filled by federal student financial aid, the existing programs of federal aid to students have been delicately balanced to help maintain not only access to higher education for students in need, but also some choice of institutions, public and independent.

This important balance has produced a system of student financial aid which has served its purposes quite well. I therefore urge caution in making major changes in the existing program structures. Recognizing that there are areas where technical and substantive changes could usefully be made, I urge that the essential framework be maintained.

The foundation of this framework is the Pell Grant, primarily designed to secure access to higher education by needy students. The Pell Grant Program is paralleled, however, by programs that are often called "campus-based."

These campus-based programs operate effectively on both public and independent campuses, but their impact on independent higher education is extremely critical. These programs, the SEOG, NDSL, and College Work-Study Programs, are the instruments of choice. They are allocated to institutions in such a way that each institution may make the wisest use of the funds in completing realistic award packages for needy students.

The importance of balance among all these programs is a necessary backdrop for the concerns I want to express about some of the contemplated changes. To complete the backdrop, a word must be said here about the federal budget.

As you know, we are considering student financial aid programs in an era of extraordinary budgetary difficulty for the United States. The shadow of the deficit hangs over any discussion of budget issues. If there were no concerns about the level of funding, one would not have to pay as much attention to the problems of balance among programs. The Pell Grant Program could be financed at a level high enough to solve our problems in the tuition gap between public and independent institutions. But, given finite resources, it seems to me a carefully constructed mix of programs is necessary to continue efforts to achieve access and choice.

For example, Mr. Chairman, budgetary constraints make me concerned about the advisability of making Pell Grants entitlement grants, or of increasing the percentage of cost that they are permitted to meet. I understand the motivations for these suggested changes, to make Pell Grants more meaningful for the neediest students and to assure the adequate appropriation of funds. But in the present budgetary environment, I fear that these changes might well force other student aid programs to a depressed level of funding. This outcome would severely disrupt the balance among student aid programs whose importance I noted earlier.

My concern about making campus based programs a block grant program follows too, Mr. Chairman, from what I said above. I believe the creation of block grants to replace existing programs would offer an easier, single target for reduced appropriations. The separate programs are not only easier to defend but offer more possibilities for sensible adjustments of programs by Congress. Each type of campus-based program—Supplemental Grants, Work-Study jobs and Direct Student Loans—gives a different instrument which may be differently apportioned among institutions and states from time to time to meet special circumstances.

I hope, Mr. Chairman, that in the reauthorization process the Congress focus on improving the essentials of the system which is in place and working reasonably well.

Another critically important element in Title IV support for federal student aid is the Guaranteed Student Loan Program. As college costs rise, the present annual and aggregate borrowing maximums, for both undergraduates and graduates, are less and less able to provide the support they provided in the past. I urge the Congress to increase these maximums. To compensate in part for the increased cost to the Treasury, I support an increase in the minimum monthly payment and the application of a rigorous needs test for all prospective borrowers, not just those with incomes over $30,000. At the same time, Mr. Chairman, I must tell you that I would hesitate to limit GSL support to students whose families have incomes under $55,000. Many families with imcomes above this level have a demonstrable need for GSL support, when their children attend higher-cost colleges.

Some of these suggestions raise the issue of student debt, and I support the concern that has been expressed about this issue. One indispensable mechanism for managing student debt is a loan consolidation and repayment-extension program like the one recently managed by the Student Loan Marketing Association. I applaud this provision in your draft legislation, Mr. Chairman.

Mr. Chairman, I want to emphasize, as you and others have, the importance of retaining and strengthening the programs of special assistance to disadvantaged students—the so-called Trio programs. At the graduate level, the Graduate and Professional Opportunities Program (G-POP) has been valuable in encouraging women and minorities to enter new fields of study. I am proud of the students attending this university under G-POP and believe our institution's programming for these students has been very good.

Next to the overwhelming national priority for undergraduate student aid, I would place support for students and resources for graduate and professional education.

Graduate student aid ought to be the area where merit is recognized along with need. A variety of programs might be considered. Competitive fellowship programs and programs like the old NDEA fellowships with allocations to good graduate departments should be employed. Some programs would fit best within the Higher Education Act; others should be in the purview of the NSF or research supportive federal agencies.

I commend the report of the Brademas Committee of the National Commission on Student Financial Assistance. Former Congressman Brademas, now President of New York University, with insights drawn from both experiences, has underscored the need for not only graduate student support but also the complimentary needs for improving facilities, laboratories and equipment which are critical to graduate education. Other initiatives have been proposed for restoring the research capacity of American universities, and the budgets of the research-supporting federal agencies should reflect those needs. However, continuation of academic facilities authority in Title VII of the Higher Education Act (and a renewal of its funding) could aid in the adaptation of older laboratories to the demands of more sophisticated contemporary research.

In this brief survey certain other programs must be mentioned. The administration's proposed FY 1985 budget has proposed no new funding for college libraries and research libraries. This is a shortsighted view of a major national resource, and I hope proposals for reauthorization contain a different course.

Among your proposals, Mr. Chairman, I am attracted to the Carl Perkins Scholarship to encourage bright high school students to enter teacher training programs.

Most particularly, all of higher education has for years appreciated your efforts, Mr. Chairman, to remedy deficiencies in the foreign language skills of our students. Your proposed Title VI on International Education will, I am sure, be widely supported.

Mr. Chairman, thank you for this opportunity to testify this afternoon. If you would like additional comment on any of the issues affecting reauthorization, I should be most happy to attempt to comply with your request.

Mr. SIMON. Thank you very much, chancellor.

Next, Father Robert Weiss, the president of—that's in your district, isn't it?

Mr. COLEMAN. Well, no. But I did go there for a year.

Mr. SIMON. I think I——

Mr. COLEMAN. It's not in my district, but I would like to claim it.

Mr. SIMON. All right. Well, Father Weiss, the president of Rockhurst College. It's very close to your district.

Mr. COLEMAN. It's in Kansas City.

Mr. SIMON. OK.

STATEMENT OF FATHER ROBERT WEISS, PRESIDENT, ROCKHURST COLLEGE

Father WEISS. Mr. Chairman, Mr. Coleman, I appreciate very much your opening remarks. This is a very crucial time for higher education and it's a great opportunity for us to be able to present this testimony for which I'm very grateful.

Rockhurst College, of which I am president, is one of the 28 Jesuit colleges and universities in the United States. It's one of the largest independent liberal arts colleges in the State of Missouri. We have an enrollment of approximately 3,200, which includes 1,550 in the day classes; almost all of them are full time. And about 850 evening students, and 800 in our graduate programs.

For the most part, our students are from middle income families, and we have a significant number who are financially disadvantaged.

The two decades since the passage of the Higher Education Act of 1965 Rockhurst has benefitted substantially from various Federal aid programs. All three of our residence halls, our library, and our physical education center, were built with Federal loan funds. The quality of education at Rockhurst has been very much enhanced by the wide variety of supportive Federal programs.

And, on the other hand, I think that the help that we have gotten from the Federal programs has helped our raising of funds from private sources. During the last 6 years, for example, Rockhurst has raised over $15 million in private funds. And I don't think that would have been possible without the incentives and the help we have gotten along the line through the Federal programs.

Moreover, the Federal Financial Aid Program for students have been an indispensible resource. Without these funds many of them, especially the minority and disadvantaged students, would never have been able to attend Rockhurst.

The cutbacks in Federal funds have put a special strain on our own resources. For example, in 1980–81 our students received $544,000 in Pell Grants. In the current year, 1983–84, the amount was $447,000. We have tried to compensate for that reduction, and reductions in other Federal programs, by increasing our institutionally funded aid from $556,000 to $759,000.

Incidentally, our day enrollment during that time actually increased from 1,406 to 1,557. But the percentage of minority students decreased from 13.9 percent to 10.4, and percentage of blacks from 10.2 to 6.4. Obviously, because of less funds available for those poorer students.

It is, therefore, with a great deal of gratitude that I read the draft of the reauthorization legislation which renews the commitment of the Federal Government to higher education. The statement of purpose at the beginning of title IV, I think, expresses very well the goals of the Federal Student Assistance Programs, and I thoroughly subscribe to those goals.

Among the recommendations for which Federal support can best be used to strengthen our postsecondary institutions, I'd like to single out three areas. Any new legislation certainly must continue to have as its highest priority the Student Financial Aid Programs. These programs continue to assure access to a college education for all qualified students, and the possibility for a choice of the institution which a student wishes to attend.

I think it is impossible to overestimate the importance of these aid programs in opening the doors of opportunity to a large number of our young citizens.

But, second, the Federal Government must not only be involved in those programs to assist the economically disadvantaged stu-

dents to attend college, but, it has to support the institutions so that they can provide the services. And that's why I think Upward Bound in the tutoring programs and TRIO Programs are so important.

I think that the Government certainly has to have a national interest in providing assistance for research, especially in science and technology, and in other ways of helping institutions to provide the services.

Then, third, in terms of the priorities, it does seem to me important that the Federal Government play a role in promoting the quality—the high quality of education to various forms of assistance to the institutions themselves.

In your comments to Dr. Aery I realize perfectly well the problems of funding renovation, and upgrading of physical facilities, support of equipment purchases, library holdings, and so forth. And yet, to completely withdraw from that, it just seems to me it's going to very much weaken the underpinnings of the quality of our education. It won't do much good to get students there if we're not able to give them a good education when they come.

My second area of comments on the proposed modification in the Federal Student Financial Aid Program. This legislation certainly provides many advantages for students and for the colleges themselves. The increase in the maximum Pell Grant to $3,000, and the allowance for nontuition expenses, would result in much larger grants for many of our students at Rockhurst.

Moreover, the merging of the campus-based programs into a single block grant with the institution having the authority to use these funds for grant and loan purposes would allow much greater flexibility. And, of course, the increase in the GSL maximum would provide more loan funds to students.

However, my concern is with possible unanticipated consequences, particularly if these programs are not fully funded. I tried to ponder this, but I simply am not completely clear as to the affect of the proposed change in the half cost provision to 75 percent on the allowance for nontuition expenses.

The low fee structure for public institutions in Missouri causes difficulty for both the public institutions in that their income is thereby kept low and highly dependent upon State funds, and for the independent institutions is that the tuition differential is so great even for colleges like Rockhurst that charge relatively modest tuition that it just is a tremendous gap, and there's no incentive, I think, in this type of program to get those fees up.

Tuition fees, for example, at the University of Missouri-Kansas City are $1,332 per year. The same costs at Rockhurst are $4,160.

If the Pell Grant Program were fully funded a Rockhurst full need dependent student living on campus would receive a $3,000 Pell Grant plus $2,000 in living expenses. The UMKC student would receive a total of $3,000. The Rockhurst student would need $2,160 in additional aid, not counting books, additional living expenses, and so forth. The UMKC student would need $330.

What would happen if the Pell Grants were not fully funded? As far as I can see, the draft legislation does not really address this question. Therefore, it is impossible to determine the extent of the

disruption in this current public-private balance, if, as seems very likely, the program were not fully funded.

A similar question arises in connection with the three campus-based programs. Would the proposed institutional Block Grant Program simply facilitate the elimination of these relatively small, but extremely important programs? Particularly, as Chancellor Danforth has pointed out, for independent institutions.

The increase in the maximum GSL loan is certainly necessary. It seems to me that the other provisions are currently satisfactory, although I, again, support the objections to this $65,000 limit.

It would be helpful if there were some opportunity for those students, or their parents, who do not qualify for a GSL loan to borrow money at an unsubsidized rate of interest, but with the provision that interest payment and and principle repayment need not begin until after the student has graduated. The problem with the parent loan now is that repayments have to begin immediately or within 60 days, 6 months of the incurring of the loan, and I find many families that are simply not able to handle that. They would be willing to pay the full interest rate so it seems to me there's need for some kind of a loan program for those who do not qualify for GSL that does not put an undue burden on the family to repay immediately.

Then I'd like to make some comments on the administration's fiscal 1985 proposal. As you know, the analyses say that the real cuts in financial aid appropriations, if you take inflation into account, have already amounted to a decrease of 26 percent.

Our estimate at Rockhurst on the effect of the administration's fiscal 1985 budget as compared with the preliminary allocations which we've received for fiscal 1985 would result in Pell Grants being in approximately the same amount.

Work study funds would increase by 50 percent according to the proposal. In our case, that would be an increase from $197,000 to $295,000. However, that $98,000 increase would be offset by the loss of $184,000 in SEOG and NDSL funds, not to mention the elimination of SSIG funds, and the possible consequences on the $685,000 received by Rockhurst students under the Missouri Student Grant Program.

Since most of the students currently receiving work funds at Rockhurst are already working the maximum allowed, I think the real loss would be much greater. And if we were to lose the Missouri Student Grant Program it would simply be of disastrous proportions for Rockhurst, and for the other independent institutions in Missouri.

Our students at Rockhurst receive the third largest amount of aid under the Missouri Student Grant Program of any of the—of all the colleges public and private in the State of Missouri, and very close, actually, to the amount of Washington U, which is second.

Other types of education support—the Special Services Programs for Disadvantaged Students are addressed in the proposed reauthorization legislation. I think these programs are extremely important, and I think the reductions in the funding for Upward Bound really has resulted in a reduction in the number of cities which these programs are offered.

We had an Upward Bound Program at Rockhurst for 17 years continuously since the beginning. It was a successful program, but was not funded this year because apparently a lack of funds.

The other Special Services Programs are also important if we are going to keep students in college and enable them to graduate from college.

We've talked about the question of renovation and upgrading of facilities. A lack of funding has really been, I think, very detrimental in an area; for example, the access for handicapped students. In spite of the requirements of the law there have been no funds allocated to assist institutions to remove barriers to handicapped students on campus, and that has just been an extra burden put on the institutions.

The same thing with regard to energy conservation. This has been promoted. Legislation has been passed, but there have not been reasonable funds allocated for that purpose.

The renovation of facilities and the replacement of equipment, especially scientific equipment, it seems to me is important if we're not going to be borrowing against the future, and simply weakening our institutions, and not being aware of it.

If the Federal Government wishes to maintain a positive role in higher education, and the benefits that will be produced not only for the individual, but for the country as a whole, it must not only help to ensure that a student is financially able to attend, but it must continue programs that allow the disadvantaged student to attend and complete college. And it must give the assistance to the institutions so that they can have adequate facilities, equipment, and materials to teach in an atmosphere conducive to learning.

I would suggest that grants requiring institutional matching would provide a means both to make funds available to the institution, and to give an incentive to the States, and to the institutions to improve their facilities and equipment.

Federal support in the past has been an important factor in strengthening libraries, and in emphasizing areas of particular need such as the preparation of teachers of science and mathematics. Such an investment of Federal funds, in my opinion, has paid substantial dividends in the achievement of our scientists and intellectual leaders. The quality of education certainly can and must be enhanced by this kind of continued support.

In conclusion, I would like to urge that the total legislation—and I have not seen the draft of the other titles, other than three, four, and five—I would like to suggest that care be given to be sure that these titles are geared to the needs of small institutions, as well as large institutions, and to independent institutions, as well as public institutions.

For example, I'm concerned about the tying of library support to Pell Grants without regard to institutional needs. That kind of tie-in, it seems to me, can really benefit very low cost institutions, and not be aware of the needs of other institutions.

One of the proposals for international programs, I think, would tend to favor existing programs in the larger institutions without much regard for the smaller liberal arts colleges. So, I hope in the final drafting of this legislation that the small and the independent institutions are not overlooked in the balance.

I thank you very much, Mr. Chairman, for this opportunity.
[Prepared statement of Father Robert Weiss follows:]

PREPARED STATEMENT OF REV. ROBERT F. WEISS, S.J., PRESIDENT, ROCKHURST COLLEGE, KANSAS CITY, MO

This is a crucial time for higher education, and I appreciate very much the opportunity to present this testimony to the subcommittee. The college of which I am president is one of the twenty-eight Jesuit colleges and universities in the United States and one of the largest independent liberal arts colleges in the state of Missouri. Our enrollment of approximately 3,200 includes 1,550 students enrolled in day classes, almost all of whom are full-time students. In addition, we have about 850 evening students and about 800 in our graduate business programs.

Our students are, for the most part, from middle-income families, and a significant number are financially disadvantaged. The average of the composite ACT scores of this year's entering freshman class was 22.6, compared to the national average of 18.3. According to the Chronicle of Higher Education, Rockhurst's percentage of Black students was 10.2 percent compared to 3.7 percent at the university of Missouri in Columbia.

In the two decades since the passage of the Higher Education Act of 1965 Rockhurst has benefitted substantially from various federal programs. All three of our residence halls, our library, and our physical education center were built with federal loan funds. The quality of our education has been enhanced by a wide variety of supportive federal programs. On the other hand, these federal funds have attracted much more substantial support from the private sector. During the last six years, for example, Rockhurst has raised over $13,000,000 in private funds.

The federal financial aid programs have been an indispensable resource for our students. Without these funds, many of them, especially minority and disadvantaged students, would not have been able to attend Rockhurst. Even though Rockhurst was among the fifty colleges singled out nationwide by Changing Times magazine as above average in quality and below average in tuition and other charges, about 70 percent of our students require some form of financial assistance in order to attend Rockhurst.

The cut-backs in federal funds have put a special strain on our resources. For example, in 1980–81, our students received $544,000 in Pell grants; in the current year, 1983–84, the amount was $447,000. We have tried to compensate for that reduction and others by increasing our institutionally funded aid from $556,000 in 80–81 to $759,000 in 83–84. Our day enrollment during that time has actually increased from 1,406 to 1,557. But the percentage of minority students decreased from 13.9 percent to 10.4 percent and the percentage of Blacks from 10.2 percent to 6.4 percent.

It is, therefore, with profound gratitude that I read the draft of the reauthorization legislation which renews the commitment of the federal government to higher education. The "Statement of Purpose" at the begining of Title IV expresses very well the goals of the federal student assistance programs, and I thoroughly subscribe to those goals.

I. RECOMMENDATIONS FOR WHICH FEDERAL SUPPORT CAN BEST BE USED TO STRENGTHEN OUR POST SECONDARY INSTITUTIONS

1. It seems very evident to me that any new legislation must continue to have as its highest priority the student financial aid programs. These programs assure access to a college education for all qualified students and the possibility for a choice of the institution which a student wishes to attend. It is impossible, I think, to overestimate the importance of these aid programs in opening the doors of opportunity to a large number of our young citizens.

2. The federal government must not only continue to be involved in programs which assist economically disadvantaged students to attend college it must also support programs such as Upward Bound and tutoring plans which help the learning disadvantaged students to enter college and especially to complete a college degree. Through its involvement in higher education, the federal government has the opportunity to promote the national interest through the educational system. The government must also continue to provide assistance for research in many areas but especially in science and technology. Another important segment of higher education in which the federal government can have a significant impact is in science education and in teacher training.

3. The federal government has an important role to play in promoting a high quality of education through various forms of assistance to the institutions themselves. Support for the renovation and upgrading of physical facilities, matching grants for the purchase of equipment, especially scientific equipment for instruction and research, and for library holdings, to mention just a few.

II. COMMENTS OF THE PROPOSED MODIFICATION IN THE FEDERAL STUDENT FINANCIAL AID PROGRAMS

As I study the proposed legislation concerning student financial aid, I can see many advantages for students at my institution and for the College itself. Obviously, the increase in the maximum Pell grant to $3,000 and the allowance for non-tuition expenses would result in much larger grants for many of our students. Moreover, the merging of the campus-based programs into a single Block Grant with the institution having the authority to use these funds for grant and loan purposes similar to the preceding program would allow much greater flexibility. And, of course, the increase in the GSL maximum would provide more loan funds to students.

However, my concern is with possible unanticipated consequences, particularly if these programs are not fully funded. I am not completely clear as to the effect of the proposed change in the half cost provision to 75 percent and the allowance for non-tuition expenses.

The very low fee structure for public institutions in Missouri causes difficulty for both public institutions, in that their income is thereby kept low and highly dependent upon state funds, and for the independent institution in that the tuition differential is so great even for relatively modest tuition institutions like Rockhurst. Tuition and fees at the University of Missouri-Kansas City are $1,332 per year and the same costs at Rockhurst are $4,160 per year.

If the program would be fully funded, the Rockhurst full-need dependent student living on campus would receive a $3,000 Pell grant plus $2,000 in living expenses. The UMKC student would receive $3,000. The Rockhurst student would need $2,160 in additional aid (not counting books, etc.), the UMKC student would need $330. What would happen if the Pell grants were not fully funded? The draft legislation does not address this question. Therefore, it is impossible to determine the extent of the disruption in the current public-private balance.

A similar question arises in connection with the three campus-based programs. Would the proposed institutional block-grant program simply facilitate the elimination of these relatively small, but extremely important, programs?

The increase in the maximum GSL loan is currently necessary. It seems to me that the other provisions are currently satisfactory with regard to loan programs. It would be helpful if there were some opportunity for those students (or their parents) who do not qualify for a GSL loan to borrow money at an unsubsidized rate of interest, but with the provision that interest payment and principal repayment need not begin until after the student has graduated.

III. COMMENTS ON THE ADMINISTRATION'S FISCAL YEAR 1985 PROPOSALS

According to several analyses I have seen, the real cuts in financial aid appropriations, taking inflation into account, have already amounted to a decrease of 26%. Our estimate of the effect on Rockhurst students of the administration's proposed FY 85 budget as compared with the preliminary allocations for FY 85 would result in Pell grants of approximately the same amount (with, of course, no provision to cover increased tuition and fees). Work-study funds would increase by 50% according to the proposal. In our case, that would be an increase from $197,000 to $295,000. However, that $98,000 increase would be offset by the loss of $184,000 in SEOG and NDSL funds, not to mention the elimination of SSIG funds and the possible consequences on the $685,000 received by Rockhurst students under the Missouri Student Grant Program. Since most of the students currently receiving work-study funds are working the maximum allowed, the real loss would be much greater, and if the Missouri funds were also lost, would be of disastrous proportions for Rockhurst and our sister independent institutions in Missouri.

IV. COMMENTS ON OTHER TYPES OF HIGHER EDUCATION SUPPORT

The Special Services Programs for Disadvantaged Students are addressed in the proposed reauthorization legislation. Rockhurst was informed last spring, one week before our Upward Bound Program was to begin, that we would not be funded even though our program had operated continuously and successfully for 17 years. The reason given was insufficient funds. This left the Kansas City area with no Upward

Bound program at all. Reductions in the funding for Upward Bound programs has apparently led to a reduction in the number of cities in which those programs have been able to be offered. This in turn will eventually lead to a reduction in the number of learning disadvantaged students who are able, in fact, to enter college. Important also are the special service programs in terms of keeping students in college.

Some method of assisting institutions with the renovation and upgrade of facilities is also essential. A lack of funding has had its effect in the area of access for handicapped students. In spite of the requirements of the law no funds have been allocated to assist institutions to remove barriers to handicapped students no campuses.

Energy conservation has also been promoted and legislation passed to assist institutions in finding ways to conserve energy, but these programs have not been funded at any reasonably adequate level. The same is true for the renovation of facilities and the replacement of equipment, especially scientific equipment. If the federal government wishes to maintain a positive role in higher education and the benefits produced not only for the individuals but for the country as a whole, it must not only help to ensure that a student is able financially to attend an institution, but it must also continue the programs which have allowed the disadvantaged student to attend and complete college. We must also maintain the financial assistance to the institutions that will enable colleges to have adequate facilities, equipment, and materials to teach the students in an atmosphere conducive to learning. Grants requiring institutional matching would provide a means to raise funds and to improve facilities and equipment.

Federal support in the past has been an important factor in strengthening libraries and in emphasizing areas of particular need as the preparation of teachers of science and mathematics. Such an investment of federal funds has paid substantial dividends in the achievement of our scientists and intellectual leaders. The quality of education can and must be enhanced by this kind of continued support.

Thank you for the opportunity to present this statement.

Mr. SIMON. We thank you, Father Weiss. Did Father Weiss break the machine over there?

Dr. James Olson, who has been a frequent witness before our subcommittee and we're pleased to have him as president of the University of Missouri, who's going to be retiring as of July 1.

Welcome.

STATEMENT OF JAMES C. OLSON, PRESIDENT OF THE UNIVERSITY OF MISSOURI

Mr. OLSON. Chairman, Mr. Coleman, thank you very much. I am delighted to have this opportunity to appear before you once again to discuss the very real and financial needs of higher education. I think all of us here today would agree that it is absolutely essential that the Federal Government continue to support, and support well, America's institutions of higher education and their students.

Mr. SIMON. Fine.

Mr. OLSON. You have it for the record. I am impressed with the importance of what we're doing though in terms of the millennium, of the year 2000. You know, the people who will be in positions of leadership at that point are in our institutions today. And we need to be concerned about the ability of our institutions to provide opportunities for them.

It seems to me that student financial aid really must continue to be the cornerstone of Federal support of higher education. It's flexible and equitable and it helps to strengthen the variety, the diversity of our institutions. And that, of course, is one of this Nation's great strengths.

I am concerned about the administration's proposals with respect to 1985 that would reduce aid. I have submitted a document, along

with my written testimony that will explain in some detail what the effect would be on a large State university, the University of Missouri.

Mr. SIMON. That statement will be entered into the record.

Mr. OLSON. Thank you very much, Mr. Chairman.

As has been suggested, fees and tuition at public and private institutions have been going up. At the University of Missouri, we've had no choice but to raise student fees more than 50 percent in the past 4 years in large part because of a decline in State support. This endangers the ability of the institutions to provide opportunity.

Now, I personally favor, Mr. Chairman, your proposal to merge the various aid programs into one block grant for each institution. Each institution is different as is its student body, and it makes sense to address the student aid requirement of individuals at the institutional level, within the expressed intent of the authorization of Congress.

The problem with that, of course, is, as has been suggested, there is the fear and perhaps the danger that the merger of these programs will result in a reduction in total support. And Dr. Aery has mentioned the problem of the Missouri Student Grant Program, and I would hope that these kinds of problems could be taken into account. I support we want both. We favor flexibility, but we do need the funds.

I do support the increasing the maximum amount for the Guaranteed Student Loan Program from $5,000 to $7,000 per year. This is obviously necessary; at the same time I think we have a problem in saddling students with too great a burden of debt and this is a problem of balance that we have to work with.

As you may be aware, I am scheduled to appear before you again in the day to discuss graduate education so I'll not—I'll defer my comments on graduate education until that time. I would also like to suggest that specific support be given to improving teaching at the postsecondary level.

A relatively small investment could well pay significant dividends in the form of more effective, more efficient instruction. And we do need to give our best thought to ways in which we improve teaching.

Further, I recognize that the matter of facilities, instrumentation, are not necessarily before the committee, and I recognize, Mr. Chairman, the problems expressed in your comments.

But I do want to be on the record as urging that somehow the Federal Government find a way to return to the support of facilities. Under the specific grants of a number of years ago, under Federal revenue sharing, we had that mechanism, and I would like to hope that somehow we can find another mechanism because this is one of the most critical areas as we seek to maintain quality and preserve our institutions, because unfortunately today's higher education is something we can't conduct in a simple building or with a good teacher on one end of the log and a student on the other.

I would like to also call attention to the fact that we sometimes overlook in our discussion of what is needed—we overlook what we have. As we have a large core of dedicated teachers who are work-

ing for relatively low wages and who are working under conditions of considerable frustration and as we approach the problems of supporting higher education, we need to keep that core of people in mind and continue to think of ways in which we can help them to fulfill their mission.

But I'm optimistic with the continued leadership of persons such as yourselves that we can continue to go forward, and, Mr. Chairman, I would like to take this opportunity to express appreciation for the services you have provided and you have given in your capacity in the House of Representatives as you are leaving the House. And I think all of us owe you a great debt of gratitude.

Thank you.

[Prepared statement of James C. Olson follows:]

PREPARED STATEMENT OF JAMES C. OLSON, PRESIDENT, UNIVERSITY OF MISSOURI, ST. LOUIS, MO

Mr. Chairman, Mr. Coleman, I am gratified to have this opportunity to say a few words about the very real financial needs of higher education. I believe that all of us here agree it is essential that the Federal Government continue to support, and support well, America's higher education institutions and their students.

Higher education has always representated not an expense, but an investment—not just for the individual, but for society. Today, as we stand on the threshold of the 21st century, the new millennium, that is truer than ever. Those who will lead this country in the next century are in college today.

America should lead the world toward a bright new future, a world where technology will make our lives richer and longer. Many of us take for granted things like desk-top computers, laser-based supermarket check-out systems, and devices such as "cat" scanners found in major medical centers. These time-saving, labor-saving, life-saving new technologies all rest on a hidden foundation, higher education. Consider this:

Higher education does much of the basic research on which such advances are based; higher education does much to disseminate new knowledge to all who can use it, and, most important, higher education trains the men and women who will ensure the process of technological and social advancement continues in the future.

That's why Congress must see to it that higher education gets the support it needs—not to benefit a relatively small number of individuals or institutions, but to benefit all Americans, of every race, creed and color, in every walk of life.

Student financial aid should be a cornerstone of that support. Such aid is one of the most flexible, equitable approaches to maintaining and strengthening the variety of higher education establishments that characterize this Nation. That variety, I feel, is one of education's great strengths. (But, as you know, the administration has proposed changes for fiscal year 1985 that would reduce aid. I have submitted a document along with my written testimony that describes how such changes would impact on our university and its students.)

Student aid has become more important than ever because, as you are aware, tuition at public and private colleges and universities has risen dramatically of late. Nationally, median tuition at state colleges and universities has jumped 24.6 percent in the past two years. At the University of Missouri, we've had no choice but to raise student fees more than 50 percent in the past four years, in large part because of a decline in state support.

But rising fees are putting higher education out of reach of many, even in public institutions which historically have sought to provide educational opportunity to all who seek it and can benefit from it, regardless of their financial situation. That's why the Federal Government must maintain a firm commitment to student financial aid, in all forms.

I personally favor Representative Simon's proposal to merge the SEOG, NDSL and SSIG aid programs into one block grant for each campus. Each institution is different, as is the student body. It makes sense to me to address student aid requirements of individuals at the campus level, within the expressed intent of the authorization of Congress.

But we favor this approach only so long as merger of these programs into a single block grant will not result in their being cut. We favor flexibility, yes, but we also need funds to support needy students.

In the same vein, I support increasing the maximum amount for the guaranteed student loan program from $5,000 to $7,000 per year. With tuition rising, more money is needed for such aid. I would like to see more money made available to graduate and professional students who, as you have recognized, often must pay for their advanced training without help from their parents.

Let me add that while I'm not opposed to the "self help" approach to student aid, I also believe we cannot continue to saddle students with huge debts. Particularly in certain graduate fields that do not offer the prospect of exceptional financial remuneration, society should assume the bulk of the financial burden of developing expertise that will ultimately be to its benefit.

As you may be aware, I am scheduled to appear before you later in the day to discuss graduate education. With your permission, I shall defer further remarks on that subject until that time.

I'd also like to suggest specific support be given to improve teaching at the post-secondary education level. A relatively small investment here could well pay significant dividends in the form of more effective, more efficient, instruction.

In our increasingly complex world, where each day there is more to learn and master, we should put a premium on further honing the skills of our faculty and developing new approaches to learning. After all, we owe it to our students and to the taxpayers to offer the best education we possibly can at an affordable price. A program to improve teaching would certainly contribute to that.

Further, I recognize this thought may not fall under the purview of the legislation we're discussing today, but nonetheless I'd also like to appeal for greater federal support for university research in general, as well as for specific support for the purchase of state-of-the-art scientific instruments.

Much of the nation's basic research is carried out in universities. Indeed, academia provides a unique environment that nurtures such research, the source of innovations upon which much of America's economic vigor ultimately rests.

We find ourselves in the situation today where many colleges and university laboratories not only are deficient in industrial terms, but they are inferior to many good high school facilities. We have let the physical underpinnings of higher education seriously deteriorate. I do not know how we will be able to reverse the trend without the renewal of some form of federal facilities and equipment support.

Science has already answered most of the easy questions. If we are to continue to advance, faculty members and graduate students must have access to the tools they need, tools that, in many cases, universities cannot hope to purchase without outside financial help.

Today's higher education demands more than simple classrooms where student and professor can meet; it demands modern laboratories and other special environments, particularly for graduate level and professional education, that are often costly in the extreme.

I've said a lot, perhaps too much, in these few minutes about what higher education lacks. But in closing, I'd like to mention something higher education already has—in abundance.

Our most important asset is the thousands of men and women who have dedicated their lives to teaching and research in an academic environment. They could earn considerably more in business and industry. Instead, they opt to help shape and train the next generation.

Those in higher education know that this task, though always challenging, often frustrating (as in these difficult economic times), is also constantly rewarding. It is rewarding not only in terms of the satisfaction that comes from helping a mind realize its full potential, but also because in doing so we've helped make the world a little better place.

With the continued leadership of persons such as yourselves, higher education can continue to produce the skilled minds and trained hands America will need to meet the challenges, and take advantage of the opportunities, the 21st century will offer. I thank you.

UNIVERSITY OF MISSOURI, OFFICE OF SCHOLARSHIPS AND STUDENTS FINANCIAL AID SERVICES, COLUMBIA, MO

The following comments concern the potential impact of the recently proposed Reagan Administration FY 1985 Budget on the University of Missouri.

I. PELL GRANT PROGRAM

The administration proposes to dramatically modify the current Pell Grant program into a self-help grant. This is the same proposal which the administration attempted to pass last year. While the maximum grant for any individual student would be increased from the current $1,900 to $3,000 per year, the eligibility requirements would be modified in such a way as to decrease the total number of awards. In addition the administration would restrict the majority of all available funds (80% of the total amount appropriated) to families with incomes under $12,000.

Effect on the University of Missouri

During 1982-83 the four campuses of the University made available $6.9 million in Pell Grant awards to 7,450 students. The AVERAGE award last year was $923. Based on the students who applied for aid this year (1983-84), only 27% of the students had incomes under $12,000. If this change in the program was adopted, over 70% of all UM students would probably be eliminated from the program even though they still demonstrated need. The average income of parents of our dependent students was $24,875, thus putting them above the maximum in the administration's proposal.

II. SUPPLEMENTAL EDUCATIONAL OPPORTUNITY GRANT PROGRAM

The administration proposes to completely eliminate the SEOG program next year.

Effect on the University of Missouri

The University of Missouri received slightly over $1.1 million in SEOG funds last year. About 3,000 students shared in the program with an AVERAGE grant of $395. At the University we utilize these funds for the very needy students—the ones who would not otherwise have sufficient funds to enroll or stay in school. The loss of this critical program would damage our ability to assist these very high need students. In addition, these students tend to be minority or disadvantaged students, therefore the loss of this program would affect the enrollment opportunities of these students.

III. NATIONAL DIRECT STUDENT LOANS—ELIMINATION OF THE FEDERAL CAPITAL CONTRIBUTION

The federal government, since 1958, has provided seed money to make loans available to needy college and university students. The administration proposes to completely eliminate the annual Federal Capital Contribution for all institutions this coming year. Therefore, we would have only the revolving funds to reallocate to needy students.

Effect on the University of Missouri

This current year (1983-84) the four campuses received $2.2 million in Federal Capital Contribution in the NDSL program. This amount, when added to repayments and available cash is used to make new loans this year. If we do not receive new federal funds, then younger campuses such as St. Louis, where the revolving fund is quite small, will have few dollars to make available. At the older campuses such as Columbia, while the revolving fund is larger, it could not sustain the current level of borrowing by students under this program.

We need to continue to have new funds in the NDSL program so that needy students can borrow funds for education. The AVERAGE loan last year (1982-83) on all campuses was about $900. At the time when the administration is suggesting the elimination of most programs for needy students, we must maintain this program.

IV. STATE STUDENT INCENTIVE GRANTS (SSIG)

The State Student Incentive Grant program provides money to states in the nation who have established their own grant programs for needy students. In Missouri, the program provides less then $2 million dollars of the total amount of money made available to students through the Missouri Student Grant Program.

Effect on the University of Missouri

While the elimination of this program would not directly effect UM students, it would indirectly reduce the aid available. During 1982-83 UM students received $690,000 in grant funds from the Missouri State Grant Program. It is our fear if the SSIG funds were eliminated that the General Assembly may eliminate the entire Grant program. While this State grant does tend to go to private institutions, the

1,890 UM students who received funds from the program were some of the most needy students enroiled at the University.

The program should be retained even though it has achieved its desired affect—that of encouraging states to begin their own grant programs. In states such as Missouri, the elimination of this relatively small program (its only $76 million in total) could reverse the participation of states.

V. COLLEGE WORK STUDY PROGRAM (CWSP)

The College Work Study Program is the only program in which the administration has requested an increase. The administration has requested an increase from $550 million to $850 million for FY 1985. The administration has indicated that an institution COULD, if it wished, transfer up to 50% of its annual allocation in the CWSP program into the Supplemental Educational Opportunity Grant program, or utilize up to $100,000 for cooperative education, adult literacy programs, or job location and development centers.

Effect on the University of Missouri

At the University of Missouri, we provided last year (1982–83) over $22.1 million in work assistance to our students. ONLY $2.2 million of this money came from the College Work-Study Program, the remaining $19.9 million came from general operating funds. Even with a 54% increase in appropriations in the program, the University would not receive sufficient funds to either make up the difference in lost aid from cuts in programs such as the Supplemental Educational Opportunity Grant and National Direct Student Loan Program, nor would it seriously reduce the dollars the University provides from General Operating funds.

We of course support the increase in the CWSP program funding, but not at the expense of the other equally vital programs.

VI. GUARANTEED STUDENT LOAN PROGRAM—UNIVERSITY NEEDS TEST

The administration has proposed that the Guaranteed Student Loan Program become completely need-based. That is before any student could receive any loan from the program, he or she would have to demonstrate need for the loan. By this universal needs test, the administration hopes to reduce the cost of the program. The cost of the program is due mainly to the current interest rate—if the interest rate is low then the cost of the program to the government is reduced. It is estimated that for each 1% increase in the prime rate, the government must pay an additional $100 million in the special allowance paid to lenders who participate in the program.

Effect on the University of Missouri

The effect on the University would be minimal because most of our students will demonstrate need anyway. The effect at lower cost public schools could be more dramatic, since their costs are lower, their students could be eliminated entirely from consideration under this program.

VII. TRIO FUNDING

The TRIO programs are three programs passed during the 1960's and are designed to encourage educationally disadvantaged students to attend postsecondary education. These programs have attempted to prepare high-risk students for college. The administration has proposed a 50% reduction in the program from $165 million to $82 million.

Effect on the University of Missouri

Three campuses of the University have TRIO funding (all except Rolla have a program) and often the programs are quite small, but have been reasonably effective over the years. With the reduction in campus budgets, especially for student services, the TRIO funding has become more important. The programs continue to serve the purpose for which they were intended—that is to provide educationally disadvantanged students a chance for upward mobility.

VIII. EDUCATIONAL SAVINGS ACCOUNT

The administration has again proposed the establishment of educational savings accounts, similar to IRA's. This proposal would allow families to contribute up to $1,000 per child per year into a specific savings account with the interest and dividends being tax-free. The proceeds of the savings account could be used to ONLY

pay for tuition and room and board directly to a college. Only full-time undergraduates between the ages of 18 and 26 could benefit from the program.

Effect on the University of Missouri

The initial effect on the University would probably be small. The program first would not allow parents to save a great deal of money and second would not benefit the families under $20,000 per year income who do not now have the ability to save $1,000 per year. The administration sees this program as aiding the middle income families, yet our experience shows that these families generally receive lower incomes during the early years of a child's life, and by the time they can begin to save, the child has already entered or is about to enter college.

If the program were begun it could encourage some parents to save, but the $295 million price tag per year should not be funded out of other more immediate and needed federal student financial aid programs.

[1] Note.—Indicates national or State total is less than UM total.
[2] Note.—For incomes above $29,999 difference is based on 4 years.

Mr. SIMON. I thank you, and I might add we owe a debt of gratitude to the retiring President of the University of Missouri, not only for your leadership here in Missouri but for your willingness to help out with your insights on the national scene.

And finally, Dr. Webb is a constituent of yours, is that correct?

Mr. COLEMAN. He is.

Mr. SIMON. All right.

Mr. COLEMAN. Some would like to say that.

Mr. SIMON. I'm going to defer to my colleague from Missouri to introduce Dr. Webb here.

Mr. COLEMAN. Dr. Webb, I think this might be your first time to testify before our subcommittee, and we welcome you from Trenton Junior College.

Trenton Junior College probably has a different view, at least one that needs to be expressed since we've had some of the titans of the community here before us in numbers and in wealth as far as endowments.

And I think that we would like to hear from the junior colleges regarding reauthorization.

Dr. Webb.

STATEMENT OF ROBERT M. WEBB, PRESIDENT, TRENTON JUNIOR COLLEGE

Mr. WEBB. Thank you very much. Chairman Simon, Mr. Coleman.

Being last is not really unique to me with a name starting with a "W" and working for a college that starts with a "T" is sort of comes that way, you know.

Just to give you a little bit of background, and you do have some prepared remarks in front of your—but I would like to tell you a little bit about our particular campus and our particular school.

We are unique to the fact we are the only K–14 school district in the United States that's actively working today. We have what we call, I guess it's been referred to me a few times—is we take them from birth to death. We start them at 3 years old in our early childhood program and our oldest student in our college this year is 94.

So, we feel like we do have a wide range of people involved in our college.

We have about 2,300 students altogether in those varied programs, and we work about an $8 million budget so we have a variety of programs we're looking at.

Basically, I didn't understand quite frankly the total bill to read it and comprehend it, so I've prepared some remarks relating probably to my particular institution and to some feedback that I wanted to give in the sense of how it has affected us and some specific comments relating to Trenton and a few of the other community colleges in Missouri.

In doing so, I have prepared some comments relating to PREGO's report for strengthening the postsecondary schools: Modification of the student financial aid program, and a brief comment on the self-help proposal by the administration's proposed budget for 1985.

There's a number of support programs from the Federal Government. One or two or three I would like to comment on is title II specifically, title II–A relating to libraries.

It just goes without saying to me, and I think to most educators that the heart of your whole institution whether it's small or large is your library. And you've got to continue support in that area. I just think it's essential that you do that.

Another area that is very important as that is vocational education. In my capacity as administrator of a district that deals not only with elementary and secondary but higher education as well as people that—adult programs coming back, we find that one of the most essential parts of our program is that of vocational education. Starting with the Smith-Hughes Act in 1917 has been very essential that educational programs at elementary and secondary, as well as postsecondary and now vocational schools be funded in a sense that it does lead them into direct job training forces as soon as they are done.

We find in Missouri, according to the Missouri Department of Elementary-Secondary Education profiles, that Missouri public schools for 1982–83, 56.8 of the graduating seniors do not continue on with their higher education when they get out of high school.

Therefore, if we de-emphasize or do not emphasize enough vocational education and if our Missouri statistics are equal to that of the rest of the Nation we are not funding the educational needs that we need in the United States.

A problem in working with it everyday that I see with vocational education is if we do not determine the needs assessments before we place students in that particular program we get to dealing with out there, with what we call tenure laws and we get to dealing with people and teachers. And we start in those programs placing students where the teachers are, not necessarily where the needs are in the job market when we get done with those students with our programs.

Another area I'd like to speak on Federal support is that of title III. We currently in Trenton—I might back up. Trenton has been around since 1925 with a junior college. Not until 1982 had Trenton ever received a Federal dollar in support, besides that of the elementary program that would come funneled through the State on block grants and these types of things.

But in our postsecondary school it was the philosophy of our board and other people in that community all the way through to operate that college without Federal support. And we continued to do that until that particular period of time and then we felt that we had some opportunities to do some strengthening and some growing at our college that we wanted to do, and we needed some outside resources to do that.

We currently, at that time, we applied for a title III grant, obtained that title III grant in the amount of only $500,000, but to us it was a major amount. Representative Coleman spent a lot of time helping us to get that approved. It has offered us the growth that we needed in that particular area, even though we're out in the rural, we're out in the country, we have computer problems.

Computer's a big thing that's coming today. That gives us the opportunity to expand into those particular technology programs and since then it also helps our communities by offering these types of programs to the people in that area.

Title III has offered us that, and I would hope that continued support in title III programs would be there in the future.

Discussing some areas of student aid programs, I would like to speak a little bit about increasing the Pell Grant from its current ratio to $3,000. In doing so, as higher education cost increases those needs for students also increases for increased funding.

But at the same time I would encourage a stronger needs-based program in granting those awards, finding out for sure the need is there before that award is granted.

Another area of changing the Pell Grant Program to an entitlement program. I appreciate your efforts in the entitlement program and making funds available to everyone that particularly wants them.

But I find it a little hard to support that program because, to me, entitlement programs are cost programs that you get locked into even though this may be a small entitlement program along with another small entitlement program locks us into what I feel is a major part of our national debt that we're dealing with today.

With that I would suggest that we look at the Pell Grant from a year-to-year basis on appropriations and maybe keeping the same and increasing, of course, if we can do that.

But on a stronger needs-based program, as I mentioned earlier, at the same time in talking about lifting the support from a half-cost provision to the 75- percent cost provision, I support that.

But at the same time I would suggest that we look at some kind of sliding-scale, family-based income for that to be established as it goes along with raising from 50 to 75 percent.

In other words, the greater need the more money you can get, and establish some kind of sliding scale to establish that to work with the lower and middle income families and students along that line.

In talking about increasing the maximum amount of the student loan from $2,500 to $3,000 and from $5,000 to $7,000 I would encourage in that program also and testify in favor of that because the needs of these students are increasing. Therefore, their aid—the services, if our education, in other words is increasing, therefore the aid needs to be increased also.

But, at the same time I would suggest that you look at extending the amount of time, a pay period, I believe—it's what? 10 or 12 years at the present time?

Increasing that from 5 to 7 more years to maybe 10- or 20-year period, somewhere in that area. One of the problems that I see with that is—and it affects directly with our people, and I'm sure it does throughout the Nation is: Here's a student entering college. They receive this loan. They get a loan, let's say for 3 or 4 years, and they come up with a debt of $10,000 or $8,000 or $12,000, whatever that may be, when they get out of college, the first thing they have is that debt looking at them when they get out. They also want to look at maybe getting married. They're going to look at buying a new car. They're going to look at et cetera, et cetera—the daily living. Therefore, that's a problem in getting it paid back. They don't have enough income, especially if they go into the teaching field.

They don't have enough income to pay it back immediately. Therefore, their priorities become now—to the family and to themself not to paying back the student loan. They want to do it, generally, I would say, in general terms.

Most of them want to pay it back, and most of them do. But at the same time you have that problem of what's more important to me right now. And so, by giving them a chance to extend that, making their payments less per month over the period of longer time, would be maybe one solution to consider.

Merging the campus-based programs to campus-based block programs, I don't believe I could testify in favor of that. Smaller institutions of my—as myself and the one that I work in and maybe others that may not have the matching resources to match this 15 or 20 percent to get the work-study programs. To get some other programs, I don't believe that would be an asset for our community colleges.

Metropolitan Community College in Kansas City, for example, in talking with them in the last few days have expressed to me the concern that I make note to you, Chairman Simon, that they would

probably lose, from their best estimates, around $96,000 if this particular block grant is put into effect.

And we feel like that we would lose particular money also, but not as great as they would and maybe some of the other colleges.

In conclusion I would like to speak briefly to the fact that the administration's fiscal year 1985 recommendation on the self-help proposal have taken in first going from the work-study program and then into the loan program and into the Pell Grant Program. And in very short and simple terms to me that is putting the burden right back on the middle income and lower income people. Forcing them into debt before they get out of college; forcing them in the long range of less payment to the student loan program, and I just feel like it would be a negative effect on those students, and they would not go on and advance their higher education program.

I appreciate the opportunity and to come and talking with you, and hope I get to do it again, Mr. Coleman, sometime.

Mr. COLEMAN. Thank you.

[Prepared statement of Robert M. Webb follows:]

PREPARED STATEMENT OF ROBERT M. WEBB, PRESIDENT, TRENTON JUNIOR COLLEGE, TRENTON, MO

Chairman Simon, members of subcommittee on Postsecondary Education, I appreciate the opportunity to give testimony relating to legislation reauthorizing the Higher Education Act and the Administration fiscal year 1985 budget.

I'll make remarks relating to: Federal support in strengthening postsecondary education; proposed modifications in the federal student financial aid program; the administration fiscal year 1985 budget recommendations; and student aid "self-help" proposal.

FEDERAL SUPPPORT IN STRENGTHENING POSTSECONDARY EDUCATION

The federal government has many support programs for education and there are three programs I would like to speak briefly about and encourage continued support.

Title II-A of Higher Education Act of 1965

The library is often referred to as the heart of the school. It is the guiding resource, not only for the student, but for teaching staff as well. Federal support in Title II-A of the Higher Education Act emphasizes a concern about quality in education.

Vocational education.—According to the Missouri Department of Elementary and Secondary Education "profiles of Missouri Public Schools 1982-83", 56.8% of Missouri's 1982 high school graduates do not immediately go to college after graduating from high school, and this figure is consistent for the past five years. Since the passage of the Smith-Hughes Act in 1917, the objective of vocational educational programs is to prepare the high school graduates and graduates of vocational schools to go immediately into the work force. Without having National statistics available, if the Missouri statistics are comparable with the rest of the nation, any less emphasis in vocational funding from the federal government would seem that the federal government is not funding programs that meet the educational needs.

A problem with vocational education programs is "needs assessment" of where the jobs are in the communities and where training is needed is not performed before students start their education. Vocational programs place students where teachers and slots are available, not where the job need is.

Title III Institutional Aid Program of the Higher Education Act of 1965

The purpose of the Title III programs is to offer opportunities to college and universities to strengthen their educational programs. In doing so, college and universities develop education programs that not only strengthen the college, but provide a needed service to the job market in producing better educated individuals.

Trenton Junior College has received and is currently receiving a grant from the federal government, and I can testify first-hand that this program is benefiting our college.

Continued support is necessary and is another way the federal government can support postsecondary education.

STUDENT AID PROGRAM

Increasing Pell grant.—I would testify in favor of increasing the Pell Grant to $3,000. As the cost of higher education increases, the students' need for additional aid increases. At the same time, I would be in favor of establishing stronger need base programs in order for students to receive benefits of the Pell Grant.

Changing the Pell grant program to an entitlement program.—I appreciate the efforts in Representative Simon's Entitlement Program in trying to make funding available to all the students that were eligible for a Pell Grant, and not how many Pell Grants can be issued depending on how much Congress decides to appropriate for this program. However, I do not feel that I could support the Entitlement Program because I do not believe that you would have fiscal control of how much money would be appropriated to fund the Pell Grants. I also believe that, in its small way, this Entitlement Program, along with other entitlement programs that Congress passes legislation on, contributes to our national debt. It seems with an entitlement program, you get locked in and have to fund a program year after year.

It is suggested that an increase in the Pell Grant Entitlement year after year be considered on a need basis and fiscal control would be maintained.

I would testify in support of lifting the half-cost provision for Pell Grant recipients to a provision that does not exceed 75% of their total cost of attending an institution, only on the provision that students are eligible and must show a need for the extended benefit. A sliding scale based on family income could be established with benefits from 50% to 75% to be determined at each level of income and this could provide greater benefits to the lower and middle income student, also, it would provide them the opportunity to choose from a broader base of colleges and universities.

Increasing the maximum annual loan amount in the guaranteed student loan program from $2,500 to $3,000 for undergraduate students, and $5,000 to $7,000 for graduate and professional students.—I would testify in favor of increasing the maximum loan amount simply because the cost of the educational services that these students are purchasing are increasing. Therefore, as the services increase, the amount of the loan needs to increase in order for these students to keep pace. At the same time, I would encourage extending the repayment period on these loans from five to seven years, providing the student less of a burden after graduation to pay off the loan.

Merging campus-based programs to campus-based block grants.—I would testify against the idea of merging campus-based programs such as the Supplemental Educational Opportunity Grant, the National Direct Student Loan Program, and the State Student Incentive Grant Program to a campus-based block grant. Under this provision, smaller colleges and universities do not have matching resources equal to the 15 percent or 20 percent match in order to receive a grant and would be losing student aid resources. Students from middle income families would suffer the most under this proposal because of the reduction of their availability of funds to advance their education. Sources from Metropolitan Community Colleges in Kansas City, Missouri, indicate that they estimate they would lose as much as $96,000 if the block grant merger goes into effect.

THE ADMINISTRATION'S FISCAL YEAR 1985 BUDGET RECOMMENDATION

Student aid self-help proposal.—I would testify against the proposal that would require students to turn first to the Federal Work-study Program, and then to loan programs before receiving a Pell Grant. Because I believe it would have a negative effect on the middle income student. The Self-help Proposal forces students into a loan program and puts the students into debt before they graduate from college and have a means to repay the loan. This, I believe, would have a negative effect on the number of students that would be willing to assume this debt and advance their education.

Mr. SIMON. We thank you very much, Dr. Webb. You handled yourself very well with all these Titans here. I want you to know that.

Mr. WEBB. I was a little nervous.

Mr. SIMON. Yeah. Let me just comment just on a couple of things here, and then I have a few questions to all of you.

First of all, the word "entitlement," I think, is—you and I are in agreement, Dr. Webb, on your concluding statement that the Pell grant ought to be the basis. The difficulty right now is that the Guaranteed Student Loan Program is an entitlement.

Mr. WEBB. Right.

Mr. SIMON. That means that's in the law, and you can get it. And it's not subject to appropriations. I happen to believe that that grant program for the kids who need it the most ought to be really—if I had a choice between a GSL being an entitlement or a Pell grant, I would prefer the Pell grant.

Now, I don't want to make that choice. I'm not suggesting that. But what we have done because we have not had Pell grant an entitlement, we have shifted more and more into the loan areas Dr. Olson was talking about.

And that is warping what students do. Whether they go to school, where they serve when they get out of school and so that's the idea of the entitlement is we want to get that base established a little more solidly and move in that direction.

I also think, and I recognize that this whole block grant thing is controversial. We face a very practical problem, and that is we hear from your school saying you want more flexibility. The students are falling through the cracks. But as soon as we suggest flexibility, you say, well, don't give it to us. And I guess thinking—I don't know who did the calculation over in Kansas City, but I don't think they calculated correctly and I'd be happy to have someone from there talk to me about it.

But I don't know where we're going on this cause obviously if the schools don't want it. We're not going to give it to you. But, ideally, it does seem to me the more flexibility we can give you at Rockhurst and Trenton and every other school, the better off you are and your students are, so that we don't have these students who fall between the cracks.

Dr. Olson, if I may specifically—I like your suggestion but I want you to be more specific. If I may quote you?

"I'd also like to suggest specific support be given to improve teaching at the postsecondary education level. Relatively small investment here could well pay significant dividends in the form of more effective, more efficient instruction." How do we do that?

Mr. OLSON. It's a good question. I'm not sure that I can provide a satisfactory answer. But, it seems to me that there could be programs to encourage institutions to provide, for example, developmental leads beyond the regular research leads which would help teachers improve themselves as teachers.

At the University of Missouri, for example, we have a very small program of that kind of lead. And we find that it's a good one. If there were the encouragement of federally funded programs along these lines I think could be helpful. That's one suggestion, Mr. Chairman.

Mr. SIMON. We take a small step in that direction by encouraging faculty teaching and studying abroad.

Mr. OLSON. Yes.

Mr. SIMON. Which one——

Mr. OLSON. That's correct.

Mr. SIMON [continuing]. One. I might add that one of the things that is discouraging, as you look at American higher education is that a decreasing percentage of our faculty are studying and teaching abroad which obviously cannot be a healthy trend.

Any—as you who look at this thing, and, incidentally, I might say that our bill is, this is not the law of the Medes and the Persians. It is we are eager for your suggestions, and as you reflect on this, I agree with what you have to say, but I'm not sure I know how to get there.

And I figure anyone who's wise enough to be able to retire as president of the University of Missouri ought to have the answers for that.

Mr. OLSON. I'll try to find it for you, Mr. Chairman, I wouldn't want to disillusion you.

Mr. SIMON. Father Weiss, I concur completely on the idea that we want to encourage the small and independent schools.

In fact, one of the things we were talking about at lunch today. What has happened in the last 3 years? We have moved toward segregating American higher education by economics. And that cannot be a good thing.

I'm going to ask Marsh to make sure you get a copy of the full bill. I would like you to just to go through that and look at it from the viewpoint of Rockhurst College. Where are places we can change the bill to more fully meet what you're talking about. I'm not suggesting we're going to be able to accept all the changes you've made but I would be very much interested in that.

Your increase in institutional aid, Father Weiss, went from 556 to 759. That meant money that came from faculty salaries, libraries, and other things, right?

Father WEISS. Well, partially money that we had raised specifically for that purpose through raising an endowment for student aid. But it is true we are putting—most of it came from actually institutional funds and that's right, it's being taken from other possible, for faculty salaries or library material.

Mr. SIMON. And I don't want to be putting words in your mouth, but when the Federal Government doesn't come along with adequate assistance for student aid, what happens at Rockhurst College or Washington University or the University of Missouri or Trenton College, is that you have to use those funds for student assistance, and there is a qualitative impact on your campus. Is that correct?

Father WEISS. Absolutely.

When the financial aid officer comes to me and says that we have this many students whose need is not being met, and we are simply not going to be able to bring them here unless we meet this need, and we need $50,000 more in student aid, well, we say we have to forego something else in the budget and shift that money to student aid.

I think that's—and I'm sure that the rest of the institutions have that same experience.

And it's unfortunate we have not put in the kinds of increases in our library, for example, anywhere near the increases in student

aid, even though the book budget should be increased. But we simply have neglected that and shifted the money to student aid.

Mr. SIMON. On your question, what would happen if Pell Grants were not fully funded? Under the entitlement program, there is no question.

Father WEISS. There wouldn't be any. Yeah.

Mr. SIMON. Yeah. There is no question on that.

Let me ask all of you one of the most controversial questions. And that is 50 percent, 75 percent, where we ought to be—and this is really, I frankly, I have asked John Brademas, the president of New York University, to pull together a small group of college presidents, both public and private, to see if some practical compromise can be worked out, because if we go to the floor with the private and public schools fighting each other, we're not going to get what needs to be done for this country.

If you were just—and I'm just going to ask each of you to give me a percentage—if you were just to give a percentage, you could write that figure into the wall, what would you make it?

Father WEISS. Well, it's hard to answer that question without solving the question of the entitlement.

Mr. SIMON. You're right. Yeah.

Father WEISS. I think if I were sure that you would have the entitlement, I would say 75 percent would be satisfactory. But my concern is that we get the 75 percent in, and then when it gets to Congress and they see the price tag, what this is going to amount to, they're going to say, well, it can't be an entitlement.

We're only going to appropriate this much money, and then we've got 75 percent in. That's going to cut out a lot of students that would get it if they were fully entitled. So, as far as I can see for our own students, a 75 percent with the $2,000 would be very helpful.

Mr. SIMON. As long as you had the entitlement?

Father WEISS. As long as it were fully funneled through the entitlement program.

Mr. DANFORTH. I agree, in part, with President Weiss.

I think that what we have now is a carefully hammered-out compromise among the private and public universities.

As you know, that took an enormous amount of time and effort, and it's a complicated kind of construction, and you can't pull out one thing very easily and say that's ideal unless you look at the whole thing.

And the—basically, the thing that some of us worry about is just that. If one unravels the package a little bit without a whole new worked-out package, that it—there are unforeseen changes that, for example, there's a major shift of students with large numbers going to—from—we worry about, from the higher tuition sector to the lower tuition sector, which, in the long run, doesn't save anyone any money because then there are new capital costs, and you have to build up a whole new sector.

I think it's hard to answer not only without knowing whether there'd be an entitlement, but without knowing, too, what the funding of the campus-based programs would be as well.

Mr. OLSON. I agree with Chancellor Danforth, Mr. Chairman. We have worked out over the years an arrangement, an accommoda-

tion and I am concerned about upsetting it unduly in a period of fiscal restraining high deficits and other elements.

Mr. SIMON. If I can just add by way—and you testified for the 75 as I recall?

Mr. WEBB. Only on the basis of a graduating scale of getting there.

Mr. SIMON. Right.

Mr. WEBB. If not, stay with the 50.

Mr. SIMON. Yeah. We go through this every time we reauthorize and it is a very—it gets really to the—and it's a very carefully constructed—the 75—right now the law—and because we kind of froze ourselves in 1981. Though 70 percent of $2,600, that's why when we moved to $3,000 we moved to 75 percent figuring that's in a line with the tradition of the compromise. But we're going to obviously, we're going to have to work this thing out very carefully and I think working it out is in the works. It doesn't mean that it's going to happen but, I think it is obviously essential that it——

Father WEISS. Mr. Chairman, could I ask with regard to the block grant is there anyway of putting some provision in that would guarantee that this would have to be funded, you know, tie it to the funding level of another program. I know that Congress very much opposes any kind of, you know, trigger mechanisms that would guarantee that this should be funded at a level at least equal to the previous levels.

Mr. SIMON. Yeah. The only way we could do that would be to make an entitlement. Now, what we do have is a grandfather clause in there so that we make sure that we do not, because of a change in formula, there isn't all of a sudden Rockhurst doesn't loose out as you did in your Upward Bound Program.

Incidentally, you in that connection also mentioned another factor that I think we have to look at and I would be pleased at any suggestions of any of you might have or anyone else here. And that is, we're trying to get the assistance a little more need based. Because, frankly as we have studied the results, for example, college work study. The original design for needy students. That's not what has happened with college work study. And so we've tied in the Pell Grant. But, we do not want to be discriminating against schools like yours or to shift things too radically in any other direction. That's why we have a 90 percent guarantee in that portion.

Let me ask one final question then I will get to my colleague here. The $65,000—and I had another question or two for Chancellor Danforth if I can find my notes around here. But, I think you were one of those who mentioned the $65,000 limitation. What we have done there is frankly taken what is now the regulation and simply put it into the statute. Is that $65,000 limitation a problem for you now at Washington University?

Mr. DANFORTH. Yes. But I can't comment very authoritatively on that. Ben Sandler will be on a panel later, Mr. Chairman, and can give you more precise information than I can.

Mr. SIMON. Any other comments from any—Dr. Aery, the $65,000 limitation, is that causing a problem now for many people?

Dr. AERY. I would have to rely on Dr. Sandler again but, I would say from the State's point it causes—it has caused some problems. But I cannot give you exact figures. But more so, it's just having

to—having to have that cutoff. There's more need for flexibility in that than just $65,000, Chancellor Danforth, in your remark.

Father WEISS. We have a parent that called me just the other day that has three students in college. One in law school and two in college. He's got an income above $65,000 and he just simply does not have the cash available to pay this kind of tuition and there's no source of assistance that's open to that person, except for, you know, a high interest type of loan and it just seems very unfair that that person should be arbitrarily eliminated from access to the Guaranteed Student Loan Program.

Mr. DANFORTH. Could I just comment on one earlier point, Mr. Chairman?

Mr. SIMON. Yes.

Mr. DANFORTH. And that is to express appreciation again for your concern about that and to underline something Father Weiss said about Rockhurst. Washington University and the percentage of our tuition and income and the fact that it's going back into financial aid now has risen in a 3-year period around 20 percent to around 27 percent. And that totals the cost of about $2 million so that the squeeze on the financial aid budget is extremely severe. And it takes away, as you know, the faculty salaries, library, and from many other things from the upgrading of equipment and facilities that we should be doing. And, therefore, I know I speak for all of us in expressing appreciation for your interest.

Mr. SIMON. Mr. Coleman.

Mr. COLEMAN. Thank you, Paul. A lot of the material that I wanted to review has been covered. I don't want to beat this horse to death [sic], but I do think that I need to point out, that we recognize the problem about the sensitive balance between publics and privates and we've discussed it. I'm laying the groundwork as to why I'm not sponsoring this bill at the present time with Paul Simon. And that's one of the fundamental reasons is that I agree with you, Dr. Danforth, that we have created, I think all of you agree, publics and private, a very sensitive balance between the two systems and to go forward into a reauthorization program without an agreement and an understanding as to where we're going to end up, I think is a very difficult proposition. And it's not very constructive when we end up having and I'm glad that you all did not engage in this today, of dividing the community among itself. I hope that when you leave the room that it won't happen either. I'm sure it won't. But, this is very difficult.

Mr. SIMON. If my colleague would yield for 1 minute. One of the—I don't mean to disagree but, we do disagree once in a while.

Mr. COLEMAN. We do disagree on this one.

Mr. SIMON. But, I think inevitably this come down—you're not—you're never going to agree in advance on this. We're going to have to come down to that final deadline and then, and this is what's happened—I've only gone through this one time. But this is what happened before. And I think it's what's going to happen again, that we're not in advance, nobody wants to concede. It's a little bit like labor management. You've got to get down close to that deadline before you reach an agreement and I think that's where we are in the private-public. Excuse me.

Mr. COLEMAN. The question is about funding and entitlements. I think it's very healthy to hear from those who would be helped and assisted by making this an entitlement program. I'm hearing some things I heard last night at my town meeting in my district in which people were concerned about the deficit, the budget, and interest rates. The entitlements is the area where we've almost lost control by the Congress on the fiscal side of things in Washington. So I'm encouraged by the healthy signs that you show of recognizing that it might be good for your institutions, it might be very self-serving, but we have larger consequences and a larger agenda in this Nation that we have to look at and I congratulate all of you.

Father Weiss, you mentioned it would be nice to receive this but are we not raising false hopes if we don't fully fund it? And I would be very very shocked if not extremely surprised if the Congress were to fully fund any entitlement programs that we would pass. The appropriations process is much different than the process we're going through here. We're simply writing the parameters and then the Congress has to pass the actual dollars. And I don't suggest and don't think that they will pass the dollars to fulfill any authorization that we might make. So isn't it creating false hopes on how we would instruct a student to even fill out the forms correctly knowing what that family might receive under various scenarios of what Congress might do on a year-to-year basis. Again, and this is no reason, these are disagreements, but I think that I would hope they could be recognized and reconciled before the end product comes into existence.

Dr. Danforth mentioned the desire for a competitive fellowship program and we have yesterday introduced a bill which would do that. And I think maybe Dr. Olson will address some of those concerns in his remarks later. We've heard a lot about the administration's proposal. The information that I have is that the current law funded about $2.8 billion. And we're not talking about GSL's, we're talking about Pells and the campus based programs. The administration's proposal would be between $2.8 and $3.7 billion. CBO Congressional Budget Office figures depending on participation. Congressman Simon's proposal was estimated at about $5.4 billion. Dr. Olson has addressed this in his handout but, I'd like to ask him some specifics. What would the effect of the President's proposal—self-help proposal—where a student would make a $500 or 40 percent contribution up front and then be qualified for a grant after? Dr. Olson, you have indicated in your attachments some information. I would like to have you if you could supply me with a little bit more specifics, for example, you talk about how much available you have now under Pell Grant awards. $6.9 million. You say that 70 percent of the students would be negatively impacted but, you don't give me a dollar figure on that change.

Mr. OLSON. May I provide that to you by letter?

Mr. COLEMAN. Please.

Mr. OLSON. Yes, indeed.

Mr. COLEMAN. And the same situation we note in the college work study program, you indicate that it would go up. By how much.

Mr. OLSON. OK.

Mr. COLEMAN [continuing]. I guess the bottom line I'm suggesting is that maybe the total awards would not be that much than what they are currently but just would be from different sources. If you could supply me that I would really be appreciative of it.

Mr. OLSON. I would be happy to do so.

Mr. COLEMAN. Would any of you other Presidents care to address the philosophy or the concept of the administration's proposal, albeit, not going too far too fast on self-help? Any takers here?

Mr. WEBB. Well, I did in my comments. I did address it briefly, and to me it's a negative effect on the higher education process because I just feel like with the middle and lower income students that they just will not take advantage of that. They can't afford to take advantage of that, therefore, they just don't go. That's where it is.

Mr. COLEMAN. Including an increase in work study goes with it.

Mr. WEBB. That's right.

Mr. DANFORTH. I think I tend to agree with that. We—our director of financial aid, Ben Sandler, will be testifying, and he is closer to this, and we can get a more considered opinion to whether he has studied it and respond today. Will do so.

Father WEISS. You know, I'm not sure that I have all the facts accurately enough in mind to respond, but the problem I think with the lowest income student is that frequently they need whatever resources they can muster in terms of, you know, work during the summer, and that kind of thing to help their families, and to just manage to live.

Now, when you talk about taking from them a certain amount, you know, of self-help, I think it's just—it's not the same as a student who is from a pretty solid middle-class family that can, you know, can afford to cut out that amount of self-help and go on from there. So I think that's a difficulty. It doesn't really meet the needs of the really poorer students, and there are a lot of them around.

And the problem with putting all the emphasis on work study and loans is that I think we've come to the—pretty much at our place a maximum that we can handle on the work study.

Now, I am not against some increase in the work study program, but a drastic increase is going to be very hard to accommodate and to really use beneficially. The students are working the maximum, and the jobs are taken up. Then I think we begin to get into, you know, artificial ways of creating jobs, and I don't think that's very helpful either.

Mr. COLEMAN. All of you mentioned support for increasing aid to facilities. How would you envision that program, to operate on a matching basis? Could you just briefly address that?

Father WEISS. I would envision a matching basis, which I think would be a very healthy way to encourage institutions to do things that need to be done for the handicapped, for energy, for needed types of renovations and updating of scientific and other instructional equipment and facilities. And I think the matching would give us an incentive to go out and raise money, and for the public institutions to go to the legislature.

Mr. COLEMAN. Everybody substantially agrees with that?

Dr. Olson, recently the Missouri legislature had before it a bond proposal and maybe still does. I'm not sure. I get my information a

little late in Washington. Were any of the facilities in the campus part of that bond construction proposal?

Mr. OLSON. Oh, yes. A very substantial amount of the funds were to be made available through the sale of bonds; would go to higher education. All the public institutions in Missouri would benefit and the University of Missouri very substantially.

Mr. COLEMAN. Is that proposal still alive in the legislature?

Mr. OLSON. It's still alive, but there doesn't—I'll defer to Dr. Aery, but there does not seem to be a great deal of chance that it will be moved forward in this session of the legislature.

Dr. AERY. It is said in the law that of the renovation and major construction, 36.3 percent of it must go to higher education. It is—we have had 175 million or so bonds issued. It does not look like this session we'll have any bonds issued.

Mr. OLSON. If I may. That would provide specific incentive if there were a Federal program. You know, the old program of providing specific funds for specific projects was a good one. The Federal Government did assist many institutions in building facilities. The program was in effect before revenue sharing attempted to take that over.

Dr. AERY. I would hope though that any policy like that we would look at renovation and maintenance before we look at new building in this kind of facility.

Mr. COLEMAN. In the closing I will ask some questions of your student aid officers. But I'm intrigued with your suggestion about having some escape valve for people who do not qualify for any of our loan programs; that they be made at an unsubsidized rate to be paid back after the attendance. I'm glad you made that point. I'm going to explore it further.

Father WEISS. It seems to me that that would be relatively inexpensive to the Federal Government. Now, obviously there is a guarantee and that sort of thing. But it really would help families like the one that I mentioned before that simply have a cash problem and there's no way they can finance the kind of education that they would like to give to their children. They're willing to pay for it, but they have to have some access to the funds.

Mr. COLEMAN. Thank you very much, all of you.

Mr. SIMON. If I can just add one more—you're getting a mini debate of what will take place in the committee. Let me just respond very briefly to a couple of comments of my colleague, for whom I have great respect. And I think there's still a very real possibility we're going to end up with a bipartisan bill that we can agree on.

But as far as confusing anyone, this reauthorization bill applies to fiscal year 1986. We're not talking about anything that's going to apply in the immediate future.

As far as raising false promises to people, if we don't dream a little, and reach a little in what we ask for, what we're going to get is going to be miniscule. And I'm not suggesting that I'm going to get everything we have in this bill that's introduced. But if we don't start with some goals that are fairly substantial goals, we're going to end up with almost nothing.

I would also point out that the shift in more toward grants than to loans ultimately saves money for the Federal Government be-

cause we do not end up with those long periods of subsidized loans. And I think that that is important.

And then, finally, on the cost that has been estimated I would simply point out we have had the drop according to the college board of approximately $2 billion in assistance assistance for higher education, and the preliminary estimate from CBO, and we're going to get a more refined estimate soon, is based on the fact that if the reauthorization bill that I've introduced were to pass there would be an additional 500,000 young people going to college. An additional 500,000 people going to college would be a tremendous plus to this Nation, and I have calculated even assuming you don't add inflation. They would repay just in tax increments about $20 for every dollar we invest, not counting what happens to the economy; not counting what we do otherwise to lift this Nation.

So I hope we don't become too shortsighted in what we want, where we want to go anyway.

That's the end of my speech. All right. And, I, again, thank the five of you for your testimony, and I think we'll include you as one of the Titans, too, now, Dr. Webb. All right.

Dr. WEBB. Thank you.

Mr. SIMON. It's been suggested we take a 5-minute break and we shall do so, and renew the hearing again in 5 minutes.

[Recess.]

Mr. SIMON. We will resume. Mr. Robert Brooker of Southern Illinois University is the witness at the end of the scheduled program. We are switching around because of schedule complications for Dr. Olson and have the graduate education panel next. I regret to say I have to grab a plane. I'm not going to be able to hear all the witnesses but I will be reading your testimony and getting your wisdom indirectly but it's not the same thing as—as hearing you personally and I apologize for that. I—and I'm going to turn the chair over to my colleague, Tom Coleman, who again has contributed a great deal and I'm grateful to him. Tom, it's all yours.

Mr. COLEMAN. Thank you, sir, for spending the time here today with us. I appreciate your kind comments. Again, we're on title IX so if anybody's following our program here we're on graduate education to try to help people with their scheduling problems also. So I guess our first witness will be Dr. Barbara Hansen from Southern Illinois. Now I don't know how these people from Southern Illinois got in here but they're represented here today.

Ms. HANSEN. We have pull.

Mr. COLEMAN. Dean of the graduate school at SIU and welcome, Dr. Hansen.

Ms. HANSEN. It's not on.

Mr. COLEMAN. It's not an amplified mike. It's to tie in with the recorder.

Ms. HANSEN. Oh.

Mr. COLEMAN. We're somewhat limited in time and all of your formal statement will be made a matter of record. And if you want to condense or abbreviate in some fashion, we'd be most happy; and try to limit it to 5 to 10 minutes if you could. Thank you.

STATEMENT OF BARBARA HANSEN, DEAN, GRADUATE SCHOOL, SOUTHERN ILLINOIS UNIVERSITY

Ms. HANSEN. I'll be happy to abbreviate. We did provide you full written comments and I did hear the debate and discussion of the last half hour or 45 minutes. So I'm going to just highlight a few things that may not have been hit quite as firmly or that you—might be of particular use in formulating of your plans, some examples that you might be able to use. SIU has approximately 100 graduate programs. Most individuals are not aware that such comprehensive universities exist outside of major cities. We have almost 4,000 graduate students and as you know no two students ever complete the exact same graduate program no matter what they come in as. And I think that's one of the key things that ought to be considered when looking at graduate education funding, that it's intimately tied to the research and the scholarly needs—scholarly activities of the faculty themselves. And, of course, that's one of the reasons that I personally am in favor of seeing campus based fellowship programs that will permit the campuses to determine where the strengths, the research priorities, the academic priorities, the strength of their faculty and their offerings are. We—we have 72 percent in-State students, 13 percent out-of-State from within this country and another 15 percent from foreign countries and we are one of the bigger international educators so we do have quite a concern with the international ed bit. But I will pass that on to a later part of the hearing. We are concerned about the library, title IIC—former title IIC piece of funding. Research libraries have proven a major resource for this country. Our university happens to have the 49th largest university library but it is the 9th in lending books and periodicals to other libraries. I'd repeat that, 49th in the country, 9th in lending and I make that strongly because it proves that we're such a regional resource, that we provide resources to all kinds of other libraries in the region. And I think that's—that's a key kind of service that a university can't afford to pay for. We have to be looking to the Federal Government for support and assistance in keeping the research quality of our library. I know that this title has not been too much oriented toward facilities. I've talked with Paul Simon about it. He feels that research facilities ought to come out of the mission agencies, so to speak. I think there's a piece missing however and that's academic facilities. There really at this point is no place to go for major renovations, for upgradings in the academic side, in the computer laboratories for instructional purposes. We have some special entitlements to get the major computer moneys from NSF but that's not meeting the instructional need and I hope you will at least consider that area. We—we certainly are concerned about the lack of fellowship support in the humanities, the arts and hope that you'll find some nice compromise. For example, the—including areas of national interest in—in that line that will allow some significant increase in support in those areas. We—we are also concerned about the debt limit of graduate students. Our new faculty are coming on at extremely modest salaries. I have an example for you. We have a new assistant professor who is receiving a salary of $2,005 per month. He did his Ph.D. in 7 years which happened to

be what's required by his program in a major university in this country and has a $16,000 debt at this point. And he's paying 10 percent of his income per month, 10 percent per month, 10 percent per month, and it'll take him 10 years to pay off his debt. That's the kind of debt that we are having a hard time dealing with. Language study and fellowships in the area of languages and area studies we believe are important and certainly an area that has not received sufficient emphasis and I think it's not even sufficiently emphasized as it currently stands in this—in this bill. Our students borrowed $2.6 million in 1 year, that's this past year. And that emphasizes that independent status of graduate students. We realize the problems of medical schools and some of the professions that—and the concerns that they have but, in fact, even the majority of medical students are, in fact, independent despite some of the comments by a small group of medical schools. Finally I'd just like to emphasize our concern with the availability of merit fellowships. Entitlements are needed for undergrad and if we have unlimited resources certainly we would welcome them at the graduate level. But graduate education is not something to be spread evenly across the masses but to be using the means to attract the highest quality and the most meritorious students. Thank you for the opportunity of addressing this group.

[Prepared statement of Barbara Hansen follows:]

PREPARED STATEMENT OF BARBARA HANSEN, DEAN, GRADUATE SCHOOL, SOUTHERN ILLINOIS UNIVERSITY

Mr. Chairman and the Subcommittee on Post Secondary Education, the Graduate School at Southern Illinois University at Carbondale appreciates this opportunity to testify on the proposed reauthorization of the Higher Education Act of 1965 and the Administration's fiscal year 1985 budget.

I want to discuss today the nature of graduate education as it is carried out at Southern Illinois University and the contribution that federal programs and federal support make to the successful completion of the graduate and professional education of 4,137 students at Southern Illiniois University. As you undoubtedly are aware, graduate education has a variety of components to it and no two programs and seemingly no two students and their program needs are precisely alike. Many of these needs and programs are developed and support in consultation with faculty and graduate education and research are linked. So much of the character of graduate education is shaped by research progress in the fields and disciplines which we embrace at the University.

Southern Illinois University offers 22 Ph.D. programs and 73 master's degree programs in addition to graduate programs leading to degrees in law and medicine. Together, these programs have an enrollment of approximately 4,137 of graduate students and in a recent year May and August (1983) we awarded 176 Ph.D.'s and 723 master's degrees to individuals. Of these degrees, the vast majority of them were for citizens of the State of Illinois although we do have a substantial number of foreign students and out-of-state students so that our total enrollment picture is 72 percent in-state and 13 percent out-of-state for citizens of the United States and 15 percent foreign students. The foreign students, of course, are not eligible for any federal aid programs but for the rest of our student body the federal aid programs provide a vital and necessary addition to the mix of support programs that are available at Southern Illinois University. I want to come back and speak at some length about student financial aid programs, but first in addition to financial aid programs, Southern Illinois University benefits from other federal support dollars that follow through the Higher Education Act. We have a substantial investment in our Library on campus and this investment has been supported in part over the years by federal support in Title II for library services and construction. Unfortunately, this money has been cut severely over the past several years. No university can continue to provide front-line research activities without substantial investment in library resource materials and the new technologies that support more rapid access to information contained in various source materials. The continued proposals to eliminate

federal support of libraries and research libraries is a disservice that should be remedied as quickly as possible. Our library serves not only as a resource for our graduate students and faculty but for this entire area of the country and our student body and service area comprises a good portion of at least three states and what we should be doing, in my opinion, is expanding access to the research materials that are available and federal support would aid this effort. In terms of facilities, as you well know, Southern Illinois University has grown rapidly in the last twenty years. Some of the growth was assisted by the Federal government; currently, no new construction is under way with federal support on our campus. The needs, however, remain great and our funding from the State has not always been what we wish it to be; on the other hand, the State of Illinois, too, has certainly helped us to expand to meet the needs of our citizens. What is now needed, however, is a different kind of facility support than that we have received in the past. In the main, we have most of the buildings we may need with the exception of modernized laboratory facilities, but what we need to do now is to, in many cases, renovate and technologically upgrade our various academic and research facilities in order to take advantage of technological advances that have taken place over the last two decades in order that we may provide our students and faculty with the most up-to-date physical facilities to support their intellectual efforts. Quite simply, we are falling further behind every year. Some kind of facility support for both new facilities and renovated facilities and increased research laboratory facilities needs to continue to come from the federal government. Now, it is quite appropriate that these grants and/or loans be available on a competitive basis but we should see further initiatives and further federal support in this area.

Let me shift now to a discussion of federal support of graduate programs and the variety of problems that our graduate school and graduate students face at Southern Illinois in 1984. Our enrollment levels have held reasonably steady over the past number of years. We have had a certain amount of success in recruiting minority students to our graduate programs and somewhat higher level of success in recruiting women to participate in our graduate programs. Financial aid and the questions of financing graduate education once again now becoming a significant barrier to further growth in the enrollment of minorities and women and are posing questions for graduate enrollment in general. We are simply not able to provide support for all of the graduate students who apply and indicate financial need at Southern Illinois University. What happens to these students has a great deal to do with the future of this country. I have yet to see projections of any kind in any area that suggest we will need less talent and less intelligence and less advanced education to deal with the problems that will confront our nation, our national economy, our national defense, and our national interests overseas without the minds and talents of a future generation to bring to bear on all these potential problem areas, and yet, the current policies in federal financial aid at least in graduate education seem to be going in exactly the opposite direction. The last four years has seen a continuous stream of proposals to end or reduce financial aid programs in the area of graduate studies. Most of these proposals have not become law, but their persistence has to be of some note and has to have an overall cumulative effect in the plans undergraduate students make concerning graduate education. I believe that is why we see such a tremendous increase in enrollments in the professional programs where the guaranteed income or rather where the return on the investment of one's time and one's money in advanced education is most clearly to be paid off. However, the country needs individuals of greatest talent and commitment scattered throughout the fields and disciplines of graduate education. As you well know, not all of those fields provide more lucrative financial remuneration particularly if those fields involve teaching and areas of research in the arts and humanities and social science. In fact, what I believe we are developing is a two-track kind of support for graduate education—those students who are in professional areas or who are in the natural sciences and most fields of the health sciences are able to receive generous levels of support from the variety of federal agencies and graduate education and research in those areas continues to be largely unaffected by federal funding cutbacks. On the other hand, the almost complete absence of support for graduate study in the arts, humanities and most areas of the social sciences means that increasingly students in these areas have had to turn to the guaranteed student loan program or other forms of loans and work as a way of financing their graduate education and their opportunities for research and for advancement and for just solid thinking time are therefore diminishing. This suggests that priorities in the direction of federal support of graduate education need some amount of revision. We must reconsider our priorities as they are expanding our support of graduate programs in graduate fellowships in natural sciences and in the health sciences area and at the same time

cutting them back or proposing to eliminate support in the arts, humanities and social sciences. The fellowship programs and the research support programs that are in the mission agencies of the federal government while they did absorb initially some cuts in the early 1980's have since regenerated and begun to expand to take up the nation's need for advanced education in all of these areas. In arts, humanities and social sciences and in those programs that have their federal path of support funneled through the Department of Education, on the other hand, programs have been cut back. Proposals continue to persist in the fiscal year 1985 budget to eliminate support for graduate fellowships in the Title VI International program area, in the Title II library area and in the Title IX graduate fellowship area. We must reverse this course. Otherwise, graduate debt levels will continue to rise and the opportunities for graduate education in fields outside of the so called "hard sciences" will continue to wither in the winds of the federal support process. What is needed is a combination of developments and Mr. Simon's reauthorization proposals which begin at least to speak to all of these areas. As I have indicated, previously, we do need additional federal support for libraries, research libraries, and research facilities. This will go towards rebuilding our research capacity in all areas of the University. We also need new fellowship programs and expanded fellowship programs for minorities and women such that the opportunities for advanced graduate education continue to grow for all segments of our complex multi-racial, multi-cultural society. In addition, to increased support levels for existing programs, we also need some new programs. There are two suggestions brought forward by the subcommittee that have been made that I want to commend, and I urge that these opportunities be expanded if at all possible. The first of these is the continuation and actual appropriations for the National Graduate Fellows Program. Adding a federally financed fellowship program in areas of national need and particularly in the areas of the arts, humanities and social sciences will give us a core of support for the very best students in these fields and these fields need to be nurtured now particularly when they are not in high favor in the economy. I am convinced that talent will be needed in these areas in the future and this, of course, includes the areas of language study and area studies. We must increase our hard knowledge of the language and culture of areas throughout the world. We are just not doing enough in this area.

The second program that the reauthorization proposals discuss is the notion of adding graduate students to the Pell Grant program for the first year of graduate studies. In my opinion, this addition of a need-based grant program to the current array of federal financial assistance programs at the graduate level will substantially increase graduate opportunities for those individuals who are reluctant to assume large debt burdens in order to pursue advanced levels of education and of course, implicitly by supporting both of those programs I am indeed also supporting any initiative that the federal government might take to reduce graduate student debt levels. Graduate students at the Southern Illinois University at Carbondale borrowed some $2.6 million dollars in guaranteed student loans. This is an enormous sum of money and to think that these graduates go out into the world with new degrees, new skills, and start new careers with this burden is astonishing to me; but, clearly, with no other kinds of financial assistance available, this is what our students are doing. This argues that their commitment to learning new skills for themselves and for the needs of the nation are, in fact, extraordinary and we just should be doing something more to support these individuals. We also mention the question of independent student status for graduate students. Most graduate students that we have at Southern Illinois University are financially independent from their parents. I commend Mr. Simon for his recognition of this fact and for his proposal to make graduate students independent by definition.

I thank you for this opportunity to present my views and I commend your efforts to achieve increased levels of support for graduate education in the next reauthorization of the Higher Education Act. Graduate education was largely left out of previous reauthorization exercises and it is a great pleasure to participate in this hearing policy developing process that you have brought to St. Louis today. I would be pleased to answer any questions the Committee might have at this time.

Mr. COLEMAN. Thank you and I'll reserve my questions until the entire panel presents their testimony. Dr. Edward Wilson, dean of the graduate school here at Washington University.

STATEMENT OF EDWARD N. WILSON, DEAN OF THE GRADUATE SCHOOL OF ARTS AND SCIENCES, WASHINGTON UNIVERSITY

Mr. WILSON. Thank you, Representative Coleman and—and to Representative Simon for the opportunity given me to speak here. I'll try and follow your guidance to summarize for a—a number of things and to elaborate in more detail in written testimony. The recent proposals for reauthorization contain a host of very welcome changes and innovations in Federal assistance to graduate study but I'm going to limit my remarks to four areas where I believe the need is especially critical. The top priority is one touched on by Dr. Hansen, that being fellowships for graduate students. The second one has been discussed at some length here today are funds for improvement of research libraries and research facilities. The third which was alluded to in the last panel incentives for new programs for teacher training and then the various title IV programs as they apply to graduate work. I think all of us are quite well aware of the huge success of the NFS and MDA programs in building up graduate studies in the late sixties and early seventies and the equally unfortunate drop in both numbers and, more painful, quality as well with the reduction in those programs. I haven't heard any graduate dean argue that it's appropriate to build the enrollments back to what they were in the sixties but we are very, very concerned that we not see a continuing decline. The current absence of any federally funded fellowship program in the humanities is very, very unfortunate. It does send a signal to our talented undergraduates in the area that it's not one where the Nation sees high priorities and that's regrettable. For that reason I then was very, very pleased to see the proposal by the chairman to create under part C of title IX the National Graduate Fellowship Program providing merit fellowships to students of the arts and humanities, social sciences, as well as areas of national need. I'm aware that Representative Coleman has recently suggested a fellowship program which, instead of creating portable fellowships would create institutional fellowships in a variety of areas. And I very strongly support the notion of institutional fellowships as did Dr. Hansen. Perhaps one might really envision a double structure with a little bit of both. My one concern is that the proposal put forward by Representative Coleman is the limitation in areas, particularly the—the absence of the humanities. It's quite true that by comparison with the humanities the physical and biological sciences is being pretty well funded. I'm a mathematician and some numbers that I've seen recently are very, very disturbing. I'll quote them briefly. From 1973 up till last year we saw a drop of 41 percent in the number of Ph.D.'s in mathematics awarded to U.S. citizens. The absolute number is 774 down to 455. That gets hidden when you look at enrollment figures. It doesn't show anything like a 40-percent drop in mathematics enrollment. The reason is that in the same period we had a corresponding increase from 22 percent to 39 percent in the number of mathematics Ph.D.'s awarded by institutions in this country to foreign students. We are very, very fond of our foreign students and they're delightful but that drop in domestic Ph.D.'s is one that should be a matter of some national concern. And it's for that reason that I certainly do support initiatives in

various directions for merit fellowships as well as research assistant- ships in sciences. The disproportionately small percentages in minorities and women in many areas of graduate study remains a matter of national shame and it's therefore extremely regrettable that G-POP is the only national fellowship program addressing those shortages and it's been threatened repeatedly with abolition and continued only with inadequate funding. G-POP programs have suffered from some other drawbacks, notably from administrative problems that I allude to in my testimony and the stipend level is frozen at 4,500 per year. That frozen stipend level has served to create in the minds of some the impression that the program is a second rate one and that's highly undesirable. And therefore I—I strongly approved of the suggestions of both the chairman and Representative Coleman for increasing the stipend level, 8,500 or 9,000 are the numbers frequently talked about. It would also be hopeful within the future that the administrative procedures for the program might be a little closer to those employed by the NSF Program. I'll skip over my comments on research libraries and facilities because that topic has been quite well covered. The last panel did describe, or did touch on, mechanisms for Federal assistance to teacher training. In my testimony I talked about a couple of ideas that we've had here that are still under discussion. I think they suggest a sort of wide-ranging initiatives that I think we're going to find in the next few years throughout the country. I don't think we're ready yet to suggest any countrywide program, but it would be entirely appropriate and it's my hope that the authorized bill will include strong support for initiatives wherever they arise.

My final comments concern the use of title IV money for graduate purposes. There we have found the use of college work study money for graduate students to be enormously helpful and we applaud the proposed rewording of the reauthorized legislation making explicit the appropriateness of these funds for undergraduate and graduate activities. It has been suggested that there should be a mandate in the legislation of a 10-percent set-aside of college work study money. We do not see the need for the 10-percent set-aside. At this institution we're currently spending well in excess of 10 percent of the institutional CWF allocation for graduate activities. We have a slight fear that a mandate of a set-aside might suggest to some that it is inappropriate to use considerably more and think that's something that should be an institutional decision. We hope the Congress will continue to view with approbation the entire college Work Study Program and continue to fund it in a way commensurate with inflation. The use of Pell Grants for first year graduate students would certainly be a value to many deserving students. However, I would not be able to favor that approach if the result were to be an inability to meet the other financial needs that I've discussed above. It would greatly add, of course, to the—the cost of the entire Pell Grant Program. The suggestions of the chairman for improvements in the GSL Program by elimination of the origination fee and raising of the loan limit to $7,000 per year for graduate students are extremely welcome. In my written testimony I've included some tables noting our current unmet need at graduate levels for more CWF funds and the rapidly increasing GSL loan amount that we've seen in recent years. And I

agree with others who are suggesting that in the short run we believe it would be appropriate to maintain GSL roughly in current terms while simultaneously using alternative support means to decrease the dependence on loans by graduate students. Thank you very much.

Mr. COLEMAN. Thank you, doctor.

[Prepared statement of Edward N. Wilson follows:]

PREPARED STATEMENT OF EDWARD N. WILSON, DEAN OF THE GRADUATE SCHOOL OF ARTS AND SCIENCES, WASHINGTON UNIVERSITY

Thank you, Mr. Chairman, for the opportunity you have given me to discuss my perceptions of current funding needs in graduate education. The recent proposals by the Chair for reauthorization of the Higher Education Act of 1965 contain a host of extremely welcome changes and innovations in federal assistance to graduate study. In the interests of brevity, I shall limit my remarks of the following areas where I believe the need is especially critical.

1. Merit-based Fellowships for Graduate Students.
2. Federal Aid for Improvement of Research Libraries and Research Facilities.
3. Incentives for New Programs in Teacher Training.
4. Applicability to Graduate Work of the College Work Study and Other Title IV Programs.

The success during the late 60s and early 70s of the NSF and NDEA Fellowship Programs in attracting large numbers of high quality students to undertake graduate study has been well documented. The reduction in these Fellowship Programs over the past ten years has contributed to an equally well documented national decline in both graduate enrollment and quality of graduate students. Few would argue that it is appropriate to build enrollments back to the levels of 15 years ago. However, immediate steps must be taken to avoid continuing declines in enrollment and quality. Merit Fellowship programs underwritten by the federal government can provide a much needed signal of national priority on the worthiness of graduate education and an incentive for talented undergraduates to pursue their academic interests. The current absence of any federally funded Fellowship program in the humanities is especially unfortunate. At Washington University, we have been able to establish a handful of privately funded Special Fellowships in certain areas within the humanities; these have proved to be successful in attracting a number of extremely well qualified matriculants to our programs. Although we continue to seek private funding for special fellowships in other areas, it is most unlikely that we will be able to meet all of our funding needs in such diverse areas as foreign languages, Asian Studies, Comparative Literature, and creative writing. For these reasons, the proposal by the Chairman to create under Part C of Title IX a National Graduate Fellows Program providing merit fellowships to students of the arts, humanities, social sciences, and other areas of national need is especially welcome. I believe an ideal structure might involve a combination of portable fellowships and institutional fellowships. It would therefore be doubly welcome if the program proposed by the Chairman were matched by another program of merit fellowships allocated to institutions through a competitive process. By comparison with the humanities, the physical and biological sciences are currently well funded. However, at this institution and elsewhere, the impact of enrollment drops in these areas has been masked by a sharp increase in the number of foreign students. For example, in my own discipline of mathematics, the 41% drop from 774 Ph.D.s awarded to U.S. citizens in 1973 to 455 such Ph.D.s last year has been compensated by a corresponding increase from 22% to 39% in the number of all mathematics Ph.D.s awarded by U.S. institutions to foreign students. Physics and engineering have seen a similar phenomenon. For this reason, I strongly support the suggestions made by Senators Danforth and Eagleton in their blueprint bill on University Research Capacity Restoration for an increase in the number of merit fellowships and research assistantships awarded in the sciences.

The disproportionately small percentages of minorities and women in many areas of graduate study remain a matter of national shame. It is therefore extremely regrettable that G-POP, the only national Fellowship Program uniformly addressing the shortages, has been threatened with abolition repeatedly in recent years and has ultimately been continued with very inadequate funding. The G-POP program has suffered from additional drawbacks:

(i) Stipend levels frozen at $4500/year and serving thereby to foster the impression that the program has a second-rate aura; (ii) late award schedules greatly in-

hibiting the usefulness of the fellowships for recruiting purposes; (iii) restriction to at most six program areas supported by G-POP at any given institution; and

The proposal by Chairman Simon to increase the G-POP stipend level to $9000 is one I strongly support. In general, I believe the program would be greatly strengthened by an effort to keep stipend levels and administrative procedures compatible with those employed by the NSF Fellowship Program. In particular, administrative changes serving to establish an early award schedule, eliminate program restrictions, eliminate a need test for recipients, and clarify award criteria would be beneficial.

Aside from securing qualified faculty, the most difficult task for graduate institutions is to provide the funds necessary to maintain up-to-date research libraries and research equipment. There is currently a need nationwide for very large expenditures in these areas. The ability of graduate institutions to provide well trained scholars for the future and to continue to supply the basic research demanded by industry depends to a large extent on our meeting this need. I therefore strongly support the proposals of the Chairman and Senators Danforth and Eagleton to provide federal funds for this purpose.

Our national attention has recently been focused on instructional and curricular inadequacies in our secondary schools. Title V of the proposed reauthorized Higher Education Act proposes several welcome mechanisms for federal assistance in these areas. By way of illustration, I will briefly mention two program ideas discussed at some length this year at Washington University. The first idea was to initiate a summer enrichment institute for local high school mathematics teachers stressing concrete techniques appropriate for the integration of computers into the teaching of upper-level high school mathematics courses. Preliminary contracts with local schools suggested the existence of considerable interest in this proposal on the part of teachers. However, efforts to secure needed funding from private sources for an institute this coming summer failed, and we are therefore forced to delay implementation of this idea for at least another year. Our second program idea is to create a teaching-internship program for graduate students willing to explore the career possibility of secondary school teaching. This would be a two-year Master's program involving a combination of graduate course work, teaching assistantships in freshman-level college courses, and two or three semesters of part-time teaching in secondary school. In order to attract very high quality students, the University would provide full tuition scholarships for students and would seek to provide outside support for student stipends compatible to those offered Ph.D. students. Several local school district superintendents have expressed a willingness to provide part of these stipends in return for teaching services rendered in their schools. Hence we have the ingredients for one of the much discussed school-college partnerships. However, to complete funding of stipends and to provide additional support for current teachers desiring to take a year's sabbatical leave for advanced study, a third partner is needed. It is my hope that the reauthorized bill will provide strong support for a variety of initiatives such as these in teacher training.

My final comments concern the current and proposed use of Title IV support for graduate purposes. We have found the use of College Work-Study money for graduate students to be enormously helpful and applaud the proposed rewording of the reauthorized legislation making explicit the appropriateness of these funds for both undergraduate and graduate activities. Since we, along with many research institutions, currently spend well in excess of 10 percent of our institution's CWS allocation for graduate activities and fear that a mandate of a 10 percent set-aside in CWS for graduate students might convey to some a suggestion that it was inappropriate to use a considerably larger percentage for this purpose, we believe that optimal institutional flexibility can be maintained without set-aside stipulation. It is my hope that the Congress will continue to view with approbation the entire CWS program and will in the future make increases in its budget commensurate with inflation. While the use of Pell grants for first-year graduate students would undeniably be of value to many deserving students, I do not favor this approach if the result were to be an inability to meet the other financial needs I have discussed above. The suggestion of the Chairman for improvements in the Guaranteed Student Loan Program by elimination of the origination fee and raising of the loan limit to $7000/year for graduate students are very welcome. In my written testimony I have included tables indicating our current use of Title IV monies for graduate purposes. Particualrly noteworthy are the unmet need for CWS funds and the rapidly increasing average GSL loan. I echo the conclusions of others that it would be desirable to maintain the GSL Program at roughly its current budgetary level in the short run, while simultaneously using alternative support programs to decrease the dependence on loans by graduate students.

Thank you again for making it possible for me to speak with you on these matters. I will be happy to respond to any questions you may have.

APPENDIX 1: FEDERAL FUNDS USED BY WASHINGTON UNIVERSITY GRADUATE STUDENTS

[As processed by the Financial Aid Section of the Graduate School of Arts and Sciences]

Year	Graduate and professional opportunities program (GPOP)		Guaranteed student loan (GSL)			College work-study (CWS)			National direct student loan (NDSL)		
	Amount	Students	Amount	Students	Average award	Amount[1]	Students	Average award	Amount	Students	Average award
1979–80	$138,125	12	$307,654	124	$2,481	$430,813	157	$2,744	$65,500	29	$2,258
1980–81	148,440	16	494,275	181	2,731	755,128	235	3,213	106,450	33	2,008
1981–82	203,324	23	693,170	191	3,629	409,878	124	3,297	89,250	44	2,028
1982–83	178,500	22	617,913	153	4,038	377,468	102	3,701	115,750	45	2,572

[1] The dollars in this column include total compensation (federal share—65 percent plus institutional share—35 percent).

Please note.—(1) the GSL average award each year is increasing, thus increasing total indebtedness. (2) while the totals for both CWS funding and the number of students have decreased, the average award has increased. This increase has been in part to meet rising educational costs and to assist in maintaining stipend levels that are nationally competitive. For 1983–84, we could have used $139,318 additional CWS funds which would have assisted 32 more students.

97-616 O—84——23

APPENDIX 2: 1982–83 USE OF FEDERAL LOAN PROGRAMS BY WASHINGTON UNIVERSITY GRADUATE STUDENTS

	NDSL		GSL		PLUS	
	Number	Amount	Number	Amount	Number	Amount
Anthropology	2	$7,500	2	$7,500		
Art and archeology			1	2,500		
Biology and biomedical sciences			16	55,703

Mr. COLEMAN. Doctor Olson, would you care to——

Mr. OLSON. Mr. Coleman, thank you very much. I deeply appreciate the opportunity to speak twice before your committee. And again I've summarized my written statement. I do talk a little in my statement about the importance of graduate education and research as national resources and I am pleased to see the committee recognizes that in the approach you're taking. One of the major concerns it seems to me is that we need to provide continuing support in graduate education. And that's one reason why, for example, I share my colleague's concern about the first-year graduate entitlement in the program. It's a good—it's a good idea but what is needed really more would be continuing support for the—for the—for the graduate—graduate student. There's a number of students who do not attend graduate school because of high costs—the number's great and it varies, of course, among departments. For example, the University of Missouri, Columbia, agricultural engineering identified 20 students who did not enter its program in the fall of 1983 because of high costs. The department—the College of Veterinary Medicine identified a loss of graduate applications primarily because of the high level of salary currently paid to veterinarians, so it varies. And it's true of engineering too. It's difficult

to get baccalaureate engineers into graduate programs because of the high salaries they can—they can get. But in every instance virtually all who attend graduate schools at University of Missouri Columbia have need of some kind or another and about one-quarter of all the graduate or professional students on the Columbia campus of the University of Missouri rely on the GSL Program for support. And reliance on loans to too great an extent can pose a serious financial burden particularly for those people who are—who are interested in and motivated in the direction of teaching for the—for the opportunities that have been suggested for repayment are not great. And because of—of the financial constraints, we are—we are finding that an increasing portion of our graduate student population is made up of non-U.S. citizens. For example, at the University of Missouri doctor's degrees awarded in engineering have declined considerably and the increase in the total number of graduate students who are not U.S. citizens has been substantial. More than half of our engineering graduate students are not American citizens. Well, all of these—all of these problems lead me to look with particular approbation upon your own initiative, Mr. Coleman. I was delighted to learn that you have introduced legislation under title IX that would provide institutional support. As I understand it the legislation would provide $9,000 in financial support each year for I believe it's a period of 3 years as I've understood the legislation to graduate students in certain categories and also provide institutional support for—to the departments or to the universities. This—this kind of support to underwrite the very heavy cost of graduate work reminds me of the very successful NDEA program a number of years ago. One of the problems with NDEA programs was that it encouraged the establishment of new programs there and did—did encourage us to have some programs that perhaps we wish we did not have now. But as I understand your legislation, you are limiting it to established programs. Your—your proposition I can tell you is a very good—a very good idea. I, too, would like to hope that the areas to be covered could be increased somewhat. I understand the—can understand the problem but somehow or other we've got to find the way to encourage young people in the humanities and certain of the social sciences to—to go to graduate school. And I—I—but it—a combination of—of the current merit fellowships and your program might do that. I—I don't know but I would hope that as you—as you work this through that you can find—find a way to add to it. I also would like to urge the continuation and more adequate funding of the G-POP program. It has been a good program. We—we send too few signals to women and to minorities about opportunities for graduate work and this is one way in which we can effectively—effectively do that. We are strongly in favor of increasing the size of the stipend and I'd like to suggest that the areas of eligibility be—be broadened. Finally, I would like to say for the record in this session as well as in the earlier session that some how or other we have got to find a way to enable institutions to improve their libraries, to bring their instrumentation up to date and to improve their graduate and research facilities. It may be beyond the scope of this particular committee, this particular area of concern, but it is a

matter of great concern to all of us in graduate institutions. Thank you very much.

Mr. COLEMAN. Thank you. Well, I appreciate you reemphasizing those comments and I'll let our last witness testify before getting into a discussion of some of the points that you all have raised. Ms. Patricia Boone who is a G-POP fellowship recipient here at Washington University is our next witness and I'm delighted to have her here and hear firsthand from somebody who has gone through this terrible ordeal.

STATEMENT OF PATRICIA BOONE, G-POP FELLOW IN CHEMISTRY, WASHINGTON UNIVERSITY

Ms. BOONE. Well, I want to thank you for the opportunity to address the committee. I'd like to speak briefly on my experiences in graduate school and the need that G-POP fills for me. I must admit I felt odd becoming a G-POP fellow. Educated and capable, I've never been knowingly deprived or subjected to any type of discrimination. I knew there were not many minority chemists but I thought the opportunities were there if you looked for them and grasped them. I soon realized, however, that if I was to mold this opportunity into a career, I'd have to learn more than just science. I would have to magically acquire that what call professional panache, the confidence, independence, creativity, and forcefulness that emanates from successful scientists as well as what seemed to be a hundred ancillary skills. I was drained just with coping. I didn't seem to be heading anywhere. I know you can't make a hard task easy but was it really supposed to be this difficult. Why did it seem harder for me than for the other chemistry students?

Mr. COLEMAN. I asked that same question when I was in law school.

Ms. BOONE. And I really—I wondered if I was supposed to be in graduate school or not. The doubts were destroying my belief in myself and my dreams were dying. But gradually as I listened to G-POP speakers and talked with other G-POP fellows, I realized it was not me. The other chemistry students may not have been experiencing my difficulties but the other G-POP people were. The education and upbringing which had taught us to dream and to strive had not provided the tools we needed to achieve our goals. For myself, I was the first of my family to enter college, much less graduate school. While my friends were normal folks, having friends and family. I had few role models and no one outside of G-POP really understood and could help me understand myself. G-POP supported me as I struggled. G-POP funding lessened my duties in the department giving me more time and energy to devote to my work. I am very proud to say I will graduate this summer. I don't know if I would have graduated without G-POP's support but I do know that G-POP helped me retrieve my dreams and instilled in me a desire to work toward the time when G-POP programs are obsolete. But I'm still amazed when I recall my naivete of 5 years ago. I who had felt odd being a G-POP fellow had needed it most of all. How many others don't know they need it? I suspect as G-POP continues it will have to expand if it is to fill the need that is unexpectedly revealed. I hope it does so.

Mr. COLEMAN. Thank you very much.
[Prepared statement of Patricia Boone follows:]

PREPARED STATEMENT OF PATRICIA BOONE, G-POP FELLOW IN CHEMISTRY, WASHINGTON UNIVERSITY

Mr. Chairman, my name is Patricia Boone. I was one of Washington University's first G-POP fellows. I will speak briefly on my experiences in graduate school and the need that G-POP filled for me:

I must admit I felt odd becoming a G-POP fellow. Educated and capable, I'd never been knowingly deprived or subjected to discrimination. I knew there were not many minority chemists but I felt the opportunities were there for those who wanted them.

I soon realized, however, that if I was to mold this opportunity into a career, I would have to learn more than sicence. I would have to "magically" acquire "professional panache"—the confidence, independence, creativity and forcefulness that emanates from successful scientists, as well as what seemed to be a hundred ancillary skills. My energy was drained just with coping. Progress was invisible to my tired eyes.

You cannot make a hard task easy, but was it really supposed to be this difficult? Why did it seem harder for me than the other chemistry students? Maybe I shouldn't be in graduate school? The doubts were destroying my belief in myself; my dreams were dying.

Gradually, as I listened to G-POP speakers and talked with other G-POP fellows, I realized it was not me; other chemistry students may not have experienced my difficulties but my fellow G-POP students were. The education and upbringing which had taught us to dream and strive had not provided the tools we needed to achieve our goals. For myself, I was the first of my family to enter college much less graduate school. While my friends were "normal" having jobs and families, I had few role models, and no one outside of G-POP who really understood and who could help me understand myself.

G-POP supported me as I struggled. G-POP funding lessoned my duties in the department giving me more time and energy to devote to my work. I am very proud to be able to say I will graduate with my doctorate this summer. I don't know if I would have graduated without G-POP's support, but I do know G-POP helped me retrieve my dreams and instilled in me a desire to work toward a time when the need for G-POP programs will be obsolete.

I am still amazed when I recall my naivete of five years ago. I, who had felt odd being a G-POP fellow, had needed it most of all. How many others don't know they need it? I suspect as G-POP continues it will have to expand if it is to fill the unexpected need that is revealed. I hope it does so.

I have tried to provide some of the information you are seeking; if not I will be pleased to try and answer your questions.

Mr. COLEMAN. Most of you have made laudatory comments regarding our proposal. It has been suggested that we're trying to channel our effort into certain areas of critical need. I wonder, since we do have to establish priorities, if we are just presenting a wish list again and that you really do recognize the limitations placed on us in the funding side. Now, Dr. Wilson, you're a mathematician. Are you suggesting that the dire need is not as great as we perceive it is, or that there is enough money already out there in some of these critical areas, or would you just like to open it up to humanities more in general? Could you give me a little bit more detail on that?

Mr. WILSON. It's hard to talk about numbers. What's especially regrettable now is that we simply have no Federal programs in the humanities. I'd like to see us get started with one. My comments on numbers, drops, and so forth in mathematics suggests that we're not in great shape in mathematics either and—and that can be extended as was noted by my colleague to engineering and to physics. So we certainly need something there. The model can be debated whether it's more fellowships or whether it's more research assist-

antships. And some of the scientific disciplines we certainly could—could do quite well with more NSF research assistantships. A few more fellowships wouldn't hurt. I hate to see us go forward with more money in the sciences and nothing at all in the humanities. That's—my colleagues in the humanities are very, very severely depressed about the State of affairs and I'm afraid that'd be a signal of more bad things to come.

Mr. COLEMAN. So you're being a good soldier today?

Mr. WILSON. Well, in my current position I'm supposed to be responsible for the needs all over.

Ms. HANSEN. He's got witnesses.

Mr. WILSON. I—I'd be quite interested whether my colleagues share what I—my views.

Ms. HANSEN. I think I said so in my comments so certainly.

Mr. COLEMAN. Just—just speak up. Right. And I know Dr. Olson echoed those same thoughts.

Mr. OLSON. I echoed the same thing. I recognize at the same time, Mr. Coleman, the dilemma you face and that you have to get started some—somewhere and I—I don't know where one makes that judgment. I'd hope you would not have to give up too early on—on some of these programs. And perhaps there could be a degree of flexibility built in the legislation so that perhaps the Secretary whom I assume to be administering this program could from time to time identify areas of—of need that would be——

Mr. COLEMAN. Right, it's more discretion.

Mr. OLSON. More discretion and not so much—not so much restrictive—restrictive language in the legislation. That might be helpful. You know, to—to recall in the experience of the NDEA, when the NDEA started out, it was quite restrictive in the legislation. Very few—I'm probably the only person in this room who remembers how they worked from personal experience but gradually they were broadened to include the humanities and the—and the social sciences and therefore they were a stronger program. But they did start out on a fairly limited basis.

Mr. COLEMAN. Yes. I recall going through that process 15 years ago. Can you tell me basically if the problems with attracting the best and the brightest is that we want to attract them to all the fields. Are we getting those people notwithstanding your remarks about salaries some times siphoning off people in some of these areas? Are the best and brightest going to graduate school? If not, could you give me one or two reasons why they're not? Is it the load, is it the cost?

Ms. HANSEN. Well, certainly the best and brightest are doing aggressive things but some of them are going into business, some are going to professional schools. Certainly if you look at application rates, at least in my university application rates are far higher for professional schools than they are for say humanities. So I think you would find that in general though not—no individual cases would pertain, the higher the mentality the more they're going into highly competitive fields as opposed to fields where there's no fellowship support.

Mr. COLEMAN. Yes

Mr. WILSON. The job market is not good and hasn't been good for some years and we don't have clear expectations that it's going to

turn up until—well, some time in the nineties. That's the problem, there's just no getting around that and for that reason what we saw in the sixties when the best and brightest were flocking to graduate students in great numbers, I just don't see that we're going to get back to that. But I think we can get a little bit back part way. We can offer an option. When we—now, as we frequently do, we tell an outstanding student in the social sciences or the humanities that your choices are to go to graduate school, add to your debt, get your degree, satisfy your intellectual interests and then we don't know. That's one option versus go get the MBA or go get the law degree and then have much better chances. It's just not terribly surprising which way they go. All we—all our—all we can hope for and I think what we're suggesting is that with the merit fellowship we at least don't add to that debt and that we at least allow someone who has the interest to come to graduate school for a few years, satisfy the academic interests, write the dissertation and then hope that a job will be available. At least they won't have to start off with a huge debt that we've—we've discussed.

Mr. COLEMAN. Well, what percent of your graduates from graduate school who receive degrees go into teaching in some form? Do you know?

Mr. OLSON. It varies from discipline to discipline. I would say that in many of the humanities and social sciences most of the students want to go into teaching. Their problem—the problem is they're difficult to get through because of lack of financial aid and then the opportunities at the end. It's that combination. And one of the problems they face is that by the middle—college population will probably increase again. And you know for people to be fully prepared and have just a little experience, they have to begin graduate school now. And we may face a—a rather critical problem in—in providing for adequate instructional numbers at that time.

Ms. HANSEN It varies by discipline. In physiology at least 80 percent end up in—in teaching though more and more of our graduates are seeking opportunities in industry and—and that's to be applauded too. Industry is looking more to doctorately prepared people than it ever used to and perhaps that's part of the job market evidenced. But it isn't the poorer students that end up going to industry. It's not the ones that education didn't snap up.

Mr. COLEMAN. Ms. Boone, in your testimony you indicated that G-POP freed you up giving you more time and energy to devote to your studies.

Ms. BOONE. Yes.

Mr. COLEMAN. Were you doing campus and lab work.

Ms. BOONE. In the chemistry department you are required to teach four semesters and I was only required to teach two instead of four.

Mr. COLEMAN. Oh, I see. Well, thank you—thank you all. I promised Jim Olson I'd get him out of here by 3:45 and it's about 5 to spare, so——

Mr. OLSON. Thank you very much.

Mr. COLEMAN. Thank you all very much for being here.

[Recess.]

Mr. COLEMAN. Our first witness is Mr. Richard Sharp, the vice president, consumer loan operation, at Community Federal Savings

& Loan here in St. Louis County. Welcome and we appreciate your coming over this afternoon.

STATEMENT OF RICHARD SHARP, VICE PRESIDENT, CONSUMER LOAN OPERATION, COMMUNITY FEDERAL SAVINGS AND LOAN

Mr. SHARP. Thank you very much, Mr. Coleman. I'm very pleased to be here and happy to have an opportunity to express our viewpoint. I must apologize for not having a written testimony to present at this time. We received the text of the actual bill this morning and thought it wise to spend some time and analyze it before we shot from the hip. I do not have to take too much time, however, to talk about the special allowance or one other major concern that is having a cumulative effect on lenders I think all over the country which is that the loan product, itself, that we are concerned with here is not a stable product. We go through this reauthorization process continually. Every time we go through it, the last time I can remember scurrying around adding computer fields to our records and changing procedures and trying to figure out how we were going to deal with individual loans made to one borrower which half of his balance was under one special allowance formula, you know, the second half under another special allowance formula and how we handle students when deferment—half of those loan balance was subject to a postdeferment grace period and the other loan balance was not and how we explain to these individuals as we go along why we're doing what we're doing and why we're requiring what we're requiring of them. This effect on the lender is that every time we go through this process there's this outright fear that something is going to happen that will affect what we've done in the past in terms of the loans we've made and how they're going to be processed and our ability to generate more loans for the same borrowers. So I'd just like to stress that all consideration that can possibly be given be given to the fact that whatever is done does not affect in any way loans that are already on the books and borrowers that are already on the books. It's of utmost concern and I think maybe it might be appropriate to explain a little bit about some of the lender's philosophy in student lending anyway. There is right now a terrific push for lenders to get into student lending as you may know. When we first entered the market, we were alone in this area. Now we're fighting for loans. The competitors are out there, they're soliciting if that's the right term high school seniors, those kinds of things. You know, give us your loan, give us your business. And the reason for this is that these rates- these loans are interest rate sensitive. As interest rates go up in general, the yield on student loans go up as the T-bill goes up as we all know. The availability to lenders of other products that do that to this point has been very slow. Usury rates in most States have—have wiped out variable rate loans in the consumer lending side and Federal regulations until the last few years have even—for example, the typical 30-year mortgage loan with fixed payment, fixed rates. The rates were locked in and as the rates we pay for money to savers fluctuates, many lenders in the entire savings and loan industry found themselves with—paying rates higher to savers—more to savers than they could get back

from loans. So therefore the student loan is an extremely attractive alternative to the fixed rate loans that we've had in the past. And lenders, even though we grumble among ourselves about the increasing complexity of the Student Loan Program and continuing every time we reauthorized to have to process the old loans and new loans and—and are beset with fear of what may be coming next, the alternatives haven't been good. However, this situation is changing. We now have federally authorized loans through savings and loan associations and banks that allow variable rates on mortgages. In fact, the adjustable rate mortgage loan has become very—very, very prominent in the marketplace. There is legislation pending now in the Missouri House—in fact, I believe it's passed the Missouri House allowing variable rate consumer loans in many respects.

These loans as they come to market will compete head on with student loans for dollars, OK. The yields from these loans are very competitive and they're very attractive. For example, our association right now can eliminate and adjust—or eliminate—essentially originate an adjustable rate mortgage loan at 12 percent, OK, say a $50,000 loan. The borrower will pay up front all the origination costs in terms of points or origination fees or whatever it costs us to put that loan on the books. In order to get that much money out in the student lending side I have to make 20 $2,500 student loans. The yield right now would be about 13 percent. The Simon proposal says essentially while those loans are in school I would—yield the same 12 percent I would get on my one $50,000 mortgage. The risk to me in that one $50,000 mortgage is less than the known expense of servicing those 20 student loans No. 1. No. 2, I'm used to dealing as a lender with interest rate risks and with the possibility of loss. I'm used to judging loss. I'm used to dealing with that. I'm not used to dealing with the uncertainty and to how the program and the operational procedures and those things are going to be changed in 2, 3, or 4 years with this other thing. I don't know how to judge that and how to rate for that so I would—I would almost rather take on the possibility of loss on a mortgage loan than deal with the uncertainty that's inherent in the student loan process. So I think the main point I'm trying to make here is the way I see it I really, sincerely believe that maybe 3 years, maybe sooner, you'll see lenders start pulling out of the Student Loan Private Program as it is set up now. Not entirely, they're still going to service their customers. They're still going to need that. But a significant portion of the dollars will begin to start being diverted into other kinds of interest-rate-sensitive loans that are better alternatives to the lender because those alternatives are coming to the forefront. Therefore I think the real issue here is to start thinking about the total revamping of the program with an eye to simplicity in the loan mechanism itself, to simplicity No. 1, stability No 2. Certainly we're going to have different budgetary problems from year to year, there's no question about that. But those things need to be dealt with in terms of rates and built-in adjustable features of the program. We can't run around changing mechanisms every 4 years and saying OK, this one's in place for these guys. Now we're going to add a new mechanism this time and cumulatively over—over the years that just weighs down the lender and makes it less—less

attractive for him to stay in the program. What you want to do is just sell everything, get out of it and go put your money someplace else because you get to the point where you've got so many people and so many mechanisms and so many old rules that apply to so many different parts of the portfolio that it's very difficult to keep up with it. Suggestions, like I said I haven't had a lot of time to think about this, but one attractive suggestion I've heard would be to head more toward a line of credit concept. Perhaps when a student goes to an institution the first loan is processed similar to the way it is now, we establish a line of credit for the time between now and when that student becomes a senior. Each additional advances—each additional advance would then perhaps have a streamlined procedure. Maybe I don't need to go through the guarantee agent for each advance. I merely go to the school and verify that academic progress has been made, those kind of things, and then I advance the check directly to the school and don't have all this rigamarole every time I make an advance. One more thing is we think that there are a fair number of loopholes that cost the Federal Government a significant amount of money that need to be addressed. An example of one of those, for example, we have what almost happens to us a fair—a fairly large percentage of the time I'd say, we have a freshman who gets a $2,500 loan. He goes to school. The administrative office there hands him the $2,500 check. The school takes only the fees that are due right now. The loan period is for the full year, two semesters, but we take only the tuition or whatever is due at this present time, usually that's $500 or less at a public institution. The student is given back $2,000. We go 3 months and the student drops out, OK. $2,000 dollars is gone, the student doesn't have to make his first payment until the grace period expires 6 months later and at that time if he defaults we have $2,500 to recover. If the school had maintained all of the funds that were expected to be due to them during the course of the school year and only disbursed the amount that is necessary for living expenses and those other things that the student deals with, we would have less to recover, less to charge off, less for the Government to have to try to recover and pay interest on during that period. That seems to us to happen a lot. We, in fact, see abuses that we know for sure afterwards that is simply a student has discovered this process, goes through the student loan process, enrolls, gets his money, selects the school that will select, take the rest—the least amount from him, drops out and keeps the money. We see this all the time. I thank you for the opportunity——

Mr. COLEMAN. Do you report those?

Mr. SHARP. Do we report those?

Mr. COLEMAN. Those people?

Mr. SHARP. Those obvious things like that we pass to the guarantor, yes.

Mr. COLEMAN. Yes. Thank you very much.

Mr. SHARP. Certainly. Thank you.

Mr. COLEMAN. Rosemary Woolley, who's the dean of services, St. Louis Community College here.

STATEMENT OF ROSEMARY WOOLLEY, PH.D., ST. LOUIS COMMUNITY COLLEGE, DEAN OF SERVICES

Mr. WOOLLEY. Thank you very much. As you know, my name is Rosemary Woolley and I am Dean of Student Services at St. Louis Community College at Florissant Valley. And I also am chairperson of our district financial aid committee that recommends policies and interpretation on Department of Education and has interpreted your legislation to our chancellor. We appreciate the opportunity to testify before you today and I would like to tell you a little bit about St. Louis Community College. We're a multicampus college serving approximately 35,000 students training for careers, beginning work for advanced degrees, sharpening academic skills and discovering directions for their careers. Our student population is as diverse as the St. Louis community itself and ranges from the 18-year-old freshman to the mature retired adult. Their average age is 26 and nearly three-quarters are part-time students with career and/or family responsibilities. To serve the students' diverse needs, the college offers courses during the day and evening on campus and at other convenient locations in the community. Our academic programs are both as contemporary as high tech and as traditionally collegiate as the classics. Based upon some of the comments I have already heard this afternoon, I would like to diverge a little bit from my prepared text and simply make the comment that I am a realist and I understand that in talking about title IV we, of course, must represent our institutions, defend our institutions if you will, whether they be 2-year, 4-year public independent. However, as Chairman Simon remarked, I like to dream dreams also. And in those dreams I would hope that we could keep uppermost in our minds the students that we need to assist rather than the institutions that we need to assist when we talk about title IV. St. Louis Community College needs and welcomes the partnership of the Federal Government as it serves the diverse student population that I have mentioned that is engaged in pursuing the American dream. For many of these students it is truly the American dream because they come from families that have never entered a college, from families in some cases that are truly illiterate. During the 1983–84 academic year, over 6,000 of our students received over 4 million in Pell Grants. As you know that year is not yet complete. We recognize the difficulty in writing legislation that meets the diverse needs of our constituency. For this reason I do urge you to provide some authority and flexibility to institutions in the delivery system of financial aid. Let me speak now to some of these proposed modifications. Pell Grant Programs. We applaud the lifting of the half cost provision to 75 percent with an allowance for nontuition expenses. As I know now there is currently an allowance for nontuition expenses that has remained the same, I believe, since the inception of the Pell Grant Program. And costs have gone up considerably since then. While I recognize there is the difficult balance again between the public independent 2-year, 4-year sectors that we offer, again let us keep in mind the students that we serve when we talk about this provision. We do not concur with the inclusion of graduate students in the Pell Grant Program unless again the undergraduate students are fully funded with all the en-

titlements under the proposed legislation and I, too, find this might be very difficult given the deficits that Congress needs to address. We do not concur with the administration's proposal of a self-help concept.

To require our students, many of whom are academically as well as financially disadvantaged, to provide even $500 or 40 percent of expenses is not feasible even with work study or loans. Such students should not have a loan burden initially and St. Louis Community College does not receive a college work study allocation to meet such a requirement. I will speak to this a little bit later and I'm sure that St. Louis Community College is not alone, especially among similar type institutions throughout the country. We do not concur with section 404—the limitation of 5 academic years of eligibility. With academic standards now required at our colleges, this provision is unnecessary. Moreover, a student at St. Louis Community College pursuing an engineering science associate degree on a full time—12 credit hour—basis as defined by the Federal Government will need 6 08 semesters or more than 3 years to earn the associate degree. This only leaves him or her less than 2 years to achieve his B.S. degree in this building at Washington University I might add. This is highly unrealistic. At this point let me digress slightly to point out the average completion of a bachelor's degree, even at a 4 year college, is usually more than 4 years. You should remember that the traditional pool of college aged students, 18 to 22 years old, is declining and aid directed only to that group falls short of the need by nontraditional groups. Let me point out that Community Colleges across the country served over 36 percent, this was in 1980, of all students in this country. And all students includes graduate and professional as well. When considering only undergraduate populations, it could be that well over one-half are enrolled at 2-year institutions. A great proportion of those students in community colleges are not the traditional pool. We plead with you to keep uppermost in your mind that for many of us traditional college is no longer the norm as when most of us went to college in 4 years or 3 years or 5 years. The college work study program. We are very pleased with the college work study program and despite what the Chancellor from Washington University stated in denoting that the college work study program is a program of choice, we believe it is a program of access as well because without the work study program at our—at our institution the student has access through the Pell Grant Program and is able to live because of the work study program. So because of the work study program they might they might not very well be able to attend even with a full Pell Grant in order to eat and provide shelter for themselves. And this is where our comments speaking to the adequacy of the funds we receive. We currently receive $876,000 some odd in Federal contributions for college work study. As you can glean from the fact that we disburse over $4 million in Pell Grants, a payroll slightly in excess of $1 million clearly can not meet the needs of our students. We applaud the simplicity of allotments to institutions in the committee print and believe it will provide a more equitable allotment than our current State formulas. I must admit that I congratulate Chairman Simon on even putting this in the draft legislation since, as I mentioned earlier, I am a realist and

recognize that within Congress both the House and the Senate there are many parochial interests and the State formulas address this interest very definitely. Block grants. We concur with the provision of institutional flexibility accompanied by reduction of regulatory burden and complex distribution formulas. However, we do need to caution you that the 15-percent requirement from non-Federal sources could very well be a burden that many institutions are not able to bear. This requirement may eliminate institutions with the most needy students from participation. Fortunately I do not believe St. Louis Community College would be among one of those institutions.

If, in fact, we were to currently receive the very same amounts that we receive now in the SCOG program which, for us, is the only program we could really talk about as far as the programs identified for the block grant program, since the SSIG funds we receive are not enough to fill your petty cash drawer based upon the current program in Missouri. However, based upon the funds that we currently received in SCOG, which is close to $300,000, I'm sure that a roughly $50,000 amount that—that St. Louis Community College would need to come up with could possibly be available but this might not be true to other institutions. Guaranteed student loans: At this point it is necessary to emphasize what I believe to be the appropriate balance between loans and grants. Philosophically, we believe the loan portion of a student's financial aid award should increase as he or she progresses toward meeting an educational objective. It is important to develop less reliance on loans and greater emphasis on grants and work programs. These programs serve lower income students best by assuring access in the short run and by reducing defaults over the long term. It is no secret that many major metropolitan community colleges no longer participate in the NDSL program due to high default rates. Hindsight tells us we contributed in part by setting unrealistic criteria for high need, high credit risk participants. We have a potential for developing the same problem with the Guaranteed Student Loan Program. And, at this point I would like to address what Mr. Sharp stated. I think the—in the sense that current regulations allow for the occurrence of what Mr. Sharp was talking about. Students, in fact, and very few I must admit, but it is a major problem I think, do take advantage of that and do borrow the full $2,500. And for our institution they pay their tuition of $255 and then take off. It's easy money. But regrettably for a very small apple, a rotten apple in a barrel of a thousand, let's don't destroy the program because of that. Let's tighten up the loopholes instead. At this point I will turn my attention to specific improvements for delivery of student financial aid programs. According to the 1984–85 payment process developed by the Department of Education, institutions such as St. Louis Community College will see students in its registration arena trying to pay for classes before we have received funds from the Federal Government. Because of the checking account payment procedures, some students with eligible student aid reports may not be able to register. St. Louis Community College does not nor should it have a $1 million cash flow to disperse Pell Grants to students in anticipation of receipt of Federal dollars some 4 to 6 to 8 weeks in the future. The Secretary, that is the Secretary of Educa-

tion, is telling us that significant management improvements have been realized with the institution of a new processing system for the 1984-85 application cycle. I quote, "In this instance, however, students and institutions are receiving better quality services at between $9 and $12 million less than under the previous contract." This is a quote from the Dear Colleagues letter we received in March of 1984. What is not noted is the greater administrative burden in costs on institutions created by those significant improvements. Much of this might be alleviated by sending the Pell Grant authorizing eligibility information directly to the institution rather than just to the student.

In closing, we again appreciate your invitation to participate and urge you to keep uppermost in your thoughts that the traditional college progression is no longer the norm. Remember our more typical student is aged 26, employed with family responsibilities and taking an average of 7.4 credit hours per semester. Aid is critical to these students and we hope procedures are developed that can benefit all our constituency. Thank you.

[Prepared statement of Rosemary Woolley follows:]

PREPARED STATEMENT OF ROSEMARY WOOLLEY, PH.D., ST. LOUIS COMMUNITY COLLEGE

My name is Rosemary Woolley, Dean of Student Services at St. Louis Community College at Florissant Valley and chairperson of our District Financial Aid Committee. St. Louis Community College appreciates the opportunity to testify before you today. St. Louis Community College is a multi-campus college serving approximately 35,000 students training for careers, beginning work for advanced degrees, sharpening academic skills, and discovering directions for their careers. They are as diverse as the St. Louis community itself and range from the 18-year-old freshman just out of high school to the mature, retired adult. Their average age is 26, and nearly three-quarters are part-time students with career and/or family responsibilities.

To serve the students' diverse needs, the College offers courses during the day and evening on campus and at other convenient locations in the community. The academic programs are both as contemporary as high tech and as traditionally collegiate as the classics.

St. Louis Community College needs and welcomes the partnership of the Federal Government as it serves this diverse student population engaged in pursuing the American dream. During the 83-84 academic year, 6,113 students have received over $4 million in Pell Grants. We recognize the difficulty in writing legislation that meets the diverse needs of our constituency. For this reason I urge you to provide some authority and flexibility to institutions in the delivery system of financial aid.

Let me speak now to proposed modifications.

1. Pell Grant Programs

A. We applaud lifting of the "half cost" provision to 75 percent with an allowance for non-tuition expenses.

B. We do not concur with the inclusion of graduate students in the Pell Grant program unless undergraduate students are fully funded with all entitlements under proposed legislation.

C. We do not concur with the Administration's proposal of a self-help concept. To require our students, many of whom are academically as well as financially disadvantaged, to provide $500 or 40 percent of expenses is not feasible even with work study or loans. Such students should not have a loan burden initially and St. Louis Community College does not receive a College Work Study allocation to meet such a requirement.

D. We do not concur with Section 404—the limitation of 5 academic years of eligibility. With academic standards required at our colleges this provision is unnecessary. Moreover a student at St. Louis Community College pursuing an Engineering Science Associate Degree on a full time (12 credit hour) basis will need 6.08 semesters or more than 3 years to earn an Associate Degree. This only leaves him or her less than 2 years to achieve his B.S. degree. This is highly unrealistic. At this point, let me digress slightly to point out that average completion of a bachelor degree—

even at a 4-year college—is more than four years. You should remember that the traditional pool of college aged students (18 to 22 years old) is declining and aid directed only to that group falls short of the need by non-traditional groups. Let me point out that Community Colleges served over 36 percent (1980 statistical abstracts) of all students in this country. When considering only undergraduate populations, it could be that well over one half are enrolled at two-year institutions. A great proportion of those students in community colleges are not the traditional pool. We plead with you to keep upmost in your mind that for many of us traditional college is no longer the norm.

2. College work study

We are pleased with the college work-study program and applaud recommended increases to the program. However, the adequacy of the funds we receive is very questionable. We currently receive $876,876 in federal contributions for college work study. As you can glean from the fact that we disburse over $4 million in Pell Grants, a payroll slightly in excess of $1 million clearly can not meet the needs of our students. We applaud the simplicity of allotments to institutions in the Committee Print (showing draft language for a Higher Education Act) and believe it will provide a more equitable allotment than our current state formulas.

3. Block grants

We concur with the provision of institutional flexibility accompanied by reduction or regulatory burden and complex distribution formulas. However, we need caution you that the 15 percent requirement from non-federal sources could very well be a burden that many institutions are not able to bear. This requirement may eliminate institutions with the most needy students from participation.

4. Guaranteed student loans

At this point, it is necessary to emphasize what I believe to be the appropriate balance between loans and grants. Philosophically, we believe the loan portion of a student's finaicial aid award should increase as he or she progresses toward meeting an educational objective. It is important to develop less reliance on loans and greater emphasis on grants and work programs. These programs serve lower income students best by assuring access, in the short run, and by reducing defaults over the long term. It is no secret that many major metropolitan community colleges no longer participate in the NDSL program due to high default rates. Hindsight tells us we contributed in part by setting unrealistic criteria for high need, high credit risk participants. We have a potential for developing the same problem with the Guaranteed Student Loan program.

At this point, I will turn my attention to specific improvements for delivery of student financial aid programs.

1. According to 1984-85 payment process developed by the Department of Education institutions such as St. Louis Community College will see students in its registration arena trying to pay for classes before we have received funds from the federal government. Because of the checking account payment procedure system students with eligible Student Aid Report may not be able to register. St. Louis Community College does not nor should it have a million dollar cash flow to disperse Pell Grants to students in anticipation of receipt of federal dollars some 4 to 6 to 8 weeks in the future.

2. The Secretary is telling us that significant management improvements have been realized with the institution of a new processing system for the 84-85 application cycle. "In this instance, however, students and institutions are receiving better quality services at between $9 and $12 million less than under the previous contract." In the Dear Colleague letter of March 1984, quoted above, what is not noted is the greater administrative burden and costs on institutions created by those significant improvements. Much of this might be alleviated by sending the Pell Grant authorizing eligibility information directly to the institution.

In closing, we again appreciate your invitation to participate and urge you to keep uppermost in your thoughts that the traditional college progression is no longer the norm. Remember our more typical student is aged 26, employed with family responsibilities and taking an average 7.4 credit hours per semester. Aid is critical to these students, and we hope procedures are developed that can benefit all our constituency.

STATEMENT OF BENJAMIN S. SANDLER, DIRECTOR OF FINANCIAL AID, WASHINGTON UNIVERSITY

Mr. SANDLER. Financial aid officers, Representative Coleman, are a contentious lot and it's tempting, I'm sure. And so it's tempting for me having the luxury of speaking third on I guess it's going to be a four-person panel to comment on Dr. Woolley's testimony. I'm going to be ethical about it though and comment only on a couple of points she mentioned with which I agree and that I want to reinforce. The way Pell Grants are administered is a joke. It's a joke because the Department of Education persists, for reasons that are not in the legislation, in getting Pell Grant eligibility to the—information to the college through the student. They persist in producing student eligibility reports that are mailed to the student, the student brings them to the college, sometimes after a considerable delay. Sometimes they're lost. Sometimes they are dropped on the sidewalk. And then a whole cycle of returns to the Pell Grant central processor has to begin. If the document is erroneous in any one of a number of respects, the college can't communicate directly with the Pell Grant processor. The college has to send the document back to the student and the student has to communicate with the Pell Grant processor. There is nothing legislatively to prevent the Department of Education from behaving more rationally which would mean sending from approved Federal processors, like the American College Testing Program, College Scholarship Service, under rigidly prescribed Federal guidelines, Pell Grant information directly to the colleges and universities that the students indicate they want the information sent to. Second point, comment on work study. Very little has been said about the work study program today. Yet everybody has nothing but good to say about it and I am beginning to fear that it's getting taken for granted, a little like Cordelia in King Lear, you know, the good sister. The sister that everybody assumes is going to be around and is going to be reliable and who gets short shrift as a result. Even the authorized—even the authorization numbers in Congressman Simon's proposed legislation, the number for 1987 is only $600 million, only $5—only $50 million more than what we have now. No program that we've got works as well as that program does, administratively and in a way that's consistent with what most of us agree is the American ethic. All of us could use more money and use it very well and I hope very much that as the deliberations continue whether it's in a reauthorization context or in a less formal reauthorization context, simply changing the law and fighting for additional funding, I hope that you will consider, as we're going to have to ask our own lobbyists in Washington, to pay more attention to this too, that the work study program works, that we could use more money in that program and that lack of comment on it is no indication that we—we don't care about it.

Mr. COLEMAN. Thank you for that lack of comment.

Mr. SANDLER. I'm not finished with my lack of comments because I—I want to say something about the—the—some of the issues that were mentioned in the President's panel earlier. There is a misunderstanding—there is a $65,000 misunderstanding afoot and it needs to be corrected and I think it can be corrected easily. Con-

gressman Simon apparently believes that the $65,000 limitation in his draft legislation on GSL eligibility is an innocuous suggestion because it simply repeats what's in the law now. What's in the law now is a $65,000 income cap on students who can qualify for guaranteed student loans through the look up tables through the congressionally mandated look up tables. Students with incomes—with family incomes above $65,000 can and do qualify in large numbers at a school like ours I can guarantee you, qualify for guaranteed student loans utilizing the uniform methodology, the alternate need analysis system that the—that the current law provides for. And so I—I hope that misunderstanding is corrected. If the $65,000 cap that's in Congressman Simon's legislation were to find its way into final law, the effect for institutions like Washington University would be devastating. You—you asked, Congressman Coleman, earlier this afternoon about a—a response to the administration's proposal for a—a self-help requirement of some kind in the Pell Grant Program and—and observed that any loss of Pell Grant funding in that area could be compensated for by the administration's admirable proposed increase in the work study appropriation.

Mr. COLEMAN. Before you attribute some of that to me, I was simply trying to present the administration's proposal.

Mr. SANDLER. I know.

Mr. COLEMAN. In as objective terms as I could so——

Mr. SANDLER. Certainly.

Mr. COLEMAN. I have a disagreement some times with the administration.

Mr. SANDLER. Fair enough. Fair enough. The—the notion of turning the Pell Grant Program into an entity that requires self-help from the poorest students who want to attend the least expensive school—school makes a sham of the Pell Grant Program and what it means and what it ought to mean. Washington University has no vested interest in making this point, but as private citizen and as an educator I do. The Pell Grant Program ought to be an avenue for access for the poorest kids who want some kind of education. There ought not to be any self-help strings attached. And I—I think it's wrong for the—the administration to try to legitimize that point of view by instituting a self-help Pell requirement.

The notion that losses in—in the Pell Grant area for individual students can be compensated for by the increase in the work study appropriation is—is a Trojan horse. The administration advocates an appropriation of $851 million I believe for the work study program. It also advocates the elimination of the—I hope I'm right here, the existing work study program, the SEOG Program and the SSIG Program. So we take the three campus-based—those three programs as they exist now, work study, SEOG and SSIG and collapse them in effect into one super work study program. The reason I want to call it a different work study program or super work study program is because there's lots of flexibility that the administration wants to extend to us in the use of that money. We could, for example, take 50 percent of the institutional allocation and use if for SEOG's. The hard reality though is that this year in 1984-85 from fiscal year 1984 appropriations—I beg your pardon, in 1983-84 from fiscal year 1983 appropriations, we have nationally

about $990 million appropriated and being used in the work study program, and in the SEOG Program and in the SSIG Program. The numbers I've got here aren't exact. They're $550 million work study, $370 million SEOG, $70 million SSIG. I may be off a little bit, but I'm not off by much. The bottom line is that the administration is asking us to trade $990 million for $851 million. That is a 15-percent drop and no matter how you slice it kids are going to get hurt, institutions will get hurt and students will get hurt. So unless the administration is willing to match its honeyed promises of greater flexibility and simplification with cash on the barrelhead, I don't think it makes any sense for us to provide an ounce of support for that proposal. I may have taken my 10 minutes, Mr. Chairman, commenting on——

Mr. COLEMAN. No, go ahead. We do have lots of time but go ahead and make the high points of everything you want.

Mr. SANDLER. There—as the only financial aid officer on the panel, my—my vision originally had been to not talk about partisan issues or issues that—that I knew other people would touch on, but to talk instead about a couple of very important, relatively technical matters—delivery system issues that too often get too little attention in discussions like these. They are outlined in my testimony and today if—if you'll allow it I'd like to talk only about the last of these, the difficulty that exists in the current Federal application process because of the conflict that's created between the desirability for getting accurate information from the student and the desirability of providing financial aid information to the student in a timely manner. This tension is especially painful in the high school senior year. As you know this is one of those crucial points at which financial aid has what it is designed to have, a major impact on college and career choice if the aid is announced to the student in a timely way. For example, consider the high school senior next year who plans to enter college in the fall of 1985. She believes that a private college can best serve her academic and personal needs but she and her family cannot possibly afford the costs. They have been led to believe in the promise of financial aid but aid is so critical a part of their decision that they want to know what's available as early as November or December 1984 so they can begin planning. If they can't know until March or April 1985, the possibility of attendance at a private college grows fainter—I'm on page 6 of my testimony—and her attention begins to turn, understandably, to the lower cost college that she and her family can more easily afford. Sadly the current application process is designed to produce exactly this unfortunate outcome. The Federal application form repeatedly raises dire warnings about the risks of completing the application before the family's IRS return is completed. Thus, even if the college encourages an earlier application, there's a powerful pressure on the student to postpone applying for financial aid until after her family's 1984 IRS return has been filed. This won't be sooner than February 1985 and it may not be until April 15. At least one more month will pass before the college even knows her need, let alone makes an award. She and her family, meanwhile, find it increasingly difficult to sustain realistic interest in a college they know they can't afford without a financial aid commitment that consists of money in hand, not a bro-

cedure's vague rhetorical promises. There is a reasonable solution to this dilemma. It would allow a student to apply for Federal student aid as early as the fall of her senior year. The key understanding would be that no Federal student aid award could be considered final and binding until the information on which it is based has been verified through reference to the schedule 1040. Although this means that the application process could not end until late spring or early summer preceding the start of the next school year, nothing would prevent the process from beginning much earlier. Colleges could have students file tentative applications at any time during the high school senior year, issue tentative awards, and confirm them later, after the schedule 1040 is available. In one sense this arrangement complicates the process because it means that every student would have to apply twice for financial aid. In reality, though, the second application would be only a schedule 1040, nothing else, and the need for a timely initial announcement would have been served. I want Mr. Simon to know that I am grateful for the—and Representative Coleman, for the ongoing congressional concern of getting financial aid information into the hands of high school students and their families as early as possible. In Mr. Simon's draft legislation, I note not only the continued support for preliminary financial aid estimates in section 483(c), but the establishment in section 491 of a National Center for Postsecondary Educational Opportunity whose sole purpose is the development of better financial aid awareness among younger students and their parents. If this Center is founded and made a productive reality, what it produces could have as great a long-range impact on college attendance as the programs and dollars in current legislation. My message today, however, is that all the early estimates in the world won't help unless they are supported by a Federal application procedure that delivers timely information in the senior year. Thank you very much for the opportunity to testify and for your attention.

Mr. COLEMAN. Thank you very much. And your other suggestions are equally as interesting. I'm going to take this and read it. Hopefully we can translate your frustrations into some changes or a reappraisal of some of these, as you say, more mundane aspects of this that we don't see that much of and you see plenty of. Thank you very much.

Mr. SANDLER. I know. Thank you.

[Prepared statement of Benjamin Sandler follows:]

PREPARED STATEMENT OF BENJAMIN S. SANDLER, DIRECTOR OF FINANCIAL AIDS, WASHINGTON UNIVERSITY

SUMMARY: SOME ASPECTS OF THE FEDERAL STUDENT AID DELIVERY SYSTEM

1. The family contribution formula for Pell Grants, and the corresponding formula for all other need-based federal funds, should remain legislatively separate and distinct from one another.

2. The non-Pell Grant family contribution formula should be prescribed in Title IV legislation only in general outline, not in specific detail.

3. Pell Grant eligibility information should be delivered to students and institutions directly by federally-approved application processors.

4. The student application process should be redesigned to eliminate the present conflict between a timely application and an application with accurate family information.

Good afternoon. My name is Benjamin Sandler. I have been Director of Financial Aids at Washington University for eleven years. My perspective on the issues we're discussing today is that of a line manager of the financial aid process at the institutional level. Line managers can certainly become narrowly myopic in their views, preoccupied with bureaucratic detail at the expense of a broader policy perspective. Yet bureaucrats often are the best eye-witnesses when well-intentioned and elegantly-designed policy founders on the shoals of inadequate implementation mechanisms. In the current financial aid idiom, many of these mechanisms are loosely gathered under something called the "delivery system."

Today I would like to discuss three of these mechanisms. They are:

(1) The federal need analysis system that determines how much financial aid a student can receive; (2) the way in which Pell Grants are delivered to students; and (3) the application process for students.

1. We take it for granted that the major federal student aid programs should be need-based, but these programs can be strengthened or sabotaged by the way in which need is determined, because it's the need calculation, more than anything else, that determines whether students and families feel the impact of federal aid programs as the Congress intends.

The most critical and hotly debatable part of any need analysis formula is the element that determines the family contribution. Today I want to argue two points about family contributions. The first is the fundamental necessity for two formulas: one for Pell Grants, and the other for other need-based programs. This separation is supported by Representative Simon's draft legislation, but I still want to discuss it here because there are many in the financial aid community who continue to be seduced by the specious simplicity of a single formula for all federal programs. The second point is the importance of prescribing the non-Pell formula in the statute in general terms only, without the imposition of constraining detail. This quality is present to some extent in Representative Simon's draft legislation, but not as much as I believe it should be.

The reason for creating separate Pell and non-Pell formulas is that the two formulas are asked to perform very different tasks. The Pell Grant formula establishes eligibility for Pell Grants only. Its results may raise or lower the Pell Grant amount, but the totality of a student's aid won't be affected. The formula for the other federal programs, however, has a much more daunting challenge, for it must try to measure what families actually are able to pay toward their children's education. The non-Pell formula finds itself in this unenviable position because, if a student's award contains even a single dime of need-based federal student aid, the entire award, no matter how non-federal its other components may be, must not exceed the ceiling of financial need that the family contribution determines. If contributions rise too much, the need and total award ceilings will drop—perhaps to the point of making college attendance impossible for too many students at too many colleges. If contributions fall, federal funds are spent inefficiently and the formula's credibility could suffer irreversible damage.

For example, a high school senior may hope to attend a college whose cost of attendance is $10,000. Her parents, whose income is around $30,000 and whose assets are modest, are willing to contibute something toward these costs, but they can't afford to pay the whole bill. If her non-Pell family contribution is calculated at $3,000, her need is $7,000. $7,000 becomes the ceiling of aid she can receive, from all sources. If she gets $7,000, she and her parents must then ask themselves the last, crucial question: can they come up with the remaining $3,000? If the formula were harsher and produced a higher contribution, she might be unable to attend her college choice because her family couldn't come up with the additional money. If her contribution calculation were lower, the resulting higher need might produce an attractive award for her, but would represent a wasteful use of federal student aid and perhaps raise public questions about the formula's credibility.

Ideally, then, the non-Pell family contribution formula should strike a balance between expecting reasonable sacrifice from the parent and student, without expecting sacrifice that will make college attendance a financial impossibility. It cannot be made vulnerable to short-term political pressures or ideological passions that want to make a particular kind of federal aid more available or less available to certain economic classes of families. It must always have its eye fixed firmly on its central mission: to measure, with as much justice, fairness and impartiality as it can muster, what families can truly contribute.

This goal is best achieved and maintained by prescribing the non-Pell formula only in general outline in Title IV legislation. It's correct to enumerate the broad categories of a family's economic situation to which the formula should attend. It's unwise, though, in my opinion, to stipulate that equity in a home should be omitted

entirely from the formula, or that business assets should be handled in a certain way, not because these judgements are wrong but because they're judgements, values with no immutable claim to rightness. When they are written into the law, they erode the flexibility that allows the formula to adjust to year-to-year changes in family circumstances and the discoveries of ongoing economic and financial aid research. The Congress can fully meet its responsibility by a close and systematic monitoring of the Department of Education's annual benchmarks. Within these benchmarks, the non-Pell formula needs all the flexibility it can get in order to perform its responsibility—the calculation of what families can truly afford to pay toward college costs.

2. A second delivery system issue that warrants discussion is the means by which Pell Grant eligibility, once calculated, is delivered to students. The current delivery mechanism has a single glaring and crippling deficiency. The Department of Education insists upon producing Pell Grant eligibility notices itself, sending these notices to the student (not the college), and relying on the student to bring the eligibility notice to the college financial aid office.

This procedure is an enormous waste of time and energy, and a major source of the delay experienced by many students in obtaining their Pell Grants. The Department of Education can maintain all the control it legitimately seeks by relying on approved student aid processors like the American College Testing program and the College Scholarship Service to produce Pell Grant eligibility calculations and forward this information directly to participating colleges. Then a student could apply for all types of financial aid, not only through a single form, but through a single process.

3. The final delivery system issue I would like to discuss concerns the tension in the student application process between accuracy and timeliness—between the necessity for verifying the accuracy of family information that is provided on a student's application, yet still allowing the student and his family to complete the application early enough to receive a timely award. This tension is especially painful in the high school senior year.

As you know, this is one of those crucial points at which financial aid has what it is designed to have: a major impact on college and career choice—if the aid is announced to the student in a timely way.

For example, consider a high school senior next year who plans to enter college in the fall of 1985. She believes that a private college can best serve her academic and personal needs, but she and her family cannot possibly afford the cost. They have been led to believe in the promise of financial aid, but aid is so critical a part of their decision that they want to know what's available as early as November or December of 1984. If they can't know until March or April of 1985, the possibility of attendance at a private college grows fainter, and her attention begins to turn, understandably, to the lower-cost college that she and her family can more easily afford.

The current application process is designed to produce exactly this unfortunate outcome. The federal application form raises dire warnings about the risks of completing the application before the family's IRS return is completed. Thus, even if the college encourages an earlier application, there is a powerful pressure on the student to postpone applying for financial aid until after her family's 1984 IRS return has been filed. This won't be sooner than February of 1985, and it may not be until April 15. At least one more month will pass before the college even knows her need, let alone makes an award. She and her family, meanwhile, find it increasingly difficult to sustain realistic interest in a college they know they can't afford without a financial aid commitment that consists of money in hand, not a brochure's vague rhetorical promises.

There is a reasonable solution to this dilemma. It would allow a student to apply for federal student aid as early as the fall of her senior year. The key understanding would be that no federal student aid award could be considered final and binding until the information on which it is based has been verified through reference to the 1040.

Although this means that the application process could not end until late spring or early summer preceding the start of the next school year, nothing would prevent the process from beginning much earlier. Schools could have students file tentative applications at any time during the high school senior year, issue tentative awards, and confirm them later, after the 1040 is available. In one sense this arrangement complicates the process, because it means that every student would have to apply twice for financial aid. In reality, though, the second application would be only a 1040, nothing else, and the need for a timely initial announcement would have been served.

Mr. Chairman, I know of, and I am grateful for, the ongoing Congressional concern for getting financial aid information into the hands of high school students and their families as early as possible. In your draft legislation, I note not only the continued support for preliminary financial aid estimates in Section 483(c), but the establishment in Section 491 of a National Center for Postsecondary Educational Opportunity whose sole purpose is the development of better financial aid awareness among younger students and their parents. My message today is that all the early estimates in the world won't help unless they are supported by an application procedure that delivers timely information the senior year.

Mr. Chairman, I hope these comments are helpful to you and your colleagues. I realize I have not responded to several of the important questions with which your staff has challenged this panel. I realize, too, that issues like those I have discussed today often seem comparatively trivial beside matters of more fundamental importance—the amount of Pell Grants and who gets them, the structure and funding of campus-based programs, the amount and structure of Guaranteed Student Loans. Delivery system issues are less glamorous and less visible. Nevertheless, I believe that delivery system redesign along the lines I've suggested would do much to insure that federal policy achieves its goals.

Mr. COLEMAN. Our last panelist in this group is Dr. Robert Bruker from Southern Illinois University at Edwardsville. He's representing the president of that institution.

STATEMENT OF DR. ROBERT BRUKER, SOUTHERN ILLINOIS UNIVERSITY

Mr. BRUKER. Thank you, Representative Coleman. As you mentioned, I am from Southern Illinois University at Edwardsville and in a relatively short time Southern Illinois University at Edwardsville has become the university of the people of southwestern Illinois. Just over 10 percent of our 10,000-plus students live in university housing. The others live at home or in off-campus housing and drive to campus each day from as far away as 50 miles. We also have a large number of part time students, individuals who have full-time jobs or family responsibilities. The median age for our undergraduate student population is just over 22 years. The median figure for our graduate students is 31. The typical, if you will, students in these age categories are more likely to be alumni of colleges and universities who have already embarked on their careers. Because of the unique characteristics of our institution and of our students, we have a number of concerns related to part-time and commuting students. I would like to briefly enumerate these concerns. The current revision of H.R. 5240 contains language which does not correct the inequity in the Pell Grant Program for commuter students. In the committee print of the bill, a $2,000 cost-of-living allowance was provided for all students. As modified, the bill now provides a $1,200 cost allowance for students living with their parents, $1,600 for students living off-campus, and $2,000 for students living on campus. The living cost allowance of $1,100 for commuters, which has been in the program since its inception in 1972 and is now being raised to $1,200, does not seem equitable. An increase of only $100 between 1972 and 1985 hardly reflects cost increases faced by parents and students for housing nor for the cost of gasoline and operating an automobile which has increased in recent years. At our institution, 90 percent of all Pell Grant recipients are commuting students. The majority live with their parents and would be adversely affected if the living cost allowance is limited to $1,200. And I cannot believe that this condition could be much different at other universities with large numbers of com-

muting students, and it must be even worse for the community college students. The Education Amendments of 1980 recognized this inequity and permitted each institution to establish reasonable off-campus living costs for its own students. We support that concept and urge that reauthorization address the problem. The proposed 5-year limitation for receiving Pell Grant aid should also be modified. At present the limit is dependent upon a timeframe established by each institution's satisfactory academic progress policy. A limitation of 5 years does not sufficiently allow for development or remedial course work or the impact of a change in majors. It would impose a severe handicap for part-time students. The Education Department's example of normal time frames for satisfactory progress is outlined in a December 21, 1983, Dear Colleague letter suggests 6 years as the norm for most 4-year institutions. We suggest that the 5 year limit be dropped from the legislation or increased to 6 years. In summary, we would like to urge that more assistance should be provided to part-time students. Restrictions in current programs should be eliminated so that these students may be eligible for all Federal student assistance programs. Currently the large number of students who attend college on a less than half-time basis are not eligible for most Federal or State student aid. Part-time students, even when eligible, have their awards reduced. We think this inequity should be corrected. Thank you, Representative Coleman, for permitting me to comment on portions of H.R. 5240 which we feel may adversely affect a large number of our students.

Mr. COLEMAN. Thank you very much.

[Prepared statement of Robert Bruker follows:]

PREPARED STATEMENT OF ROBERT BRUKER, REPRESENTING EARL LAZERSON, PRESIDENT, SOUTHERN ILLINOIS UNIVERSITY AT EDWARDSVILLE

My name is Robert Bruker. I am here representing Earl Lazerson, President of Southern Illinois University at Edwardsville. Dr. Lazerson is unable to be here this afternoon due to a previous commitment. We appreciate the opportunity to have our view heard by the representatives of the House Committee on Education and Labor.

We wish to commend Representative Simon, as Chairman, and Representative Coleman, as one of the principal minority party members, of the Subcommittee on Postsecondary Education for their efforts in behalf of higher education in America. The legislation which you and the other members of the Subcommittee have proposed represents a giant step on the part of government toward expanding access, enhancing quality, and improving program efficiency while fulfilling the Federal role in higher education.

Southern Illinois University at Edwardsville is the university for the people of southwestern Illinois. Just over 10 percent of our 10,000-plus students live in university housing. The others live at home or in off-campus housing and drive to campus each day from as far away as 50 miles. We also have a large number of part-time students—individuals who have full-time jobs or family responsibilities. The median age for our undergraduate student population is just over 22 years. The median figure for our graduate students is 31. The "typical" students in these age categories are more likely to be alumni of colleges and universities already embarked on their careers.

Because of the unique characteristics of our institution and our students, President Lazerson has expressed a number of concerns related to part-time and commutings students. I would like to briefly enumerate these concerns.

1. The current revision of HR 5240 contains language which does not correct the inequity in the Pell Grant program for commuter students. In the Committee Print of the bill, a $2,000 cost of living allowance was provided for all students. As modi-

fied, the bill now provides a $1,200 cost allowance for students living with parents; $1,600 for students living off-campus; $2,000 for students living on campus.

The living cost allowance of $1,100 for commuters, which has been in the program since its inception in 1972 does not seem equitable. An increase of only $100 between 1972 and 1985 hardly reflects cost increases faced by parents and students for housing. Further, substantial increases in the costs of gasoline and operating an automobile in recent years for commuters have not been recognized.

At SIUE 90 percent of all Pell Grant recipients are commuting students. The majority live with parents and would be adversely affected if the living cost allowance is limited to $1,200. I cannot believe that this condition could be much different at other universities with large numbers of commuting students, and it must be even worse for community college students. The Education Amendments of 1980 recognized this inequity and provided for each institution to establish reasonable off-campus living costs for its own students. We support this concept and urge that Reauthorization address this problem.

2. The proposed five year limitation for receiving Pell Grant aid should be modified. At present, the limit is dependent upon a time frame established by each institution's "satisfactory academic progress" policy. A limitation of five years does not sufficiently allow for development or remedial coursework, or the impact of a change in majors. It would impose a severe handicap for part time students.

The Education Department's example of normal time frames for satisfactory progress in a December 21, 1983 "Dear Colleague" letter suggests six years as the norm for most four year institutions. We suggest that the five year limit be dropped from the legislation, or increased to six years.

In summary, we would like to stress that more assistance should be provided to part-time students. Restrictions in current programs should be eliminated so that these students may be eligible for all federal student assistance programs. Currently the large number of students who attend college on a less than half-time basis are not eligible for most federal or state student aid. Part-time students, even when eligible, have their awards reduced unfairly. We think this inequity should be corrected.

Thank you once more for permitting me to comment on a portion of HR 5240 which we feel may adversely affect a large number of our students.

Mr. COLEMAN. I was going to ask a question and maybe just kind of lead out of your testimony. About the new nontraditional student that several of you mentioned. Would you address some specifics? I know we talked about it in generalities, but we are going to have some sort of restrictions, we know that. How will we address this new student. We see now from the classroom more and more from the student aid side of things?

Ms. WOOLLEY. One of the things where I did address that was in the 5-year limit written in the draft of the committee print of assistance and that, I think, is a—is a major problem in that area. The nontraditional student may end up taking 15 years coming and going and taking 6 hours here and there. And that could be very burdensome, not only limit the student assistance but also burdensome to the institution too to try and keep track of that.

Mr. DEAN. May I make one clarification on the 5-year limitation in section 404. It is my reading of the provision that the language reads: "shall be 5 academic years or the equivalent." So for part-time students, it actually would be 10 years.

Ms. WOOLLEY. That's correct. I understand that, but in the example that I gave with our engineering science student, he needs 74 credit hours to complete his degree. For the associate degree it would take you 3.08 semesters. He has less than two to complete his engineering science degree at Washington University at the baccalaureate level even on a full-time basis. So you equate that to part time, it becomes even worse.

Ms. WICE. You meant to say 3 years, not three semesters, right?

Ms. WOOLLEY. Three semesters.

Ms. WICE. OK.

Ms. WOOLLEY. No, no, no. No, no, I'm sorry, 3 years; 3 years, 12 hours per semester; OK. Thank you. The other thing on the nontraditional student which again seems to be—well, they are older, they're part-time employed, maybe full-time employed in very low level, low-income jobs. They have small children. Many of them are—are single with family. Many of them, of course, are participating in other kinds of Government programs, such as family assistance, food stamps, et cetera. And they have problems even being transported to school, finding care for their children. I don't have any answers to be honest with you. I guess I'm simply asking for recognition that most of our students any more are not the 18-year-old that begins college at 18, completes her baccalaureate at 22. Also mind that we note constantly at least the regulations are written in the baccalaureate—for baccalaureate. No mention of—we used to have a major problem at our institution we thought with the Pell Grant Program in that they were limited to the baccalaureate degree. However, they could stay at an associate degree granting institution forever and we could not deny them the Pell grant. And so that is the other side of the coin as a major problem. So I guess I'm encouraging you to recognize where a great number of the students are in the country today at community colleges.

Mr. COLEMAN. What do you think about Mr. Simon's suggestion on his allotment on block grants tying in the GSL participation to allotments made on that basis? How would that impact your institution in general? If we could just go down the line here, Mr. Sandler?

Mr. SANDLER. I'm not sure how it would impact us because everything's relative. What matters is our Pell Grant and guaranteee student loan activity compared with everyone else's and—and then we would get some percentage of the whole. So without knowing what the universe is, it's hard to say how the proposal would impact us. I—I have a comment on its elegance. It's—Representative Simon's draft legislation is admirable, I think, politically bold, some might say politically naive in that it takes on the—the great rusty old bear of the State allotment formulas. It—it blithely ignores them. I sure hope it flies and I hope that you, Congressman Coleman, will support their abolition. They're a powerful vested interest if you benefit whose States benefit now from the State allotment formulas. Unfortunately they're in powerful States. Nevertheless they distribute now funds to some States far in excess of the minimal funding needs in those States and in other States, Missouri being one, there is not even enough money coming into the State of Missouri either in the Work Study or in the SEOG Programs to meet our conditional guarantees. The thing I like about the current fair-share formula, the formula that distributes funds now within a State once the money gets there is that it makes an honest attempt to recognize institutional need. It's crude. You can poke a lot of holes in it, but you've got to have some system and someone's ox is going to get gored no matter what system you use. The nice thing about the current system is I think it's a—it's a good compromise between relative simplicity not a terribly complicated application to fill out, and yet it's an honest attempt to try to measure institutional needs in the aggregate. And

that's why my technician's intuition is to prefer that system to Congressman Simon's approach which is one step further in the direction of a kind of arbitrary simplicity that has even less to do with institutional need than the current mechanism does.

Mr. COLEMAN. Briefly, Ms. Woolley.

Mr. SANDLER. Sorry.

Ms. WOOLLEY. OK. Now again without some kind of simulation it's difficult to respond. But in first reading it was this would be a fantastic benefit for the community college because we weren't in the game years ago when it was really a grantsmanship game of getting the funds. That's No. 1. No. 2, you can see in the amount of work study we currently get, primarily based upon the State formula and some of the other things and the amount of Pell grants we disperse, our guaranteed loans is $2 million, something like that, that we would, if the funding were there, definitely it would be a benefit to our students.

Mr. COLEMAN. You think you'd receive more funds?

Ms. WOOLLEY. Yes. Currently we receive close to $300,000 under what would be—well, that's what we currently receive in SEOG.

Mr. COLEMAN. Mr. Bruker.

Mr. BRUKER. No, I couldn't comment on that.

Mr. COLEMAN. We do have a very capable staff here. Any of you that would want to ask a question of these witnesses

Mr. DEAN. If I could ask one question regarding the disbursement of guaranteed student loans. The administration has suggested that lenders be permitted to issue a check to the educational institution as copayee. How would your response be written into our Education Act?

Mr. SHARP. I think we would welcome that in that in some instances had great difficulty with students, especially in some proprietary schools where the situation hasn't been explained to students properly or whatever. We've had checks stolen off of some—directors' desks when students leave because we had it in their name and those kind of things. I think most schools—I think they might welcome it.

Mr. DEAN. Perhaps we might hear some comments from the schools. How about yours?

Ms. WOOLLEY. We would have a real problem with it, more in the administrative line than anything else. If we have a $2,500 guaranteed loan check and tuition is only $300 and you have to send it through your finance cycle then the burden is on us for redoing that check to give to the student. We require, at least at St. Louis Community College, those students who receive guaranteed loans, we require them to pay their tuition. By law our students must have their fees paid before classes begin and then we will not disburse the guaranteed loan checks until classes begin.

Mr. DEAN. How would you address the problem of the student who gets the $2,500 GSL and then disappears?

Ms. WOOLLEY. Again the way that I would suggest that would be of benefit to us and might not be to—obviously to Washington U. or higher priced institutions. It's a semester check, not a year. Instead of 2,500, it would be 1,200.

Mr. DEAN. In Federal law as it is written there is no obstacle to multiple disbursements by the lenders.

Ms. WOOLLEY. That's correct.

Mr. DEAN. I gather that your institution is giving out $2,500 checks all at once. Is there any reason you do that other than——

Mr. SHARP. The difficulty with that is the administrative costs are very high. To a lender a $2,500 loan is a very, very small loan, especially the administrative costs. If you broke that into two disbursements, true under the present law we'd be paid special allowance in interest on the remaining 1,250 that we hold but it in no way offsets the burden involved in processing the second disbursement.

Mr. DEAN. If we mandated multiple disbursements for first-year students once they went in the second year, would this not complicate your program. Do you think it would drive lenders out of the program?

Mr. SHARP. Yes. First of all, there's—there's a major software consideration. Take a lender such as Community Federal that might disburse $18 million a year, I don't know how many loans that is, OK, but that's a lot of loans. A lot of those are, let's say conservatively a third, first-year students. So that means immediately we need some kind of software system to process and handle those checks and that basically isn't there because they're all going to happen at the same time basically within the same time frame. Either that or we hire every temporary person in the city to come in and type checks out within a certain time. There's got to be a lot of data processing and it's very, very costly to do that. And it isn't applied only to those loans then we'd have to, you know, have two procedures side by side.

Mr. DEAN. Right.

Mr. BRUKER. That would have the same type of administrative problems as being mentioned.

Mr. SHARP. I'm sure that we would develop the redtape though to run the students through in order to administer it.

Mr. DEAN. Well, you have no choice.

Mr. COLEMAN. Thank you all. We could ask lots more questions but unfortunately we have these time limitations so thank you very much. Our last panel today is far from least important. Paul Simon and I think it's very important. It's on foreign languages and international education. Doctor Etzkorn happens to be first on my list, he is the associate graduate dean at the University of Missouri here at St. Louis. Welcome and if you could hold it to 5 to 7 minutes we won't have significant time problems.

STATEMENT OF K. PETER ETZKORN, ASSOCIATE DEAN OF THE GRADUATE SCHOOL AND CHAIRMAN, INTERNATIONAL IMPLEMENTATION COUNCIL UNIVERSITY OF MISSOURI, ST. LOUIS

Mr. ETZKORN. All right. I appreciate having the opportunity to present information and testimony to the House committee. We are dealing here in an area where the broad purpose is really to be applauded and the suggestions that I am bringing to the committee are only in the form of recommendation. I compliment the—Mr. Coleman and Mr. Simon for having squarely put before the Government into the one area in higher education where there can be relatively little debate about that the Federal Government indeed

does have a role in this area and that is to see to it that the national security needs and the purposes of national security of the country are being met. So I'm delighted about the various titles and sections within the—Title VI in particular, of course, the provisions for providing support for language training and for sensitizing the American public to the fact that the boundaries of the United States are not in Canada and—pardon me, in California and New York but that they are somewhere out there in China and on the other side maybe in the Soviet Union, that east to west and north to south the U.S. interests are not bounded any more by what used to be somehow the place where the customs officers are. We applaud the dimensions in the bill that deal with exchange of persons, of students, undergraduates and graduates, of teachers, of faculty researchers and while I'm not sure whether the legislation as I'm reading it may have some conflict with existing legislation, such as Fulbright Act or Fulbright deals, the intent of the bill is fully applauded and I'm sure that the details on whether this should be under USIA auspices or under somebody else's auspices is something that will be worked out in some form or other. I simply wish to emphasize that all of these titles or aspects of the bill have the full support I think of the higher education community. I wish to speak now about some of the thoughts that I have or that we have where just possibly the committee might wish to consider maybe amending the current bill, improving it, augmenting it and these are essentially three areas. The national endowment of international studies is certainly most intriguing and we all applaud the fact that you will give greater profile to the significance of international education by this particular suggestion. In the tasks for the endowment, I would suggest that you might wish to consider to add something, and that is a concern which I have encountered among many professionals. It is the fact that we in this country find ourselves almost in no position whatsoever to invite international scholarly associations to hold their meetings in this country. The rather disturbing experience that many of us have is if we are say invited to present—to be present or to present a paper to be present in a undeveloped country where they hold scholarly associations, we find—we find that the Government there will roll out all kinds of red carpet treatment, will make it possible for scholars from around the world to come there. Usually those countries have some airline even and they provide you with tickets and they can pretty much stack even the tiers of who comes and attends these kinds of meetings. When then some of these individuals say well, why don't we meet next time in the U.S. members of the U.S. delegation will have to beg off because there's no way where we can turn around and say come to the United States. And if we invite people to come to the United States, it means that the professor or university dean or whoever else is there, by tendering such an invitation is knowingly saying—committing themselves to 1 or 2 years of fund raising on the private level because we have no way of organizing this and from the point of view of national interest it seems to me that it is of great significance that, first, we bring people from other countries, community influentials, or scholarly influentials to the United States; second, that they come under auspices which are optimum; third, that by doing so our own

people benefit from contact with these people again in our optimum circumstances. It seems to me that just possibly that might be a task that the national endowment for international studies might be assigned to it. We currently to my knowledge have no such facility. We have some dollars in the mission agencies, the National Science Foundation, funds of certain very narrow targeted activities of a scientific nature but nothing of the nature I'm talking about. A second area that I feel you might wish to give some thought to concerns the question of possibly targeting the location of these newer centers of language training in international studies. That may be possibly tied in with some of the provisions in the title that deals with the urban grant universities. It seems to me that the resources that we have in the population centers of this country as far as international activities go could be cost effectively integrated so if we are having shortages of Federal dollars or shortages if we ask where do we get the most done for the buck, my recommendation would be to look at the—tying it up with the urban grant legislation and—and finding ways to locating these centers in our urban areas. My colleague, Dr. Fedder, I have seen his testimony, is going to say something about how we're doing things in St. Louis. I'm making some reference to an organization which I think is one of the most effective organizations, a nongovernmental area, namely, the Sister Cities International and in the State of Missouri, both at the University of Missouri-Kansas City and at the University of Missouri-St. Louis we have dovetailed with that organization and really been in a position to strengthen our international out reach through that organization's linkages. In the case of Kansas City, with Seville, Spain, and in the case of St. Louis where we have five sister cities with Lyons, France, and with—currently with Stuttgart, West Germany. We've also been dealing with Nanjing, China, the People's Republic, and with Suva in Japan. So there are ways by which the Federal tax dollar can really be used to provide incentive to the private sector. I would suggest that this might be an area where the committee might wish to explore further out reach.

The first—or the third area is a somewhat ticklish area because it deals with questions of which I have no great competence and so I'm not too confident in suggesting it but I do feel obliged to do so, and that is in the field of State universities, as we all know, there is always a differential of in-state fees and out-state fees. International students typically are being charged the out-state fees. It would seem to me that it would be a proper role of the Federal Government to address the question of out-state fees for international students. If we were to provide say some block grants to institutions to pick up a certain portion of the out-state fees for international students we could effectively enhance the recruitment of international students to our institutions of higher education. I'm not making a special partisan plea for the public sector because the same amount on a per capita basis could be allocated to the independent schools. What it would do in my estimation is that it would similar to the arguments of our graduate deans provide the schools with the wherewithal to select the competent student and not to deal on an entitlement basis but rather to look for those students who are really most likely to benefit from it and the criteria

of what is the greatest benefit might be very—might vary a great deal. Nevertheless, the initiative, in my view, would be given to the institutions. These are three areas which you might wish to consider beyond what the draft proposal is in the bill. I am grateful that I had the opportunity to support your very important work on behalf of higher education in strengthening title VI and providing these opportunities to our institution. Thank you for your attention.

Mr. COLEMAN. Let me take the time to ask you a question before we go on to the next witness. It's a little bit different format. In your suggestion about international scholarly associations, are you—because I'm not familiar with it, when you say you must raise funds for 3 years if you did it privately, do you provide plane tickets, transportation costs or hotel, meals here? What is usually done on that basis when you go to another country?

Mr. ETZKORN. When we go abroad, we typically get assistance with transportation. We typically have no per diem costs at the location and we typically have some kind of show and tell which is organized on a very high level. They're—expressed in costs, maybe they will put you up in a first-class hotel, they will have some first-class coaches with travel guides and will show you around and give you some——

Mr. COLEMAN. And that is all paid out of public or private funds in that host country?

Mr. ETZKORN. In the host country it's—examples——

Mr. COLEMAN. Are they private funds?

Mr. ETZKORN. It's usually public funds.

Mr. COLEMAN. Public funds.

Mr. ETZKORN. Public funds, it's some kind of academy or some kind of governmental arrangement. And it is, of course, extremely persuasive and it wouldn't be terribly expensive for us to do it on a——

Mr. COLEMAN. Also about the sister cities, I'm aware of one but I do not know how they operate. Is it a private foundation type of arrangement?

Mr. ETZKORN. Sister cities is a—first of all, nongovernmental. It's the private sector and it's based entirely on volunteers. We have a—typically you have in a given community, say Kansas City, a group of citizens who find that Seville, Spain, which is your sister city there, has certain complementarities. As a result of that, the people in Kansas City—citizens, civic-minded individuals, organize themselves, go to their city council and their city council establishes some kind of a formal recognition. In Seville, Spain, kind of private citizen initiative, sometimes it's initiated then by the mayor but at any rate there's this comparable kind of a publicly spirited group in existence. As far as the university goes, Seville does have a university and naturally Kansas City has a number of independent schools plus the University of Missouri in Kansas City. And so by having these academic communities, then both sides students can be exchanged and the students then are not limited to living in a dormitory because the citizens in these communities will take them in their home and there is some range of opportunities. On the national scale, all of our—we have about 700 cities in the United States, or communities, not all of them are big cities,

of course, that do have affiliations abroad which amounts to over 1,100 affiliations in about 80, roughly, countries and there is quite a resource in our cities that can be called upon by our universities. It is being done. I mean we are not singular examples. Phoenix, AZ, it's being done. In Taylor, TX.

Mr. COLEMAN. Well, thank you very much for your——

Mr. ETZKORN. Thank you, Congressman.

[Prepared statement of K. Peter Etzkorn follows:]

PREPARED STATEMENT OF K. PETER ETZKORN, ASSOCIATE DEAN OF THE GRADUATE SCHOOL AND CHAIRMAN, INTERNATIONAL IMPLEMENTATION COUNCIL, UNIVERSITY OF MISSOURI, ST. LOUIS

Congressman Simon and Congressman Coleman and other members of the Committee, my name is K. Peter Etzkorn and I am Associate Dean of the Graduate School at the University of Missouri—St. Louis where I chair the University's International Implementation Council. In a volunteeer capacity I serve as Director of Sister Cities International (Washington, D.C.), as Chair of the Council of Sister Cities of St. Louis and am a Director of the Lyons and Stuttgart-St. Louis Sister Cities Committees, Inc. I also serve on the governing boards of a number of international scholarly and professional societies such as The Society of Ethnomusicology, The International Institute of Sociology, MEDIACULT and The Inter-American Association of Higher Education.

UMSL's International Implementation Council coordinates the activities of administrative officers with varying responsibilities affecting international dimensions of University life such as the Coordinator of Student Services, the Director of the Center of International Studies, Directors of Finance and of Admissions and Registrar. The Chairmen of the Committee on International Studies of the Faculty Senate and of the Department of Modern Foreign Languages represent the faculty on the Council. As Chairman I represent the Campus at the International Program Council of the Mid-American State University Association (MASUA), Universities Field Staff International (UFSI) and International Programming in the University of Missouri system.

I am pleased to be here and be given the opportunity to tell you about the exciting opportunities in Higher Education for sustaining the international dimensions of St. Louis. St. Louis' international heritage is obvious, whether in the names of its streets and suburbs, the founders and contributors to its cultural institutions, or the present day markets to which St. Louis manufacturers ship their goods. Our students sometimes need to be made aware of the very imbeddedness of St. Louis and the United States in the web of nations through our heritage and contemporary interdependencies. Yet the various programs proposed in the Bill to amend and extend the Higher Education Act of 1965 strongly dovetail with our local efforts and would lend support in areas in which local resources for international programs are difficult to be found when the local and state tax base is barely adequate to begin taking care of immediate regional needs.

In order to respond to the mandate of the State of Missouri and this nation for research that will improve the quality of life, the University of Missouri considers that it is an important part of its responsibilities to participate in carefully selected international activities which: (1) contribute to the education of its students or the education of foreign students, or (2) involve research activities which broaden the University's research capability or disseminate results of University research to other institutions.

In carrying out these broad purposes, the University of Missouri undertakes international activities which:

(a) Are directly related to and are supportive of existing academic programs of the University; (b) can be undertaken with the same commitment to quality that typifies the University's programs and functions; and (c) have potential for long-term benefit, rather than being isolated activities with little continuity and promise of development.

In my following remarks, I wish to direct the Committee's attention to opportunities through which Congress could strengthen the international programs of Higher Education. They are:

1. Consistent with the rationale of the urban grant sections of the Bill, to set aside funds for urban based Center of International Studies.

2. For the purpose of increasing contract with foreign scholars, to direct National Endowment of International Studies to support holding conferences of major International Scholarly Associations in the United States.

3. For the purpose of encouraging private sector initiative, to provide funds to institutions to cover the non-resident portion of tuition for privately sponsored international students.

Title VI of the Bill would significantly undergird the basic commitments of the University of Missouri regarding the roles of international activities in its academic programs. Consequently, I offer my full support for the provisions that deal with strengthening the preparation of U.S. citizens in the area of International and Foreign Language Studies through undergraduate and graduate centers. I would respectfully invite the Committee, however, to consider whether it might be desirable to amend the current Bill so as to assure that a fair share of programs and centers slated for support from Federal funds be located in principal cities? I offer the following reasons: International Centers located in urban communities can draw cost-effectively on rich international resources in these communities, such as ethnic/heritage societies, headquarters of international corporations, cultural institutions, and Sister Cities committees. In St. Louis and Kansas City, for example, Sister Cities Committees have assisted our University with enriching academic exchange programs with partner universities abroad. These private volunteer groups assist with hosting foreign students and faculty, thereby multiplying the impact on the U.S. community at no additional costs; their counterparts abroad assist our own students with gaining a more direct learning experience of the foreign culture. Through these committees our students become involved in the life of foreign communities through home stays, inclusion in community and business activities, rather than the relative isolation of academic dormitory housing. At present few international center programs are supported in our urban public institutions, although they are located where the majority of U.S. students reside. Amending the Bill in this direction, in my opinion, would considerably strengthen its impact. The Board of Sister Cities International, whose Committee on Higher Education I chair, would work with the Department of Education to promote this kind of private sector volunteer, non-governmental-organization initiative in programs supported in urban universities. We have in place a network of 1,153 community-to-community n.g.o. linkages in 84 countries. I would be pleased to work with your staff should this idea be worthy of further exploration.

The proposed National Endowment for International Education would enhance the status and improve the administration of international education activities within the Department of Education. I am also offering my full support for this section of the Bill.

While my following concern may not be under the rubric of the Endowment as currently conceived, I wish to share it with the Committee. It would appear to me to be most appropriate for International Education if Congress could provide for this Endowment (or another suitable agency) to encourage and assist international scholarly associations with hosting international conferences within the United States. One of my scholarly associations is working diligently at making arrangements for such a meeting to be held in Seattle, Washington. We have not been able to locate any financial assistance from Federal or State governmental agencies toward assuring that the conference will be able to acquaint foreign influential scholars with hands on experiences of what the United States has to offer. I have been an invited participant in numerous conferences in underdeveloped countries, in socialist countries, and in the European Community. In every single instance the national governments assisted the inviting organization with considerable sums, allowing them to show off their way of life along with scholarly accomplishments to the foreign visitors. We will be working hard in Seattle to do our best towards providing modest hospitality to our visitors. But it would serve the national purpose and strengthen our national security, if we would be able to compete with other countries for the hosting of University level conferences in the United States. If our scholarly associations could count on the assistance of Congress, it would be relatively easy to bring internationally influential scholars to the United States to share their contributions with us and to share with their countrymen, after their return, their positive first-hand experiences with U.S. citizens. At present, U.S. scholars typically are embarassed in turning down opportunities for holding international conferences in the United States.

We simply do not have the wherewithal to respond to such inquiries unless we are willing to give up a year or more of productive scholarly time for fundraising on the private sector. Typically, however, the private sector replies that international activities are the obligation of the Federal government. For purposes of the Bill, it

may be necessary to channel support for such international conferences in the Endowment through U.S. host universities, rather than scholarly associations. Such a mechanism would be most suitable. I am also in full agreement with the objectives of the Bill to help internationalize our campuses by supporting student and faculty exchanges.

Beyond the Bill's provisions, I would like to offer a suggestion on how to enhance the flow of international students to both public and private institutions of higher education. As you know, some State Legislators already are reluctant to have out-of-state students attend State institutions when being charged only a non-resident tuition differential. They tend to be assuaged by arguments that on balance the movement of students among states somehow approximates zero additional costs. For international students, however, these legislators cannot be shown comparable statistics. Could the Bill perhaps, provide this non-resident tuition differential for international students? The national purpose would certainly be served by such an allocation! the result might be that State Legislatures, rather than confronting University administrators with accusations of squandering State resources, might recognize the significance of contributions of an international student body to the welfare of their State and the Nation both in the short and long runs? Private institutions might also be provided with amounts equal to the highest non-resident tuition differential of public institutions in their States so as to be able to reduce the tuition they need to charge international students? It would seem to be that such an institution based support program for international students would require minimal administrative machinery but could produce considerable incentives for international students to study on U.S. campuses. This allocation might be restricted to those international students who privately finance their studies. Fees for students under government auspices would not need to be supported through this program. Needless to add, such a provision would assist our efforts at the University of Missouri—St. Louis and other MASUA (Mid-America State University Association) institutions since we would like to be able to attract more international students so that our own students would have increased opportunities to interact and study side-by-side with contemporaries from other cultures.

As you can see I am appreciative and applaud your efforts to provide incentives for the higher education community towards meeting its obligations in the area of international education. My suggestion for possible additions are made in response to the Committee's letter inviting ideas for further exploration. Please call on me if I can be of further assistance.

Mr. COLEMAN. Dr. Fedder is the director, Center for International Studies here, at the University of Missouri-St. Louis.

STATEMENT OF EDWIN H. FEDDER, DIRECTOR CENTER FOR INTERNATIONAL IMPLEMENTATION COUNCIL, UNIVERSITY OF MISSOURI, ST. LOUIS

Mr. FEDDER. Thank you, Mr. Chairman. I'm going to abbreviate my statement although I can end the entire document as brief as it is to your attention. Let me address two principal points. One is a strategy more than a basic need, a strategy for attacking the whole question of how to improve the teaching of foreign language and international studies, not only at the university and postsecondary level but also K through 12 because I think this is a—an issue area that is so important and an area which can be treated by a good old-fashioned American know how which is called rearranging and some restructuring which we often engage in but usually in the wrong thing. This is one area where I think we can do something. The St. Louis community has recently started a new concertion which has promise I think where we're really coming to grips with this process. It's a conception for international studies education with basic funding from the Dentwood Foundation described somewhat in my statement. It comprises all of the major universities in the St. Louis area, the World Affairs Council of the United Nations Association, the Higher Education Center, the St. Louis community

37-618 O—84——25

colleges that includes superintendents, principals and teachers from the St. Louis area schools K through 12 and secondary, but primarily secondary. It is a concertion which will be getting underway with an annual budget of somewhere on the order of $150,000 to $170,000 which is not a lot of money to spend in a city the size of St. Louis. With another $100,000, I could virtually guarantee a very fine delivery of service. And again I say that's very little. All of the money that we're talking about now is local foundation money with a lot of volunteer time by citizens in the community and by university people. You can't carry on a professional activity over a long period of time entirely by volunteers but there's no need to. I think this is an area of approach which deserves some real attention nationally and should be participated in if I'm at all right by the Federal Government because it makes a direct contribution I would argue in the area of national defense. Why in the area of national defense? We operate often in Congress and in the public generally in the selection of Presidential candidates in a vacuum without any real opportunity for citizens to understand the kind of foreign events that occur—that happen. What we are trying to do with the concertion is not train people in how to think about specific things but give them a sense of history and geography, a notion of where the United States fits within the total environment. One side reference, a couple of years ago during the heighth of the recession in automobiles, and you know St. Louis is the second largest automobile manufacturing center in the United States, second only to the Detroit area. We brought in a group of a hundred inner city, primarily black high school students to the campus for a day's symposium on automobile trade. The students went home at the end of the day we did a little survey, do they favor protection or not protection and we used that issue throughout the day with little bias in the presentations. The students came out favoring a lack—favoring free trade and it was very interesting. These were kids who had never—never thought of it. They then came to grips with the issue and they saw how important it was to them.

We can improve, I would argue, the entire delivery system of knowledge in the international area, in the foreign policy arena, in international trade, by a relatively simple, relatively inexpensive device. And frankly I think it should come from the national defense allocation and not from traditional—because that is where I think the critical need is. Let me add one brief statement and then I'll keep quiet because it is over and it—I'm sorry, the day is getting long. I list on the third page several items and they're in an order more or less of priority. I say by and large our teachers and institutions perform extraordinarily well given the inadequacy of available resources. I don't create the environment within the document itself to show the inadequacy of the resources but they are inadequate. We need several things hinted at in title VI but not sufficiently addressed. To cite a few: (1) Expand and expend—enrich and expand generic international studies programs in colleges and universities. (2) Enrich and expand area studies programs in colleges and universities. Historically we either favor one or the other, and I think that's a mistake. (3) Require community outreach thrusts for both of those points, and I mean require. In

other—in other words, the universities that expand these programs must get into the question of enlightening and informing and educating the community, continuing education, an important thrust of it. Establish and expand partnership among universities individual schools and school districts. By this I mean to establish real direct relationships between universities, university faculty and particular teachers and particular classrooms in the schools. Make this really a continuing process, not a truncated process. Provide for workshops, institutes, and inservice training for teachers on a continuing predictable basis. We lack the predictability now. It does continue but it is very, very mixed in its general format. Begin foreign language training in primary school and by that I don't mean every kid should learn a foreign language. But there should be some foreign languages being taught. The whole process of having some of your friends or your kids' friends learn French or German helps the educational climate in a school even if all the students are not there. I said on the whole our universities and communities have a reasonable understanding of what needs to be done. We think we know where the beef is, our question is where's the bread.

Mr. COLEMAN. I was hoping we'd get through the whole day. Very good suggestions and it's so exciting to hear you talk about the subjects. Let me ask you one question since the hour is getting late. Are you suggesting a matching fund type of arrangement, in other words come up with an IEC concept? You come up with some money from some source with a Federal match of some sort? Is that what you're suggesting?

Mr. FEDDER. Well, what I'm suggesting is related to the matching grant but I think it's even more modest. What I would suggest is that there be a fund available, and if a community reaches a certain level of saturation with programs, meets minimal conditions, then they automatically are entitled to a portion of that fund so long as it meets those conditions and delivers that process, maybe it's 20 percent of the total budget. In other words, if a community raises $200,000, they can apply for $40,000. It wouldn t be automatic. They'd have to meet the conditions, but the conditions would be the kind of average component, the kind of saturation, the kind of relationship in the schools, the kinds of delivery systems.

Mr. COLEMAN. Now you said during 1974 through 1976 you directed a project and so forth. When was it formed here?

Mr. FEDDER. It's just being formed now.

Mr. COLEMAN. Oh, it's just being formed now?

Mr. FEDDER. Right.

Mr. COLEMAN. And you say it's all volunteer?

Mr. FEDDER. It's all volunteer. I'm sorry, we had—we do have a staff we are beginning to put on line now.

Mr. COLEMAN. OK.

Mr. FEDDER. A professional staff.

Mr. COLEMAN. Are you inventing the wheel here? Has this been done in other places?

Mr. FEDDER. There's a similar program in the bay area. It's not quite the same thing. I——

Mr. COLEMAN. I assume you've utilized their experience?

Mr. FEDDER. Of course. Of course, we've brought in consultants from a variety of places. We're—we're doing this by—on the basis of the experience tnat's been gleaned from a number of places. But we're finally at the point where we can begin to see the strategy that will be fruitful.

Mr. COLEMAN. And how long do you think it takes from the beginning to really say that you're established.

Mr. FEDDER. We'll start with our first group of teachers of—high schoolteachers this summer in a workshop. We will continue with them through the year. We will expand that to include another group. This will be—the initial group will be teachers from 8 or 10 schools and then 8 or 10 additional schools every 2 years over the next 6 years.

Mr. COLEMAN. And are those teachers——

Mr. FEDDER. Now I can't claim success for this program.

Mr. COLEMAN. Right.

Mr. FEDDER. We're—we're just putting it underway.

Mr. COLEMAN. Right. Well, I think it's an exciting concept and let you stumble along and then we can come by and pick it up and take it to Kansas City and——

Mr. FEDDER. Probably it could miss.

Mr. COLEMAN [continuing]. I think it's really great. You've got some good suggestions here that we'll certainly look at it for title VI.

[Prepared statement of Edwin H. Fedder follows:]

PREPARED STATEMENT OF EDWIN H. FEDDER, DIRECTOR, CENTER FOR INTERNATIONAL STUDIES, UNIVERSITY OF MISSOURI-ST. LOUIS

Good afternoon Mr. Chairman and members of the subcommittee, my name is Edwin H. Fedder. I am Director of the Center for International Studies and Professor of Political Science at the University of Missouri-St. Louis. I am pleased to have this opportunity to appear before you to comment on the importance of improving our people's competency in foreign languages and international studies.

During 1974-76, I directed a project funded by the Office of Education under Title VI that has had a lasting impact on the University, our students, the community, and on our approach to solving the problems of language and international studies competency. We concluded that the problem of parochially-oriented undergraduate students could not be solved by the University alone. Curricular and program changes at the University were necessary but not sufficient. We had to get out of the ivory towers and encourage secondary and primary school educators and local groups to teach about international and intercultural studies.

I am presently co-chair of the St. Louis International Education Consortium (IEC) which seeks to improve international and intercultural education in St. Louis area school districts. The IEC comprises the Higher Education Center, World Affairs Council, United Nations Association, the St. Louis Community Colleges, Washington, Webster, and St. Louis Universities and the University of Missouri-St. Louis and diverse school personnel. With basic funding by the Danforth Foundation and supported by prodigious volunteer efforts, this program seems a likely model for coordinating university, community, school district, cooperative approaches to improve the quality of international education for students.

The need for improving the teaching of foreign languages and international studies has been stressed to the point of triteness. But while the repetition may be trite, the need for a better educated citizenry is profoundly compelling. Americans tend to be poorly educated in languages, history and geography despite valiant efforts by teachers, school districts and universities.

Americans lack the comprehension necessary to respond intelligently to policy needs in Lebanon, El Salvador, or the Strait of Hormuz. Our students barely know where the Chesapeake Bay is, much less the Gulf of Sidra. Our lack of knowledge drapes us with an Albatross of ignorance where understanding is essential. Few among us are ever exposed to, much less experience multi-lingual or multi-cultural

events, yet most of the people inhabiting the Earth are neither white nor English-speaking. We must heighten sensitivity to the problems and opportunities confronting the United States in this increasingly interdependent world. Issues of critical importance such as nuclear proliferation, environmental pollution, tariff and non-tariff trade barriers are largely unintelligible to most of our citizens. Both democratic theory and political reality require minimal comprehension. As a nation we are failing to do what must be done. We are far more successful at training soap-opera viewers than informed citizens and public officials.

We must infuse education from K-12 and at postsecondary levels with enlightened international content and thus provide students with an opportunity to understand how U.S. foreign policy and international events impact their lives. This can only be accomplished if effort is supported by adequate resources made available by national and state governments and by philanthropic foundations and civic groups.

By and large our teachers and institutions perform extraordinarily well given the inadequacy of available resources. We need several things hinted at in Title VI, but not sufficiently addressed. To cite a few,

(1) Enrich and expand generic international studies programs in colleges and universities.

(2) Enrich and expand area studies programs in colleges and universities.

(3) Require community outreach thrusts for 1 and 2 above to the end that their services extend to the community at large and not merely to the participants.

(4) Establish/expand partnership programs among universities, individual schools and school districts.

(5) Provide for workshops, institutes and in-service training for teachers on a continuing, predictable basis.

(6) Begin foreign language training in primary school.

On the whole, our universities and communities have a reasonable understanding of what needs to be done. We think we know where the beef is, our question is, Where's the bread?

Mr. COLEMAN. And our last witness is Mrs. Prifti, who is director of the Vocational Foreign Exchange Program in the county, Higher Education Center. I don't know where that is in the county or city?

STATEMENT OF WILMA PRIFTI, DIRECTOR OF THE VOCATIONAL FOREIGN EXCHANGE PROGRAM

Ms. PRIFTI. Right, the Higher Education Center is the cooperative form of five universities, six senior colleges, and three community colleges.

Mr. COLEMAN. Oh.

Ms. PRIFTI. It's here in the St. Louis area, the metropolitan St. Louis area. I direct an undergraduate student exchange which is sponsored by ATC and the Ministry of Education and Culture of Baden-Wurttemberg, West Germany. We exchange business students and German students from St. Louis area colleges and universities with business management students from the Berufsakademies near our sister city, Stuttgart. The American students typically are sophomores and juniors. The German students are completing their second of a 3-year program of alternating quarters in the classroom and on a job in German industry. Their St. Louis experience constitutes a quarter on the job. I would like to condense my testimony and report from my experience how student exchange is contributing honestly to our national capabilities in a foreign language and international studies. The experience from which I draw my conclusion is different from other student exchanges. Like others, it focuses on developed—on development of foreign language skills and an intimate understanding of another culture but it is not academic. During most of the summer they are immersed in the daily life of the foreign country working in an industry, residing with the host family and participating in the life of

that country. The core of their experience is an 8-week, unpaid internship in the other country's industry while residing with a host family. The German students enter the exchange well prepared because they have studied the King's English for 8 or more years. During their internship in St. Louis industry, they serve in various departments, from export to accounting. Our employers have found them fluent enough in English to assign them to a wide variety of important tasks, even handling customer complaints. And one example I'd like to share, some of these German students are fluent in additional languages so that when one St. Louis company faced a sudden loss of its South American representative in mid-summer, our German student intern, who knew Spanish as well as English, assisted at the South American desk for several weeks until a replacement was found. The German students all have evaluated their learning experience as incomparable mainly because their foreign language education was so extensive. The same results have been achieved by well-prepared St. Louis students in their German internship and home stays. On the other hand, our students with more limited German background faced much greater challenges. For them the language barrier is very real during orientation and internship and with their host families. We try to help them overcome inadequate preparation through a predeparture orientation program, including practice of German customs and some conversation and sharing the experience of our exchange alumni. But even for these with a limited preparation, the exchange is so rewarding in every way, including language skill development that they return to St. Louis with a new zest for life, a new desire to develop their foreign language skills and a new appreciation of foreign culture and renewed appreciation of the United States. They will, I think, help create a new American milieu in which foreign language skills are more highly prized and sought. Consequently, I believe that a national policy of support for foreign language and international studies through title VI is more important than ever to the future of the United States and I would particularly support the addition of the program for undergraduate exchange. I have made four specific recommendations that you have before you in writing and I thank you for the opportunity to testify.

Mr. COLEMAN. How long has the exchange been going on?

Ms. PRIFTI. It has been for 4 years. We will conduct our fifth this year.

Mr. COLEMAN. Does any money change hands or do you host and they host and therefore the balance sheets work out?

Ms. PRIFTI. Well, the German Government——

Mr. COLEMAN. Except for transportation.

Ms. PRIFTI. Right, they pay their own personal air fare. The German Government provides stipends for our American students while they are there. We are not able to pay the German students.

Mr. COLEMAN. Yes.

Ms. PRIFTI. They come over on tourist visa. There is no pay to them. They do not have any course work here so they are here for the unpaid internship.

Mr. COLEMAN. I see.

Ms. PRIFTI. The internship companies provide contributions to the Higher Education Center to help fund the program and there have been other community organizations such as the Strassenfest Corp. which has helped to support it.

Mr. COLEMAN. Well, I have not had a chance to look over your points, but I will.

Mr. DEAN. Let—let me ask one question here.

Mr. COLEMAN. OK.

Ms. PRIFTI. Sure.

Mr. DEAN. That is in terms of a Federal program to encourage student study abroad or student experiences abroad——

Ms. PRIFTI. Right.

Mr. DEAN [continuing]. How would you recommend that it be funded?

Ms. PRIFTI [continuing]. I——

Mr. DEAN. Should individual projects submit applications and they be evaluated or how should it work?

Ms. PRIFTI. Yes, I think it should be given to the student. I think it should be used as an incentive, financial aid of some sort, that would be given to the students who participate in exchanges like this, possibly to help them with their studies after they return and particularly those who continue with a foreign language study. I'm all for incentives rather than requirements.

Mr. COLEMAN. Well, thank you very much.

Mr. COLEMAN. The hearing is adjourned.

[Whereupon, at 5:10 p.m., the subcommittee was adjourned.]

[Material submitted for inclusion in the records follows:]

PREPARED STATEMENT OF WILMA PRIFTI, DIRECTOR OF THE VOCATIONAL FOREIGN EXCHANGE PROGRAM

My name is Wilma Prifti, I direct an undergraduate student exchange which is sponsored by the Higher Education Center of St. Louis and the Ministry of Education and Culture of Baden-Wurttemberg, West Germany. We exchange business and German students from St. Louis area colleges and universities with business management students from Berufsakademies near our sister city, Stuttgart. The American students typically are sophomores and juniors. The German students are completing their second of three years in a program of alternating quarters in the classroom and on a job in German industry. Their St. Louis experience constitutes a quarter on the job.

I accepted an invitation to testify today in order to report from my experience the importance of improved foreign language and international studies, particularly in preparing young Americans to increase our country's ability to participate in international markets. I would also like to point out how student exchanges contribute to our national capabilities in foreign language and international studies.

The experience from which I draw my conclusions is different from most student exchanges. Like others, it focuses upon development of foreign language skills and intimate understanding of another culture, but it is not academic. Only for an initial orientation week do the exchange students spend time on campus. During most of the summer they are immersed in the daily life of the foreign country—working in the industry, living in the homes, and participating in the recreational and social life of that country. The core of their experience is an eight-week unpaid internship in the other country's industry while residing with a host family.

The German students enter the exchange well-prepared. Because they have studied the "The King's English" for years, their initial language task is simply attuning their ears and adjusting to the speed of American speech. Their ability to learn

quickly the idioms and slang expressions that are part of our daily conversation confirms their excellent preparation in our language.

During orientation week key people in our area and local alumni of our exchange introduce them to the geography, history, culture, business, industry, recreation, and social life of our metropolitan area. At the end of the week their host families meet them at brunch and take them into their homes for eight weeks and into their families for a lifetime.

The following Monday they begin their eight-week internships in St. Louis industry. They serve in various departments, from export to accounting. Our employers have found them fluent enough in English to assign them to a wide variety of important tasks, even handling customer complaints! Some of the German students also are fluent in additional languages. When one St. Louis company faced the sudden loss of its South American representative in midsummer, our German student intern, who knew Spanish as well as English, assisted at the South American desk for several weeks until a replacement was found.

Most participating companies have found the experience so worthwhile to them and their employees that they have provided substantial gifts to the Higher Education Center to support the exchange. The German students all have evaluated their learning experience as "Incomparable." A major reason why they learned so much was that their foreign language education was enough—eight years of regular exposure—so that they could adjust quickly to immersion in our culture.

The same results have been achieved by well-prepared St. Louis students when they reach Germany, particularly those who have had the equivalent of two to three years' university coursework in German. They adapt readily to the home, work, and community situation in Germany. They absorb new vocabulary, idioms, slang, and dialects. They catch on to humor that consists of linguistic manipulation. They easily manage the differences in terminology used by German business.

On the other hand, our students with more limited German background face much greater challenges. For them the language barrier is very real during orientation and internship and with their host families. Their German listening, vocabulary, and speaking skills are constantly stretched beyond the limit, and assistance from an English-speaking native is not always available (it is a myth that English is the second language of all Europeans).

We have tried to overcome the inadequate preparation of some students through a predeparture orientation program. We provided them several opportunities to supplement their German coursework, including practice of German customs and conversation and sharing the experiences of our exchange alumni. Our students develop a sense of community and camaraderie so that those with better linguistic preparation reach out to help those with poorer preparation. The latter acquire a sense of security in the group and, therefore, freedom to recognize their mistakes and reach out for help.

It is evident that students with more language training contribute more to the internship and benefit more from the exchange experience. For those with limited skill, the language may be a struggle, but the exchange is so rewarding in every way, including language skill development, that they return in late August with a new zest for life, a new desire to develop their foreign language skills, a new appreciation of a foreign culture, and renewed appreciation of the United States of America. They will, I think, help create a new American milieu in which foreign language skills are more highly prized and sought.

As a consequence of contact with such students, I believe that foreign language and international studies are more important than ever to the future of the United States.

I believe that Americans and the rest of the world's citizens will become much friendlier toward one another if we show respect for their languages and cultures through a national policy of support for foreign language and international studies.

I believe that our national policy should strongly support foreign language and international studies at the higher education level, where so much of our national leadership is trained, and in our elementary and secondary schools, where languages are easily learned, where side benefits accrue to the learning of English grammar and vocabulary, and where most of tomorrow's citizens can be introduced to the values of other cultures and their languages.

To help achieve these ends, I urge that our national policy provide strong support for international exchanges that immerse students in the daily life of other cultures. Federal support of student exchanges would be particularly valuable if it included four provisions:

1. Extension of federal financial aid to students participating in international exchanges after they complete two or three years of foreign language at the college level or the equivalent.

2. Grants to students for their next undergraduate year as a reward for participating in an exchange and as partial compensation for the loss of summer income they might have earned during the exchange. Grants would be especially appropriate for students who continue their foreign language study during the year following the exchange.

3. Travel grants to exchange leaders who work directly with exchange students so that they can evaluate and improve their programs through occasional visits with their overseas counterparts and exchange participants.

4. Stimulation of gifts from local industry, community agencies, and foundations to exchange sponsors through a federal matching program.

Prepared Statement of the National Association for Developmental Education

INTRODUCTION

The National Association for Development Education is the nation's major professional organization for college and university personnel who work in remedial, developmental, and learning assistance programs. The Association has an active national membership of approximately twelve-hundred (1,200) college and university instructors, counselors, and administrators. The Association also has nineteen (19) regional chapters representing twenty-five (25) states and an estimated additional four-thousand (4,000) postsecondary education professionals. The Association produces a quarterly newsletter (The NADE Newsletter—circulation approximately fifteen-hundred), a quarterly professional journal (the Journal of Developmental and Remedial Education—circulation approximately five-thousand), and a series of technical reports and monographs (approximate circulation, one-thousand per issue). The Association also conducts an annual national conference, regional conferences, and state and local conferences for members and other interested professionals. Through its publications, conferences, and other activities and services, the Association reaches nearly ten-thousand (10,000) postsecondary education professionals. This represents approximately forty-percent (40%) of the college and university personnel in the United States who are involved in remedial, developmental or learning assistance programs. It is estimated that the active members of the Association, in their roles as instructors, counselors or administrators, have direct contact with approximately 850,000 community college, college and university students.

ENROLLMENT BY TYPE OF INSTITUTION—FALL 1982

	Total enrollment figures [1]		Approximate enrollment involved in developmental programs [1]	
	Public	Private	Public	Private
Universities [2]	2,153,000	731,000	430,600	146,200
Colleges [3]	3,024,000	1,746,000	604,800	349,200
2 Year Institutions [4]	4,520,000	252,000	1,808,000	100,800

[1] Including full and part-time students.
[2] Universities—state universities, graduate schools, ivy league, etc.
[3] Colleges—branch campuses, liberal arts colleges, etc.
[4] 2-Year Institutions—junior and community colleges, technical schools, etc.
Reference.—Survey of Fall Enrollment in Higher Education—1982, National Center for Educational Statistics, Department of Education

PHILOSOPHY OF THE ASSOCIATION

The basic philosophy of NADE is that a dynamic and productive society requires an ever-increasing number of highly literate, thoughful, articulate, knowledgeable, and skilled members. NADE supports the notion that American institutions of postsecondary education should be the primary vehicle through which advanced knowledge, training, and skills are disseminated to members of society. The Association also affirms the notion that all members of society have an inherent right to participate in postsecondary education to the extent that their ability and motivation permits. The Association defines ability and motivation, however, not in terms of past performance but in terms of individual potential for development. As such the Asso-

ciation is committed to equality of educational opportunity and the concept of the "open door".

DISCUSSION

In spite of the current national debate on public education and subsequent efforts to improve its quality, it is highly unlikely that significant improvement in the basic skills of entering college students will take place until the end of the 20th Century—if at all. Even if reforms currently being considered are implemented on a massive scale, it will be many years before the effects of these reforms will be observed in the quality of entering college students.

Furthermore, according to practically all projections on population demographics, the number of college-age students is declining and will continue to decline until the 1990's. While colleges and universities may, indeed, attempt to raise their admissions standards, there simply will not be enough well-prepared college-age students able to meet these standards. Unless colleges and universities are willing to accept smaller numbers of students and a subsequent loss in revenue, there will still be many students attending college well into the 1990's who are unprepared to do college-level work.

The same projections which suggest a decline in the college-age population also suggest that minority groups are the most rapidly growing segment of American society. Yet these groups are among those which tend to have the poorest level of preparation for college-level work. Since they will comprise an increasingly larger percentage of the pool of available college students, minority groups are likely to suffer the most negative impact of higher admissions standards coupled with inadequate preparation for college. If the present trend towards higher admissions standards and reduction of services for underprepared students continues, the gains made in equality of educational opportunity during the last two decades could easily be wiped out by the end of the Century.

A major challenge for educational policy makers in the next decade, therefore, will be to maintain academic standards and educational opportunity in a period when enrollments are declining and the skills of entering students are not improving.

The professionals involved in Developmental Education have made access to quality education and the ability to achieve excellence a reality. This has been partially accomplished through programs provided for under Title III and Financial Assistance provided for by Title IV. Any cuts in funding for either of these Titles would be devastating to postsecondary education and consequently to our country. That is, we can either provide access and opportunity to all which will allow us to redirect and salvage individuals or we can assume a custodial role for members of our society.

Colleges and universities must work with the students avilable to them. To assume that the problem may be solved by arbitrarily raising admissions standards is wishful thinking. It is unrealistic and undemocratic to attempt to raise academic standards by limiting access. It is more realistic and, in the long run, more cost-effective, to raise academic standards by improving the quality of learning that takes place in American colleges and universities.

Ten years ago, very little research was available on Developmental Education programs. However, in the past three years more, although not nearly enough, research has been done and it suggests that Developmental Educators are getting the job done and are successful in many areas. For example, research suggests that Developmental Education is effective in improving students' basic skills and student's grade point. As a result institutions experience improved retention and that means improved institutional revenue.

As a profession, one of the primary concerns of Developmental Educators is the learning process. This is due to the varying levels of preparedness of individual students involved in Developmental programs.

The National Association for Developmental Education, therefore, wishes to make the following recommendations which the association believes will strengthen the quality of the nation's institutions of postsecondary education.

1. Improving college teaching.—Most efforts to improve academic standards in colleges and universities have focused on increased expectations and requirements for students. Such efforts ignore the fact that poor academic performance results as often from inadequate teaching as it does from inadequate student skill development. Furthermore, even if students are well prepared for college they should have excellent teachers if they are expected to meet standards of excellence in academic performance.

College teachers, however, are not well prepared by virtue of their academic training to provide excellent instruction. Most academic training at the doctoral level is designed to produce research scholars, not teachers. Those who complete doctoral programs in American postgraduate institutions are well trained in the research, literature, and inquiry of their content areas. They seldom receive any instruction at all, however, in how to teach others about their content fields. Whatever most faculty in American colleges and universities have learned about teaching has been learned informally, if at all.

If the nation expects truly excellent teaching in its colleges and universities, then it must make an investment in the development of faculty teaching skills. Such an investment should include the following:

(a) Establishment of a national faculty development fund to be administered through the U.S. Office of Education for the purpose of providing financial support to faculty members who wish to improve their teaching skills.

(b) Encouragement of state and regional certification and accreditation agencies to consider the professional development of faculty members in evaluating institutions.

(c) Encouragement of colleges and universities to reward professional development and improved teaching skills in the same manner that research efforts and publications are currently rewarded.

The Association suggests that these recommendations be considered when deliberating on Part A & B of Title V.

2. Expanded research on teaching and learning.—Improved teaching rests on the foundation of improved knowledge of the teaching/learning process. Research on teaching and learning has received far less attention, funding, and federal support than most other areas of inquiry at the college level. While substantial gains have been made during the last two decades in our understanding of how students learn, large gaps exist in our knowledge of this process. These gaps must be closed through research if we are to improve the quality of learning that takes place in American institutions of higher education. Efforts to expand research on teaching and learning should include:

(a) Expansion of funding available to the National Institute for Education to support research on teaching and learning.

(b) Provision of additional support to the Fund for the Improvement of Postsecondary Education for the purpose of supporting the efforts of professional education associations, such as NADE, in expanding research on teaching and learning.

The Association suggests that these recommendations be considered when discussing Title X.

3. Improved support for models of excellence.—Throughout American postsecondary educational institutions, there are outstanding examples of efforts to strengthen the skills of underprepared college students. Unfortnately, these efforts tend to be isolated. They are frequently unknown even to those on the same campus let alone others throughout the country who share an interest in learning improvement.

This is partially due to the fact that working to improve student learning skills is not viewed as a legitimate activity in academe. Faculty tend to expect that students will enter their classes with all the skills necessary to be successful. While their experience should have taught them otherwise, the myth remaines that students in college should all be fully prepared for college level work. The myth also exists that teaching basic skills is not an appropriate activity for college faculty. These myths remain in spite of the fact that most college faculty will acknowledge that may of their students do lack basic skills.

It is imprtant to acknowledge, therefore, that colleges and universities do have a responsibility for improving basic skills and, subsequently, the quality of lerning that takes place in in postsecondary education. It is also important to strengthen, reward, and publicize successful efforts to improve learning. In order to do this, it is recommended that:

(a) National, regional, and state efforts be made to identify "pockets of excellence" in learning improvement and to highlight and reward these efforts.

(b) Colleges and universities be encouraged through accreditation agencies to develop and strengthen efforts designed to improve learning.

(c) Policy statements at the federal and state level acknowledge the importance to improve learning as a necessary and valid means of maintaining academic standards.

(d) Colleges and universities be encouraged to recognize and reward the efforts of those involved in learning improvement.

4. Recognition of learning improvement as need for all students in postsecondary education.—Perhaps one negative consequence of efforts to improve learning for the "New College Student" in the 1960's was that such efforts began to be perceived as

appropriate only to students with poor academic backgrounds. Remedial, developmental, learning assistance, and special services programs were soon looked upon as services only appropriate for minority or underprepared students. Yet all college students can profit from special support services designed to improve the quality of learning. And the techniques used to improve the skills of underprepared students are just as applicable to enhancing the skills of excellent students. It would certainly seem appropriate to the mission of American post-secondary education to promote the academic development of all students—not just those who are mediocre.

It is recommended, therefore, that the following actions be taken to promote learning improvement as a valid goal for all students enrolled in institutions of postsecondary education:

(a) Emphasis by national and state policy-makers on the importance of efforts designed to improve learning for all students enrolled in colleges and universities.

(b) Increased funding from the U.S. Office of Education for demonstration projects designed to show how learning improvement techniques can be applied to well-prepared in addition to underprepared college students.

(c) Federal sponsorship of open forums on learning improvement at the college and university level.

(d) Recognition that learning improvement for all is in the best interests of the nation as well as its postsecondary educational institutions.

CONCLUDING COMMENTS

American postsecondary education faces a critical challenge in the decade of the 1980's. It is in a period of transition form one baby boom to another. It faces significant issues of access versus excellence. It must contend with a short-term decline in the skill levels of entering college students versus a potential abundance of well-prepared college students in the future.

The National Association for Developmental Education believes that the actions recommended here will help the nation's institutions of postsecondary education respond successfully to these challenges. By emphasizing learning improvement through better instruction, better research, recognition of outstanding efforts to enhance learning, and support of activities designed to enhance learning skills for all students, American postsecondary education can only be improved. And only through such improvement can postsecondary education in this nation attain the elusive goals of combining opportunity for all with excellence for all.

The National Association for Developmental Education wishes to thank the Sub-Committee for this opportunity to express the views and concerns of its members. Please feel free to contact the Association at the address below for any additional information.

HEARINGS ON THE REAUTHORIZATION OF THE HIGHER EDUCATION ACT

MONDAY, APRIL 2, 1984

HOUSE OF REPRESENTATIVES,
COMMITTEE ON EDUCATION AND LABOR,
SUBCOMMITTEE ON POSTSECONDARY EDUCATION,
Flushing, NY.

The subcommittee met, pursuant to call, at 9:30 a.m., at Student Union, City University of New York Queens College, Flushing, NY.

Members present: Hon. Paul Simon (chairman of the subcommittee) presiding. Representatives Simon Ackerman, and Owens.

Staff present: William A. Blakey, council, Laurie Westley, assistant council, and John Dean, Republican assistant counsel.

Mr. SIMON. The subcommittee hearing will come to order.

We are pleased to be here at Queens College, Flushing, the City University of New York. This is one of a series of hearings we are holding on the whole question of where we go on the Higher Education Act Reauthorization.

There is perhaps no one single bill that is more important for shaping the Nation's future than where we go in the higher education field, and we are pleased to be here at Queens College.

Today's hearing continues a dialog we began in Washington last week. The entire series of hearings will address the spectrum of issues related to the appropriate Federal role in higher education, the proper focus of our programmatic effort, and funding commitments to low- and middle-income students and to postsecondary institutions.

The Higher Education Act Amendments of 1984, H.R. 5240, refocuses student financial aid on the neediest student to ensure that the student who could not begin, or would not complete, an education, because of high costs and limited family resources, will have the opportunity.

H.R. 5240 simplifies student aid programs with one grant, one work, and one loan program, along with an institutional block grant program. The student financial aid programs were created by Congress over the last two decades. The purpose was to make funds available to students who had no other way to finance their education. In today's economy with nationwide unemployment at 7.8 percent, youth unemployment at 19.3 percent and minority youth unemployment at 43.5 percent, it is time to refocus these programs to address the need they were created to serve.

I am looking forward to hearing from today's witnesses on the specific and the broad policy questions raised in H.R. 5240.

I am interested in receiving recommendations regarding the proposals in H.R. 5240 that make changes in Federal student financial aid programs, including making the Pell Grant Program an entitlement, merging SEOG, NDSL, and SSIG into institutional block grant, the modification of the half-cost provision and the "independent student" definition among other issues.

H.R. 5240 addresses a number of needs of graduate education, including the extension of aid to graduate students. The proposals include a presumption of self-sufficiency (independence) for graduate students, allowing limited graduate student eligibility for Pell Grants, and raising loan limits for guaranteed student loans.

College and universities nationwide are in need of funds to halt the deterioration of America's university research facilities and buildings generally. H.R. 5240 addresses that need for low-interest renovation and construction loans and instrumentation grants. Today's witnesses are particularly able to comment on the bill's approach to this concern.

It is a pleasure to be in New York today and I look forward to a varied and diverse set of testimony. I welcome each of you this morning.

Our first witness will be Mr. Steve Biklen of Citibank.

We are pleased to have you here, Mr. Biklen.

STATEMENT OF STEVE BIKLEN, VICE PRESIDENT IN CHARGE OF STUDENT LOANS, CITIBANK

Mr. BIKLEN. Mr. Chairman, members of the subcommittee: I am Steve Biklen, vice president in charge of student loans for Citibank.

Thank you very much for the opportunity to testify at this hearing on the proposed draft language for a Higher Education Act Reauthorization Bill. The Higher Education Act of 1965 is extremely complex and the committee is to be commended on its efforts to simplify the bill. I hope that my comments will be useful in this process.

Citibank is currently the largest private holder and originator of guaranteed student loans in the country with over 350,000 borrowers. Of this number, approximately 25 percent are in New York State. As such, we have learned a great deal about the program and while my comments will be limited to the Guaranteed Student Loan Program, I will hopefully maintain a beneficial perspective on the overall program. My testimony will be broken into three main areas. First I would like to address some major areas of concern from the lender's standpoint. Second, I would like to comment on several facets of the draft bill that we support, and, third, I would like to offer some comments on a number of other technical issues.

A major concern we have with respect to the draft legislation is the proposal to reduce the special allowance paid to lenders. The draft proposes that the special allowance paid to lenders be reduced from 3½ percent above the 91-day Treasury bill to 3 percent above the same Treasury bill rate or a reduction of 50 basis points. We recognize that this proposal is being made to reduce the overall cost of the program to the Federal Government and to enable the current origination fee charged to the student to be eliminated, but

we believe that if this reduction is imposed, many lenders will either drastically reduce their loan originations or stop originations entirely. As a result, the students and schools would be negatively affected.

While lenders are currently able to make a profit on the guaranteed student loan program, such profit margins are small. This observation is based upon our own experience and conversations with other lenders. Therefore, any reduction in special allowance could make it untenable for lenders to continue to offer the product.

Rather than reducing special allowance, we suggest the following alternatives:

Retain a portion or all of the origination fee. The impact of this on students could be partially offset if 100 percent reinsurance of default claims were instituted, eliminating the need for a guarantee agency to accumulate large reserves, and the insurance fee charged by the guarantee agencies to borrowers was reduced or eliminated. If the insurance fee was eliminated or greatly reduced, the student would receive a substantial benefit.

Raise the base interest rate charged to the student. The discussion draft proposes that the applicable base interest rate for a fiscal year be calculated by subtracting 4 percent from the previous year's average of the 91-day Treasury bill. Instead this might be changed to a reduction of 3½ percent or 3 percent.

Eliminate certain deferments.

A second area of concern is the wording on page 159 relative to the powers of Sallie Mae. The draft legislation authorizes Sallie Mae to undertake any other activity which the board of directors of the association determines to be in furtherance of the programs of insured and guaranteed student loans authorized or will otherwise support the credit needs of students. We believe that any additional programs undertaken by Sallie Mae should first be approved by Congress. Sallie Mae has numerous competitive advantages over private lenders such as the ability to borrow funds from the Government at a preferred rate. Given these advantages, it is appropriate that any new activity Sallie Mae proposes to undertake be carefully analyzed so that private lenders are not placed at a further competitive disadvantage.

As noted above, it would be possible to offset a portion of the origination fee charged to the students if 100 percent reinsurance were implemented. This would eliminate the need for guarantee agencies to buildup large reserves and to fund those reserves with an insurance fee charged to the student. In this connection, it would be possible to greatly simplify sections 442, 443, and 444 of the bill which deal with the various insurance agreements between State agencies and the Department of Education. With 100 percent reinsurance only one simple insurance agreement would be required. We would endorse this as a means of simplifying the administration of the overall program and reducing the cost to the Federal Government through the return of current State agency default reserves to the Department.

Another area of concern is the proposed legislation regarding lenders of last resort. The draft language would require each State to designate a lender of last resort for that State. Over the past few years numerous States have set up lenders of last resort through

State legislation or other mechanisms. It is not clear that there is a need for Federal legislation to address this issue. In our view, this legislation would simply add an additional burdensome administrative procedure.

There are a number of requirements that have been incorporated in the draft bill which we strongly endorse. I would like to briefly comment on some of the important ones. Page 89 requires that loan checks be made copayable to the student and the school. We support this proposed procedure because it will help to reduce fraud and abuse and defaults. We also endorse the requirement on page 94 that all guarantee agencies report defaulted loans to credit bureaus. This should reduce the number of student defaults. Additionally, the expansion of the grace period from 6 months to 9 months should have a positive impact on the program.

I would like to comment on a number of other issues that are more technical in nature. However, I believe that a number of our suggestions might greatly contribute to a more efficient program. In discussing each of these items, I will reference the page numbers as they appear in the draft bill.

Page 81 proposes lower loan limits on students in their first academic year and who were not previously enrolled in a program. Definition of and verification of the "not previously enrolled in a program" requirement could be extremely difficult and may outweigh the advantages of such lower limits.

Page 79 states that a student cannot qualify for a loan if family income is in excess of $65,000. In view of the fact that the amount of any loan is determined by a "needs test" formula subject to maximum limits, we would recommend that all students be eligible for a loan, subject to the needs test. The number of additional students who would qualify would be small.

Page 82 raises the maximum annual borrowing limits from $2,500 to $3,000 and from $5,000 to $7,000 for undergraduates and graduates, respectively. However, the bill maintains the current aggregate limits at $12,500 and $25,000. We recommend that consideration be given to raising the aggregate limits.

Page 86 requires that the Secretary of Education fix the student's interest rate for the ensuing year at the end of each Federal fiscal year based upon a specified formula. We recommend that the rate be fixed at the end of the fiscal year, but not be implemented until January 1 of the ensuing calendar year. This would allow for a smooth transition period. It is not clear that the draft bill provides for this 3 month transition period.

Page 101 notes that holders of loans which were made or purchased with funds obtained by the holder from the issuance of tax-exempt obligations are eligible for only one-half the quarterly rate of special allowance. In order to clarify this provision and to clear up uncertainty among lenders who do not issue tax-exempt obligations, it would be helpful if the legislation specified that lenders whose funds are taxable, are entitled to full special allowance in all cases even if the loans they hold were purchased from a holder who had issued tax-exempt obligations.

It would be helpful if the language on page 102 would define what constitutes the act of making a special allowance payment.

The legislation should specify that the lender receive payment within 30 days of the Secretary receiving a payment request.

Page 104 requires that tax-exempt issuers submit a plan for doing business with the Secretary of Education as a condition for receiving

SPECIAL ALLOWANCE

The language should also require that the plan be approved if this is the intent of the legislation.

It might be useful to define reasonable loan transfer fee on page 105.

Page 105 also requires that issuers of tax-exempt obligations have an annual audit of the bond authority by a certified public accounting firm. We would recommend that this concept also be applied to guarantee agencies. Many agencies currently have annual audits done by certified public accounting firms on their own. We would recommend that all guarantee agencies be required to obtain this type of audit to ensure that proper accounting practices are being employed and to ensure consistency across the program.

We endorse the draft bill's parent loan program. The program as structured in the bill will be superior to the current parent loan program. However, we would recommend the committee consider increasing the aggregate loan limit from $15,000 to a higher amount. We would also recommend that the language on page 133 specifically require that lenders make parent loans based on the same lending practices that are customary in making noninsured loans.

Page 135 and 136 states that as a condition for a lender making a consolidation loan the borrower can have no application pending with another lender. We believe this condition will be extremely difficult to administer and monitor and recommend that it be dropped.

Thank you very much for the opportunity to testify at this hearing. If there are any questions, I would be more than happy to answer them.

Mr. SIMON. Thank you for doing some of the best testimony we have heard, simply because it is very specific and right on the points we are covering.

Perhaps the most controversial area you testified on is the 3½ percent. You understand why we are moving where we are moving. Someone has suggested as a compromise that we permit 3½ percent for the first year and then 3 percent after that, the theory being that by covering the first year, you cover a lot of proprietary, a lot of the higher risk, because of the dropout rate and so forth. Is that a workable thing from the viewpoint of the bank?

Mr. BIKLEN. From our viewpoint, it would probably not be workable, simply because when we measure our profitability in the program, we look in the portfolio in total. There may be certain aspects of it which are in certain phases more difficult to process service for that payment, but we do look at it in total. And by looking at it in total, we are able to virtually not have any restrictions in terms of loan size and so forth.

37-618 O—84——26

If we start segmenting the special allowance according to different types of loans or according to the different statuses, and that segmentation results in a drop in the overall profitability, it is going to cause at least our service to take a look at the impact of that and then probably have to make some offsetting.

Mr. SIMON. In fact, you end up in saying this is going to cause 3.2 percent or something like that.

Mr. BIKLEN. It would be for us to say that we would require a minimum loan size, because it costs the same to service small loans as it does a big one. And by reducing the special allowance just for a portion of the portfolio, the fact is that you have reduced the overall profitability.

Mr. SIMON. If you do have a 3 percent, realistically, would Citibank stay in the program?

Mr. BIKLEN. I do not think so. We would have a big problem with that.

Mr. SIMON. If you made it 3¼, would you stay in the program? We are going to have an auction here.

Mr. BIKLEN. I cannot answer that. We would have a problem. Whether or not we dropped out of the program entirely, that would be something else. But just so that you can understand why the special allowance is so important, I know we do and I think most other lending institutions look at their returns in terms of the net spread that we are earning on the assets, and normally I think any institution is looking at a required return pretax of close to 2 percent.

If you start, for the sake of argument, earning 3½ percent over the Treasury bill, I think it is fair to say that the best anyone can fund their student at is somewhere around 100 basis points or 125 basis points over the T-bill. And that leaves you with 225 to 250 basis points. Out of that, you have to take your operating cost and on an average those are probably 2 percent or higher. So you are talking about a term of 150 basis points pretaxed, and I think most institutions would have a higher target than that to start with.

So that if we are talking any kind of reduction in special allowances, this is going to be difficult.

Mr. SIMON. If I can switch over to Sallie Mae, your feeling is that is simply too sweeping, it ought to be more specific?

Mr. BIKLEN. Yes. My feeling is that it is too sweeping and they basically can do anything that they want to do They do have a number of competitive advantages over private institutions and if they are able to do anything—if that is not the case, then I think review by the Congress is appropriate.

Mr. SIMON. Have you had any experience with any loan consolidation?

Mr. BIKLEN. Not loan consolidation. We have experience with loan consolidation to the extent that when one of our borrowers goes into repayment, we consolidate all of that into individual's loans with us into one loan. We also have had some experience in purchasing loans from other institutions and consolidating some of those with loans that we already had. But we would not have had as much experience as Sallie Mae had with the options program.

Mr. SIMON. Do you have any other comments on the consolidation question? Any specific things that you would suggest?

Mr. BIKLEN. One thing I might suggest that I did not have in my prepared testimony, is that I feel that a better consolidation program would be one that would impose some sort of needs test so that a person, an individual, would qualify for consolidation loan as a result of a test that compared their ability to pay, then compared the size of the monthly payment to their gross income. as opposed to just tying it to a minimum loan size. I would try and get at more of the people who really need it than if you have a minimum loan size.

Mr. SIMON. Then you talk about the lender of last resort. What we are clearly trying to do is make sure that everyone can get a loan.

Mr. BIKLEN. Yes.

Mr. SIMON. Do you think that is possible without having this kind of language?

Mr. BIKLEN. I do.

Mr. SIMON. How can you be sure of that?

Mr. BIKLEN. I think it is virtually happening today.

I know that if anyone comes to us, from anywhere, we will make a loan to them and I think that is true of a number of other lenders also. I know that a lot of States that are concerned with access, they solve it on their own. I do not think it requires Federal legislation.

Mr. SIMON. What would you say to a student in North Dakota who cannot get a loan? How does that student in North Dakota get tied into Citibank?

Mr. BIKLEN. Through word of mouth: I suppose that would be the best way. But I think it is fairly well-known across the country that we will make loans to anyone. There are a number of other institutions that will, too.

Mr. SIMON. And practically, a student in Bismarck, ND, how does he tie into Citibank?

Mr. BIKLEN. He could either write us or call us on a toll-free line and request an application and we would send him an application and then we would go through the normal application process.

Mr. SIMON. You suggest raising the aggregate limits. What would you suggest we raise them to?

Mr. BIKLEN. I did not have a number in mind. I guess you might just pro rate it, whatever the increase, if the draft was 22, 5 to 7, it might go up to 35. But I had not given thought to a number; I just think something should be considered.

Mr. SIMON. Are there guarantee agencies that have no audit at all now?

Mr. BIKLEN. Yes, there are a number of guarantee agencies that are not audited by certified public accountants, and some of them have audits to a lesser degree by special auditors and some of them virtually have nothing.

Mr. SIMON. Before our PA man leaves us here, I think my mike is dead. We will try this one.

Before I turn you over to the second Member of Congress here, let me welcome Representative Gary Ackerman, who is now a sophomore Member of Congress, who is the only Member of Congress who shows up every morning wearing a boutonniere. He is a

man of distinction beyond that, and has been a very valued Member. We are pleased to have you here.

Mr. ACKERMAN. Let me just thank the chairman first, and thank you very much for bringing this hearing here to my county. And I want to welcome you and welcome your leadership in this area.

Let me express my thanks to you for scheduling this field hearing on the Reauthorization of the Higher Education Act here at Queens College. As a graduate of this institution I take a certain amount of pride in returning here. The City University of New York, of which Queens College is a part, represents what I believe to be the finest of ideals in higher education in this Nation. The university has immigrants, non-traditional students and persons of all ethnic backgrounds and economic status. Had there not been a tuition-free City University of New York in the sixties, I doubt very much that I would have been able to attend college at all.

I should point out, Mr. Chairman, that the great State of New York is now celebrating the bicentennial of its own Board of Regents, a board which supervises all educational activities in the Empire State. The University of the State of New York, as the Regents are formally known, was founded in 1784 as a vehicle of upward mobility of our young people. All of the educational institutions in the Empire State belong to this university system. I wish to take this opportunity to acknowledge its great contributions to this State and Nation.

The testimony which this committee will hear today, I believe, will be a true reflection of the unique needs of this metropolitan area and State. Over the past 200 years, New York has attempted to meet the diverse needs of its citizens by addressing the very real problems of higher education.

One of the chief striking points is the high costs of education, and how to make higher education affordable to our students. Free tuition at the City University of New York was one way; the Tuition Assistance Program, which is supported by the Federal State Student Incentive Grant, is another. The continuing commitment to education by our national leaders is essential. But while the city's and State's dedication to this mission has remained steadfast, the Federal Government's commitment to access, excellence and diversity in postsecondary education has been declining since 1980. The financial hatchetmen for the administration did their work on our education budget.

If we treated student loans the same way that Presidential staff loans are treated, instead of calling the loans Guaranteed Student Loans, we would call them "Meese Loans," and the financial problems of New York students would be over. But in the real world, we must insist that our students repay their debts.

The reauthorization of the Higher Education Act is an appropriate vehicle to restore much needed funds to the postsecondary budget. Many critical programs that would restore access to universities are contained in title IV of the act. For example, I believe it is imperative that we treat Pell Grants as entitlements. Pell Grants are, and should be, related to the financial need of the student. By constantly chipping away at the program, we are doing no more than discouraging truly needy students from attending college. In a city and State where thousands of students are unable to

afford even the low cost public universities, continued and expanded aid through the Pell Program would be of astronomical benefit.

In addition, we must continue to urge all of our colleagues in the House to support programs that attract historically underrepresented minorities to higher education opportunities. The reauthorization resurrects a strong commitment to TRIO Programs, which provide the incentive for economically disadvantaged students to embark on postsecondary education.

Mr. Chairman, it has been a long time since we each attended classes in institutions such as this one. Our dedication to preserving the traditions that are embodied in these halls of higher learning have not waned. It is crucial, as you well know, to continue our efforts to grant the educational franchise to the countless Americans who now, and in the future, will desire to learn. I firmly believe that the legislation which you have introduced is the appropriate and necessary means to achieve educational quality for all Americans. Thank you, Mr. Chairman.

Mr. SIMON. So we are in your district right now?

Mr. ACKERMAN. We are on the borderline of my district, actually. We are in the great institution that I had the honor of being graduated from, where I first heard the name of Paul Simon, who was a classmate of mine. And I was very anxious to get to meet you and see you again, only to find that you were somebody else.

Mr. SIMON. Thank you. We are pleased to be in Gary Ackerman's alma mater. I did not realize what a fine place we are in.

Mr. Biklen, I thank you very, very much for your testimony and I thank you also for being here early so that we can get the hearings launched properly.

Your testimony is frankly some of the most practical and helpful that we have received. I cannot tell you that we are going to adopt every one of your recommendations, but we are certainly going to consider it.

Mr. BILKEN. Thank you very much.

Mr. SIMON. Thank you.

Now Scott Wexler is here and he will be back in just a moment. Are there any other witnesses here now that are scheduled?

Scott Wexler, we are going to put you on here. We are pleased to have you here as a witness.

STATEMENT OF SCOTT WEXLER, VICE PRESIDENT, UNITED STATES STUDENT ASSOCIATION

Mr. WEXLER. Thank you very much.

Members of the Subcommittee on Postsecondary Education, my name is Scott Wexler. I am vice president of the U.S. Student Association. I live in Albany, NY, and work with the Student Association of the State University of New York.

I would like to speak with you today about your work in reauthorizing the Higher Education Act of 1965. I hope that you will take my words into consideration as you debate and discuss the many directions you may take this legislation.

I strongly support your commitment to make the grants-in-aid program for students, Pell Grants, an entitlement program. This is a very positive step in the direction of guaranteeing that all need-

based aid programs be allocated as entitlements. While political realities may not permit us to make such broad guarantees today, this proposal will help many who could be the target of future budget cuts.

Increased availability of student loans will be helpful in increasing access to postsecondary education. This will help fill the gap between available financial aid and other income sources. I urge you to remember as you prioritize resources that many students at the lower income levels cannot afford current loan programs. They are left short of funds necessary to meet the costs of their education and are therefore forced to leave school. The neediest students must remain our priority.

The Campus-Based Block Grant proposal would significantly increase the sensitivity of the Federal financial aid system to the individual campus and student. It is not clear, given the recent personnel cuts at the State University of New York, felt heaviest in student services, and the increased burden of implementing the Solomon amendment, that we can afford the luxury of administering this new program.

An area that has not received proper attention is the needs of the nontraditional student. Today nontraditional can mean that you are: over 25, working full time and attending classes full time, attending school part time, a veteran, a mother, or any other student who does not fit into the "traditional" model. These students are in need of Federal assistance in order to obtain an education. All students should have access to all need-based aid programs. Specific programs should be expanded to include greater numbers of these students.

Attempts should be made to increase commuter allocations to more adequately reflect the cost to the students. Independent student status guidelines should be amended recognizing that students classified as dependent, but getting no parental support, have extreme difficulty remaining students. The definition of independent student must be flexible enough to acknowledge the economic realities of today's student.

A valuable lesson we can accept from our experience with Federal assistance for postsecondary education is that of review and criticism. We must look at the failures in the system and make the necessary adjustments. For example, this semester, hundreds of students at SUNY Buffalo were surprised to find that they would be receiving smaller work-study allotments because the college had overbudgeted its Federal allocation during the previous semester. This resulted in many losing up to 50 percent of their anticipated spring stipend. Last year very similar events took place at SUNY Fredonia. A regular monitoring agency will help to assure proper administration of these fine programs.

The Higher Education Act of 1985 will reflect a public policy of recruitment and retention of the students most in need of an extended arm. Programs must be encouraged that expand access to a postsecondary education to many who have never considered it an option. We must also reinforce our commitment and potential to assist those who only lack the financial resources to attain this goal.

I leave confident that the best interests of all students will be protected by those who are charged to do so. Chairperson Paul Simon, Representative Major Owens, Representative Gary Ackerman, their colleagues on this committee, and former student leaders like Bob Levi, serving on congressional staffs, will continue to be leaders in the effort to change the political realities of today that bar us from attaining our idealogical goals.

Mr. SIMON. We thank you very much, Scott. Are you personally familiar with people who are not, or potential students who are not going to school because of the resources that are not there?

Mr. WEXLER. Yes. Would you like an example?

Mr. SIMON. Yes.

Mr. WEXLER. My mother. My mother is a 45-year-old woman. She has three children: myself, trying to finish my education as a senior at the State University; my brother, who is a sophomore who is at SUNY College at Buffalo; and my sister, who has graduated from high school who is going to the University in the fall.

She started attending Nassau Community College part time 2 years ago, attempting to acknowledge that she had goals that she had not attained in her earlier years. She took two classes the first semester and really had quite an enjoyable time. And to be honest, between the crunch of finances, a decrease in the amount of loan that she was getting, she did not have the $600 to register for classes the day that it was due and the college was not in any position to allow her further payment, so my mother did not register for college this fall as she wanted to.

Personally, I am certain that she will not go back, ever, until many of us are able to help her out. My cousin, in fact, almost left school. She was a Social Security child who just missed the boat. Her mother passed away 4 years ago and her parents were divorced 7 years ago. Her mother had been her sole support, and she moved in with my family. Now she is a first year student at the State University College of Brockport, barely hanging on because of the personal tragedy she has had to deal with and not knowing where the aid is going to come from.

These are two personal examples.

Mr. SIMON. I do not mean to be picking on you or your mother.

Mr. WEXLER. Please do.

Mr. SIMON. And I will not ask you who got better grades, you or your mother. But she is a part-time student, right?

Mr. WEXLER. She was a part-time student.

Mr. SIMON. And what kind of assistance would she need in order to continue with her education?

Mr. WEXLER. She needs access to a need based grant aid. If she was eligible, too. I am not from a poor family, my mother and father work full time but—I do not know what kind of need—but she would like access to that because there are a lot of people who are her age that are not working full-time who have a husband to help support them. She would need access to loans; being a product of the economic boom of the inflationary seventies, she would need access to low interest loans to get the couple of hundred dollars, even short-term loans where she could have borrowed the money to have paid it off.

Mr. SIMON. If I may, since the previous witness is still here: Steve, how would you respond to Scott's mother and her specific need? How should we respond?

Mr. BIKLEN. It is a difficult question. I am not entirely sure without looking at this and understanding more about the specifics of the situation, but there is a problem there, obviously.

Mr. WEXLER. That is the same answer the president of the college gave my mother. I was wondering, I was handed before I left to come here the testimony of a woman who could not be here. It is about three handwritten pages, but I think it is important.

Mr. SIMON. We will insert it in the record.

Mr. WEXLER. Thank you.

Mr. SIMON. Mr. Ackerman.

Mr. ACKERMAN. Let me just say that I, for one, can personally relate to those circumstances, having grown up right across the street from Queens College in a federally subsidized housing project on the other side of Kissena Boulevard. I would not have been able to attend any college had not the City University, during the time that I was here in the sixties, had a tuition-free college education offered to all students. I could not probably have afforded the tuition that is being paid right now at the city colleges, as low as some people might think that that might be. I was interested in your statement about changing the definition of independent student status. What would be some of the suggestions or suggestion that you might make in redefining an independent student?

Mr. WEXLER. Well, in the controversy over the last 2 or 3 years about the guidelines, I have noticed that students are trying to find a way to become independent, as I was with my parents. Because I thought upon my 21st and 22d birthday I should start heading in that direction, but was still unable to meet the needs—there was no way that I could stay in school and become an independent student, even if I wanted to wait a year for the aid. So the statement in the original text of Representative Simon's bill, that talked about the need to assure that students do not go from being dependent one year to independent the next, I thought, while being an important administrative line to have to draw, that there is a need to recognize that not all of us have control on what our parents put on their schedule 1040's. That even though occasionally a parent may—you know, the guidelines, they are not flexible, Representative Ackerman. They do not recognize that every personal situation usually is a separate case. That is the positive thing about the campus-based block grant: you can put that decision into their hands and maybe balance it.

Mr. ACKERMAN. Is what you are saying that we should have some more human controls on a more local campus level because in some households the parents may be having a combined income of $50,000 or $60,000, but the two students of college age may not be reaping the benefits of that type of an income?

Mr. WEXLER. Yes; and many of the students that go to school here at Queens College are representative of that kind of family. They usually do live at home, they are paying for economic reasons and they are working quite a lot. We should be as sensitive as we can be to the personal needs of the student, because that will only help us attain our goals.

Mr. ACKERMAN. Thank you.

Mr. SIMON. Thank you very, very much, Scott, for being here. And we are going to try to follow through to try and see how we can help specifically, not only your mother, but your counterparts. You tell her that she has become a part of this record today, all right?

Mr. WEXLER. Yes. Thank you very much.

Mr. SIMON. Thank you.

We are pleased to have someone who has been a witness for our subcommittee on at least two other occasions, Dr. Dolores Cross, the president of the New York State Higher Education Services Corp.

STATEMENT OF DOLORES CROSS, PRESIDENT, NEW YORK STATE HIGHER EDUCATION SERVICES CORP.

Dr. CROSS. Good morning, my name is Dolores Cross and I am president of the New York State Higher Education Services Corp., our State's centralized student financial aid agency. I am pleased and honored to testify before this distinguished forum.

By way of background, I would like to describe our agency's scope. We are the largest State student aid agency in the Nation. We administer 15 programs of grants, scholarships, and loans which last year provided $1.3 billion to 700,000 students. These funds support a higher education enterprise which comprises 650 postsecondary institutions, enrolls over 1 million students, employees 200,000 faculty and staff, expends $7 billion annually, and offers more than 15,000 registered academic programs. While enrolling 8 percent of the Nation's college students, New York provides 30 percent of all State-funded grants made nationally, and our students utilize 40 percent of all ALAS loans, 18 percent of all PLUS loans, 14 percent of all GSL loans, and 13 percent of all Pell Grants awarded nationally. Clearly, New York State is dependent on the title IV student aid programs and thus we are here to ensure that policy is developed with sensitivity toward the needs of our students and institutions.

I am going to deviate somewhat from the normal mode of testimony by reading into the record a recent letter I sent to Clarence Pendleton, Chairman of the U.S. Commission on Civil Rights. It summarizes my concerns over issues which must be kept in the forefront of our thinking as reauthorization and budget options are considered. I read now from the letter:

DEAR CHAIRMAN PENDLETON: I write to urge you to reconsider the recent decision of the U.S. Commission on Civil Rights to cancel a study of how reductions in Federal student aid have affected large numbers of black and Hispanic students.

I found the decision to be unfortunate and not reflective of the needs of our times. I also noted an inconsistency with the Commission's later decision to study whether factors other than discrimination prevent racial and sexual equality. I submit that one definitive factor which prevents equality is the lack of fair and even access to a postsecondary education. I further submit that access is directly contingent on the adequacy of available Government-sponsored student financial aid.

As you know, our Nation established a policy of encouraging attendance beyond the high school level with the passage of the National Defense Education Act in 1957. That commitment was further reinforced by the 1965 Higher Education Act and subsequent amendments. In 1978, the Middle Income Student Assistance Act [MISSAS] once again reaffirmed the partnership of the Federal Government with States and institutions, with the objective of equalizing opportunities for education.

Since then, however, there has been a retreat from that position. Some have sought to shift funds away from social programs which help the poor, especially minorities, without realizing the disproportionate damage that such action wreaks on our historically underserved populations. Consider the following:

During the late 1970's, the growth in funding for Federal student aid programs slowed markedly. And, since 1980, there has been a 21-percent decline in the real value of the funding level of these programs when adjusted for inflation, with an absolute dollar loss of $2 billion annually.

Concurrent with shifts in Federal student aid funding, there have been reductions for black students both in student aid awards and in enrollment opportunities.

According to the congressionally appointed National Commission on Student Financial Assistance, black college students were more likely to receive a smaller Federal financial aid award in 1981 than in 1974, when inflation is considered. Yet, white students were more likely to receive a larger Federal award.

From 1974 to 1981, enrollment of the lowest income dependent students, those whose families earn less than $7,500, fell more sharply than for any other income group. Census data show us that blacks and other minorities are disproportionately represented at these lower income levels.

According to the National Center for Education Statistics [NCES], the significant gains in college enrollment for blacks made in the early 1970's leveled off by the end of the decade.

The proportion of black high school graduates aged 18 to 24 enrolled in college increased from 26 percent in 1970 to 32 percent in 1975, about the same level as whites. By 1980, however, the proportion of blacks dropped to 28 percent, while the rate for whites stayed at 32 percent.

Our statewide research has found blacks and women to be more financially vulnerable than their majority counterparts. Indeed, when the 1981 Omnibus Reconciliation Act cut Federal aid and caused great confusion regarding eligibility for remaining aid, enrollments of women, minority, part-time and independent students dropped disproportionately. Black respondents to a recent statewide survey which we conducted were more likely to report financial aid as a central consideration in their inability to attend college and were more likely to downgrade their educational aspirations if enough aid were not available.

Why must blacks and other underrepresented groups continue to downgrade their hopes, aspirations, and dreams because of a waffling Federal commitment? How long will their rights to educational access be denied? Who will fight to protect their civil right to an opportunity for education, if not the Civil Rights Commission?

With all due respect to the fine lines of organizational charges and jursidictional boundaries, I appeal to you and the Commission to reconsider your decision. As John Kenneth Gailbraith said recently, "The poor are still very poor." And as the Census Bureau reported recently, the percentage of blacks living below the poverty level was the same in 1981 as it was in 1970. Is that progress? I doubt it. Why do we not find out why this program is lacking?

We need a clear voice of conscience on this issue. Without it, the voice of blacks, Hispanics, and women will continue to be unheard and generations of undereducated people will be our generation's legacy. Now is the time for the Commission to act."

That is the end of the letter.

In addition to maintaining our research efforts in the areas of access and choice for minority students, I suggest that this subcommittee be attentive to the plight of the independent student. Demographics suggest that these students are growing in numbers, yet our research shows that they face a high, unmet need, even after financial aid and the family contribution are considered. I recommend that budget and reauthorization proposals be developed in ways that will increase benefits to independent students, a group that is disproportionately composed of minorities and women. The remainder of my recommendations are contained in my agency's reauthorization position paper, which is now available.

Thank you for your attention

Mr. SIMON. We thank you, Dr. Cross. And I concur wholeheartedly in your letter to the Chair of the U.S. Civil Rights Commission.

An interesting statistic is that we are looking at demographics, and we anticipate, if you are to take a purely demographic look as where we are, that we will have roughly a 20-percent drop in student enrollment in the next decade, but if we were to get the same percentage of blacks, Hispanics, and women who graduate from high school to enroll in college in the next decade, there would be no drop in students.

To those who criticize what we have introduced here to say that it is costing money, of course it is costing money, but someone handed me this morning the Washington Post which says that James Michener received $11,000 in educational assistance from the taxpayers and he has now paid about $65 million in taxes. Not too bad, I would say.

Dr. CROSS. I referred to your comment about the enrollment of blacks and Hispanics in the presentation I made just Saturday at C. W. Post

Mr. ACKERMAN. Just let me say it was a pleasure listening to you and it was a pleasure listening to you when you testified before our Higher Education Committee in the New York State Senate and it is an additional pleasure to hear your testimony today. I fully concur with your comments on observations.

Dr. CROSS. We try to be consistent. Thank you.

Mr. SIMON. Thank you not only for your testimony here today, but for your leadership. The Nation is richer because of your leadership. We thank you.

Dr. CROSS. Thank you.

Mr. SIMON. I am going to defer the introduction of our next witness to my colleague, who is known on the floor as a gentleman from New York, but he is actually from Queens, so he has an special privilege here today.

Mr. ACKERMAN. I want to thank the chairman, or should I say, not too prematurely, the Senator from the great State of Illinois, for giving me the privilege and pleasure of introducing the next witness.

I would like to ask for the president of Queens County to come forward. Donald Manes is not only the borough president but the county leader of what is the fifth largest city in America, and his leadership and direction in the field of education and higher education in particular is well known to all of us who are interested in this field.

Without the necessity of further introduction, I would like to ask our borough president to address the committee.

STATEMENT OF HON. DONALD MANES, BOROUGH PRESIDENT, QUEENS COUNTY

Mr. MANES. I was a professor here, so this particular school of higher education is one that is extremely meaningful to both of us.

As president of a borough of 2 million people from divergent national, social and economic backgrounds, I have considerable concern for maintaining and extending access to postsecondary education.

Traditionally, the public colleges of New York City have been the stepping stones for upward mobility of the poor, the immigrants and the children of immigrants.

Queens County, in the past 10 years, has had a large influx of people from countries throughout the world. Over 35 languages are spoken in the various communities throughout our borough. The opportunity for a quality education for them and their children will have a major effect on the nature and health of our future city.

Queens is most fortunate in having six fine institutions of higher education, our public senior colleges, Queens and York; our public community colleges, Queensborough and LaGuardia; and our private institutions, St. John's University and the Academy of Aeronautics.

My purpose in coming here today is twofold:

To impress upon you the importance of making as much Federal financial aid possible to those residents of our borough and city who want to further their education and cannot do so without financial assistance; and

To impress upon you the need of Federal assistance to meet the institutional needs of our colleges.

In order to maintain a well-educated work force and citizenry, the Federal Government must continue and expand its role in reducing the economic difficulties of lower and middle income students in pursuing a higher education. The continuing acceleration of the cost of attending college has made it impossible for many to do so.

The New York State Board of Regents, since 1980, has advocated that:

> Federal grants to students in combination with direct payments by students and families should equal half of the actual cost of postsecondary attendance. Other federal assistance programs, such as loans and work study, together with state and institutional student aid and family or student loan obligations, should provide the remaining half of postsecondary attendance costs.

I would like to suggest that steps be taken to fulfill this concept of a State-Federal-institutional partnership. This would result in ensuring access to a college education of choice to our students who are most in need.

I want to bring your attention to some areas of particular concern:

PELL GRANTS

Funding levels for Pell Grants have provided smaller maximum awards than the levels authorized. The maximum Pell award for the current academic year is actually $500 less than authorized. Award levels must be increased to offset the increased costs of a college education and to reduce dependence on student loans.

GUARANTEED STUDENT LOAN PROGRAM

Statistics compiled by the New York State Higher Education Services Corp. indicate that many students find it necessary to borrow the maximum amount of loans to meet current costs. While

there is a need to lower administrative costs and to curb fraud and abuse, loan availability should not be restricted further.

TEACHER PREPARATION

The dangerous shortage of well-trained teachers on all levels, elementary, secondary, and postsecondary in the areas of math, science, early childhood, foreign languages and teaching of the handicapped, make it imperative that more funds be made available to:

Schools of education to assess and revamp their programs introducing curriculum changes that will include the latest technologies and practice teaching experiences. All teachers, but most especially early childhood teachers and teachers of the handicapped, should be trained in guidance and human relations in order to better meet the needs of our student population.

Attract bright students to teaching. Scholarships and other incentives should be offered to high achieving high school graduates to enter the teaching profession.

Retain outstanding teachers in our elementary, secondary and postsecondary schools. Many highly qualified persons have left the teaching profession for the private sector. This is particularly true in the areas of math, science and engineering.

COOPERATIVE EDUCATION

LaGuardia Community College, located in Long Island City area of Queens County, has an outstanding cooperative education program that has received nationwide recognition.

As cooperative education serves the dual purpose of enhancing the educational program and providing opportunities for students to earn money to help pay the cost of their college education, these programs should be expanded on both the senior and community college level.

CONSTRUCTION, RECONSTRUCTION, AND RENOVATION

Our two public senior colleges in Queens have plans underway to construct much needed new facilities, science building, new library, and school of music for Queens College, and support facilities, auditorium, gym, athletic field, and student union building for York College.

The CUNY Law School at Queens College is temporarily housed in an elementary school and will, when renovations are completed, have a permanent home in a building that was formerly a junior high school.

We are acquiring a former factory building to relieve the severe overcrowding at LaGuardia Community College. This building will require major renovations.

Further, all of our college buildings, not only in Queens but throughout the city, are in need of modernization and rehabilitation. In many cases, maintenance has been deferred for too long a period making costs of rehabilitation extremely high. Compounding this are the high costs of construction and provision of laboratory and instructional equipment.

All of the above compels me to strongly urge you to both change the provision of, and raise the authorization levels of title VII of the Higher Education Act.

Provision should be made in part A and B of title VII to broaden the grants for construction, reconstruction, and renovation of undergraduate and graduate academic facilities to include rehabilitation of existing facilities and expansion of facilities as well as construction and renovation to economize on use of energy resources, conformity with requirements of the Architectural Barriers Act, improvement of research facilities, and detection and removal of asbestos hazards.

I am extremely proud of all of the colleges in Queens County. They are closely knit into the very fabric of our borough, playing major roles in our economic development, providing culture as well as education, and enhancing and broadening the curriculum of our lower schools. Queens could not be the vibrant and vigorous home and workplace for 2 million people without them.

Mr. SIMON. We thank you very, very much for your testimony. What did you teach?

Mr. MANES. Public affairs.

Mr. SIMON. You would be an even better teacher today if you came back. Not that you were not a good teacher then.

Mr. MANES. When I say I taught, I taught after I was assistant district attorney and while I was borough president. So, I taught here having that experience.

Mr. SIMON. It was not an academic pursuit before you got into the business of being in government?

Mr. MANES. No. the only academic pursuit I ever had was becoming an attorney.

Mr. SIMON. The points you mention we cover, most of it we do. The one area where, frankly, we have not done as much, and you point this out, is title VII, the construction area, funding for lab equipment and that sort of thing. It is an area we stayed out of. Well, we touch on it lightly because you get into such huge figures so quickly. And I face a very practical problem, which you understand, and that is that I don't want to make a bill so heavy financially that it will not float. But, in fact, we could probably view whatever we have in title VII as a job's creation bill in the field of construction in addition to whatever we do in assisting higher education.

I assume that in Queens and New York City and the State of New York, the construction field is down just as it is down everywhere else in the Nation in terms of employment.

Mr. MANES. There is no question about that.

I have a suggestion which I think would highlight the very necessary funds from the Federal Government which we feel is necessary for construction.

First of all, from an employment area, that is one thing. The other area is that there are certain schools in this county and throughout the city that were built with materials that are not used today. There are ceilings that are made out of what, Armstrong?

Come over here. I have my major expert.

Mr. SIMON. Can we identify you for the record?

Ms. MORSE. I am Anne Morse and I am special assistant of education to borough president Manes of Queens County.

Mr. MANES. Can I ask her a question?

Mr. SIMON. Go ahead.

Mr. MANES. Remember when we went down to the buildings and the ones there that were falling down?

Ms. MORSE. Those were elementary school buildings. Well, it is cinder concrete that they are made of, and it is literally falling apart. They have caused tremendous problems with all kinds of leaks, and the breaking up of the material itself. So, we really have to do major construction to remedy these problems.

Mr. MANES. I would advise both Congressmen that there are buildings in this county where schools were built while they were using, they have not used it in 20 years, but schools which were built in the 1960's and after, we have schools in the county where we have literally sealed off the top floor because the cinder concrete roofs have completely disintegrated, and the costs are huge. These are major, major construction, where we have, the city, because of the financial crisis we are in, have really opted to just close floors. And some of them are dangerous because those roofs are in the process of coming down.

This is a problem that the city is aware of that we try to cope with, but it is a very, very difficult time to put the funds into this construction.

Mr. SIMON. Are there any higher education facilities that face this problem that you are aware of?

Ms. MORSE. No, not that I am aware of.

Mr. MANES. Our buildings are in disrepair. So that funds for construction, for rehabilitation of our schools for higher education, are really quite need, and it is vital.

Mr. SIMON. Mr. Ackerman.

Mr. ACKERMAN. I want to thank you for calling to our attention the need to broaden both parts A and B under title VII. I would suggest to the chairman that perhaps we can take a look under this act and maybe some others for the greater use of some of our resources in the field of energy conservation in some of our institutions of higher learning.

Mr. SIMON. We thank you very much. Let me just add, it is refreshing to have a local government executive in your capacity with your responsibilities to show a real interest in education. I commend you and I comment the people of Queens.

Mr. MANES. Thank you, and we would like to thank you gentlemen and ladies, for first of all, caring, and also coming to the community. I think that far too often you think of Congress being in Washington.

Mr. SIMON. We are here specifically at the request of Congressman Ackerman, and I want you to know that. Thank you very, very much.

Our next witness is Mrs. Ollie Bryant, director of financial aid at New York University.

We are happy to have you here, Mrs. Bryant. We think your university is in good hands with you and John Brademas.

STATEMENT OF OLLIE BRYANT, DIRECTOR OF FINANCIAL AID, NEW YORK UNIVERSITY

Mrs. BRYANT. Thank you very much. Dr. Brademas was not able to be here last Thursday and he was very sorry that he could not be here today.

Good morning. I am Ollie S. Bryant, director of financial aid at New York University and I am pleased to give testimony this morning. NYU, the country's largest private university, is located in Greenwich Village in New York City with an enrollment of 46,000, 33,000 of whom are degree-seekers. Educational expenses for our full-time students range from $9,900 for community undergraduates, to in excess of $25,000 for students in our College of Dentistry. Seventy-one percent of NYU students receive some form of financial assistance.

I am especially pleased, as an aid administrator, by this opportunity because the drafters of the proposed bill have recognized that under its provisions "students and institutions will benefit through increased access and improved operations if processing is moved closer to the student and his/her institution." Much has been said in discussion of Mr. Simon's proposed bill regarding access and choice. The aid administrator, for the record, is additionally concerned about retention, increasingly so as we watch the gap between educational costs and student and institutional resources grow over the course of a student's education.

New York University is generally supportive of the proposed modifications in title IV programs. In particular we support the concepts of a campus-based block grant program, increased Pell Grants and the reinstatement of the Pell Grant Program as an entitlement program. We do caution, however, that the practical application of these concepts may have some unintentional negative consequences for higher cost independent institutions such as New York University.

PELL GRANTS

As proposed, increasing the maximum Pell Grant to $3,000 addresses only the gap that has grown between inadequately funded Pell awards and the cost of education. The proposed modification in the program's "half-cost rule," however, does not remove the disincentive to a Pell recipient of debt related to enrollment at a high cost institution. In effect, net cost would remain a factor under the proposed bill. We recommend, therefore, that a Pell formula be developed that is more sensitive to the actual expenses at high cost institutions and, thereby, enable program-eligible students to weigh institutional choice on bases other than the size of debt to be incurred or avoided.

While NYU supports reinstatement of the Pell Grant Program as an entitlement, we are concerned about the practical effects. Due to the large amounts of public subsidies that Pell might absorb, the result could limit appropriations for the Block Grant Program.

Finally, my institution understands, and as an aid administrator, I salute the desire to strike a balance between loans and grants under the Federal Government's student aid programs. Nevertheless, I must stress that the Guaranteed Student Loan [GSL] Program remains the single most important form of Federal assistance for students at New York University and other, similar institutions. We urge that the "entitlement" nature of the GSL Program be preserved and that the program not be further limited. For this reason, we must question the arbitrary $65,000 family income ceiling on GSL eligibility, as proposed. We at New York University do not believe that two-earner households, living in the Northeast, with children in high cost colleges and universities and whose total family incomes might exceed $65,000 are necessarily wealthy and therefore without need of the GSL Program.

As proposed, families whose incomes exceed the ceiling would no longer be able to file a multiple data entry document, the College Scholarship Service's Financial Aid Form for most of the country, for a more extensive determination of need. Such analysis, while allowing more offsets to income than the simple needs test required by the GSL Program, also takes into consideration assets in determining family financial strength. Such a document serves as a safeguard; the truly wealthy are determined ineligible when assets enter the picture. Whether or not the ceiling is lowered to $65,000, a family who maintains that it has need should still have the financial aid form route as an option.

I thank you for the opportunity to speak to you this morning.

Mr. SIMON. We thank you for your testimony. Two points you raised: No. 1, on the Pell formula, we would be pleased to look at any specific suggestion you make. I have had some discussions with your president about where we are going in this whole field.

Mrs. BRYANT. Yes.

Mr. SIMON. We are trying to be sensitive both to the public and the nonpublic institutions, and putting a formula together that says both is not easy, as I am sure you appreciate.

Mrs. BRYANT. Yes.

Mr. SIMON. On the $65,000 family income limitation, or ceiling, what we have, frankly, done there was to simply take what is now the regulation of the Department of Education, and I have to say I had never heard any complaints about that particular regulation. All of a sudden, we put it into the law and now we are getting quite a few witnesses who complain about that.

Have you had, in your experience, people who should receive aid who have not received aid because of a present legislation?

Mrs. BRYANT. The present regulation I believe now has a ceiling of $75,000, so this looks as though it was being moved down to 65. And there are families who do qualify, whose income is between 65, that is proposed here, and 75, which I believe is in the current regulations, and that is part of the concern that we have.

Mr. SIMON. You may be correct. I thought we had simply taken the current regulation, but you may be correct that the current regulation is 75.

Mrs. BRYANT. Yes, above $75,000 the family still has the option of filing a financial aid form for determining need.

Mr. SIMON. Mr. Ackerman.

Mr. ACKERMAN. As you might know, there are members of the President's Cabinet who are in the $75,000 a year bracket, and they seem to be able to get loans without any real demonstration of need.

Do you think if we gave out something like Meese loans to students, that they would not necessarily have to repay? That is a rhetorical question.

Mrs. BRYANT. Of course. Our students and their families are willing to repay whatever loans are granted.

These are two-earner households, and I think the intent is to exclude the rich from the program and/or the wealthy from the program. And I think that we already have the means to do that. And a family earning $65,000 in this part of the country, for NYU, those tend to be two-earner households, and there is a difference between assigning the parent earning the 65 and two parents earning the 65.

Mr. SIMON. We thank you very much for your very practical suggestions. You give our greetings to your president.

Mrs. BRYANT. I will.

Mr. SIMON. Thank you very much. Are there any other witnesses now scheduled who are here?

[No response.]

Mr. SIMON. We will take a 5 minute recess.

I am sorry. We do have a witness here. We have Nitza Escalera, the director of the East Harlem College Career and Counseling Center.

We are pleased to have you here. And if I recall correctly, you used to work with the subcommittee.

Ms. ESCALERA. That is right.

Mr. SIMON. We are very pleased to have you here.

STATEMENT OF NITZA ESCALERA, DIRECTOR, EAST HARLEM COLLEGE CAREER AND COUNSELING CENTER

Ms. ESCALERA. Thank you very much. Good morning, Mr. Simon and members of the subcommittee.

Mr. SIMON. You are going to have to pull that mike up very close to you, please, so we can all hear you. What Queens College needs is a course in electrical engineering here.

Ms. ESCALERA. I will try to be brief. I am honored to be before you today in order to testify about H.R. 5240 and in particular on the sections of the bill that deal with TRIO Programs and with student assistance.

As executive director of the East Harlem College and Career Counseling Program, Inc. (EHCCCC), a community-based organization that receives TRIO funds to operate a Talent Search Program, we are particularly enthused with the continued strong direction this legislation places on TRIO Programs to identify students at the earliest possible stage. Presently, legislation for students from a disadvantaged background provides that talent search work with students as early as the sixth grade and for Upward Bound as

early as the eighth grade. It is imperative that we service students as early as possible so that we can provide them with the necessary tools he or she needs to get back on track to avail themselves of educational opportunities.

At EHCCCC, through our talent search grant, through funding received from Stanley Kaplan and through our volunteer tutorial program sponsored by the Harvard Club of New York, we have been able to work with students as early as the second grade. Each year we have increasingly serviced junior high school students identified as potential dropouts by providing one-on-one tutorial assistance and career workshops that focus on self-awareness, values clarification, and instruction on utilization of career resources. This is just one step to addressing the dropout problem in New York City which officially stands at 45 percent for the total high school population and 60 percent for Hispanics as a group.

The other items of the legislation on which I would like to positively comment are the sections that deal with the Pell Grant, Special Services, EOC's, and the short-term training institutes for counselors and teachers. The section where the Secretary of Education is instructed to give preference to special service programs at institutions who have a large minority population and who have also a high dropout rate is right on target. With 57 percent of Hispanic males and 54 percent of Hispanic females failing to graduate from college, it would seem to us that this provision is a step in providing a mechanism to insure that a higher percentage of minority students entering college graduate.

The second area I would like to comment on has to do with the section focusing on Pell Grant. The section that states that a student would be eligible for grants during the first year of graduate or professional school would do much to increase the enrollment of minorities at the professional schools. Presently, the average enrollment rate for minorities hovers around 2.5 percent, while the white population shows an 82-percent enrollment rate. One of the factors that precludes students enrolling in professional school is the need for financial aid. This financial aid assistance, coupled with the new special services provision will, in my opinion, increase the number of minority college graduates entering professional schools.

The last two items I would like to comment on are the sections that focus on EOC's and on the training of counselors and teachers. In the area of EOC's, I am in complete agreement with the proposed reduction of from 25 percent to 10 percent in matching grants required of EOC's. As director of an agency that has been involved in raising matching funds in order to be eligible for city funds, I know about the difficult climate in the area of fundraising. There has been substantial increase in the number of groups competing for funds from foundations and corporations. And, even though the present administration has encouraged the private sector to increase its support to the nonprofit sector, the literature shows that this has not happened.

The provision that sets up short-term training institutes for counselors and teachers in junior and senior high schools so they can more effectively counsel students in the college admission process is one step toward addressing the needs of educational staff de-

velopment. With recent interest in excellence in education, it is imperative that the individuals dispensing information to students be cognizant in their subject area. One of the many strong points of TRIO is that yearly, TRIO staff receive training on the up-to-date data in the college admissions process. This provision is key if you want to insure that as many students as possible avail themselves of educational opportunities.

I congratulate this committee on a well written piece of legislation.

Mr. SIMON. We thank you very much for your testimony. We will not use this mike for the time being here.

Tell me, the East Harlem—I hate to say it but I don't know as much about New York City as I should. Is East Harlem primarily Hispanic?

Ms. ESCALERA. Yes, it is. It is about 55 percent Hispanic, 45 percent black, and then whites and Asians.

Mr. SIMON. The dropout rate problem is a major problem nationally for Hispanics, and there is a second problem, and that is as you look for Hispanics going to college, a disproportionately high percentage of Hispanics going to the 2-year colleges; they are not moving into the other colleges probably as much as is desirable. Do you think our bill helps in that?

Maybe I should frame it a little differently. Is there anything we can do structurally where a higher education bill will help on that problem?

Ms. ESCALERA. I think some of the things that—I sit on the advisory board of Community College and a number of students I think are attracted to the growth industries areas and the health areas. And I did not mean it completely, but I know you are doing a lot more to expand the cooperative co-op programs at different universities. I do not know for sure whether they are much involved at the 4-year universities, but I think maybe something like that. And I think maybe more intense counseling on the part of counselors at the postsecondary school level would also be helpful. But I think we really need to start talking to students about 4-year colleges, and strong links have to be developed between 2-year colleges and 4-year colleges.

I think maybe that is one piece that might be missing, that 4-year universities need to have a definite mechanism to come into 2-year universities and strongly recruit students. These colleges really need to work hand in hand and really be assertive about it.

Mr. SIMON. Is another factor that the more traditional 4-year colleges and universities have very few Hispanics in the faculty and in the population, so that the Hispanic students might not feel as comfortable as they might? Is that a major factor?

Ms. ESCALERA. I do not think that is a major factor. I think that applies to whether you are in a 2-year situation or a 4-year situation. But it is always good to be able to relate with faculty.

But I think more can be done between the relationships between 2-year colleges and 4-year colleges.

Mr. SIMON. Mr. Ackerman.

Mr. ACKERMAN. Is there a concern at all? At least this is my perception, that the 2-year and community colleges are basically minority institutions whereas the 4-year institutions are not?

Ms. ESCALERA. My personal opinion, I would say yes. And again, that is why I say there has to be a strong effort and an assertive attempt to have a dialog between the 2-year and the 4-year colleges. When I look at the graduate school problems, too, that is another way to provide students with some education, but then there are other barriers.

Mr. ACKERMAN. Thank you.

Mr. SIMON. We thank you very, very much. We thank you not only for your testimony here today but for what you are doing in your work.

Ms. ESCALERA. Well, I enjoy it. Thank you.

Mr. SIMON. Keep it up.

We are lucky to have as our next witness Dr. Irwin Polishook.

STATEMENT OF DR. IRWIN POLISHOOK, PRESIDENT, PROFESSIONAL STAFF CONGRESS, REPRESENTATING AMERICAN FEDERATION OF TEACHERS

Dr. POLISHOOK. Mr. Chairman, I am Dr. Irwin Polishook, president of the Professional Staff Congress. I am representing here, today, the American Federation of Teachers. The AFT welcomes the opportunity to testify on issues confronting higher education and, more particularly, H.R. 5240, a bill to reauthorize the Higher Education Act. The AFT recognizes the continuing efforts of the subcommittee and its very able chairman to improve the Federal Government's role in higher education.

H.R. 5240 addresses many areas of critical need in higher education. The AFT embraces the bill's objective to expand access for needy students, to simplify student aid programs, to enhance the quality of higher education, and to assist in institutional growth. I believe the proposed legislation would go a long way to achieve these goals. Of particular interest to the AFT is title V; that part of the bill dealing with teacher preparation.

The AFT regretted the loss of previous Federal teacher training programs, particularly the Teacher Center Program. Teacher centers, as encouraged by the Federal Government, were among the most effective inservice programs for teachers yet devised. They allowed the sharing of valuable teaching skills, on a teacher-to-teacher basis in a nonthreatening environment. Teacher centers helped institutionalize the type of sharing which often occurs informally in the schools and is so important to effective teaching. For this reason, the AFT welcomes the development of "professional development resource centers" with the active participation of teachers and their representatives.

The Carl A. Perkins Scholarship Program, part A under title V, not only recognizes an outstanding leader in education, it offers a means to attracting high quality students to the ranks of teaching. The National Commission on Excellence in Education has illuminated the fact that teaching as a career is not attracting enough academically able students. It is common knowledge that in recent years the test scores of prospective teachers have been significantly below those of former teacher education students.

The AFT believes that improved salaries, better working conditions, increased professional responsibilities, and reasonable job se-

curity, along with other improvements, will be necessary to attract and retain good teachers. However, there must also be efforts to bring out most talented students into teaching. Other measures taken to improve education such as improved curriculum, mean little without better teachers. Albert Shanker, president of the AFT, has spoken of the need for a program: similar to ROTC to provide federally funded college scholarships for bright high school graduates who agree to teach for a number of years. The Carl D. Perkins Scholarship Program would respond to this need.

Although it would not affect a significant number of teachers, at two per congressional district, part B, the Talented Teacher Fellowships Program would provide opportunities for professional growth and innovative activities. However, I question whether participants in the program, who must have their fellowship plans reviewed by local school district authorities should in all cases be required to return to the same school district for a full 2 years.

The AFT would welcome the establishment of summer institutes and workshops under part C to upgrade educators in elementary and secondary schools in subject areas, teaching skills, and in other ways. Likewise, the AFT would welcome the professional development program under part D of title V. This program could provide much-needed improvements in teaching and school administration. Of particular interest to the AFT is the establishment of resource centers with the active participation of elementary and secondary teachers. However, as long as any appropriation part D must await a full appropriation for part C, it is doubtful the program will be adequately funded.

Part E, assistance to schools, colleges or departments of education, would provide valuable incentives for such institutions to upgrade faculty and programs and to establish cooperative relationships with elementary and secondary schools. The AFT believes that such cooperative relations will be valuable sources of research and innovation.

Part F addresses a need for greater understanding of methods of evaluating teacher performance. The AFT must emphasize that programs of teacher evaluation must be associated with meaningful opportunities for staff development and in-service programs. The appropriate use of teacher evaluation is helping teachers improve their effectiveness in the classroom.

Title IV for H.R. 5240 deals with student financial assistance. The AFT strongly supports the concept of making Pell Grants an entitlement program. The AFT supports a significant increase in the maximum allowable Pell Grant award and support moving substantially above the "half-cost" provision. Such as increase is necessary to better serve low- and middle-income students and to serve the purposes of the grant program. Low- and middle-income students also will be better served by measures in the bill to simplify the student assistance program. Minimizing redtape will improve student access to the program and therefore to higher education.

In general, the bill that we are addressing today deals in concrete terms with many of the issues in what I would call the tidal wave of reports about what should be done for aid to education. We believe this bill is what the Government should be doing to improve education, if the Government was listening not only to its

own commission but to all the other commissions that have made recent reports.

In conclusion, may I say that the AFT looks forward to working with the chairman and members of the subcommittee on reauthorization of the Higher Education Act, and I will be happy to answer any questions from the committee. Thank you.

Mr. SIMON. We thank you very much for your testimony. I like your phrase, "the tidal wave of reports that has innundated us." Clearly, just a general question, I guess a leading question: with this tidal wave of reports you are talking about, that clearly suggests action and leadership upon the part of the Federal Government. One of the criticisms that is being made of this legislation that is before us is, we are going to be spending too much money in this area. How do you respond to that criticism?

Dr. POLISHOOK. Well, if the reports all direct our attention to inadequacies of education in the United States and bring our attention to a critical phase in the history of the country tied into the failures of education, it seems to me there has to be significant improvement in funding the program and significant leadership by the Federal Government, if we are to address those problems. I point just to the President's own commission appointed by the President of the United States, which made recommendations to him that did not follow the major lines of his own problem initiatives and called in fact for an upgrading both of the fundamental programs in education but also of a Federal initiative and greater Federal funding.

So the nature of these reports, as you read them, is not only criticism, it also has a counterpart of improvement, and that improvement calls for leadership. And I think we should applaud the committee's initiative, not only for calling for greater funding to meet a critical need, but also the initiative for creating new programs to improve the Higher Education Act.

Mr. SIMON. You mentioned the requirement—what did you call it again—the outstanding teacher program.

Dr. POLISHOOK. Talented teacher fellowship.

Mr. SIMON. Yes. The reason for putting the 2-year requirement in is, it is so that you do not acknowledge an outstanding teacher and have that teacher approved and move from a school district in Arkansas where they really need help to suburban Cook County, which has an outstanding school system where they really do not need the help like that rural school district in Arkansas or an inner-city school district in New York City or Chicago.

What you suggest is the possibility of shortening the requirement. What do you think that requirement ought to be?

Dr. POLISHOOK. Well, this is similar to an experience with a program we have in many institutions of higher learning in the United States. There are fellowship and sabbatical programs where professors are permitted for a period of a year, and in some cases more and in some cases less, to take time away from their normal classroom activity to either engage in research or a variety of other professional concerns. And the normal requirement is similar to this proposal, to have them come back for a minimum of a year to the institution that provided the fellowship or the sabbatical, or whatever the program might be. It is our position, based on that

experience, that there are instances in which there would be a constraint and a loss in terms of what the Government is providing for an individual teacher to require that or to compel that, particularly for a 2-year period, in this case.

There may be reasons that serve good public purposes for people who have been successful teachers and having availed themselves of the opportunity in this program to go on to other professional opportunities, whatever they might be. That is why we say the constraint here compelling the person to come back for a 2-year period, while we understand it and it has its reasons, might be too restrictive.

We would suggest either consideration of a shorter period, possibly a year, or alternatively, and/or I should say, possibly consideration of some form of waiver of the requirement, if a particular public purpose might be served by a person not coming back to their district.

In fact, someone who has availed themselves to this opportunity might, under favorable circumstances, be picked up by a congressional committee to serve their own interests, which would be I think a much wider forum of public service than going back to the classroom. In our experience with college professors, these are not normally people who do not want to go back to teaching, back to their institutions, but people whose particular skill, already recognized, should have a wider area in terms of contribution.

Mr. SIMON. Mr. Ackerman.

Mr. ACKERMAN. I just want to add my personal thanks to Irwin for his expert testimony; and on top of that, for responding to us so quickly to our call. We were running a little short on time and you got here in such a quick fashion and we do appreciate it.

Dr. POLISHOOK. Typical of New York, the biggest problem in getting here is parking and traffic.

Mr. SIMON. We thank you not only for your testimony but for what you are doing in this field.

Dr. POLISHOOK. Thank you.

Mr. SIMON. We will now take a recess for lunch and return at 12:30.

[Luncheon Recess.]

Mr. SIMON. The subcommittee will resume its hearing. We are pleased to have joining us our colleague from New York, Representative Major Owens, and we will welcome you to the subcommittee.

Our final witness before hearing the panel of presidents is Melvin Lowe, the chairman of the University Student Center from the City University of New York. We are pleased to have you with us here today.

STATEMENT OF MELVIN LOWE, CHAIRMAN, UNIVERSITY STUDENT CENTER, CITY UNIVERSITY OF NEW YORK

Mr. LOWE. I thank you for this opportunity to comment on the reauthorization of the Federal Higher Education Act. I am Melvin Lowe, chairman of the University Student Senate. In this capacity I represent the 180,000 students of the City University of New York. It is on their behalf that I make this statement. I will con-

centrate on the student's point of view and leave the facts and figures for the many experts that will testify before you.

First let me say that I am living proof of the positive effects of Federal financial aid to students. I am currently a junior at Hunter College campus of the City University. I am able to attend college because of a State and Federal financial aid package. I, and students like myself, are grateful for these programs.

Yet CUNY students need more because we are different. Discard the image of a 19-year-old from a family of four. The average CUNY student is over 25 years of age and can be classified as low- to middle-income. Fifty-four percent of the population is minority and sixty-one percent of the graduates are women. A significant number of students require extensive support services. For many CUNY students, they are the first from their families to attend college. For even more, attending CUNY is their only opportunity to end the cycle of poverty.

Tuition increases and shifts in Federal and State aid policies make it more difficult and cause alarming drops in enrollment. For our students, adequate financial aid is crucial. Although CUNY is the largest recipient, nationally, of Pell Grants with a total of 80,000 awards, programs as they stand do not totally cover the expenses most students face. As a result of this gap, many who are interested no longer have the option of higher education and those that do are taking on unmanageable debts. For us reauthorization is vitally important. Today, as when it was established in 1965, the Higher Education Act is designed to promote opportunity and access. The new proposals before us will help to update the original structure to the reality of the current high costs of higher education.

Students are happy to see the recommendation that Pell become an entitlement program. We hope this results in practice that every student that is eligible will receive awards. We are pleased that the maximum award will be raised from $1,900 to $3,000 and we hope that raising the ceiling for income eligibility to $40,000 will assist those from the middle class. However, students are still leery of financial formulas that lower maximum awards such as the half-cost provision and the unreasonable living allowance category. Most distressing is the possible imposition of a 5 year limit on Pell Grant eligibility that directly affects CUNY students who normally finish their programs in a period of 5 to 7 years.

Students look with great anticipation to the rulings because our futures depend upon it. Unless students have the opportunity for adequate financial aid, they will not be in a position to prepare themselves to make a contribution to the future of this country.

Thank you, Mr. Chairman. I will be glad to answer any questions at this time.

Mr. SIMON. We thank you very much and we appreciate your being here. Let me just add that what the students have done, represented through you here, is to take a real interest in legislation. And when we passed the bill, there was no question that students played a very important lobbying role and a role in what the final outcome would be. You mentioned the limitation on Pell Grant eligibility. This was set out in part so that we do not have people who

are just in a sense continuously students, but who are not making satisfactory progress so that we have some kind of a limitation.

Do you have any suggestions as to how we get around that problem?

Mr. LOWE. What happens in the city university, as I stated, students are there longer because of working, they have to work, and it is not a normal process whereas they go to college for just the straight 4 years. It usually take's them longer.

Right now I will not have a recommendation but we are really concerned about it and we hope that you would look into it, because what happens is that after the Pell awards are finished, then students usually have to drop out because there is no more money. So that is top priority on our list.

Mr. SIMON. Mr. Ackerman? Before I introduce Mr. Ackerman, I have to say that he took us to a deli in Queens here for a sandwich—what was the name of it?

Mr. ACKERMAN. Ben's Deli on Queens Boulevard.

Mr. SIMON. Ben's Deli on Queens Boulevard. Make sure we have that in the record.

Mr. ACKERMAN. I just wanted to say that despite the commercial plug, we did pay for the bill.

I also want to thank you for the fine work that you are doing as a student advocate here in the City of New York, and your work is certainly well-known to me and the members of the subcommittee. We want to congratulate you and thank you again for your participation.

Mr. SIMON. Mr. Owens.

Mr. OWENS. I wondered if you had any facts or statistics on how many students take several years?

Mr. LOWE. I do not have any facts, but maybe the chancellor does. I would not have those facts now.

Mr. OWENS. Thank you.

Mr. LOWE. We have registered close to 25,000 students with our voter registration cards, so that is something that I would like to put on the record, that we are getting actively involved and we like to get involved in the political process and elect people like yourselves who are looking out for education and making education a priority.

Mr. OWENS. I did not ask you that question, but I thank you for the information.

Mr. SIMON. Spread the word on that last item to the State of Illinois.

Now, we will have our panel composed of Chancellor Joseph Murphy of the City University of New York; Joseph Sciame, representing St. John's University; Dr. Saul Cohen, president of Queens College, Dr. Walter Hartung, president of the Academy of Aeronautics; James Whelan, president of Ithaca College, and Dr. Donald Scherl, president of Downstate Medical College.

I do not know if you are all here or not, but if you will just get yourselves around the table and we will pass the mike from one to the other. We will have the others add to the panel as they arrive.

Chancellor Murphy, we are happy to have you as a witness once again.

STATEMENT OF DR. JOSEPH MURPHY, CHANCELLOR, CITY UNIVERSITY OF NEW YORK

Dr. MURPHY. Thank you, Mr. Chairman. My distinguished colleagues, Melvin Lowe was asked a question and I would like a chance to respond to that. As a consequence of a study that we just made.

Mr. SIMON. Your mike is not working. Please try to speak up louder.

Dr. MURPHY. We discovered recently that only 11 percent of our students complete a bachelor's degree in 4 years. We followed that class through over an 8-year period and discovered that after 8 years, 62 percent of them completed their bachelor's degrees, which was even higher than the national average. It indicated two things to us, rather eloquent piece of data: One, the enormous amount of courage and sacrifice our students demonstrate in getting a bachelor's degree, because it does take them so much longer; and, second, and for vast numbers of them other than the City University of New York, there would be no opportunity for education.

Mr. SIMON. Are these full time students or mostly part time?

Dr. MURPHY. Both. The comparison is almost impossible to describe. That, by the way, is a number that has been consistent in the City University and prior to that City College since 1847.

Mr. ACKERMAN. I just must add that it took me 5 years, but I stuck to it.

Dr. MURPHY. I have submitted testimony and will read only selected paragraphs.

Thank you for this opportunity to testify on the reauthorization of the Higher Education Act. This act provides more than $160 million to the City University, almost all of which is in the form of student aid. About two-thirds of our students rely on Federal aid to meet the costs of attending college.

Those costs are considerable. CUNY's tuition is $1,225 a year, higher than most public colleges, and there are constant pressures to increase it. Our students also face nontuition attendance costs ranging from $2,800 to $6,000 a year. This is an extremely heavy load to impose on a student body that is anything but affluent; more than half our students come from families with incomes below $12,000; more than 40 percent have incomes below $9,000.

I am convinced that today's Federal student aid structure is not as healthy as it should be. The original intention behind the student aid programs has been undermined over the last 12 years. In rewriting the law, Congress needs to bring the reality of these programs into line with their basic purpose.

The bill you recently introduced is a serious and inventive attempt to accomplish this aim.

ORIGINAL STUDENT AID PURPOSES UNDERMINED

Today's Federal student aid structure dates from 1972. Then, Pell Grants were seen as a basic foundation of aid that, coupled with an appropriate family contribution, would be enough to allow even the neediest student to attend a local public college or community college, at the same time, Congress recognized that a financial gap would remain in many cases, especially at high-cost pri-

vate colleges. Thus, the law included a second-tier system of grants, loans and work study to guarantee access and provide some measure of choice, allowing students to pick colleges best suited to their aspirations.

Although the reality was never this simple, it was common to speak of student aid as follows: Pell Grants for access; the other programs for choice. Pell Grants as a voucher, an entitlement; the other programs as a second tier of support.

That basic concept made sense then, and makes sense now. The problem is that today's reality is far out of line with the original program purpose. There are a number of reasons for this.

The most important reason, of course, is funding. The situation is clear; college costs have gone up rapidly over the last 12 years, while student and funding has risen much more slowly, and sometimes slipped backward.

As a result, the purchasing power of student aid has declined and the concept of Pell Grants as an access program has gone by the boards. In 1979, for example the maximum Pell Grant covered about 46 percent of average college costs; now, it only covers 31 percent, a 15 percent decline.

Plainly, students of modest means cannot make up that big a decline with their own resources. Increasingly, they have faced the unwelcome dilemma of either dropping out of school or taking a guaranteed bank loan. Most people chose the loans, and, as a consequence, guaranteed loan volume has gone through the roof and students everywhere are assuming unmanageable debts, with predictable social costs and runaway default rates.

Clearly, this is not what Congress had in mind when the student aid structure was conceived. At the same time, low student aid budgets have kept in effect two legal provisions that undermine the voucher like quality of Pell Grants. One is the so-called half-cost rule and the other is the Pell Grant commuter allowance. Both these provisions would have been modified or eliminated with more student aid funding.

Under the half-cost rule, a student entitled to a $1,900 Pell Grant can get the full $1,900 if he or she goes to a high-cost school, but can get no more than $1,600 if he or she wants to attend the City University of New York. This is because the Government says the cost of attending CUNY cannot be more than $3,200, and the grant cannot exceed half the cost.

Under the commuter provisions, students who live in college dormitories can use their actual room and board expenses in computing their Pell Grants, but students who live offcampus have to accept a Government-approved expense allowance that is unreasonably low. Last year, this subcommittee took the lead in raising the commuter allowance, for which we are grateful, but even with this increase, the allowance is between $1,300 and $4,000 less than actual expenses at City University.

The effect of the half-cost provision is to provide a larger Federal subsidy to high-cost colleges than low-cost colleges, and to encourage all colleges to raise their tuition. The effect of the commuter allowance is to give preferential treatment to dormitory students in computing student aid grants. It seems to me that these effects are contrary to the basis purpose of Pell Grants, which is to help

students, not institutions, and therefore, to treat students in the same financial circumstances equally.

What we need is a renewed commitment to the principles Congress tried to enunciate in 1972. We need to get back to the concept of Pell Grants as a basic access program, with a second tier of programs to cover any remaining gap.

The Pell Grant formula embodied in your bill is clearly an attempt to move in this direction. It would make Pell Grants an entitlement. It would provide $3,000 a year to students eligible for the maximum grant. This would be a large step toward fulfilling the program's basic mission, and you deserve great credit for this initiative.

I must note, however, that there is one important way in which the Pell Grant proposal fails to fulfill its potential, namely, the formula for computing grants, which, in several respects, would perpetuate the unfair treatment of students at low-cost colleges.

The computation formula has two parts. The first part lets the student count three-quarters of his or her tuition and books toward the grant. The problem with this provision, like the half-cost provision I described earlier, is that it would provide a differential subsidy to high-cost colleges.

The second part of the formula counts a living cost allowance toward the Pell Grant. The problem here is that the proposed allowance falls far short of actual living costs. For example, the formula would only cover between one-quarter and one-half of the costs faced by students at my university.

The low-living allowance would not prevent students at high-tuition schools from getting the maximum Pell Grant, but students at institutions like mine would lose out. For example, the formula would take between $200 and $600 off the top grant for students at the City University. This disparity would get worse each year, as the maximum grant rises with inflation but the living allowance remains frozen.

Mr. Chairman, I urge you and the subcommittee to change the computation formula to reflect your commitment to educational access. Preferably, you should make Pell Grants a true, tuition-blind voucher, just as you would make the program an entitlement. I understand that this approach was taken in an earlier draft of the reauthorization proposal.

If, however, you want to retain the basic formula in this bill, I urge you to return to another idea put forward in earlier proposals, the idea of a $2,000 across-the-board living allowance, adjustable for inflation. Although students at the City University would receive somewhat less than the maximum grant under this proposal, it is much fairer and simpler than the formula put forward now.

I also recommend that you take another look at the idea of imposing a 5-year limit on Pell Grant eligibility. In dealing with the underprepared or nontraditional student, a year or two of remedial work is often necessary to bring academic skills up to par; over half the students at the City University fall into this category. This type of remedial work has always been accepted for Pell Grant support.

Imposing an eligibility time limit would cut off students who have been through remedial programs just as they are about to

complete their baccalureates. In other words, the provision would affect the students who have come furthest, the ones who are just about to reach their academic goals. This seems contrary to the general thrust of your proposal, and should be reconsidered.

To sum up, I think a number of changes in your Pell Grant package are needed to enhance its effectiveness, but, at the same time, the overall thrust of your proposal would be a great improvement over the current state of affairs.

I am also interested in another element of your student aid proposal, the idea of consolidating a number of student aid programs into a new block grant.

The City University would welcome the flexibility that a block grant offers. We believe that moving from a State-based distribution formula to a need-based formula is the only fair thing to do in a time of limited resources. Again, some details of the proposal may need ironing out. For example, I am concerned about requiring an institutional match for grants made under the block grant program. The fact is that some schools are not in a position to meet a new matching requirement, and the schools least equipped to meet the requirement may be the very ones whose students need grants most. I hope you will reconsider this provision, but, overall, the block grant concept has promise.

I want to briefly note and commend your bill for providing new visibility and funding for other programs which provide essential services to our students: programs like TRIO and graduate fellowships. These programs play an important role in helping the City University fulfill its special education mission, and it is good to see them enhanced.

Finally, as the programs covered by the Higher Education Act are of great concern to us, I have agreed to chair a new National Pell Grant Coalition, which will be formally announced shortly.

The coalition will involve about 20 national education groups, student groups, labor, civil rights, and ethnic groups. Our goal is to push for a higher Pell Grant budget and remove some of the program impediments I described earlier. We hope to bring national focus and publicity to the Pell Grant Program, and stimulate the development of State coalitions that will promote Pell Grants with their own Congressmen and Senators. I am very excited about the prospects for this effort, which, I believe, will supplement many of your own activities.

For the people who need Pell Grants, Federal aid can be the difference betweeen college and no college. Three-fourths of Pell Grant recipients come from families with incomes below $15,000. Over 40 percent are self-supporting, about one-third are minorities.

In reauthorizing the Higher Education Act, I hope the subcommittee will focus on providing an adequate level of aid, a predictable level of aid, and a sensible structure of aid. There are a number of ways these goals could be achieved, but the bill you have put forward, Mr. Chairman, with some alterations, would go a long way toward accomplishing these aims.

Thank you very much.

Mr. SIMON. Thank you for your excellent testimony.

Our next panel member is Joseph Sciame, vice president for financial aid at St. John's University. We are glad to have you here today.

STATEMENT OF JOSEPH SCIAME, ON BEHALF OF ST. JOHN'S UNIVERSITY

Mr. SCIAME. I am representing today, Congressman, our president who, unfortunately, must be at our other campus. We are being visited by our new archbishop and the university is officially greeting him on campus at this point.

Permit me to take this opportunity at welcoming each of you to the very diversified and every-growing borough of Queens, NY. St. John's University has been and continues to be a part of this complex and urban county with a unique ability at offering a quality private higher education at a reasonable cost to the student consumer.

Since 1870 when St. John's University was founded by the Congregation of the Mission, better known as the Vincentian Fathers, our institution of higher education has continued to grow in numbers and welcome into its halls needy students. In fact at our groundbreaking ceremony in 1868, Governor Lowe of Maryland, hailed St. John's as "* * * a college for the education of * * * youth * * * without distinction of religious belief, political opinion, or social condition * * *." Today St. John's boasts of a dual-campus operation, one in Queens and the other on Staten Island. Our overall enrollment this academic year exceeds 19,250 and includes students in seven undergraduate colleges with four graduate schools and division and a school of law. The graduates of St. John's University have entered every field of endeavor and have been recognized for their contributions to our society by their dedication and high moral standards learned while at the university during their course of study which includes theology and philosophy course requirements.

The education of our graduates could not have been accomplished at such reasonable tuition rates were it not for the sacrificing efforts of our religious, the priests who administer our university. The education of our graduates could certainly not have been accomplished without the dedication of faculty, administrators and staff who earnestly believe in what we do, the education of the whole student in body, mind and heart.

As a private institution of higher education with long standing Roman Catholic traditions, the university does not receive any direct subsidy from Federal or State supported funds. Therefore, St. John's University has been an early supporter and proponent of Federal funds under the title IV programs which are available currently to eligible students in order to attend the college of their choice. Since 1958, the university has participated in all campus-based programs of financial assistance, the least important program which has not been the National Direct Student Loan Program. It has been gratifying over the years to have returning students bear witness to the extent to which this one loan program has assisted them in meeting their student budgetary expenses.

While the dedication of religious, faculty, staff and the self-initiative of students has been praiseworthy, it has been the actual dollars which have been recieved by students through Federal aid programs that has made choice and access possible for students. I might take this opportunity to point out that we are most grateful in New York State for the presence of the tuition assistance program, TAP, a State grant program geared to students with parental net taxable income of under $25,000. Last year 1982-83, some 7,000 university enrollees received TAP thereby attesting to the serious family income needs of our students.

The university has been able through its own diversified academic programs to challenge the minds of students, but it has been the financial support received from Federal and State sources of assistance that has made it all a reality. In a time of continuing spiraling tuition costs, St. John's University has been able to maintain a reasonable rate for students.

I also wish to point out that in the same academic year, 1982-83, the university provided $6, million of its own tuition funds to needy and qualified students.

Again, this has been no easy task and at the same time the needs of students in qualifying for available resources is ever present. In 1981-83, the financial aids received by St. John's students hit an all time high of $36, million for some 13,000 students. However, rest assured this could never be enough were it not for the sacrifices of parents and students who work diligently in meeting their respective expenses. Over 75 percent of our students are employed after school hours in order to meet expenses for a totally commuter-based university at both campuses.

While we boast of our proximity to Manhattan for the purposes of job availability, we are also realistic in that there are never sufficient positions for part-time student workers who are pursuing full-time study. The challenge of meeting one's student budget at St. John's University is exacerbated when one reviews the family size, diverse cultural backgrounds, and complicated family situations of our students. The ongoing witness to the increased numbers of one parent families causes us great concern.

There are many days in the operation of an Office of Financial Aid, such as St. John's, when one wonders how to possibly meet the needs of 9,920 student applicants, as was the case last year. Permit me to emphasize that there is no way to meet those needs. Our present day system of financial aid programs is purely a rationing device and all one can hope for is that those who qualify receive as much as needed in order to accomplish their education goals.

As we review the contents of the fiscal year 1985 budget recommendations and legislative proposals, and legislation reauthorizing the Higher Education Act of 1965, we naturally applaud the past Federal efforts and look toward the future with much hope.

And we wish to focus in on three areas: We are extremely supportive of the concept of substantially increasing the Pell Grant awards commencing with the maximum of $3,000 in the 1985-86 academic year. It has been near impossible at times since the initial year of Pell Grants, previously BEOG, to ascertain early enough as what amount award we could commit ourselves. As the overseer in an area of university administration, which has respon-

sibility for recruitment of students and effective financial aid packaging it is essential to plan ahead for students and their families. I would point out, however, that while we appreciate the Pell Grant Program, we have noted since 1981-82 when we reached an all-time high of recipients of 3,930, that our Pell recipients have declined to 3,479 in 1982-83 and we feel will decline further this year to 3,200. The reason? The assessment rates do not afford needed consideration for moderate- or middle-income families. We urge immediate attention in this area and an early resolution in order to enhance the Pell Program as it was meant to be, an entitlement program.

Second, we are extremely excited and supportive regarding the possibility of providing a Pell Grant for the first year of graduate or professional study since we are affected in two very opposite directions today with enrollment trends. On the one hand, we hear constantly from prospective graduate students who are concerned about taking more loans after graduation and who seek out grant support for graduate study. On the other hand, our law school students, while in abundance in terms of applications and acceptance, have such costly tuitions that they are truly in a financial crunch, and oftentimes dissuaded from attendance. The ability to use the Pell Grant for graduate or professional study even for the first year would certainly alleviate some concern on the part of many students.

We are fully in support of increased loan availability but wish to speak in behalf of the current National Direct Student Loan Program. We recognize that for some in the world of big business and money it is difficult to imagine a loan program at a 5-percent rate of interest. However, this program has been one which involves the triangle of Federal Government, institution, and the student. In many instances, it has been a hidden grant program, sometimes because of its low interest rate, which has helped immeasurably in the packaging of students.

We are in support of a Guaranteed Student Loan Program which provides more flexibility in terms of eligibility. Many students are currently precluded from the program due to income levels, which appear high, but are not in a geographic location such as New York City and the surrounding suburban areas. Therefore, we feel that the adjusted gross income level should be raised from the present $30,000 to $65,000 with a needs test. The maximum loan per year should be raised as soon as possible to at least $3,000 for undergraduate study and at least $7,000 for graduate or professional study.

While there were times in the past when I personally questioned the goodness of recommending increased loan amounts for student borrowers I have also seen what a conscientious debt management program can do at an institution such as at St. John's. For us as professionals to allow increased loan limits appears to me to be reasonable; however, for us as a society not to incorporate or insist upon viable means of debt management counseling would certainly be a violation of our professional integrity. It seems to me we each have a responsibility to ascertain reasonable loan limits within the framework of our work world to which our graduates will enter. That responsibility if seriously taken, will provide access and

choice to our students through affordable and reasonable loan programs.

While we at St. John's University recognize that there may be new initiatives which can be instituted during the reauthorization period, we wish to also acknowledge the success of the current Federal program configuration of grant, work study, and loan. At times there seems to be a feeling that these Federal programs have been successful but have been difficult to assess in terms of their real value to students and families. Allow me to state that one afternoon at graduation ceremonies at almost any campus in our great country will bear witness to the fact that students and families are not only appreciative but most of them have made it through the educational processes only because of Federal student aid programs.

My personal and professional wish is that we continue as a democratic society with our financial commitment to the educational goals of our society, and that if anything, we do more for students. I feel confident it will be returned a hundredfold by an educated society that will make it a better world for all our tomorrows.

Mr. SIMON. We thank you very much, Mr. Sciame.

Our next panel member is Dr. Saul Cohen, the president of Queens College. We are very pleased to have you here.

STATEMENT OF DR. SAUL COHEN, PRESIDENT, QUEENS COLLEGE

Dr. COHEN. Congressmen, we are very pleased to have you here. My bishop is with me this morning, the chancellor, so I am not going to repeat.

Mr. SIMON. He refers to himself as the pope.

Dr. COHEN. I am not going to repeat what most presentations focused on because I think most of us agree with most of the provisions. I would rather talk about linkage, leverage, and piggybacking.

Now, I am not asking you to rewrite your magnificent statement completely, but I am asking you to think of some issues which have really been chronic in most Federal legislation. Let me start with something that is very close to my own heart, and that is title III of the Black College and Universities Act, which I think very rightfully are projecting as a very specific need which has to be responded to within title III legislation. There is a piece there about the promotion of new academic programs for black colleges.

In various fields, engineering, language, premedicine, et cetera, et cetera. I would like to see that particular piece of title III linked to some other elements in the proposed legislation. When a student graduates from one of the black colleges, from a particular department, a particular department, a particular discipline, I think the issue of trying to create portable scholarships will follow a graduate from a title III—an outstanding graduate—from a title III institution on, let's say, to a graduate national and language studies program in one of the other titles—I guess it is title VI, all of which would tie in a title III program with the merit scholarship program for talented teachers of title V.

So I think that as we zero in on these colleges, we have got to use some of the other programs that we have to identify their better students while they are at those colleges and supporting them directly, or as they move out of those colleges into graduate and professional fields, where we want them to make their mark.

To ask you to rewrite G-Prop (ph.) and I was involved in G-Prop at its very onset, there is one item in G-Prop which I think needs your attention. I believe that G-Prop continues to omit support in the field of education. I think it is assumed that other pieces of legislation will handle G-Prop. And I think the basis for it is that, well, that is and area where minorities and women are already heavily, at least they are more well represented in education than in other areas, true.

But on the other hand, in a city like New York, certainly, our problem is to attract the most talented of minority students in the teaching profession; the best in the ranks. And not simply into the classrooms. That is, not simply into the meritorious teacher grouping. It is also attracting them into leadership positions in research and evaluation. Therefore, I would like to see you reconsider that issue of making some of the G-Prop graduate fellowships available to students who move through this particular route from title III colleges.

I feel rather keen about this. Years ago, back in 1965, I was executive vice president of my own professional association. We had two blacks who had Ph.D.'s in our field. Our problem was to open up our field to black Ph.D.'s. I began to work with black colleges, and this was a time when we could not identify scholarships directly to blacks. So we had to crouch in all types of terms. We came up with a term that said we would provide 3-year fellowships for students from small disadvantaged colleges in the South. Now believe it or not, a few whites crept into that program. But on a 10-year period, we got this through the UCOE, we brought 55 black Ph.D.'s into our field. For a small field that made a difference.

I believe there has to be more of a tie-in of G-Prop to the particular disciplines and involving the associations in bringing consortia of universities which will try to focus on fellowships in those particular fields with their students.

One more item: you have referenced the problem of blacks, you have referenced the problem of Hispanics, and rightfully so. I think we, again in this city, and I am sure it is true on the west coast, have one more minority group which cuts across race and color, and that is new immigrants.

I would like to see a piece in title III, and I know there are no institutions for new immigrants, but typically there are lots of institutions, we are one of them, we have 4,300 students who have come recently from foreign countries. We can use and we do use, as a matter of fact, title III support to try to strengthen our outreach to this particular class.

One final point about linkage and leverage: title V, the merit scholarships. You have that program, 10,000 merit scholarships, and you also talk about a talented teacher fellowship program. I think they are both extremely important. But I would like to see the latter tied to the former. I think it makes more sense to attract bright youngsters into the field of education by giving them merit

scholarships and then let them exit with portable fellowships, which do not have to spare the $20,000 a year in one contract. A student entering the teaching profession, if that student were given as a fellowship, let's say, $5,000 a year for 4 years, to use that fellowship to keep progressing professionally, you might get a better mileage out of that 10,000 merit scholarships that you are talking about. Otherwise, I think we will go the same route as the NEA fellowships, which were very good for what they did, but never ended up doing what they were supposed to.

If you want to divide that $20,000 into four, you could create roughly 8 fellowships per congressional district, and that would mean what, 3,000 students? So maybe one out of every three graduates of your merit scholarships program might be entitled to the teacher fellowship program.

Well, I do not think I should say any more except to commend you, especially in the arts and sciences. By all means, push very hard for title VIIB, matching grants for lab research and other instructional equipment. It is a crazy world where we pour money into buildings, we are pouring money into fellowships. We do not have the equipment, which is another investment in human resources to keep our students, and I am talking about undergraduate, as well as graduates, competitive with what is going on in the rest of the world. Thank you.

Mr. SIMON. Thank you, Dr. Cohen.

Dr. Walter M. Hartung, president of the Academy of Aeronautics.

STATEMENT OF GEORGE BRUSH, PRESIDENT, ACADEMY OF AERONAUTICS, LaGUARDIA AIRPORT, QUEENS COUNTY, NEW YORK CITY

Mr. BRUSH. Dr. Hartung is not here. I am George Brush and I am speaking in his place.

Mr. SIMON. We are happy to have you here.

Mr. BRUSH. I am George W. Brush, president of the Academy of Aeronautics located at LaGuardia Airport in Queens County, New York City.

The Academy of Aeronautics is a private college which devotes its entire resources to aeronautical engineering technology education. It is the only school of its kind in this region.

The availability of adequate financial aid is imperative for substantial numbers of young men and women who seek access to private education. Freedom of choice and equal access are critical among the population served in our urban areas such as New York City. Open access is an important element for many low income and minority students who are seeking productive lives in our high technology society. Any diminution in funding is certain to have an adverse impact on open access and equality of opportunity.

Accordingly, the Academy of Aeronautics supports changes in the Higher Education Act which will serve to implement the objectives of freedom of choice and equal access to higher education.

It is essential that the time from application to delivery of funds be held to a realistic minimum. Any needless delays tend to

become serious discouraging factors for the individual student and a cash flow problem for the institutions.

Confusion resulting from funds processing, changes in funding, or administrative delays leads to hardship which too often results in discouragement. Therefore, the legislation should seek to eliminate every potential area of confusion and delay.

With respect to the Guaranteed Student Loan Program, we advocate the definition of independent student as used by the Higher Education Services Corporation in New York State. Students over the age of 22 who claim financial independence should provide documentation to the college financial office for its determination of independence within the Federal guidelines.

It is recommended that the income cap for dependent students be increased to $50,000 with provisions for annual review and adjustment. The cap for independent students appears to be adequate at $30,000 for the 1985–86 year. Again, provisions for annual adjustment would be highly desirable.

The origination fee which was instituted in the face of very high interest rates should be reexamined. The loan limits for junior college students at $2,500 per year appear to be satisfactory, provided the origination fee is removed.

The concept of a lender-of-last-resort is needed to assure those students who have exhausted other financial aid sources of an opportunity to obtain needed funding.

With respect to the Pell Grants, entitlement status is desirable since the number of potential awardees may exceed the congressional appropriation. A funding shortfall can affect significant numbers of needy students.

The Pell Grant amounts appear adequate for 1986 at $2,900 per year, for 1987 and 1988 at $3,000 per year, and for 1989 and 1990 at $3,100 per year. However, projected college costs over this 5-year period can be highly inaccurate since they are based upon considerable speculation. If adequate funding levels are to be achieved, periodic adjustments to current college costs will be required. In the unlikely event that costs are reduced, means can be available for appropriate adjustments in the level of funding.

The importance of Pell Grants to the Academy of Aeronautics student body can be seen in the fact that over 70 percent now benefit from the Pell Program. They have access to this unusual career education largely because grant moneys are available. In the absence of adequate funding, some capable young men and women will be forced into other career areas.

It is important to provide a Pell Grant delivery system that will reduce the period between the application and funding. The availability of a State-level authorization would have significant benefits. In New York State, an authority is already in place through the Higher Education Services Corp.

We recommend further that any reduction in awards caused by reduced fund levels be distributed through a formula which protects the needy students.

Responsibility of the institution for administrating the Pell Program has grown to such an extent that an administrative allowance of $20 per student now appears to be justified.

The campus-based college work study program rightly is a significant element in the self-help concept. The legislation should assure that the college work study funding is acceptable as the self-help element in each student's financial aid package. Accordingly, we urge that the college work study proposal be funded in full.

In summary, we strongly urge procedures which will streamline the delivery system while retaining the integrity of the eligibility criteria. In significant numbers, students become impatient with unexpected or unusual delays and may withdraw from their educational programs on the basis of this frustration. Clearly, this defeats the purpose of every aspect of the financial aid program.

We appreciate this opportunity to address the subcommittee at this hearing on the Higher Education Act.

Mr. SIMON. Thank you for being here.

Our next witness is James L. Whalen, the president of Ithaca College.

STATEMENT OF JAMES WHALEN, PRESIDENT, ITHACA COLLEGE

Mr. WHALEN. Good morning. I am James J. Whalen, president of Ithaca College, and I am pleased to have this opportunity to testify as chairman of the Federal Relations Committee for the commission on independent colleges and universities in New York State.

The Commission represents 116 nonprofit New York State independent postsecondary institutions which enroll over 405,000 students. New York's independent sector is the largest sector in the country.

I cannot emphasize enough the critical nature of Federal student aid in providing meaningful access and choice for students in our State. Annual prices at independent institutions are as high as $15,000 for undergraduates and $25,000 for medical students. Although these prices sound extremely high, the cost of educating students is almost identical in all sectors; the price to students differs substantially because of State tax subsidies at public institutions.

The recommendation for the 1980 reauthorization of the Federal Higher Education Act promised a lot but gave much less than promised. We are most concerned that an inadequate reauthorization will result in limiting students' choice to low-priced community colleges receiving high local and State-taxpayer subsidies.

The underlying constitutional purpose of Federal aid to students is to provide equality of opportunity. That means students must have available to them the resources for choice so that economic status is not a segregating fact of life.

PELL GRANTS

Unfortunately, the structure of many of our Federal programs serves to limit student choice while ostensibly increasing the accessibility to college. This is especially true of the major Federal program which provides Pell Grants on the basis of need. Pell Grants are insensitive to price differences in the various sectors of higher education. They fail to take into account the major stream of Government support for higher education, which is direct appropriations to governmentally operated public institutions in the States.

The Federal Pell Grant Program uses a synthetic level of cost of attendance which now totals $3,800, and has no relationship to actual costs. This is especially true in the independent sector where the national average cost of attendance is currently $8,440. In New York State the cost of attendance for students who reside at State university campuses is also above the Pell Grant $3,800 level.

The current Pell Grant distribution formula based on this unrealistic level of costs is effectively defeating the purpose of equalizing higher education opportunity. Low-income students are not receiving equal opportunity. As shown on exhibit 1, a resident student who qualifies for a maximum Pell award presently receives $1,900 whether attending a college where the tuition price is $1,000 or one where the tuition price is $8,000. Similarly, under the reauthorization bill introduced by Congressman Simon, the maximum Pell award would equal $2,975 for a resident student where the tuition price is $1,000. For a resident student where the tuition price is $8,000, the Pell award would be $3,000, only $25 more.

Nationally, the average tuition price in public 2-year institutions averages $621. A commuter student living at home attends a community college charging that tuition and whose family earns less than $14,000 receives $1,075 from a Pell Grant. The same commuter student attending an independent institution where the national tuition price averages $4,627 receives a Pell Grant of $1,900. Thus, while actually facing a price differential of over $4,000, the Pell award differential is only $825.

As shown in exhibit 2, these same commuter students attending 2-year public colleges in fiscal year 1985–86 would receive 91 percent of their total cost of attendance, after the family contribution, from their Pell awards under the proposal by Congressman Simon. If we look down the exhibit to the line for "Guaranteed Student Loans," we see that students attending public institutions will have low-borrowing levels and no unmet need, while students attending independent sector institutions will be borrowing the maximum GSL and still have a substantial unmet need requiring additional indebtedness at higher interest rates.

We believe that Mr. Simon is right in suggesting that the maximum Pell Grant for 1985–86 be raised to at least $3,000. But, in the name of equity, and the encouragement of voluntary integration across our higher education system, we believe that every eligible needy student should receive the same percentage amount of their actual college costs from a Pell Grant. This percentage would be determined by the amount of funds allocated to the program by Congress as a proportion of the gross remaining need of all students eligible for Pell Grants. The cost of attendance should include actual tuition and fee charges and an average allowance for room and board that is reasonable, plus a set amount of approximately $600 for books and personal expenses.

Given the enormous disparity in State funding of public and independent higher education, the Pell Program has unwittingly become an instrument for limiting student choice. This is because Pell's tuition price insensitivity leaves low- and moderate-income students with the unreasonable choice of assuming huge debt burdens if they wish to enroll at an independent institution or no debt if enrolled at a public institution where State and local tax moneys

subsidize tuition price regardless of students' economic circumstance. Given that choice, we are retreating to a de facto segregation in American higher education. And this is happening if we look at the statistics on minority and low-income enrollment in our sector over recent years. Our recommendation for reauthorization would restructure the formula to ensure that low-income students not only have access to, but choice of the institution which they feel best meets their higher education needs.

GUARANTEED STUDENT LOANS

The second most important Federal program for students, especially those attending high priced institutions is Guaranteed Student Loans. The average size GSL for students attending independent institutions was $2,264 in 1981–82. Many of our students are now at maximum borrowing level of $2,375, which is the $2,500 nominal GSL maximum loan minus the 5 percent origination fee and a 0.25-percent insurance fee. The necessity for our students to borrow such large sums each year is troubling to all of us, but it is absolutely essential that students willing to borrow should not be barred from that option if it is necessary to attend the college of their choice.

We suggest that loan amounts for undergraduate students be based upon the student's demonstrated need. The GSL maximum should be increased to $4,000 a year with recommended levels set for each class as follows: $3,000 for freshmen, $3,500 for sophomores, $4,000 for juniors and seniors.

We recognize that higher borrowing levels increase the cost of the GSL program. There are several cost-saving measures we recommend to assure that GSL funds are spent wisely and Federal costs held to a minimum:

First, we believe that all Federal student loans should be based on financial need as determined by uniform methodology;

Second, we feel there should be 100-percent validation for all first-time GSL applicants at every institution;

Third, we believe that a tightening of the emancipated student definition is warranted;

Fourth, we believe the Internal Revenue Service should have authorization to withhold tax refunds from students in default on their GSL's. For defaulters not eligible for tax refunds, the amount of their defaulted loan should be added to their Federal tax obligation with appropriate interest penalty.

We are extremely concerned about the maximum income ceiling of $65,000 for GSL's that is contained in Mr. Simon's reauthorization bill.

For a student from a family of five, with an income of $75,000, the current family contribution equals approximately $13,000. Presently, this family does not qualify for a GSL at institutions with costs below $13,000 but may qualify for a GSL of some amount at institutions priced above $13,000. Several institutions have prices over $13,000 now and by 1985–86, the number will be higher. There is no reason why this family that shows financial need at a college costing more than $13,000 should be eliminated from borrowing a need based Guaranteed Student Loan. Families at incomes above

$65,000 may also have more than one child attending college at the same time, resulting in greater financial need.

Setting such an income ceiling will hurt only independent institutions, making it necessary for many upper middle income students to attend the public sector where the cost of educating the student is the same but the price is heavily discounted because of huge State subsidies.

CAMPUS-BASED STUDENT AID PROGRAMS

We recommend that the campus-based student aid programs remain as they are with the improvements in the allocation formulas and increased funding levels.

The three major problems with the current allocation formulas used for distributing the Federal campus-based aid funds are:

First, the State allocation formula.

Second, the flat $3,000 used for all students for living allowance.

Third, independent institutions are required to report 25 percent of their unfunded institutional aid to determine need for these programs. However, public institutions are not required to report 25 percent of their State tax subsidies.

We recommend that these inequities be addressed and that the funds be distributed where the greatest need exists.

We are not in favor of the Institutional Block Grant Program as proposed in Congressman Simon's bill. We have several concerns, but our major concern is with the proposed allocation formulas. The bill proposes that institutions be allocated funds for block grants and college work study based on their total amount of Pell Grant and Guaranteed Student Loan amounts disbursed to students. The difference in price at independent institutions is virtually ignored by this formula. At many income levels, students receive the same Pell award regardless of the price they must pay. Students may also receive the same Guaranteed Loan amounts.

Pell and GSL combined would meet full need at most public colleges. At independent colleges the allocation formula would ignore all unmet need above the proposed combined maximum Pell and GSL level of $5,500. At a $13,000 priced institution this would amount to ignoring $7,500 of financial need for the lowest income students. Since Pell Grants and Guaranteed Student Loan borrowing levels are not sensitive to the real needs of students based on real prices, allocating Federal funds by this formula will distribute them where they are least needed.

To reiterate, we recommend that the campus-based programs remain as they are and that the current allocation formulas are improved and funding levels increased.

GRADUATE STUDENTS

The current financial aid situation for graduate students is extremely discouraging. There is critical need to increase funds for fellowships and student loans. We applaud Congressman Simon's proposal of extending Pell Grants to first-year graduate students, providing they are awarded based on true need at differently priced institutions. New York State's independent sector enrolls over 49,000 full-time students in graduate and professional pro-

grams. This equals over 70 percent of all full-time graduate and professional students enrolled in our State. The one concern we have with the bill is the language which automatically declares first-year graduate students emancipated. From the viewpoint of stabilizing student aid, and insulating it from political exploitation, I believe the Committee would be well advised to review this language. Consider the repercussions of news stories identifying millionaires' children in graduate programs as emancipated students entitled to Pell Grants.

TITLES VI AND VII

We are warmly supportive of titles VI and VII of the Simon bill calling for a national endowment for international education and reconstruction and renovation of academic facilities.

As the president of an institution which has a high commitment to international education, I am especially enthusiastic about title VI.

Title VII is crucial for the continued well-being of academic institutions. The problem of maintaining facilities is a particularly sore subject for independent institutions. We are falling behind in that field because of the extraordinary increases we have been forced to provide for unfunded student aid. The increase in institutional funds to help low- and middle-income students meet our costs has led every budget category at virtually every campus in the independent sector. Therefore, title VII funds combined with adequate and fair funding of Federal student aid would do much to recover the facilities deterioration that we have witnesses over recent years.

We appreciate this opportunity to share with you our concerns. If there are any questions which you have, I will do my best to respond to them.

Mr. SIMON. Thank you very much, Dr. Whalen. We appreciate all of your testimony. Let me, Dr. Whalen, touch on the block grant recommendations you have made. The reason for the recommendation is that we constantly are hearing about students who fall through the cracks, that institutions need greater flexibility in order to accommodate student aids. The second part of that, and the reason for the formula, and I think, frankly, the formula clearly does need some changing, is that programs have been designed to help needy students. In fact, when we study who we are helping, we are not helping the needy students, we are helping those in middle- and upper middle income brackets. And that clearly is not the intent.

I am desirous of having that flexibility. I am desirous of having great help from the students whom we need to help the most. I would be interested in any further observations you might make on how we could change the formula.

I recognize the problem that the independent institutions face. Are there any suggestions you might have to change the formula so we really do help the needy students but also provide greater, you know, recognize the cost differential here, so that we are not treating your schools unfairly?

Mr. WHALEN. I would say first of all, I realize what that block grant was intended to do, and I appreciate that. We would have some recommendations, I do not know that I could give you a couple off the top of my head today, but I would be glad to give you a few both from the CICU point of view and from the NAIC point of view in Washington. I think we probably could work out some suggestions that you might want to consider.

Mr. SIMON. I would be very much interested in that. And, Mr. Sciame, you mentioned the same line of concern. I would be interested in anything you would propose. I am not saying that we are going to accept it.

Mr. WHALEN. I understand that.

Mr. SIMON. What is proposed, but we also want to move fairly rapidly. We hope that by the end of the month we are going to be in a position to market the bill. So if the two of you could get together with whoever else you are working with to come up with some kind of a formula that can be of assistance, we would appreciate that.

I do not know that I want to shift it away from what the original purposes of helping the needy students is, but I do want to help the needy students at your institutions as well.

Mr. WHALEN. I would be glad to get back to you very quickly on that.

Mr. SIMON. That would be appreciated.

Representing the Academy of Aeronautics, you mentioned something in here that I don't recall having heard before, and that is the need for an administrative allowance for administering the Pell Grant Program. If I can just ask all the witnesses, how much of a chore is this right now? And, frankly, we are trying to keep the bill for this down somewhat and we are already getting a lot of criticism for having a bill that is costing too much.

Mr. BRUSH. I think most schools would respond that if anything has to be cut out, this would be at the top of the priority. It is be-

coming a chore to manage the financial aid aspect of the institution. With a guarantee, all of these other factors entering impact into the financial aid office, it is almost impossible to not increase the staff.

That becomes a chore and problems as far as personnel is concerned. Anything to alleviate this would be helpful.

Mr. SIMON. Any other comments?

Dr. COHEN. From the public sector, we have twice as many people engaged in our—we have twice as many people involved in managing financial aid as we do in academic and psychological counseling. Let me tell you something about the enormous and escalated burden of this issue.

Obviously if we have a choice, an aid program or no aid program, we take the aid program first. But this is a crucial problem I think for all of us. It is not just an independent college problem.

Mr. SIMON. Let us just take your Queens College. You have how many Pell Grant recipients, as a guess?

Dr. COHEN. About 5,500, which is about a third. Our financial aid office has, I believe, what, 13 or 14 in it and we have 6 academic and psychological counselors.

Mr. SIMON. So your school with a $20 per capita would be $165,000?

Dr. COHEN. Right.

Mr. SIMON. I am afraid we are talking about pretty substantial dollars. But anyway, Chancellor, several of you touched on what is the most difficult problem that we face, and that is this 50-percent problem. It is one where the public and nonpublic institutions come up with very different answers. We are frankly going to have a real fight on our hands to pass a bill in these dollar dimensions right now. But the chances move to almost nil if we end up reporting a bill on the floor with the private and public fighting each other.

The Pell Grant Program in theory now, we should be at $2,600, and 70 percent. That was part of the original compromise. We have moved now to $3,000 and 75 percent, feeling that that is in line with the original compromise.

There are obviously a great many people on the public side who think we have compromised too far down, and people in the private side who think we have compromised too far up. Any thoughts that you have on how we effect, or any of you have, on how we effect something that somehow bridges this gap that is here? And we go through this every time we have a reauthorization. It is a very different problem for us.

Dr. MURPHY. May I say two things. First, as a practical matter your compromising strikes us as reasonable. We would like 200 percent, but I am sure that most people in public higher education are governed by the same prudence and reasonable expectations as to what is possible.

General principle has to do with a question that is more basic, that I cannot answer for anybody except obviously for myself, and that is what the appropriate use of public dollars and public resources.

To listen to a referenced made with regard to the plight of the family earning $75,000 a year is discriptive only of the fact that

one of the reasons that we have so much difficult talking to each other is because we are in two completely different universes. I do not make light of the problems of people earning $75,000, but since it exceeds both my income and my president's income and a lot of other people's income in this room, the issue of plight of such persons is clearly—it bears no relationship to the fact that vast numbers of our students are attending institutions such as ours in usual settings largely throughout the country, in public institutions at enormous personal cost to themselves in order to get an education.

Anything you do to put the resources in the hands of those people who desperately need it the most and for whom no education would be possible without it, to that degree you are mandating, it seems to me, a human principle that a commonwealth has and obligation to provide for those who need it the most.

It is nothing in what I have said that ought not to be sensitive to the fact that private institutions have as much of a right to exist as the public ones, but that public ones are created by the public, they are created by our States and by our Federal Government itself and supported by it. We are not independent institutions in the sense that we can make policies that are different from those that are democratically established public policies.

And since people are on record, although less so today than a decade ago, we can recall the first Higher Education Act, I think Mr. James Flood was the Congressman at that time, from the Subcommittee of Labor and Education, coming to Washington to give testimony. He was also drinking out of a similarly colored and sized cup, if I recall. That principle was established in the middle 1960's. It is closed somewhat. And my argument to you and to the members of the committee and to the rest of our representatives is that I pray and trust the political process.

Mr. WHALEN. I would like to make a comment there, if I might. Joe, I am disappointed, but not surprised on the $75,000 income. I had to include that in my testimony, Congressman, because I think it does make a point.

If the chancellor feels that he can decide what income level should exist for people being allowed to make loans, then obviously we have a disagreement on that. I think you overlooked, Joe, the emphasis of my whole presentation, which was not just access but choice.

I spoke of the very needy students who would not be able to go to our institutions, and that was the reason why we were concerned about the way in which some of the formula was being developed. It is not simply a case, as you well know, of a State university or a city university costing less. It is simply because of the taxpayers' dollars, and I would like the taxpayers' subsidy to be included in it, and that that be a part of any formula because we are trying to serve, and I do believe we serve very well, the poor, the minorities.

We have tried very hard. Our financial aid budget in this last 4 years, 4½ years, has gone from $1.5 million of unfunded aid to $6 million next year. We have something on the order of a $1½ million of that in the educational opportunity programs. So I would simply like to balance it a little bit, if I may, and to say that the majority of what I said today had to do with access and choice and

needy students and not $75,000, but you have to take that into consideration.

Mr. SIMON. If I can mediate this debate here for a moment, and some of it I agree with both of you in that I think chancellor, you are absolutely correct that we have moved away from that original intent. And that is what we are trying to do with this legislation, is move it back. There is a problem, however, that you touched upon, and the problem has become more severe in the last 3 years, and that is the economic segregation of American higher education.

Wellesley hit the front page of the Times by saying that it was going to admit four children of poor parents to Wellesley. But many other schools have not hit the front pages but in fact have been forced into this kind of situation. I think clearly Congress wants to make sure that the choice is there, and it is not there.

Mr. WHALEN. I agree 200 percent with that. I would like to add that the average family income in SUNY is higher than the average family income in the independent sector. I think that is very interesting. Not in the City University, I hasten to add. I think that is an interesting thing when you are talking about this.

Mr. SIMON. Our colleague who was an alumnus in this school wants to get involved in this dialog here.

Mr. ACKERMAN. This discussion is intriguing to me. I would like to ask a question. If we set aside the argument that the public institutions were established for those who could not afford to go to private institutions, and we accept, those of us in Congress, accept your basic argument that we should be giving out the grants based on an actual percentage of the costs, when we go to the floor philosophically on other issues, like let us say we are talking about food stamps, how do we adopt the same argument? Should we say that we have to give those people who are poor more food stamps money because they want a free choice of steak instead of hamburger? Should we be then giving those people who want to spend more funds because there diets by choice is going to be different?

Mr. WHALEN. I do not sense I have a colleague on that side of the table. But I would respond: That is a tough question, certainly. But let me say something.

We all serve the public. We all serve the public. And I think the independent institutions serve it very well for a very small amount of money. And I would also say that I do believe that under the University of the State of New York, there is some kind of commitment to a dual system. I think we can take a lot of examples about hamburger and steak or $75,000, but I would rather, I guess, try to come to grips with the problem. As you were suggesting a little bit earlier, if we can get away from some of the rhetoric, perhaps, I think my response was mostly to fix the record a bit, Joe, and I could sit here and debate all day, but I am not sure that it is serving anybody's purpose.

Mr. OWENS. May I comment? As a graduate of an independent college maybe I can help you. Would it be better to phrase what you are saying in terms of at the State level, State subsidies should be given to the students as individuals in the same manner as Pell grants are given? Granted that State institutions already exist, but the amount that it costs the State, the average student in a State university, the cost of State subsidy, if that were made available to

the student instead of to the institution, the student would be free to choose, add that to his Federal subsidy, and he can go where he wants to go.

Mr. WHALEN. Well, I have refrained from that. We have a system, and it is an important system, and Joe's right about that, and we cannot turn it upside down.

Mr. OWENS. I am not sure it would turn it upside down, but merely to create a choice.

Mr. WHALEN. We do need choice as well as access. I think it is tremendously important. And my testimony tries to simply get to the point that if we can be sensitive to the fact that the independent sector and the public sectors cost the same, the pricing is different, because of the tax support given in the State, and therefore Federal programs can be very helpful to us and very helpful in this area.

And I was responding to the $75,000, I think, which I think ignored 95 percent of my expression about trying to have needy students in our institution.

Mr. OWENS. I would just ask a few other questions. One, about the problem of administering the aid program. How does that compare to the cost of fundraising? You spend quite a considerable amount of money raising funds. I do not suppose you spend as much, I imagine the cost of administering your aid program is so infinitessimal.

Dr. COHEN. The administration of our aid program costs us about $350,000 in direct salaries, the administration of our development program, which we pay for from money that we raise, the total cost of about $160,000.

We have a much smaller development office than we have a financial aid office.

Mr. OWENS. Your development produces what percentage of your overall budget versus your aid program?

Dr. COHEN. If you leave out research grants, our development produces only about $1.5 million. Your aid program produces about, what, 6 million is it, or more? I think it is more than that. But you have touched on another issue, Congressman, and that is in the endowment development piece, which is related to what we are talking about, I think it is an excellent idea. I have one modest suggestion. You made it very clear that institutions should receive and award on a one-time only basis. It seems to me that you ought to reward, do an incentive piece in this legislation, to reward an institution which does a particularly good job using that seed money, and you might tie it to an important public aspect. That, as you say, that these endowment moneys are for universities' discretionary purposes.

But if a university does very well using that seed money, if, for example, he uses that endowment for what are clearly publicly valuable purposes such as scholarships, it seems to me that you might leave some proportion of the total amount of money that you have for a second time around for secondary institutions.

Mr. OWENS. The new immigrants program, who are the new immigrants? Can you give me some examples?

Dr. COHEN. New immigrants come from 70 different countries. They come from Latin America, they come from Korea, Vietnam,

China, the Soviet Union, Iran, they come from Greece, they come from Italy, they come from Nigeria, and I could go on and on and on.

Queens has a half a million residents who have come to this country, I would say in the last 10 or 15 years. These are separate from our foreign students, as we have 1,000 card-carrying foreign students. But we have 4,000-plus foreign born-students who graduate the high schools of New York City, come to the college, are talented and motivated students, but do not have the kinds of a grasp of the language which they need to succeed in the way that they can in a college of this sort. And we do not have the kind of targeted funds which could let us address that particular problem.

Dr. MURPHY. This gets magnified throughout the City University of our 180,000 students, 30 percent come from homes in which English is not or was not the original language. And that has not differed very much from the turn of the century, when the two principal languages, other than English, were Yiddish and Italian, and today, 80 years later, it is Spanish and some oriental language. And that percentage roughly has been the same for some 80 years. So that we face certain kinds of structural problems, first generation Americans, in a way no other institution ever faces in the same magnitude. And we could use all kinds of help.

This is the first I hear of Saul's notion. And any moneys that are appropriated for that purpose, not just in terms of English and terms of a second language, but the fact that many of our people come to the city and the boroughs who are seriously damaged because of the language handicap.

The family needs certain types of help, the student needs certain types of help. If the student is older, he often has to work and he often has to work at minimum wage because that is the only job he can find.

Mr. SIMON. It seems to me that what you are talking about there really ties in with another problem that is more than a new immigrant problem, and that is the whole world of functional adult illiteracy. We have tried in the college work-study portion of this to move a little more in that direction. Could we use college work study?

Dr. COHEN. You can use college work-study and FIPSI (ph). For example, we have a FIPSI grant which tries to address the problem of illiteracy among younsters who are in the high school who come to this country within the last year or so. They sit in high school classes because they are placed there because of their age, so they sit in the 9th grade, in the 7th grade, and do not understand a thing, drop out by the 11th grade. Now we have done two things: We have used the FIPSI grant to support our college students who will act as tutors to high school students who are literate and conversant in the home language, who in turn then work with the illiterate students; and we are trying to develop a parenting framework as well. So we are trying eventually to refer parents who are also illiterate to the high school programs for literacy. We could plug the college work-study program into this very well, because nearly everyone of our tutors clearly is eligible for work study, since they are all immigrants themselves. So we find that our problem now is a ceiling on our work-study funds. There was a time

when work study, when used unimaginatively, you really could not find enough jobs in the college for them, so three students would be sitting at one table. That is no longer the issue, if we work creatively in areas like this.

Mr. SIMON. It seems to me that we ought to be moving beyond the immigrants.

Dr. COHEN. Yes.

Mr. SIMON. One of the things I do in my district, I have open office hours where people come in and say they need a job. I ask the first question,"Can you read and write?" and it is just amazing the number of people, that whenever there is that awkward moment of silence, I know what the answer is going to be. And somehow we ought to be doing something and we ought to be utilizing, if possible, our institutions of higher education to be of assistance on that problem. It seems to me that it ties in with this new immigrant problem that you have testified about.

Mr. ACKERMAN. Out of curiosity, how many students are receiving, either numerically or percentagewise, the maximum Pell Grant in either the private or public sector, if you have those numbers? It might be interesting to look at what percentage of the new Americans there are.

Mr. WHALEN. I will get that information for you in a little bit. Seventy-five percent of students in the independent sector are qualified for financial aid. I can give you that number. So three out of four of the students that are coming to us do qualify for financial aid.

I am sure we have those numbers.

Dr. MURPHY. You asked two questions. You asked one question but you are getting different answers. You did not ask what percentage you are getting from financial aid. I think your percentage is correct, if that was the question. You asked full Pell.

Mr. WHALEN. Yes, I was just trying to say what I knew about the percentage.

Mr. ACKERMAN. Which percentage of the students?

Dr. MURPHY. We have about 55,000 on full Pell, but we have 110,000 on some form of financial aid. It is 50 percent of our full-time students in the senior colleges, and it is higher in community colleges. But we estimate that out of our 180,000 students, a substantial number of them are part-timers which means some of them will qualify for Pell money but none of them will qualify for tuition assistance program money. But out of 180,000, 110,000 get some type of financial aid.

Mr. ACKERMAN. And about half of them get full Pell?

Dr. MURPHY. Yes.

Mr. ACKERMAN. Is there any breakdown available?

Dr. MURPHY. The university has gone from 2 to 12 percent in the last 2 years in the category of oriental students. Saul's percentages here may be even more dramatic than that.

Dr. COHEN. My guess is that it would be significantly higher. What was initially very heavily black and Hispanic is now much broader at this college; roughly a third of those who were coming in are, we think, recently arrived oriental, Greeks, et cetera, and are certainly of Hispanic population, and many of the blacks are also new arrivals.

Mr. WHALEN. I cannot give you the specific number for CICU, because I do not have that. We do have it for the total independent sector, $99 million with Pell. That does not help to answer the specific question, however. I am going to say, on our campus where we have 5,000 students, we have pretty much close to 40 percent receiving a full Pell Grant, maybe 50 percent. I am going to go on the lower side because I do not want to find out that I am wrong, but I am pretty sure it is close to that now.

Mr. BRUSH. We have about one-third of 75 five percent.

Mr. ACKERMAN. Seventy-five percent actually getting aid?

Mr. BRUSH. Actually getting Pell; of that amount one-third would be getting a full Pell. We are not mentioning the number of the youngsters who are getting full Pell who come from single-parent homes where the father has died, whatever.

Mr. SCIAME. The number in terms of minority students and foreign students, last year out of an enrollment of 18,900, there were 2,200 minority students, there were 1,000 permanent residents who do not fall into those categories, and there were roughly 1,000 foreign students. So we have the same problems. Queens College may be part of the City University and St. John's may be a private institution, but we compete harmoniously for similar students and we have students with the same kind of financial needs.

The problem is that our tuition now in September will be four times the tuition here, or at least three times. And at the same time, we have students who want to go to both. We think they make the selection that they would like; we try to come up with packages that are attractive.

And I think the bottom line is to provide this diversity. The fact that the private sector, CICU, the Commission on Independent Colleges and Universities must come to the table with CUNY and SUNY. We have to live harmonious in this State. We have over 200 colleges and universities. And let me tell you, the financial aid professionals in this State have tried to maintain all of this in a very nonpolitical way.

When I served as State president, I believe the congressman was a State senator, and we attempted to do whatever we could do to insure that we call could live together. And now it seems to me that the situation has really gotten very precarious and dangerous. And I am fearful of it.

I think St. John's can live together with Queens, and I think Ithaca can live with the State university, provided there are sufficient funds. Although there never have been sufficient funds. But what is in jeopardy right now are the State allotment formulas, the assessment rates.

So we have some very serious concerns out there. We need help and we need some objective, clear, concise thinking from the outside.

We need people in your position who can say that we want to keep everybody living together. It is very confusing for the students, the cost factor. We now have a full-time person administering the Pell Program. He is a professional, assistant to the director, with two additional professionals working half time solely on Pell, a full-time clerk-typist and three student workers. That is to moni-

tor very carefully 3,500 Pell recipients. It does not speak to the point of the entire Federal process, which is very complicated.

When you are sitting with a recent immigrant parent who speaks Spanish or Chinese and who does not understand when you say, "Can you bring in your 1040," and cannot figure out the number, I am beginning to worry about this problem of illiteracy.

We heard a quote that in the year 2000, 40 percent of the people will not be able to read that sign as they leave this room, in terms of occupancy level. That is how bad it will become. Illiteracy is a problem. Our concern is on a day-to-day basis. The problems that are encountered in the financial aid office by the student workers, by the financial aid professionals, in trying to relate one to one, in trying to facilitate this process of filling out forms, instead of having one application they have to fill out their Pell application, their FSS, and then proceed with the TAP application and back and forth to the bank. The process is completely involved. It is huge, it is onerous, it is confusing. And that is one of the reasons that there is no money.

At St. John's last year, what did they give us, roughly $13,000, $14,000. That could never pay for even one professional. So it is a very involved situation in which I think meeting with people such as you have met today and what you are doing across the country, meeting with some parents, I think that is the best way to find out. And also to hear about students who have made it through the cycle.

Last year we had five students who had made it through the system, speak about how they went through the financial aid program and how it helped them to get where they are today, and that is what we have to hear about. Not so much the emphasis on students who are defaulting on loans. What is the true default rate? Is it as high as we hear? Four years ago we asked for the cumulative default rate on GSL's. We reduced our list down to 2 percent.

The initial list had students who had died 4 years ago. And what happens is that the public picks up that kind of information and it just beats down on students. The famous David Susskind question, across the country we hear that students are deadbeats, they do not want to work, they do not pay back their loans. Imagine that being broadcast on national TV in every State. I was fortunate to respond to that question, and it is absolutely erroneous.

Mr. SIMON. If I may just use a couple of phrases from you to lobby. You mentioned what we want to do is to preserve, and we do, there is no question about it. The second thing we want to do is to increase access, and the third is to in some modest way improve quality in part having less dependent on your own resources for student aid. You mentioned you went from $1 to $6 million in student aid. We are improving the quality of the library program, assistance for faculty study abroad.

One of the most ominous things is just the general trend of a declining percentage of faculty members studying abroad, it has to be a terrible thing for the kind of world we are living in.

We have put this program together through a variety of things, but basically increasing the Pell Grant Programs is going to help every one of your schools; GSL is going to help every one of your schools; the block grant should help every one of your schools; if we

can get it in the right kind of shape; the endowment should help every one of your schools.

But we also face a great many people who are resistant to any program: "It is going to cost a few dollars more." CBO estimates, and we are going to be getting more precise estimates very shortly, but they make an assumption that if my bill passes, an additional 500,000 young people are going to go to college. What a tremendous thing. Not a liability to the Nation, but a great asset to the Nation, to have 500,000 more people going to college. And I have to believe that would ultimately be the finest kind of an economic investment we can make; forgetting everything else.

But to get this kind of a program across, we have to have people like the five of you supporting the program. And, No. 2, if it is possible, and I recognize from having been through this before, these agreements usually do not get reached until the last minute and we are trying to put some pieces together in getting some people together quietly to see if we can work out compromises, but it is also essential that we not have too much intramural warfare that prevents passage of something like this.

We really appreciate your testimony, what you are doing. If my colleagues have any final comments?

Mr. ACKERMAN. It is just good to be home again.

Mr. SIMON. We are pleased to be here at your alma mater. Next time I come to Queens College, I expect to see a plaque somewhere here that Gary Ackerman was once a student here.

Mr. ACKERMAN. There is enough graffiti that says that.

Mr. WHALEN. I would just like to add one thing. I am headed now over to chair a meeting of the search committee of the Association of Colleges and Universities in the city of New York, which is a group that has all the city universities and State universities independent sector, and is the organization where we are supposed to meet and come together and discuss issues and try to work things out. My comments today were simply, I guess, to say that I am presently terribly concerned about the limitation of the private sector, because I think it is very valuable, it is valuable for the public sector, and I think that we would like to have more of the minority students have more access and more choice.

And I am just concerned that what has been proposed could move us further in the direction of diminishing that 20 percent of the private sector which exists.

Mr. SIMON. Any specific suggestion you can come up with? Now the one big thing, the 50 percent thing, we are going to have to iron out. But I beyond that, any other specific suggestions you have would be appreciated.

Mr. Owens, you want to add something?

Mr. OWENS. No comment.

Mr. SIMON. We appreciate your being here. Thank you very much.

[Whereupon at 2:45 p.m., the hearing in the above-entitled matter was closed.]

[Material submitted for inclusion in the record follows:]

PREPARED STATEMENT OF SAUL B. COHEN, PRESIDENT OF QUEENS COLLEGE

I would like to put emphasis in this testimony, not on individual parts of the Subcommittee's recommendations, but rather on an overall strategy of linkage and leverage for these recommendations. Certainly if what has been proposed by Congressman Simon and his committee members should be realized, it would represent a major new beginning for higher education. I, therefore, want to take this occasion to commend the document highly.

A major problem with most of the legislation in higher education that stemmed from the Higher Education Act of 1965 was that many fine programs were unrelated to others, and that the effects of individual programs were therefore never maximized. Let me give you some examples of how linkage could take place in the proposed 1985 Act. Recommendations for Title III—The Black College and University Act, call for new academic programs in a wide variety of fields including English, languages, premedical, etc. It is vitally important that means be found to strengthen Black colleges. They are in danger and they need help. But the issue is not only the vitality of the institution; it is also the long-term future of the student whom the institution serves. We must be concerned with what happens to the young Black student when he/she graduates from a Black college. I believe there is an opportunity to use other proposed parts of the act ingeniously. We could provide portable scholarships for graduates from the institutions supported by the Black College and University Act from the proposed Graduate International and Language Studies programs of Title VI. We could also set aside for some students from these Colleges a number of Merit Scholarships for Talented Teachers from Title V.

Moreover, in looking at Title III, it occurs to me that another group worthy of categorical aid, in addition to Blacks and Hispanics, is the new immigrants. At QC for example, we have approximately 4,500 foreign-born students, excellent students who have arrived in this country relatively recently. Their main problem is with the English language. While most have graduated from New York City high schools, their command of the language is, nevertheless, not in keeping with their command of their own native languages, and we lack the supplementary support needed to help them realize their fullest potential. If, as a Title III institution, we could receive categorical support to provide much more intensive work in the English Language Institutes, this important human element in the life of the College and, indeed, New York City and the Country could be justly served.

Another example of linkage and leverage is to be found in Title V. The Merit Scholarship Program for Undergraduates could be tied to the proposed talented Teacher's Fellowship Program. Instead of assigning two Fellowships to experienced teachers from each district, one might take the $20,000 that is proposed for each teacher and provide $5,000 for entering teachers who have been undergraduate Merit Scholars and provide them with supplementary funding to enhance their skills over a number of years. Another example in Title V has to do with the school-college partnership. One could link this partnership to the Merit Scholars and talented teachers by selecting those colleges that train the Merit Scholars to become engaged in school partnerships that include providing the talented teachers with college research opportunities. College-generated mentoring programs could then be fed into the schools at which the former Merit Scholars are now stationed as talented teachers.

I can only underscore the value of what is proposed in Titles VI, VII and VIII. Title VIII in particular, Cooperative Education, supports progams which tie the application of studies to work experiences in a way which can permit liberal arts institutions to remain viable while giving students a sense of vocational and professional direction. We can offer as an example our experience at Queens College in the graduate field of arts and sciences. This is one of the first programs of this type to have been funded by Co-op Ed and we are very pleased with the results to date.

Title IX, the Graduate Fellowship Program is one that continues to warrant support, and the proposed increase in stipends is certainly needed. However, the emphasis on minority fellowships is one which requires not simply the support of individual universities, but also the support of disciplines. In the past there have been a few isolated efforts to target particular disciplines. As chairman of CONPASS (Consortium of Professional Associations), I was involved in programs that were able to target certain fields such as geography and history. This was in the late 1960's and early '70's. We organized consortia of universities which agreed to take minority fellowship recipients within a particular discipline, and to create a network among those universities which helped the minority students to see themselves as part of a broader picture, and indeed to become a force within their disciplines. My own field of geography is a good example. When I became interested in the problem we had

only two black Ph.D.'s. By the mid '70's that number had increased to over 50 as a result of our efforts in targeting minority fellowships which we had succeeded in obtaining from the NSF and the U.S. Office of Education.

Time does not permit me to continue along this vein, but I would strongly urge that before the final legislation for the 1935 Higher Education Act is completed that a very thorough analysis of this leverage-linkage theme is pursued.

THE BICENTENNIAL OF THE BOARD OF REGENTS AND
THE UNIVERSITY OF THE STATE OF NEW YORK,
Albany, NY, May 1, 1984.

Hon. PAUL SIMON,
Chairman, U.S. Congress. Committee on Education and Labor, Subcommittee on Postsecondary Education, 320 Cannon House Office Building, Washington, DC.

DEAR CONGRESSMAN SIMON: Donald J. Nolan, our Deputy Commissioner for Higher and Professional Education, was unable to testify at your hearing on April 2, 1984. I am submitting the attached statement for the record on H.R. 5240, the Higher Education Act Amendment of 1984. We find many of the proposals in the bill to be commendable but I am concerned by the absence of a continuing state role in administering several Federal programs and in planning and coordinating postsecondary education.

The New York State Board of Regents and I will continue to review the proposals for HEA reauthorization and assist you in your leadership to reauthorize this act.

Sincerely,

GORDON M. AMBACH

Attachment.

STATEMENT OF GORDON M. AMBACH, PRESIDENT OF THE UNIVERSITY OF THE STATE OF NEW YORK, AND COMMISSIONER OF EDUCATION

The New York State Education Department appreciates this opportunity to submit a statement on the proposal by Congressman Simon for reauthorization of the Higher Education Act, which contains many elements that we can support strongly. It also contains certain proposals with which we disagree. We need additional time to study some proposals, particularly Titles III and XI, before we comment extensively.

In New York, all educational institutions, public and non-public, elementary, secondary, postsecondary, and cultural, are part of The University of the State of New York. The Regents of The University of the State of New York are New York's educational governing board and set educational policy for the State. The State Education Department is their administrative arm. In February 1984, the Regents issued a comprehensive review of "Federal Legislation and Education in New York State." A copy of that document is appended to this statement. It includes (pages 103–125) a review of the major issues that must be addressed in reauthorization of the Higher Education Act. Our comments in this statement are based on that review.

The basic aims of Congressman Simon's proposal—expanded access and enhanced quality—are laudable. However, a serious flaw in the proposal is that it does not adequately recognize the responsibility of the states to coordinate postsecondary education. Indeed, it would weaken the ability of states to set higher education policy. At the postsecondary level, there must be a strong partnership among institutions of higher education, state higher education agencies, and the Federal government. We do not believe that this proposal fosters that partnership. The Regents believe that Federal higher education programs, other than direct student aid and competitive research grant programs, should aid state higher education agencies to assist colleges and universities in meeting national objectives.

We urge that the Congress give careful consideration to the maintenance of a strong institutional/state/Federal partnership in postsecondary education, and that reauthorization include effective measures to strengthen that partnership.

TITLE I. CONTINUING POSTSECONDARY EDUCATION PROGRAM AND PLANNING

The proposed revision to Title I would embrace efforts to provide education outreach to adults, veterans, the illiterate, and the incarcerated. These all are populations with special needs. To different extents, the states are attempting to address those needs. It might be most effective, therefore, to provide population-based formula grants to state higher education agencies, which would make awards to higher education institutions for the purpose of strengthening and improving efforts to ad-

dress needs. Consideration should be given to coordination of these efforts with related efforts under the Vocational Education Act and the Job Training Partnership Act.

We strongly disagree with the proposal to delete the Education Information Center (EIC) program. In New York, the EIC program has been a clear success. With Federal aid, aid from the Kellogg Foundation, and local resources, we created a network of seven Education Information Centers located in libraries and community-based organizations. Between 1980 and 1983, they served almost 170,000 clients, at an average cost of only $6.51 per person. An evaluation in 1983 of New York's EICs found that most users were adults, 25 or older. Over 20 percent were unemployed and seeking employment or additional education or skill development to improve their job prospects. Sixty percent had incomes below $16,000. Over 90 percent said they found new information at an EIC.

Education Information Centers can be important, and notably cost-efficient, contributors to the maintenance of a well-educated citizenry. Rather than eliminate the program, we strongly urge that it be reauthorized, in a separate part of Title I, to meet the education information needs of 116 million adult Americans.

TITLE II. STRENGTHENING LIBRARY RESOURCES

The proposal would revise programs of suppport for college and research libraries, and for library training and research, in the following ways: (1) Introducing a "needs test" for institutional participation in the Resource Development Grants program (Part A). We have not analyzed the effect of the specific elements proposed and wish to study them further. (2) Emphasizing library use of technology and minority education programs under Training, Research, and Development (Part B). We suppport such emphases. We strongly support reauthorization of the Strengthening Research Library Resources program (Part C). New York has 11 comprehensive research libraries recognized for their contributions to scholarship and research.

TITLE IV. STUDENT FINANCIAL ASSISTANCE

A strong state/Federal/institutional partnership is essential to effective student aid funding and delivery. We recognize that the Federal role in assuring access to postsecondary education is carried out principally through student financial aid programs. Currently, some $16 billion in student aid is provided from Federal, state, institutional, and private sources.

New York has the largest state student aid program in the Nation. In 1982-83, we provided $313.1 million in grants, loans, and scholarships to almost 371,000 students, accounting for about one-third of all funds spent by all the states on the student aid grants. At the same time, students in New York received $323 million in Pell Grants and took out 411,000 Guaranteed Student Loans.

We are concerned about the adequacy of, and interrelationships among, Federal, State, and other sources of student aid. Evidence suggests that the balance among grants, work, and loans in the student aid delivery system may have shifted too far towards loans. This does not mean that we favor further restrictions on the Guaranteed Student Loan program. What it does mean is that possible unmanageable loan burdens are being placed on even our lower income students, who are least able to bear them. If our student aid systems are to work, the balance must be shifted back towards grants and work, so that students need not rely so heavily on loans to meet the costs of attending college beyond the self-help currently expected of students and their families.

Pell grants

We applaud the proposal to restore "entitlement" status to the Pell Grant program. This is essential if the Pell Grant is to continue to function as the Nation's basic student aid program. Restoration of its "entitlement" status is one of the most signficant reforms needed in the Higher Education Act. We also support inclusion in statute of a Master Schedule and specific provisions governing family contribution. These proposed revisions will help to assure that low and middle income families can determine in advance the aid they can count on, and that this aid will be available in a timely manner. We also agree with the proposed statutory definition of an "independent" student.

In addition, the value of the Pell Grant clearly needs attention as do other aspects of the program. The maximum Pell Grant clearly must be increased. Several suggestions also have been made concerning revision of the current percentage of cost limitation, including the proposal by Congressman Simon that it cover up to 75 percent

of tuition plus an allowance for non-tuition costs. We are not yet ready to recommend any of the suggestions made in this proposal.

College work study

We believe that consideration should be given to the question of whether or not proprietary institutions that are duly authorized to confer degrees by the states in which they are located should be able to use College Work Study funds for on-campus jobs.

Campus based block grant

Congressman Simon proposes to consolidate Supplemental Educational Opportunity Grants (SEOG), National Direct Student Loans (NDSL), and State Student Incentive Grants (SSIG) into a Campus Based Block Grant.

We strongly oppose inclusion of the State Student Incentive Grant program in a compus-based block grant. SSIG is not now a campus-based program; it is a program to encourage states to provide student aid grants. SSIG has had a significant influence on the growth of state student aid programs; therefore, we urge that SSIG not be incorporated into any campus based block grant, but rather that it be reauthorized and enhanced.

Guaranteed student loan program

The Guaranteed Student Loan Program provides a significant amount of financial assistance for students. In response to the changes made in the GSL program by the Education Amendments of 1980, the number of borrowers in New York grew by 20 percent between 1980-81 and 1981-82, and loan volume grew by 30 percent. Following the changes made to GSL by the Postsecondary Student Assistance Amendments of 1981, however, the value of loans made in New York dropped by 15.3 percent between 1981-82 and 1982-83, from $1.137 billion to an estimated $962.8 million (including PLUS and ALAS loans).

We believe that eligibility for Guaranteed Student Loans should not be restricted further. In particular, we oppose the establishment of a needs test for all students regardless of income to establish eligibility for a Guaranteed Student Loan.

We also believe that the income ceiling established in 1981 should be reviewed if it is to be retained. Currently, the $30,000 income ceiling set in 1981 equals an income of only $22,500 in 1980 dollars.

To say that eligibility for Guaranteed Student Loans should not be restricted does not mean that loans are appropriate forms of financing for all students. Students from low or lower-middle income families should receive sufficient aid in the form of grants to assure that they are not overburdened by debt. We urge that Federal student grant programs provide sufficient aid for such students to reverse the current over-reliance on loans.

We support several other provisions of the proposed revision to the Guaranteed Student Loan program, including the concept of a "lender of last resort" in each state and, especially, elimination of the loan origination fee.

Special services for disadvantaged students

The "TRIO" programs authorized in Title IV (Talent Search, Upward Bound, Special Services for the Disadvantaged, Educational Opportunity Centers, and Staff Development) are intended to aid students from disadvantaged backgrounds to attend postsecondary education by providing a variety of outreach and support programs. The concept of a state/Federal/instituitonal partnership strongly suggests that we need a better coordination of state and Federal efforts to provide access to postsecondary education for the disadvantaged, in order to assure that state and Federal resources are used with maximum effectiveness. Provision of an appropriate role for state higher education agencies would be an effective way to assure such coordination.

In reauthorization, Upward Bound should be strengthened and expanded. Once considered a prototype, Upward Bound has proved its effectiveness. There are 18 Upward Bound programs in New York State. It is particularly important to consider the level of Federal support needed to permit Upward Bound's objectives to be widely achieved, and to allow flexibility to states with their own established criteria to define educationally and economically disadvantaged populations.

TITLE V. TEACHER PREPARATION

In New York, the Regents have taken strong steps to assure the quality of elementary and secondary education, including competency test standards for a high school diploma that are the highest in the Nation. To assist schools to meet the

standards expected of them. The State Education Department has adopted an approach to providing services and assistance that concentrates on those schools most in need of it. We are implementing this fall a requirement of entry-level examinations for persons newly seeking certification to teach in New York's public schools. Following a two-year review, the Regents have adopted an Action Plan that aims at strengthening curricula and instruction in elementary and secondary schools.

Obviously, one of the major elements in the quality of schools is an adequate supply of well-qualified teachers. With the exception of mathematics and science teachers, who currently are in short supply, there is today an adequate pool of qualified applicants from which districts can draw to fill vacancies. These conditions will change in the late 80's, however. It is necessary that steps be taken now to ensure that we will be able to meet the anticipated need for new teachers in the late 80's. In addition to that emerging need, there are immediate needs for mathematics and science teachers.

A second, equally significant, need is for staff development to assure that the current teaching force remains up-to-date in knowledge and skills. The limited influx of new teachers over the past several years has meant that schools cannot rely on newly prepared teachers for infusion of new ideas. It is clear that staff development is the single most important factor for improvement in pupil performance.

The Regents position is that Federal funds for educational personnel development should be provided through aid to the states and, in turn, to local districts for both pre-service and in-service training in educational institutions and teacher centers. Further, the Regents have urged that educational research and development funded by the Federal government be conducted cooperatively between Federal agencies and state agencies with demonstrated capacity. Research and development program efforts must link Federal, state, local school, and classroom personnel in a vertical relationship to assure that these efforts will have a direct impact on instruction.

The proposed revisions to Title V attempt to address both pre-service and in-service education needs. We are disappointed, however, that they provide little if any role for the states for whom education is a major responsibility.

We believe that the aid programs proposed for Parts A, B, and C should be operated by the states. Further, it is essential that such programs take into account state-identified areas of need and state priorities derived from pupil needs.

TITLE VI, INTERNATIONAL EDUCATION

We support reauthorization of the International and Foreign Language Studies and Business and International Education programs in Title VI. We also support expansion of faculty study abroad and undergraduate student exchange programs. The decline in language proficiency in recent years comes at a time of increasing interdependence among nations in both the public and private sectors. The decreased emphasis placed on knowledge of foreign languages and cultures in recent years can have an adverse effect on the United States in our ability to remain cognizant of international scientific and technical developments, the effectiveness of our foreign policy, the capability of the public to understand world events fully so that official policies will reflect the interests and concerns of the American people, and the improvement of mutual understanding among different ethnic groups and cultures within American society.

The Regents have taken particular interest in H.R. 2708, the "Foreign Language Assistance for National Security Act." That bill would provide $50 million in grants to state education agencies for model programs to be designed and operated by local education agencies and two-year colleges, postsecondary institutions with more than five percent of their enrollment receiving foreign language instruction, and colleges and universities to conduct intensive language summer institutes for exceptional secondary school students and elementary and secondary school teachers and for study abroad programs for advanced students who are training for professions with a potential international dimension. The Regents are pleased that this bill has been passed by the House of Representatives and urge the Senate to pass it.

TITLE VII. CONSTRUCTION, RECONSTRUCTION, AND RENOVATION OF ACADEMIC FACILITIES

The adequacy of the academic facilities of colleges and universities directly contributes to excellence in postsecondary education. To achieve and maintain excellence, colleges and universities need facilities that are conducive to it, well-maintained and able to accommodate modern equipment and the academic resources needed for their programs of study and research.

At present, Title VII authorizes a program of grants for up to 50 percent of the eligible cost of construction, reconstruction, and renovation of undergraduate aca-

demic facilities (Part A), and of graduate facilities (Part B). It also authorizes a program of long-term loans, at very low interest, for construction and renovation of academic facilities (Part C). These programs have been valuable to New York's colleges and universities.

The revisions proposed for Title VII would give emphasis to (1) low-interest loans for construction of academic and research facilities, and (2) matching grants for the purchase of laboratory and instructional equipment. State higher education agencies would play no role in those programs.

We believe that a program of Federal grants for facilities replacement, reconstruction, and rehabilitation probably is preferable to a loan program. Some colleges may have debts that are reaching unmanageable levels. While there will continue to be a place for low-interest Federal loans for facilities, for institutions that have difficulty arranging for financing from more conventional sources, a facilities grant program continues to be needed.

In the event that a loan program is authorized rather than a grant program, it is essential that state higher education agency review and comment be required, in order to assure that projects comply with state master plans.

There is an unequestioned need to assure that colleges and universities have up-to-date instructional and research equipment. We support a program to aid acquisition of instructional and research equipment. There is a need for review of proposals by state higher education agencies to assure that projects are consistent with state master plans.

TITLE VIII. COOPERATIVE EDUCATION

We very strongly support expansion of the Cooperative Education program. Such support has consistently been the position of the Regents over several years. During 1982-83, there were 13,665 undergraduates participating in cooperative education programs at 56 postsecondary institutions in New York. In 1982, 33 New York institutions received grants under Title VIII.

TITLE IX. GRADUATE PROGRAMS

Among the most critical issues to be addressed in the area of graduate and professional education is the assurance of access. Ability, rather than personal means, should be the key determinant of access to graduate and professional education; it is essential to avoid a system in which only the relatively wealthy can obtain the advanced academic or professional education needed to teach or to pursue other careers. It is especially important to enhance access for members of minority groups.

At the same time, a balance must be maintained between grants and loans. Many careers that require graduate education, such as teaching, do not promise the incomes necessary to permit repayment of substantial loans, especially if they are added on top of loans for undergraduate study. A 1982 study by Educational Testing Service discovered that almost half of the persons earning Ph. D.'s in the arts and sciences, and over 80 percent of graduates of law schools and medical schools, had "unmanageable" debts.

There is a critical need to restore an appropriate balance between grants and loans for graduate and professional study by providing special incentives to the most promising students and to members of underrepresented minority groups to seek graduate and advanced professional education. For this reason, we strongly support the proposals for reauthorization of the Fellowships for Graduate and Professional Students and the National Graduate Fellowships. The continued health of American society is dependent on the education of the future generations of scholars who will discover and transmit knowledge in the humanities, the social and behavioral sciences, the natural sciences, and the learned professions.

TITLE X. FUND FOR THE IMPROVEMENT OF POSTSECONDARY EDUCATION

Since its creation, we have supported the activities of the Fund for the Improvement of Postsecondary Education. We support the proposed reauthorization.

TITLE XII. ENDOWMENT DEVELOPMENT (PROPOSED)

A new Title XII is proposed to establish an Endowment Development program, authorized at $600 million for each of three years, to provide grants of not less than $100,000 nor more than $500,000 to public and non-profit independent institutions as a contribution toward institutional endowment. No institution would be eligible to receive more than one award. The amount of an institution's award would be

based on its relative need. Up to 2,000 awards would be made in each of the first three years.

We support the concept of the proposed Endowment Development program. There is a sizable number of institutions in New York that could benefit from it. However, the proposal indicates that no restrictions would be placed on the institution's use of the funds. It is intended that the institution could spend the principal. We believe that some restriction on the ability of the institution to spend the principal should be considered. Otherwise, the proposed program would not achieve the objective of developing institutions' financial resources and lessening their needs for Federal aid.

HEARINGS ON THE REAUTHORIZATION OF THE HIGHER EDUCATION ACT

TUESDAY, APRIL 3, 1984 (MORNING)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON EDUCATION AND LABOR,
SUBCOMMITTEE ON POSTSECONDARY EDUCATION,
Washington, DC.

The subcommittee met, pursuant to call, at 9:45 a.m., in room 2261, Rayburn House Office Building, Hon. Timothy J. Penny (member of the subcommittee) presiding.

Members present: Representatives Penny, Gunderson, and Packard.

Staff present: William A. Blakey, staff director; and John Dean, Republican assistant counsel.

Mr. PENNY. The meeting will come to order. The Subcommittee on Postsecondary Education today continues its hearings on the reauthorization of the Higher Education Act. We have this morning a distinguished group of college and university presidents who will offer their perspectives on the reauthorization and the specific proposals contained in H.R. 5240.

I welcome you here this morning on behalf of Chairman Simon. I apologize for the absence of several members on this side. As you know, there is an election in New York today and our colleague, Mr. Harrison, from Pennsylvania had to debate his primary opponent last night and is unable to be present this morning. Chairman Simon regrets that he cannot join us, but he has indicated that he has most of the testimony and will followup with some questions for several of you at a later time.

I ask unanimous consent that both the chairman's statement and Mr. Harrison's statement be entered in the record at this point. Without objection, that will be done.

[Opening statement of Congressman Paul Simon follows:]

OPENING STATEMENT OF HON. PAUL SIMON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ILLINOIS AND CHAIRMAN, SUBCOMMITTEE ON POST SECONDARY EDUCATION

Todays' hearing continues a dialogue we began in Washington last week and continued in St. Louis and New York over the weekend. These Higher Education Reauthorization hearings will address the spectrum of issues related to the appropriate Federal role in higher education, the proper focus of our programmatic effort, and funding commitments to low and middle-income students and to postsecondary institutions.

The Higher Education Act Amendments of 1984 (H.R. 5240) refocuses student financial aid on the neediest student to ensure that the student who could not begin, or would not complete, an education, because of high costs and limited family resources, will have that opportunity.

H.R. 5240 simplifies student aid programs with one grant, one work and one loan program, along with an institutional block grant program. The student financial aid programs were created by Congress over the last two decades. The purpose was to make funds available to students who had no other way to finance their education. In today's economy with nationwide unemployment at 7.8%, youth unemployment at 19.3% and minority youth unemployment at 43.5%, it is time to refocus these programs to address the need they were created to serve.

I am looking forward to hearing from today's witnesses on the specific and the broad policy questions raised in H.R. 5240.

I am very interested in receiving witnesses comments regarding the proposals in H.R. 5240 that make changes in Federal student financial aid programs, including making the Pell Grant program an entitlement, merging SEOG, NDSL and SSIG into Institutional Block Grant, the modification of the "half-cost" provision and the "independent student" definition, among other issues.

H.R. 5240 addresses a number of needs of graduate education, including the extension of aid to graduate students. The proposals include a presumption of self-sufficiency (independence) for graduate students, allowing limited graduate student eligibility for Pell Grants, and raising loan limits for guaranteed student loans.

College and universities nationwide are in need of funds to halt the deterioration of America's university research facilities and buildings generally. H.R. 5240 addresses that need for low-income renovation and construction loans and instrumentation grants. Today's witnesses are particularly able to comment on the bills approach to this concern.

[Opening statement of Congressman Timothy Penny follows:]

OPENING STATEMENT OF HON. TIMOTHY J. PENNY, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MINNESOTA

Good Morning. The Subcommittee on Postsecondary Education today continues its hearings on the reauthorization of the Higher Education Act. We have appearing this morning a distinguished group of college and university Presidents who will offer their perspectives on the reauthorization and the specific proposals contained in H.R. 5240, The Higher Education Act Amendments of 1984.

I welcome you here this morning on behalf of Chairman Simon and apologize for the absence of several of the Members on this side. As you know, there is an election in New York today and my colleague from Pennsylvania, Mr. Harrison from Pennsylvania, had to debate his primary opponents last night and is unable to be present. Chairman Simon regrets that he cannot join us this morning but he has indicated he has most of the witnesses' testimony and will follow-up with some questions for several of you.

I ask unanimous consent that both the Chairman's statement and Mr. Harrison's statement be entered in the record at this point.

Let's begin with Dr. Jordan from Penn State.

Mr. PENNY. We will begin with Dr. Jordan from Penn State and special greetings from Congressman Harrison to you.

[Prepared statement of Dr. Bryce Jordan follows:]

PREPARED STATEMENT OF DR. BRYCE JORDAN, PRESIDENT, THE PENNSYLVANIA STATE UNIVERSITY

Chairman Simon and Members of the Subcommittee:

Thank you for this opportunity to testify on matters of critical importance to the country's system of higher education. We at Penn State find your concern for the Nation's colleges and universities encouraging.

We are particularly pleased that you have taken the initiative to address the disparity that has evolved in higher education in the ratio of student loans to grants. We welcome your efforts to correct that disparity by placing more emphasis on higher education grants to reduce existing pressures on students to take on frequently alarming loan burdens.

Higher education costs are increasingly squeezing families who are attempting to support their children's postsecondary education. A recent national study completed by the College Board, for example, revealed that only one in five families of the 1983-84 freshman class can provide the $4,700 required for a year at an average public university, down from one in four in 1976. According to the College Board study, only one in ten families can provide the $8,400 necessary for a year at a typical private institution, down from one in eight in 1976.

We are witnessing the consequences of such trends at Penn State. Our Office of Student Aid, for example, has called to my attention a case of a young Black woman majoring in engineering at our University Park Campus. She will start her senior year next fall with a total loan indebtedness of $19,500.

This is just one example of a growing trend in higher education that poses potential problems for the future. For the 1983-84 academic year, for example, the total documented financial need for our undergraduate students was $99.8 million. After all existing aid sources had been taken into consideration, the unmet financial need for these students totaled $22.8 million. The unmet need for our freshmen alone totaled $6.8 million. Again, after all existing aid sources had been taken into consideration, the unmet financial need for Penn State's black students totaled nearly $1 million. This has a pronounced negative effect on our efforts to recruit and retain black students.

Because of the scarcity of grant dollars, our students with documented financial need are turning to loans to finance their education. Over half of our students participating in the National Direct Student Loans (NDSL) program also must borrow from the Guaranteed Student Loans (GSL) program to stay at Penn State. The mean amount borrowed by these—our neediest students—is an alarmingly high annual per capita total of $3,262. Approximately one-fifth of the University's Black Achievement Students are included in the group which must tap both NDSL and GSL for funds. They are among the university's highest achievers. Their situation reflects the inadequacy of available grant funds to support their academic work. In addition, nearly 50 percent of those students accumulating the $3,262 annual indebtedness are also receiving Supplemental Grant (SEOG) funds. Thus, we support proposals to increase the maximum award levels for the Pell Grant program.

As the National Association of State Universities and Land-Grant Colleges (NASULGC) has noted, the Pell Grant program is the most important program for students in the public sector of higher education. Almost 85 percent of student aid recipients in that sector received a Pell Grant in the 1981-82 academic year. NASULGC studies indicate that the maximum Pell award between the FY '79 and FY '84 has increased by only 5.5 percent ($100), while average undergraduate student charges in the public sector for the same period jumped by 49.7 percent ($1,633). The Department of Education is projecting that the number of Pell recipients in four-year public institutions will decline from 1.013 million in FY '79 to 938,000 in FY '84. In terms of dollars, the aggregate amount of Pell Grant funds to students in four-year public schools has also declined from $1.01 billion in FY '79 to $934 million in FY '82.

We join NASULGC in supporting proposals calling for the establishment of Pell Grants as an entitlement. We recognize that recent economic history has made entitlement programs something of a political anathema. However, in the case of Pell Grants, we believe it is justified. Entitlement status would preserve this critical program from annual budgetary threats. We would hope that an entitlement program would not jeopardize other vital portions of the Title IV student aid package.

As you know, the proposed modification of the "half-cost" provision in the Pell Grant program is a controversial topic in the higher education community. Maintaining the "half-cost" ceiling at its current 50 percent of tuition costs does not provide adequate funding for students. We are, therefore, very pleased with your initiative to incorporate inflation adjustments into the Pell Grant formulas. We also welcome your effort to increase the "half-cost" ceiling to 75 percent, but the proposed program still does not recognize student costs adequately. The Pell program historically has not recognized the true costs students must meet. Penn State, for example, has conducted student cost surveys on a regular basis. These surveys have sampled on-campus, off-campus, and commuting students at our University Park campus and our other campuses which serve undergraduates. Survey results consistently show that these students' actual and legitimate costs for room and board are greater than the Pell cost of attendance allowance (see Table 1).

These same cost disallowances unfortunately are continued in the proposed reauthorization. Our Office of Student Aid, for example, has projected that under the proposed reauthorization, the percentage of disallowed costs total 28 percent for our on-campus students, 32 percent for our commuting students, and 44 percent for our off-campus students. This situation needs to be corrected not only to benefit students, but also because failure to do so will perpetuate a problem that exists in the student aid funding structure. Specifically, in the proposed reauthorization, a university's allotment formula for other Title IV student aid funds is driven by the dollars awarded to its Pell recipients. Thus, under the proposed reauthorization, students at some academic institutions will be denied their fair and reasonable share of proposed institutional block grant funds and work-study funds.

We believe a more equitable approach for the allotment of student aid funds would first recognize the total cost (including tuition) students must pay for their post-secondary education. That cost should then become the base of which a predetermined percent applied equally to all institutions would be eligible for student aid funds. To avoid division within the higher education community, we strongly recommend further study of this issue. It is our hope that such study will lead to the development of a standardized and acceptable Pell formula that recognizes the true cost of attendance experienced by on-campus, off-campus, and commuting students.

We believe the proposal to create an institutional Block Grant Program is worthy of careful consideration. We would support the notion of flexibility with accountability inherent in such a program. However, we recognize that block grant programs have been used in the very recent past as a mechanism to consolidate federal budget cuts and return certain financial responsibilities to the states. The block grant concept raises the specter of budget reductions rather than adequate funding for student aid.

I would like to add that adequate student aid for graduate students is very important to Penn State. As one of the nation's leading research universities, we are placing increasing emphasis on the breadth and quality of our graduate programs. Thus we, like the other research universities in the nation, strongly support adequate student aid for graduate students. Insufficient aid for graduate students will have serious consequences for the nation's basic research effort and the benefits that effort produces for our society.

Signs of Trouble and Erosion: A Report on Graduate Education in America.—A study completed recently by the National Commission on Student Financial Assistance, addresses this important issue. Noting that graduate education is designed to create both new scholarship and new scholars, the report reminds us that it is not possible to conduct first-rate graduate education without original research. This unity between graduate education and research is a key national asset. The authors of the report note that America's graduate research and education enterprise was at the heart of the nation's success after World War II and argue that it will be critical to our continued success through the end of this century. The study continues that, and I quote,

"It is to our universities that we must once again turn if we are to improve our commerce and industry, preserve and defend the nation, conquer disease and malnutrition, and reclaim the environment as well as to restore the intellectual and civic fabric of American society."

The nation's research universities will not be ready to respond to that challenge unless they are able to attract and maintain a pool of talented graduate students. Unfortunately, that poll has been declining. For example, only one-third of Harvard's 1980 summa cum laude graduates engaged in graduate study compared to over three quarters of such students in the 1960's. Many in the sciences, as you know, are attracted away from graduate study by competitive salaries and the opportunity to have access to outstanding laboratories and facilities in the industrial sector. Part of the student trend away from traditional graduate study can be attributed to what the authors of Signs of Trouble and Erosion call the "unstable nature of federal support of the graduate enterprise."

Robert Rosenzweig, President of the American Association of Universities, reiterated this point in the March, 1984, issue of Change. He noted that instead of carefully constructing a national policy on the federal role in graduate education, we have allowed this field to drift "more or less aimlessly." This must change, a position advocated by John Brademas, President of New York University and Chairman of the Graduate Education Subcommittee of the National Commission on Student Financial Assistance. Dr. Brademas argues that the federal government has an obligation to ensure stable support of graduate research and training. In the March 2, 1984, issue of *Science* he noted that adequate student aid—through loans, fellowships, research and teaching assistantships, and work-study programs—is an important part of that support, especially to minorities and women.

The Graduate Professional Study Program (G*POP), the only federal program providing fellowship support for both minorities and women, provides an example that demonstrates several of our college and program needs. G*POP funding for twenty-two students was requested by Penn State for the 1984–85 academic year in areas including Agriculture; Business; Earth and Mineral Sciences; Health, Physical Education and Recreation; Communication Disorders; and Psychology. Nine awards were made. Although this is an increase over previous years, it still means other funding will have to be found for thirteen students if they are to attend Penn State. Furthermore, supplemental funding for Penn State's nine G*POP students will have to be secured. G*POP currently provides a twelve-month living stipend of $4,500.

This compares to $8,100 that the National Science Foundation Fellows receive. It does not cost less money to support a G*POP Fellows than an NSF Fellow. We support your efforts to bring the stipend up to the level of other federal fellowships programs, which would recognize the program for the service it provides. Continuing G*POP as an insufficiently funded program (both in scope and in individual awards) subtly perpetuates the myths that caused the need for such a program initially. Increasing fellowship support in this area would demonstrate federal commitment to helping minorities and women achieve equal access to graduate education.

As Dr. Brademas noted, because "graduate training is intimately connected to research, assistance to students cannot be reduced without diminishing the entire research endeavor." Few would argue with that statement. Yet assistance to graduate students is not what it should be. During the 1982–83 academic year at Penn State, for example, the University enrolled 6,104 graduate students. Only 37 percent of them had assistantships. The number of fellowships available to Penn State graduate students has declined by 184, or 53 percent, between 1973 and 1983. For the 1982–83 year, fellowships supported only 173 graduate students or 3.0 percent of the total graduate student enrollment! Graduate students at Penn State, like our undergraduate students, are increasingly turning to loans to finance their education. In the last three years alone, the number of our graduate students using loans has increased 34 percent.

We are, obviously, concerned about the types of resources available to our graduate students. The average cost of education for a Penn State graduate student in the 1982–83 academic year was $7,083 for a Pennsylvania resident and $9,339 for an out-of-state resident. These costs have increased 52 percent in the last four years. The financial resources available to cover such expenses for our 6,104 graduate students for the 1982–83 academic year totaled $27.2 million. That compared to total costs of $48.7 million. The $21.5 million difference had to be made up by often nonexistent personal resources.

Given the rising costs of graduate education and decreases in resources available to meet the costs, it is apparent that the annual maximum guaranteed student loan amount of $5,000 established in 1976 is outdated. An annual maximum amount of between $6,000 and $7,000 would be closer to costs and we support efforts to adjust the maximum amount of the GSL annual loan limit to reflect real costs more adequately. Of course, as the annual maximum GSL amount is increased, both limits to the aggregate amount borrowed and the length of time required to repay the loans must be reviewed. Extending the repayment period for these loans from ten to fifteen years would aid our graduate students. I would like to add at this point that we question the $65,000 annual family income cap proposed for the GSL program. We feel access to that program, should be based on documented need, regardless of family income.

National priorities must be set to achieve the goals of quality graduate education and research as well as equal access to the nation's colleges and universities. Achieving a more equitable balance between fellowship and loan programs should be a dominant factor when pursuing these priorities. Penn State welcomes proposals to increase graduate student access to Title IV student aid programs. However, such programs must be adequately funded so that graduate student access does not mean reductions in the amount of student aid available to undergraduate students.

I would like to add that we recognize and support the initiative this committee is taking to maintain and improve access to higher education in America. Educational access is the cornerstone of the Morrill Act which, in 1862, fostered the most ambitious and productive system of higher education in the history of the world enabling land-grant universities like Penn State to develop. As Dr. Frank Rhodes, my colleague from Cornell, has argued so eloquently, "Investment in a program of open access to higher education is a necessary part of—indeed, the very foundation of—the nation's future prosperity and well being." However, we must also recognize that academic merit is an important facet of graduate education and must be a strong factor in allocation of support for graduate students.

We at Penn State also welcome efforts to allow more institutional control in the distribution of student aid funds as well as proposals to increase the College Work-Study (CWS) program. Penn State has had a good experience with the work-study effort. More than 3,700 of our students are participating current in this program. These students are a substantial asset to the University; their work ranges from peer counseling in student aid to assisting research professors. As you might expect, there are many more positions proposed for such students by the faculty than there are funds to support them.

The Penn State experience suggests that those who advocate reduction in the student aid system based on the assumption that such aid continues to be too generous

are misinformed. Since the 1978–79 academic year, the growth in employment has been greater than the growth in grants at Penn State. During that same time period, the growth in employment has also exceeded the growth in loans. The growth in employment (up 305 percent since 1978–79) and loans (up 91 percent since 1978–79) has outstripped the growth in grants (up 69 percent since 1978–79).

As you know better than I, the reauthorization of the Higher Education Act of 1965 is an enormously complex task that involves a diverse group of constituencies throughout the United States. Recognizing that, we would like at this time to focus our comments on the reauthorization on three points in addition to those we have already made on student aid. They deal with the proposed Black College and University Act in Title III; Title VII: Construction, Reconstruction, and Renovation of Academic Facilities; and Title VI: International Education Programs.

As part of an aggressive program designed to increase the proportion of black students at Penn State, the University is working to establish links with Cheyney and Lincoln Universities, both traditionally black schools. Such schools unquestionably need to upgrade their instructional and research equipment as well as to strengthen their programs in disciplines where black students are underrepresented. Our experience suggests that this upgrading process should not occur in isolation, but in concert with other supportive institutions. Cooperative efforts to improve the postsecondary education of black students, particularly of those seeking entrance into graduate or professional school, are very promising. When strengthening traditionally black colleges and universities, we must not fall prey to the implicit notion of "separate but equal." Rather, blacks and whites must together—with other minority groups—reap the benefits of quality higher education systems developed for and available to all our people. We support those who advocate the need to involve the federal government in the upgrading of black schools while facing the very real dilemma of being in competition with those schools for talented black students.

I would be remiss if I did not emphasize again the pressing need for increased federal funding for research equipment and facilities, a point I discussed in considerable detail before this committee on December 8, in Pittsburgh. As I said then, the Pennsylvania State University is among the top twenty research universities in the nation. Yet, we are dangerously behind in keeping the University at the state-of-the-art in engineering and scientific equipment. Updating our equipment and facilities is Penn State's single most pressing need for substantial funding support. It is becoming increasingly critical.

Hence, we applaud Title VII in its effort to provide support to improve research facilities at the nation's universities. You have summarized well the need for this, Mr. Chairman, on pages 48 and 49 of the January 19, 1984, document highlighting your thoughts for reauthorization. We welcome your efforts to emphasize low interest loans for the construction of academic and research facilities and to provide matching grants for the purchase of laboratory and instructional equipment. We regret, however, that you saw the need to increase the local share for construction projects from 20 percent to 50 percent. We also hope that your proposal to authorize $100 million annually for five years to provide matching grants to universities to purchase laboratory, research, and other instructional equipment is enacted.

Before concluding, I would also like to applaud your interest and leadership in international education as outlined in Title VI. The need for international education is becoming increasingly critical in our pluralistic society. It is an area we are nurturing at Penn State. The idea of establishing a National Endowment for International Education offers great promise in this area. Your long-standing commitment to and support of international education is appreciated.

We thank you for this opportunity to share our views with you on these important issues and for your work on behalf of higher education.

TABLE 1.—COMPARISON OF ALLOWABLE PELL COSTS AND ACTUAL STUDENT COSTS FOR ROOM AND BOARD AT THE PENNSYLVANIA STATE UNIVERSITY

	Current law 1983–84			Higher education amendments of 1984–86		
	Allowable Pell costs	Documented costs	Disallowed costs	Allowable Pell costs	Projected actual costs [1]	Disallowed costs
Commuter	$1,100	$1,575	($475)	$1,200	$1,770	($570)
Off-campus	1,100	2,562	(1,462)	1,600	2,879	(1,279)
On-Campus (residential)	2,464	2,464		2,000	2,769	(769)

[1] Current costs plus anticipated 6 percent annual increase.

STATEMENT OF DR. BRYCE JORDAN, PRESIDENT, PENNSYLVANIA STATE UNIVERSITY

Dr. JORDAN. Thank you. Mr. Penny and members of the committee, I do thank you for the chance to appear before you related to these very important issues in higher education. I have submitted extensive remarks for the record and what I would hope to do here this morning is simply summarize those remarks.

If I may, I should like to turn first to the matter of student aid and begin by commending this subcommittee's initiative in addressing what we view as a very serious disparity developing in higher education in the ratio of student loans to grants. We have begun to note that student loan indebtedness is becoming quite alarming.

Recently, our student financial aid officer pointed out to me an example of a young, black woman majoring in engineering at the University Park Campus at Penn State. She is now finishing her junior year and as she finishes that year, she will have a total loan indebtedness of $19,500. This is illustrative of a growing trend, we think, in higher education.

At Penn State the total documented financial need for undergraduate students for 1983–84 academic year was $99.8 million. We can document an unmet need for these students that totals $22.8 million. Over half of our students who participate in the National Direct Student Loan Program also must borrow from the GSL, or Guaranteed Student Loan Program, in order to stay in school at Penn State.

Continuing to talk about this matter of loan obligation, the mean annual amount borrowed by our neediest students is at an alarmingly high per capita total of $3,262, mean annual amount. Penn State has a particular interest in recruiting and retaining black students from the State of Pennsylvania as well as from elsewhere. One-fifth of our black students that are among the university's highest achievers are included in the group which must borrow from NDSL and from GSL.

I mentioned earlier that the mean annual amount per capita total loan was $3,262. Nearly half of the students accumulating that total, that mean, also are receiving supplemental grant funds. So in that environment—the environment in which we are working—the fiscal environment for our students, we support proposals which would increase maximum award levels of the Pell Grant Program and we support proposals calling for the establishment of Pell Grants as entitlement. We support proposals to incorporate inflation adjustments in the Pell Grant. We certainly support proposals to increase the half-cost ceiling to 75 percent of tuition costs.

Still the proposed program does not recognize student costs adequately. At Penn State, the costs of tuition over 10 years have risen 170 percent. So we do suggest further study of this issue so that a standardized Pell formula which is acceptable to the entire higher education community can be developed.

Such a formula, we believe, should recognize the true costs of attendance experienced by three types of students—on campus, off

campus, and commuting students. All public universities are finding increasing numbers of commuting students and the inequities there are perhaps the largest of all.

We do support also the proposal to increase the College Work-Study Program. Let me point out that Penn State has had a particularly fine experience with the College Work-Study Program. More than 3,700 of our students are participating at this point in work which ranges from pure counseling in the student aid program to active research activity in the laboratories and research programs of our professors. There is much more need there than we can presently fulfill.

We also want to comment on the Institutional Block Grant Program. We think that is very worthy of consideration because of the flexibility and the accountability involved, but we do have a caution. We recognize the block grant programs have been used in the very recent past as a mechanism for consolidating Federal budget cuts and for throwing additional financial responsibilities on the States and we are cautious about that.

We have a very particular interest in improving the possibility and the climate for student financial aid for graduate students. We think this is a critical national problem which has been increasing as support for graduate students has declined over the years.

Sufficient aid for graduate students is critical to the research effort of our Nation's major universities. We think that insufficient aid for graudate students has had severe consequences for the research posture of our entire country and for our country's basic research effort and we see increasing problems unless that trend of financial aid for graduate students can be reversed. We support very fully the conclusions of a study recently published by one of our former distinguished colleagues, the now distinguished president of NYU, John Brademas, a report titled, "Signs of Trouble and Erosion: A Report on Graduate Education in America." That study argues and I quote, "It is to our universities that we must once again turn if we are to improve our commerce and industry, preserve and defend our Nation, conquer disease and malnutrition and reclaim the environment as well as to restore the intellectual and civic fabric of American society."

The Nation's major research universities of which the Pennsylvania State University is one will not be able to respond to that kind of a ringing call unless they are able to attract and obtain a talented pool of graduate students. The key to that is adequate graduate student aid.

Assistance to graduate students is certainly not what it should be. At Penn State during 1982-83, we enrolled 6,104 graduate students. Only 37 percent of those students had assistantships. Only 173, or 3 percent, had fellowships. The number of graduate fellowships available to Penn State graduate students has declined by 184, or 53 percent, between 1973 and 1983.

The matter of an increasing amount of debt liability is just as true for graduate students as it is for undergraduates. Increasingly, graduate students are turning to loans to finance their education. In the last 3 years, the number of graduate students using loans has increased 34 percent.

We point out, by the way, that the average cost of education for a Penn State graduate student has increased 52 percent in the last 4 years. For 1982–83 academic year, the total cost for a Pennsylvania resident graduate student was $7,083. For an out-of-state student, over $9,300.

In this environment, we support proposals to raise the annual maximum Guaranteed Student Loan amount to $7,000. We support increases in the limits to the aggregate amount borrowed and, particularly important, in view of the load which graduate students and undergraduate students are carrying, an extension of the length of time required to repay those loans.

I want to comment particularly on the Graduate Professional Student Program or G*POP as it is called. G*POP is a very important program and something that Penn State is spending a great deal of attention and energy on these days: That is, the recruitment and the retention of larger numbers of minority graduate students. There is a sizable shortage of minority faculty on the campuses of most major American universities. We see the G*POP as an important avenue for educating and recruiting top-flight young minority Ph.D.'s onto the faculties of major universities. We particularly support the program which would increase the G*POP stipend from its current 12-month, $4,500 to a much larger figure. G*POP stipends simply do not compare to NSF fellowships—G*POP stipends being at $4,500 and NSF fellowships at $8,100. It's one of the great ways of increasing minority participation in higher education and in faculties of our major universities.

We also support proposals to increase graduate student access to title IV student aid programs. However, we do want to stress that academic merit is an important facet of graduate education and must be a stronger factor in the allocation of support for graduate students. Need is an important consideration, but merit is a very important consideration, if our universities are to provide the kind of highly educated graduate degree holders which our country must have.

I would like to discuss very briefly the matter of support for black colleges and universities. We support proposals to involve the Federal Government in the upgrading of these black institutions, but I would point out that we face a very real dilemma in being in competition with those schools for talented black students. It creates a real dilemma for Penn State, for example.

We presently have close cooperative ties with Lincoln and Cheyney Universities in Pennsylvania. These are traditionally black schools and our efforts there suggest that the upgrading process should not occur in isolation but in concert with supportive institutions, such as Penn State and our other major research universities in Pennsylvania.

Cooperative efforts to improve postsecondary education of black students, particularly of those seeking entrance into graduate or professional school, we think are very, very promising. Blacks and whites must together with other minority groups reap the benefits of quality higher education assistance developed for and available for all people.

I do want to reemphasize, Mr. Chairman, the pressing need for increased Federal funding for research equipment and facilities.

That particular problem is a massive one for Penn State and for the other State-related research institutions in Pennsylvania. This is a point which I discussed in considerable detail when I testified before this committee on December 8 in Pittsburgh.

So we support title VII in its effort to emphasize low interest loans for construction of academic and research facilities and we support most enthusiastically your proposal to authorize $100 million annually for 5 years to provide matching grants to research universities to purchase laboratory, research and other instructional equipment.

Before concluding, Mr. Chairman, I also want to applaud efforts on behalf of international education as outlined in title VI. Penn State University has a large and active international program in all parts of the world and the idea of establishing a national endowment for international education offers, we think, great opportunity.

I thank you very much for the opportunity to appear here today.

Mr. PENNY. Thank you, Dr. Jordan.

I think it would be best if we just proceeded with the other panelists and at the conclusion of all of the testimony we will then ask questions of each of you.

Next, I would like to call on Dr. Frank Rhodes, president of Cornell University.

[Prepared statement of Dr. Frank Rhodes follows:]

PREPARED STATEMENT OF DR. FRANK H.T. RHODES, PRESIDENT, CORNELL UNIVERSITY

I am Frank Rhodes, President of Cornell University.

Mr. Chairman, Members of the Subcommittee on Postsecondary Education. The prospective reauthorization of the Higher Education Act of 1965 raises more issues than one witness can possibly cover in an appearance such as this. Therefore, with your permission, I should like to focus my remarks on those aspects which are concerned with the support of graudate education and its essential partner, research and scholarship.

Before doing so, I would urge the Subcommittee to consider carefully two important questions raised by the bill introduced by Chairman Simon in the major changes it proposes for student aid.

First, what would be the effect of the proposed entitlement for Pell Grants? If needy students at lower-priced institutions were to have most of their costs covered, while those at higher-cost institutions remained dependent on the uncertainties of the appropriations process, could this discourage attendance at independent institutions and thus alter the balance between the sectors? Access would still be maintained; choice between institutions would be reduced.

Second, how would the proposed consolidation of campus-based aid programs effect institutional allocations? To date, there has been no analyses of this important question, and I would urge the Subcommittee not to consider such a change without detailed information as to its impact. If a block-grant proposal were adopted, for example, it would be important to assure that the allocation of funds under it is as equitable as possible.

You have now heard testimony on issues affecting graduate education from John Brademas, President of New York University and Chairman of the Graduate Education Subcommittee of the National Commission on Student Financial Assistance. That Subcommittee has recently issued a splendid report, of which you have copies, whose conclusions and recommendations I enthusiastically endorse and commend to you.

In particular, the Brademas report outlines the reasons for a carefully bounded but major Federal role in maintaining a healthy graduate enterprise. The rationale for a Federal role has been succinctly put forth by President Robert Rozenzweig of the Association of American Universities. In barest essence, it is as follows:

1. Doctoral education in America is inseparable from research.

2. There is a recognized Federal responsibility for the report of university-based basic research, whose costs are local but whose benefits are broadly distributed and enormously important.

3. Quoting now from Dr. Rosenzweig, "a national research enterprise that falls short of reaching the very highest levels of creativity imagination, and intellectual power is, in the end, far more costly than one that does [reach these levels], because the return from it is so much lower."

4. The quality of the scholars and scientists who do the work, and the quality of their students, are absolutely critical.

At the graduate level, the Federal role should focus on programs designed to attract the most talented college graduates into graduate study. This should involve three major initiatives:

1. Competitive fellowships and traineeships for the most promising students and the highest quality departments, ranging across all academic disciplines, but including some programs specifically designed to fill shortages.

Figures compiled by the American Society for Engineering Education show that 8% or 1,450 of the budgeted engineering faculty positions nationwide are unfilled. If we returned to the faculty/student ratios of the 1960's, however, that number would rise to 6,000. We are now producing 3,000 engineering Ph.D.'s per year compared with 3,800 in 1973. About 35% of these foreign nationals. The need could be met, according to some estimates, if we could increase the 15,000 engineering students enrolled in Ph.D. programs by 1,000 each year for the next five years.

2. Assistance in rebuilding and re-equipping laboratories and libraries.

Unpublished National Science Foundation statistics show that only 16% of university instrumentation is state-of-the-art in the fields of physical sciences, engineering, and computer science. About one-quarter of the 1982 inventoried equipment is listed as obsolete and no longer in research use.

Thirty-one percent is over ten years old, 49% is one to five years old, and 20% is in the range of six to ten years. A 1981 survey by the Association of American Universities found that 15 of the major universities would need to spend three quarters of a billion dollars over the three years 1982-84 for research facilities and special research equipment. The total national problem is, of course, far larger.

3. Incentives for the most promising minority college graduates to enter careers of teaching and research.

Statistics in this area (1981) are discouraging. Twelve percent of the U.S. population is black, but only 9.7% of undergraduate students are black and the percentage drops to 4.2% at the Ph.D. level. By field, blacks receiving Ph.D.'s in 1981 ranged from less than 1% in physics and the earth sciences to 8.8% in education. Blacks received only 5% of professional degrees in 1981.

It is important to recognize that the rationale for a Federal role in graduate education, and the appropriate policies to implement it, are fundamentally different from those underlying Federal support for undergraduate education, which properly emphasize access and choice through need-based student aid.

On the specifics of what you propose, Mr. Chairman, I would now like to make the following observations and recommendations.

National Graduate Fellows Program.—This program, authorized for the past five years but never funded, would provide up to 450 merit-based fellowships annually. I commend the proposed legislation for recognizing the primacy of this program for support for the arts, humanities and social sciences and permitting expansion to other areas of national interest. I also support the $9,000 minimum stipend. Your proposal would be further enhanced, Mr. Chairman, if a program of NIH-type institutional traineeships could be added.

Graduate and Professional Opportunities Program.—This program has been of significant help at Cornell and other institutions over the past six years in attracting and supporting minority graduate students. The proposed increase in stipend level and the progressive increases in program authorization would be very valuable. I understand that this program has experienced administrative difficulties, which I hope the Department of Education will be able to resolve.

Early Identification.—Important new language would permit "the identification and recruitment of minorities and women for graduate and professional programs." I understand that the National Institutes of Health have established a very successful program called MARC—Minority Access to Research Careers—which could usefully serve as a model for a similar program in the Department of Education. The MARC program provides competitively awarded 5-year institutional traineeships which support promising minority undergraduates in special programs to prepare them for graduate training. It effectively addresses serious problems in both the re-

cruitment and retention of minority students in doctoral programs, and should be expanded to other Federal agencies that support graduate education.

Pell Grants for First-year Graduate Students.—This is a commendable initiative. There is certainly well documented need among our graduate student population. In fact, at Cornell, approximately 30% of our National Direct Student Loan (NDSL) and College Work Study (CWS) allocations are utilized by needy graduate and first professional students. I am concerned, however, that the Pell grant program, which has never been funded at the levels authorized in 1980, could be further diluted by this effort. I therefore endorse this proposal contingent upon the full funding of the Pell grant program as authorized in 1980. These new Pell funds would then certainly shift some of the emphasis in graduate student support from loans to grants, while providing the support necessary for our truly needy undergraduates.

Facilities and Instrumentation.—One of the most heartening aspects of the legislative proposals you have placed before us is explicit recognition of "the overwhelming need for facilities and instrumentation throughout higher education." I want to underscore the urgency of these proposed programs for (1) low-interest loans for construction of academic and research facilities, and (2) matching grants for the purchase of laboratory and instructional equipment. The needs are very great, but this is a good beginning. We simply cannot train young scientists, engineers, physicians and others on obsolete equipment. Inadequate equipment will provide inadequate research. As a nation, we cannot afford that particular economy.

Research Libraries.—High quality graduate education and research are fundamentally dependent upon access to large and very costly research libraries. The relatively few such libraries constitute a significant national resource, and the arguments for their support parallel those for Federal support of research and graduate education. Their needs at the moment are especially acute as we enter the highest-cost phase of the unprecedented revolution in library technology.

I applaud the initiative in the proposed legislation which would support the development of technology. At the same time, I would hope that additional funds could be authorized for expanded support grants to research libraries.

International Education.—The statements accompanying the proposed legislation indicate your full awareness of our country's needs in international education. A number of your new proposals would be valuable, including the provision for a foreign language periodical system and for a center or office of international education within the Department of Education. The proposed faculty and student exchange programs are highly commendable in their intent; I hope they will reinforce and not displace the successful existing Fulbright-Hays programs.

I would also like to call your attention to a major study of foreign langauge and area studies now in progress under the auspices of the Association of American Universities. This study will be completed soon, and I hope its recommendations will be carefully assessed as reauthorization proceeds. One important suggestion already made is for support for both summer institutes and year-long institutes for intensive training in critical or neglected languages, and I understand that your legislation is responsive to this need.

Loan Limits.—The higher education community is greatly concerned about the increasing debt burden carried by many students upon graduation, especially by those who go on to graduate or professional school. At the graduate level, as I have said, we would like to see the primary mechanism of support be fellowships and traineeships based on merit. Yet I do not foresee a time in the near-term future when either undergraduates or graduate students will be able to manage without increased access to loan capital.

I am therefore very pleased by the proposals to raise the annual borrowing limit under the Guaranteed Student Loan Program to $3,000 for undergraduate students and $7,000 for graduate or professional students. I fear that even this may not be enough. Limits of $4,000 for undergraduates and $10,000 for graduate students, already suggested to your Subcommittee, may be more appropriate. Moreover, the aggregate limit for graduate and professional students remains at $25,000, which unfortunately does not meet the need for many. I hope this can be reviewed.

On interesting possibility, which I understand has been raised before your subcommittee, is a Federally guaranteed loan program which bears no Federal subsidy other than that implied by the guarantee. This concept would give individual institutions a promising opportunity to seek private loan capital on their own.

While on the subject of loans, I commend you for the removal of the origination fee. I would also like to express concern about the fixed family income limit of $65,000, and recommend instead that you require a full needs analysis in each case. Surprising as it may seem to some, today's cost of college attendance can place a severe burden on some families ordinarily considered in a comfortable income

bracket. The primary need is for flexibility, both in access to loans and in repayment. In this connection, I am very happy to note your recognition that some form of loan consolidation and flexible repayment plan must be provided for needy and highly indebted borrowers.

A Prescription.—Our graduate schools provide the continuing supply of talented individuals with the knowledge, technical skills and perception on which depend our food supplies, our health and well-being, our military strength, our cultural life, our international leadership and our economic vitality.

As Dr. Robert Rosenzweig has said:

A simple and clear prescription can serve as a guide to national policy with respect to graduate education. It is this: attend to the education and training of the nation's best young minds or fall behind those nations that do. For it is upon this thin stream of highly talented men and women that our national creativity chiefly rests.

Mr. Chairman, in this, your final year in the House of Representatives, I would like to say how very greatly we in the higher education community appreciate your extraordinary and constructive interest over the years in the welfare of higher education. You have consistently sought to enhance the opportunities of students, their families and their institutions, and we are all the better for it. So is our nation. You leave us all greatly in your debt.

Thank you.

STATEMENT OF DR. FRANK RHODES, PRESIDENT, CORNELL UNIVERSITY

Dr. RHODES. Mr. Chairman, the proposed reauthorization of the 1965 Higher Education Act raises more issues than any one person can possibly speak to in a session such as this. With your permission, I want to focus my remarks entirely on the support of graduate education and on its essential part in research and scholarship. In doing that, of course, I have no less interest in other aspects of the proposed reauthorization.

But before I talk about specifics, perhaps I could urge the subcommittee to consider carefully two very important questions that are raised by the bill which Chairman Simon has proposed. Those concern major changes in student financial aid.

The first question is this: What would be the effect of the proposed entitlement for Pell Grants if needy students at lower-priced institutions were to have most of their costs cut, while those at higher cost institutions still remained uncertain about the appropriations process? Might this not discourage attendance at independent institutions and so alter the general balance between the two sectors?

I say that not out of any protectionism for the independent institutions—Cornell happens to live in both worlds—but because I believe that access continues to be enormously important to us, but so does choice. I hope for all students this element of choice between different kinds of institutions may continue to be regarded as a priority.

The second question: How would the proposed consolidation of campus-based aid programs affect institutional allocations? We have not yet together had any analysis of this very important question. I hope the subcommittee won't go forward with such a change without very detailed information as to what the impact would be. If a block grant proposal were adopted, for example, it would be very important to assure that the allocation of funds under that was as equitable as possible.

You have heard reference this morning and you have already heard testimony from Dr. John Brademas on behalf of the National

Commission on Student Financial Aid. The report of that subcommittee is one that is well known to you and I want simply to endorse wholeheartedly the proposals that it has made.

My thesis fundamentally this morning is that the Nation must not economize in graduate education because it is of vital importance not simply for the students, not simply for the universities, but for the health and prosperity of the Nation. It is the single most important investment that we have to make in the future of our Nation.

At the graduate level, it seems to me that the Federal role should focus on programs to attract the most talented college graduates into graduate study. My colleague, Dr. Jordan, has just emphasized the fact that it is not only need, but it is also merit that is so critical in attracting the best young people into graduate studies.

It seems to me three major initiatives that you are considering are of particular importance to us. The first is competitive fellowships and traineeships for the best students in the highest quality departments that go right across the ranges of the academic disciplines, but including especially some in programs designed to fill critical shortages.

Let me point out, for example, the crisis that we face in graduate education in some areas of engineering. It has been estimated recently that about 8 percent, or 1,450, of the budgeted existing faculty positions in engineering nationwide remain unfilled and they have been unfilled for 3 or 4 years now with no prospect of filling them.

If we went back from mur present faculty-student ratios to those of the 1960's which are more realistic, that number would actually rise to 6,000 unfilled vacancies in faculty engineering positions. We are now producing about 3,000 engineering Ph.D.'s a year. Ten years ago that number was 3,800. About 35 percent of those enrolled in doctoral programs in engineering are foreign nationals, many of whom return to their home countries at the completion of their studies.

Our need could be met if we could increase the present enrollment of about 15,000 students in Ph.D. programs in engineering by about 1,000 a year. But given the attraction of careers in industry, that will not happen without a Federal interest and Federal support.

Second, we welcome the initiative you have proposed in helping us rebuild and re-equip the laboratories and libraries in which instruction research takes place. About 16 percent of all instrumentation in universities is no longer state-of-the-art. About one-quarter, in fact, is obsolete and no longer in use. If you review all of the research equipment in our universities, 31 percent of it is over 10 years old and over 20 percent of it is more than 6 years old. In general, it has been shown in a recent survey conducted by the Association of American Universities that just 15 of our major research universities need to spend three-quarters of a billion dollars to bring their equipment up-to-date. Of course, nationwide, that figure is very much greater.

And then the third need that you have identified—and I cannot emphasize too strongly its priority—is that incentives have to be offered at a reasonable level to attract the best minority college grad-

uates into careers and teaching and research. The results are discouraging and they are not improving. Twelve percent of the U.S population is black, to take one example, but only 9.7 percent of our undergraduates are black. At the Ph.D. level that falls to only 4.2 percent black students enrolled. In some fields the problem has reached crisis proportions. Only 1 percent of those students enrolled for Ph.D.'s in physics are black.

Translated into actual numbers, we are now producing only 30 or 40 students a year in certain vital fields such as engineering, biological sciences, and a number of others. The number of black and other minority graduates has to be improved at the Ph.D. level. We are clamoring for their presence as faculty members in the 3,000 colleges and universities, in hundreds of corporations which conduct research, and in scores of Federal agencies as well as many other leadership positions.

I do ask you, whatever the other priorities, urgent as they all are, to regard this as one that we have to give the utmost urgency and priority to.

Let me talk very briefly about one or two of the specifics of the programs that you have proposed.

The National Graduate Fellows Program has been authorized now for 5 years, but never funded. That program would provide assistance for 450 merit-based fellowships annually. That's a vitally important program to us and I support with enthusiasm the $9,000 minimum stipend that you suggest.

I also suggest, Mr. Chairman, that you might be willing to look at the possibility of NIH-type institutional traineeships as well as the particular model that you have proposed.

Let me repeat what my colleague, Dr. Bryce Jordan, has already said about the G*POP program, the Graduate and Professional Opportunities Program. This has been of great help already not only at Cornell, but at many other sister institutions for over 6 years in attracting and supporting minority graduate students. I understand that there have been some difficulties in administration and I hope that they can rapidly be ironed out because that's a vital program.

But it won't, by itself, solve our problems. We have to identify young men and young women from minority groups only who have the talents for graduate and professional programs. I commend the language you have put into your proposals for the early identification and recruitment of these minority men and women.

I understand that the NIH has already established a very successful program called MARC, Minority Access to Research Careers, which might well serve as a model for what you have in mind here. This provides competitive awards to institutions which are then given to trainees that supports undergraduates of minority groups in early exposure to research training. I hope those opportunities for early identification can be expanded as well as the need for support once they enter graduate programs.

Pell Grants for first-year graduate students represent another proposal that you have made and that's a commendable initiative and certainly there is a very well-documented need for support for graduate students. In fact, at Cornell, some 30 percent of our Na-

tional Direct Student Loans and College-Work Study funds go to first-year professional and needy graduate students.

I am concerned, however, that because the Pell Grant has never been funded at the 1980 levels that we don't embark upon this program, if it's likely to dilute support that it provides for undergraduates. I hope that both needs can be kept in mind as you review this.

Facilities and instrumentation are another part of your proposal and one of the most heartening of the all of the good proposals that you have made. I want to underscore the urgency of the programs you have proposed. First, for low-interest loans, for construction of research facilities and second, for matching grants for the purchase of equipment.

Industry is beginning to come around now enthusiastically to the idea of sharing research equipment with the universities, but we do need your help in providing matching funds to meet the cost and match the cost of purchases that we continue to have to make.

The needs are very great and I can only tell you that inadequate equipment will provide inadequate research and that is an economy that the Nation cannot and must not make. Research libraries continue to be the base of the research effort, not just of universities, but of the Nation. Your committee knows very well the acute problems that we face not only in preserving materials published in the last 100 years which are printed on acid papers which are now deteriorating rapidly, but also in the need to apply nationwide new systems of technology for information storage and retrieval.

I hope you can also recognize the relatively small number of research libraries that serve as regional resources for other colleges, for industry and for Federal agencies across the country.

I support the proposals you have made for international education. They have already been described and already been supported and this, in a changing world, becomes a greater priority as each year goes by. I applaud particularly the provision of a foreign language periodical system that you have proposed and the center or a new foundation for international education.

The faculty-student exchange programs are very important to us, though I hope they won't displace the existing Fulbright-Hays Program.

I also wish to point out, if I may, that there is in progress at present under the auspices of the Association of American Universities, a study that will very soon be completed and I hope you and your committee will have the benefit of reviewing the proposals which will come out of that study.

One suggestion which has already been made by that group is the need for summer institutes and year-long institutes to provide skills in neglected, critical languages which are vital to government as well as to areas of scholarship.

I won't talk at length about loan limits, but they remain a matter of great concern to us. My written testimony describes those in some detail and I hope that will remain high on the agenda that you have proposed.

Finally, let me say, our graduate schools represent the continuing base of the pyramid of our national progress. It is from them that that small, but important supply of talented individuals with

the knowledge and the technical skill and the perception come—people who will give us in the future not only food supplies but every aspect of our national needs will depend upon their success—health, well-being, military preparedness, cultural life, international leadership, economic strength.

My colleague Dr. Robert Rosenzweig from the AAU has given a prescription which I believe is one of enormous importance. "Attend to the education and training of the Nation's best young minds or fall behind those nations that do, because it is upon that thin stream of talented young men and women that our national creativity and our national strength ultimately will rest."

I appreciate the opportunity to appear before you, Mr. Chairman.

Mr. PENNY. Thank you, Dr. Rhodes.

Next, Dr. Joseph Caputo, president of Millersville University of Pennsylvania.

[Prepared statement of Dr. Joseph Caputo follows:]

PREPARED STATEMENT OF DR. JOSEPH A. CAPUTO, PRESIDENT, MILLERSVILLE UNIVERSITY OF PENNSYLVANIA

Mr. Chairman and Members of the Subcommittee:

My name is Joseph Caputo. I am President of Millersville University of Pennsylvania, one of the 14 component universities of the Pennsylvania State System of Higher Education. My purpose in appearing before you today is to comment briefly on the reauthorization of the Higher Education Act of 1965, as amended. It is indeed an honor to have been invited to sit with my distinguished colleagues on this panel and to make this statement.

My comments will be brief, and will include a background statement describing Millersville University and a few comments on reauthorization and House Bill 5240 specifically. But first, I wish to commend Chairman Simon for his leadership on the reauthorization and for his demonstrated concern for our students.

Millersville University is located in southeastern Pennsylvania about 90 miles due west of Philadelphia and 40 miles southeast of the State capitol, Harrisburg. Our fall enrollment exceeded 6,700 students in approximately 100 degree programs covering the broad fields of the traditional arts and sciences, as well as many professional programs including teacher education.

Over our more than 127 years history we have evolved from a state normal school to a liberal arts oriented state college and in 1983 by Act of the Pennsylvania legislature and Governor Thornburgh, we became a University.

As promised, my comments on reauthorization will be brief. I will use House Bill 5240 as the vehicle to address four general areas on which I will comment.

1. TITLE IV. STUDENT FINANCIAL ASSISTANCE

As the president of a public university where 50% of the students are from families with annual incomes of less than $25,000, and many of whom are the first members of the family to have the opportunity to attend college, I am committed to and applaud your goal of expanding access to higher education, particularly for needy students, by strengthening the provisions of title IV in House Bill 5240.

Approximately 80% of the students attending Millersville University receive some form of student financial assistance. This is perhaps a rather surprising percentage when you consider that we are a relatively low cost institution. Tuition, room, board, and fees average approximately $3,400 for an academic year for a full time undergraduate student at Millersville.

I am pleased with your proposal to make the Pell Grant Program a true entitlement program for needy students. I also support the modification of the so-called "half-cost" rule by increasing the maximum grant to 75% of the students tuition and fees not to exceed a $3,000 maximum award for the 1985–86 fiscal year. I would, however, recommend that the standard cost allowance be fixed at a flat $2,000 per academic year for students living on or off campus.

I do not see any benefit to establishing a three pronged cost allowance system as specified in House Bill 5240. At Millersville, for example, we simply do not have the dormitory space available to meet the housing needs of our students, thus these students have no choice but to seek off campus, and in most cases, more expensive

housing. It seems that the three pronged cost allowance system unfairly penalizes these students.

As I become more knowledgeable in the area of student financial aid, I am struck with two glaring needs that must be addressed. First, complexity of program regulations must be reduced. And secondly, an institutional aid office must have flexibility in structuring a student's financial aid package to meet his or her particular needs. The proposed campus-based block grant meets both of these objectives. It provides for flexibility, less regulations and the more effective use of limited campus based student aid funds.

Although supportive of the campus-based block grant, I would, however, be remiss if I did not express one concern that I have with the proposal. That is, I am not at all sure that the State Student Incentive Grant Program should be eliminated. The SSIG Program has worked. It was created as an incentive for states to establish need-based student aid programs. I am aware of the argument that many states exceed the required state match. Pennsylvania is one such state. But nevertheless, the state-federal partnership concept in student financial aid is important and should be maintained. I am also troubled with the possibility that should this successful program be eliminated, some states would lose the incentive to continue their important state grant programs and this should not be allowed to happen.

2. TITLE V, TEACHER EDUCATION AND PROFESSIONAL DEVELOPMENT

Millersville University has a long and proud history of preparing students for careers in the teaching profession, and I am fully supportive of the changes in Title V as they appear in House Bill 5240.

The new title, "Teacher Education and Professional Development," suggested to me when I first saw it, an excellent opportunity to address an important problem that I see emerging on our college and university campuses. That is, the need for faculty development.

As our institutions of higher education cease to grow, and, indeed, begin to decline in student enrollment, the faculty stabilizes, becomes less mobile, and ages. Opportunities for this well-educated, intellectual resource and repository of expertise, the faculty, to remain current in their academic disciplines and even to retrain, are absolutely essential.

I believe that the growing problem of inadequate faculty development opportunities is not well addressed in HR 5240. Perhaps I can make a suggestion. Pennsylvania, as but one of many states, provides a sabbatical leave program for the faculty of its public institutions. Traditionally, after 6 years of fulltime service, a faculty member is *eligible* to take the seventh (sabbatic) year as leave for the purpose of professional development (including research, scholarship, advanced degrees, etc), with the ultimate expectation of improvement in classroom instruction. At Millersville, Pennsylvania law allows a maximum of 5% of the faculty per year to participate. Other states have similar laws. Thus, while roughly 15% of the faculty are eligible for the professional development opportunity, only about one-third of this number are authorized by law. Presumably the 5% cap is cost motivated.

The sub-committee has at least two opportunities to enhance faculty development opportunities through partnerships with existing state funded sabbatical leave programs. The first is to match state funding one-to-one, thus doubling, or two-to-one, thus tripling, the percentage of eligible faculty who may participate. A second opportunity, alternately viewed as a leave option of the first, if so authorized, would consist of a one-to-one federal-to-state funds match for the extension of traditional one-year leave at half-pay to a more realizable full-pay option.

I suggest that this is an issue the committee may wish to consider.

3. TITLE VII, CONSTRUCTION, RECONSTRUCTION, AND RENOVATION OF ACADEMIC FACILITIES

I cannot emphasize strongly enough to the members of the subcommittee the critical needs that we have on our campuses for assistance in renovating and maintaining our physical plants. A recent survey of the building renovation and repair needs of the fourteen public universities that make up the State System of Higher Education in Pennsylvania identified an immediate need for approximately $80 Million to correct safety hazards, repair leaking roofs, replace boilers, to name but a few items requiring attention. On the Millersville campus alone, we need $7 million, but have virtually no means of obtaining such a large amount of capital funds. Establishing a revolving fund to provide low interest loans with a 50% required match from local sources as proposed in part of Title VII, will not provide the full assistance we re-

quire. The public cannot afford to see its investment in our college and university physical facilities be permitted to deteriorate.

The chairman is further to be commended for his interest in and recognition of the need to provide assistance to colleges and universities with the purchase of laboratory research and other instructional equipment as proposed in Part B of Title VII. I am not at all sure, however, that the $100 million authorization level is sufficient to meet the critical need we have for acquiring and replacing equipment, which ages both because of use and technical obsolescence.

4. TITLE XII, ENDOWMENT DEVELOPMENT

I was intrigued by the bold and innovative "Institutional Endowment Development" concept addressed in Title XII.

Millersville University, a state-owned public institution, has witnessed a continuous decline in state support as a percentage of university operating revenues over the past decade. The state appropriations as a percent of operating revenues have declined from 61% in 1969 to 50% in 1983. Millersville University has no endowment upon which to rely or draw. But realizing the need to begin to cultivate and develop independent sources of revenue, we have instituted an Annual Fund Giving Program and we contemplate the launching of a Capital Campaign and the building of an endowment. These are now frequently observed initiatives in the public sector that only a decade ago were virtually unheard of.

Believe me, building an endowment at an institution like Millersville is no easy task when you are starting from scratch. The proposed "Institutional Endowment Development" Program will greatly assist us in obtaining a diversified revenue base to meet the income needs of the future and insure the University's vitality. I applaud your proposal.

Thank you. It has been an honor to appear before you.

STATEMENT OF DR. JOSEPH CAPUTO, PRESIDENT, MILLERSVILLE UNIVERSITY OF PENNSYLVANIA

Dr. CAPUTO. Good morning, Mr. Penny and members of the subcommittee. My name is Joseph Caputo. I am president of Millersville University of Pennsylvania, one of the 14 component universities of the Pennsylvania State system of higher education. My purpose in appearing before you today is to comment briefly on the reauthorization of the Higher Education Act of 1965, as amended. It is indeed an honor to have been invited to sit with my distinguished colleagues on this panel to make this statement.

My comments will be brief and will include a background statement describing Millersville University and a few comments on reauthorization in H.R. 5240 specifically. But first, I do wish to commend Chairman Simon for his leadership on the reauthorization and for his demonstrated concern for our students.

Millersville University is located in southeastern Pennsylvania, about 90 miles due west of Philadelphia and 40 miles southeast of the State capital, Harrisonburg. Our fall enrollment exceeded 6,700 students in approximately 100 degree programs covering the broad fields of the traditional arts and sciences as well as many professional programs including teacher education.

Over our more than 127 year history, we have evolved from a State normal school to a liberal arts-oriented State college.

In 1983 by act of the Pennsylvania legislature and Governor Thornburgh, we became a university.

As promised, my comments on reauthorization will be brief. I will use H.R. 5240 as the vehicle to address four general areas on which I will comment.

First, title IV, Student Financial Assistance. As the president of a public university where 50 percent of the students are from fami-

lies with annual incomes of less than $25,000, many of whom are the first members of the family to have the opportunity to attend college, I am committed to and applaud your goal of expanding access to higher education, particularly for needy students by strengthening the provisions of title IV in H.R. 5240.

Approximately 80 percent of the students attending Millersville University receive some form of student financial assistance. This is perhaps a rather surprising percentage when you consider that we are a relatively low-cost institution. Tuition, room, board and fees average approximately $3,400 for an academic year for a full-time undergraduate student at Millersville.

I am pleased with your proposal to make the Pell Grant Program a true entitlement program for needy students. I also support the modification of the so-called "half cost" rule by increasing the maximum grant to 75 percent of the student tuition and fees, not to exceed a $3,000 maximum award for 1985-86 fiscal year.

I would, however, recommend that the standard cost allowance be fixed at a flat $2,000 per academic year for students living on or off campus. I do not see any benefit to establishing a three-pronged cost allowance system as specified in H.R. 5240.

At Millersville, for example, we simply do not have the dormitory space available to meet the housing needs of our students. Thus, these students have no choice but to seek off-campus, and in most cases, more expensive housing.

It seems that the three-pronged cost allowance system unfairly penalizes these students.

As I become more knowledgeable in the area of student financial aid, I am struck with two glaring needs that must be addressed. First, the complexity of program regulations must be reduced. Second, an institutional aid office must have flexilbility in structuring a student's financial aid package to meet his or her particular needs.

The proposed campus-based block grant meets both of these objectives and provides for flexibility, less regulations and more effective use of limited, campus-based student aid funds.

Although supportive of a campus-based block grant, I would, however, be remiss if I did not express one concern that I have with the proposal. That is, I am not at all sure that the State Student Incentive Grant Program should be eliminated. The SSIG Program has worked. It was created as an incentive for States to establish need-based, student aid programs. I am aware of the argument that many States exceed the required State match. Pennsylvania is one such State, but nevertheless the State and Federal partnership concept in student financial aid is important and should be maintained.

I am also troubled with the possibility that, should this successful program be eliminated, some States would lose the incentive to continue their important State grant programs and this should not be allowed to happen.

Second, title V, Teacher Education and Professional Development. Millersville University has a long and proud history of preparing students for careers in the teaching profession. I am fully supportive of the changes in title V as they appear in H.R. 5240.

The new title, "Teacher Education and Professional Development," suggested to me when I first saw it as an excellent address to an important problem that I see emerging on our college and university campuses—that is the need for faculty development.

As our institutions of higher education cease to grow and indeed begin to decline in student enrollment, the faculty stabilizes, becomes less mobile as it ages. Opportunities for this well-educated intellectual resource and repository of expertise, the faculty, to remain current in their academic disciplines and even to retrain are absolutely essential.

I believe that the growing problem of inadequate faculty development opportunities is not well addressed in H.R. 5240. Perhaps I can make a suggestion. Pennsylvania is but one of many States that provides a sabbatical leave program for the faculty of its public institutions.

Traditionally, after 6 years of full-time service, a faculty member is eligible to take the seventh sabbatic year as leave for the purpose of professional development including research, scholarship, advanced degrees, et cetera, with the ultimate expectation of improvement in classroom instruction.

At Millersville, Pennsylvania law allows a maximum of 5 percent of the faculty per year to participate. Other states have similar laws. Thus, while roughly 15 percent of the faculty are eligible for the professional development opportunity, only about one-third of this number are authorized by law. Presumably, the 5-percent cap is cost motivated.

The subcommittee has at least two opportunities to enhance faculty development opportunities through partnerships with existing State-funded sabbatical leave programs. The first is to match State funding one-to-one, thus doubling, or two-to-one, thus tripling the percentage of eligible faculty who may participate.

The second opportunity, ultimately viewed as a leave option of the first, if so authorized, would consist of a one-to-one Federal-to-State funds match for the extension of traditional one-year leave at half-pay to a more realizable full-pay option.

I suggest that this is an issue that the committee may wish to consider.

Third, title VII, Construction and Reconstruction and Renovation of Academic Facilities. I cannot emphasize strongly enough for the members of the subcommittee the critical needs that we have on our campuses for assistance in renovating and maintaining our physical plants. A recent survey of the building renovation and repair needs of the 14 State-owned universities that make up the State system of higher education in Pennsylvania identified an immediate need for approximately $80 million to correct safety hazards, repair leaking roofs, replace boilers, to name but a few items requiring attention.

On the Millersville campus alone, we need $7 million, but have virtually no means of obtaining such a large amount of capital funds. Establishing a revolving fund to provide low-interest loans with a 50 percent required match from local sources, as proposed in part A of title VII, will not provide the full assistance we require. The public cannot afford to see its investment in our college and university physical facilities be permitted to deteriorate.

The chairman is further to be commended for his interest and recognition of the need to provide assistance to colleges and universities for the purpose of laboratory, research and other instructional equipment, as proposed in part B of title VII. I am not at all sure, however, that the $100 million authorization level is sufficient to meet the critical need we have for acquiring and replacing equipment, which ages both because of use and technical obsolescence.

Fourth, title XII, Endowment Development. I was intrigued by the bold and innovative institutional endowment development concept addressed in title XII. Millersville University, a State-owned public institution has witnessed the continuous decline in State support as a percentage of university operating revenues over the past decade. The State appropriations, as a percentage of operating revenues have declined from 61 percent in 1969 to 50 percent in 1983. Millersville University has no endowment upon which to rely or draw.

Realizing the need to begin to cultivate and develop independent sources of revenue, we have instituted an annual fund raising program and we contemplate the launching of a capital campaign and the building of an endowment. These are now frequently observed initiatives in the public sector and only a decade ago were virtually unheard of.

Believe me, building an endowment at an institution like Millersville is no easy task when you are starting from scratch. The proposed Institutional Endowment Development Program would greatly assist us in obtaining a diversified revenue base to meet the income needs of the future and ensure the university's vitality. I applaud your proposal.

Thank you, Mr. Penny. It has been an honor to appear before you.

Mr. PENNY. Thank you for your testimony.

Next, I would call on Dr. Benjamin Payton from Tuskegee Institute. Dr. Payton.

[Prepared statement of Dr. Benjamin Payton follows:]

PREPARED STATEMENT OF BENJAMIN F. PAYTON, PRESIDENT, TUSKEGEE INSTITUTE

I. INTRODUCTION

I am Benjamin F. Payton, President of Tuskegee Institute, Tuskegee Institute, Alabama. Located in central Alabama, Tuskegee Institute is a complex university with an enrollment of 3600 students. It offers 45 degree-granting undergraduate programs and 29 graduate programs. Its current programs are concentrated in seven major schools: Agriculture and Home Economics, Arts and Sciences, Business, Education, Engineering and Architecture, Nursing and Allied Health, and Veterinary Medicine.

I am very pleased to have been invited today to participate in this discussion on the Higher Education Act of 1965 and on funding for higher education in the proposed Fiscal Year 1985 Budget of the United States. I have spent most of the past twenty years professionally engaged in the field of higher education. This included five years' service as President of Benedict College in Columbia, South Carolina and ten years as Program Officer for Education and Public Policy at the Ford Foundation. I would like to share with you some observations on the need for continued federal support for financial assistance to needy students and to historically black colleges.

II. STUDENT AID

I would like to comment first on student aid. The President's Fiscal Year 1985 budget has placed emphasis on the concept of self-help. Under this concept, a student and his family would have to provide a minimum of $500 or 40 percent of the cost of college education before the student would be eligible for a Pell grant. Federal loans and work study funds could be used in satisfying this minimum. Administrators of historically black colleges know that their students and their families have always followed the concept of self-help.

This self-help pattern is well-known and well-documented. Let me share with you my own personal experience. I am a graduate of an historically black college. My father was a rural Baptist minister whose earnings were very limited. All nine of the children in my family were graduated from black colleges. In addition, four earned Master's degrees and two earned the Ph.D. degree at major research universities. All of us found that our undergraduate education at black colleges prepared us well for rigorous advanced training. In my own case, I graduated from a black college and then earned three postbaccalaureate degrees at Harvard, Columbia, and Yale. I have this pattern repeated again and again in students at Tuskegee Institute, many of whom have even fewer resources than did my family.

Statistical data illustrate the aggregate pattern of black spending for higher education. These data show that black families have consistently made a far greater sacrifice for higher education than white families. For example, in 1976, 38 percent of black families with incomes below $10,000 had at least one family member in college; only eight percent of white families in this income category had a family member in college. In 1981, applicants to United Negro College member schools had a median income of $13,700. The median income of students applying to colleges nationally was $26,800.

The data also suggest that the typical family of a black college student simply does not have enough money to spend more than it is already spending for higher education. The United Negro College Fund has estimated that black families are already providing 37 percent of their children's education costs through parental contributions and student summer employment, work study, and loans. Bureau of Labor Statistics data show that in 1981, a family with a total budget of $15,323 ended up with only $644 left over after allowances for the amount that would be required for food, housing, transportation, clothing, and personal and medical care. Note also that in 1981, 55 percent of black families earned less than this $15,323.

The availability of loans and work-study to assist students in raising the 40 percent does not appear to be a realistic solution for poor students. At Tuskegee Institute and many institutions, only a limited number of work-study jobs are available. Further, the bipartisan National Commission on Student Financial Assistance expressed concern over the increased levels of indebtedness among low income students, even under the current system. There must be an appropriate balance among work-study, loans, and grants.

I believe Congressman Simon has worked hard to achieve that balance. I particularly welcome Congressman Simon's effort to end the annual uncertainty that surrounds the award of Pell Grants by making the Pell Grant an entitlement. In endorsing this proposal, I am fully aware of the current national concern over our near $200 billion budget deficit. This is a cause of alarm for every citizen and it means that we face hard choices as to where cuts shall be made. Even in this difficult economic climate, however, I believe we must find a way to make a greater commitment to invest in the future of our young people. I would hope that the committee would give very careful consideration to giving the Pell Grant a simpler and more secure legislative base.

I cannot emphasize too strongly the importance of continued full support for the TRIO program. Upward Bound, Talent Search, Special Services, and the related programs which comprise TRIO provided low-income, first generation college students with the counseling, tutoring and basic information they need to enter and complete college. The 50 percent cut in this program recommended in the President's FY 85 budget proposals would have a tremendously negative impact.

Let me illustrate to you just how important it is to reach these young people. In 1981, a black male high school graduate had a median income of $12,349. Three years of college could increase his income to $14, 657. Completion of four years of college would take him up to $17,253. In that same year, however, a white male

high school graduate could start out earning $17,548—almost $300 more annually than the black male college graduate.[1]

These figures clearly show the differential impact of the denial of an opportunity for higher education to black youth. Since a black male has to complete college in order to earn as much as a white male high school graduate, the denial of access to higher education can extract a tremendous social cost. It is therefore vital that we maintain vigorous outreach programs such as the TRIO programs to reach these youth. To demonstrate the impact this program has had at Tuskegee Institute, the Institute's former legal counsel (a graduate of the Harvard Law School) was initially "discovered" as a Tuskegee hgh school youth through the Intstitute's Talent Search program.

Finally, I welcome the support Congressman Simon has recommended for an emphasis on the neediest students in the Graduate and Professional Fellowship Awards Program. The Graduate and Professional Opportunities Progran. has been important to minority students. Because of the large loan obligations incurred during their undergraduate years, however, an alarming decline in the numbers of blacks going on to graduate and professional school has occurred. This has serious implications for staffing our colleges and universities now and in the future. I urge a significant investment in this program.

III. INSTITUTIONAL AID

I strongly endorse Congressman Simon's initiative to include in his proposals for Title III, the Black College and University Act. This Act responds to the continuing need for direct assistance to historically black institutions—particularly for construction, maintenance or rehabilitation of classroom, library and laboratory facilities.

I believe there is a particular need for assistance to academic and professional programs where black Americans are underrepresented. As the only historically black college with a School of Veternary Medicine, Tuskegee Institute is particularly eager to bring to the attention of this Committee this especially difficult problem.

In 1980, of the 34,000 veterinarians in the United States, only 533 or 1.6 percent were black. Along all of the health professions, veterinary medicine has the smallest representation of blacks. Tuskegee Institute has trained over 90 percent of all black veterinarians, including 99 percent of those located in the South.

Training students who may well be both financially and educationally disadvantaged places a particularly difficult financial burden on a school of veterinary medicine. The cost of training one student exceeds $20,000. Tuskegee's tuition for 1983-84 was $3,600. Tufts University, one of two other private veterinary schools in the country, charges $18,000 a year. Tuskegee Institute's fees are approximately one-sixth the cost of training, as calculated by the Council of Deans, Association of American Veterinary Medical Colleges (AAVMC).[2]

In addition to financial aid, Tuskegee Institute must also provide a comprehensive academic reinforcement program. Many students must receive assistance through a structured program of pre-entry academic enrichment and post-admission supportive services to insure their retention. These programs require special laboratory facilities, auto tutorial/audio visual aids, low faculty-student ratios, faculty and student tutors, and special counselors. The cost of these special programs places a considerable strain on the school's budget, but the programs are necessary in view of the unique mission of the School of Veterinary Medicine.

I would recommend that the Tuskegee Institute School of Veterinary Medicine be included with the graduate and professional schools eligible for specialized program grants under Section 326. While the School of Veterinary Medicine is located within the administrative structure of Tuskegee Institute, the special financial burden which I have described above makes it essential for the school to have additional assistance tailored to its needs as a professional institution.

IV. CONCLUSION

Support for higher education is one of the greatest investments that can be made by individuals, by families, by businesses, and by government. In undertaking to make a thorough review of the Higher Education Act of 1965, Congressman Simon has performed an extremely constructive task. He has set a very high level for dis-

[2] Association of American Veterinary Medical Colleges. Comparative Data Report, 1981-82.

cussion of reauthorization. He has courageously proposed needed programs such as the Black Colleges and Universities Act. He has discussed and debated his proposals throughout the higher education community. I believe we are off to a timely and positive start for the reauthorization process.

As we continue this discussion regarding the future of the nation's higher education programs, let us remind ourselves that this country is frighteningly at risk because of the economic conditions of millions of black and brown families. Unemployment rates of over 20 percent among black adults threaten to destroy the very basis for hope and aspiration. Moreover, as the gap between the median income of black and white families continues to widen, from 61 percent in 1970 to 55 percent in 1982, equality as a goal begins to lose credibility and is increasingly supplanted by cynicism and despair. Yet blacks and browns are the most rapidly growing populations in our society. Failure to address the causes of their despair increases the possibility of loss of faith in basic values which underpin our society. I earnestly believe that the provision of education to these young people, particularly through the strengthening of historically black colleges, can turn them into America's most productive citizens.

Thank you very much for giving me the opportunity to share these views with you.

STATEMENT OF DR. BENJAMIN PAYTON, PRESIDENT, TUSKEGEE INSTITUTE

Dr. PAYTON. Thank you, Mr. Chairman. I am Benjamin Payton, president of Tuskegee Institute, Tuskegee, AL. Located in central Alabama, Tuskegee is a complex university with an enrollment of some 3,600 students. It offers 45-degree granting undergraduate programs and 29 graduate programs. Its current programs are concentrated in seven major schools—agriculture and home economics, arts and sciences, business, education, engineering and architecture, nursing and allied health, and veterinary medicine.

I am pleased to have been invited today to participate in this discussion on higher education and on funding for higher education in the proposed fiscal year 1985. I have spent most of the past 20 years professionally engaged in the field of higher education, including 5 years as president of Benedict College in Columbia, SC, and 10 years as program officer for education and public policy at the Ford Foundation. What I want to do is share with you some observations of mine based on these experiences.

I would like first to comment on student aid. The President's fiscal year 1985 budget has placed emphasis on the concept of self-help. Under this concept, a student and his family would have to provide a minimum of $500 or 40 percent of the cost of college education before the student would be eligible for a Pell Grant. Federal loans and work-study funds could be used in satisfying this minimum.

Administrators of historically black colleges know that their students and their families have always followed the concept of self-help. This self-help pattern is well known and well documented. But let me just share with you a personal experience.

I am a graduate of a historically black college. My father was a rural Baptist minister whose earnings were very limited. All nine of the children in my family were graduated from black colleges. In addition, four earned master's degrees and two earned the Ph.D. degree at major research universities. All of us found that our undergraduate at black colleges prepared us well for rigorous advanced training. In my own case, I graduated from a black college and then earned three post-baccalaureate degrees at Harvard, Co-

lumbia and Yale. I see this pattern—this is the point—I see this pattern repeated again and again in students at Tuskegee Institute, many of whom have even fewer resources than did my family.

Statistical data illustrate the aggregate pattern of spending for black higher education. These data show that black families have consistently made a far greater sacrifice for higher education than white families. For example, in 1976, 38 percent of black families with incomes below $10,000 had at least one family member in college. Only 8 percent of white families in this income category had a family member in college. In 1981, applicants to United Negro College Fund members schools had a median income of only $13,700. The median income of students applying to colleges nationally was $26,800.

These data also suggest that the typical family of a black college student simply does not have enough money to spend more than it is already spending for higher education. The United Negro College Fund has estimated that black families are already providing 37 percent of their children's education costs through parental contributions and student summer employment, work study and loans. Bureau of Labor Statistics data show that in 1981, a family with a total budget of $15,323 ended up with only $644 left over after allowances for the amount that would be required for food, housing, transportation, clothing and personal and medical care.

Note also that in 1981, 55 percent of black families earned less than this $15,323.

So the availability of loans and work study to assist students in raising the 40 percent does not appear to be a realistic solution for poor students. At Tuskegee Institute and many institutions, only a limited number of work study jobs are available. Further, the Bipartisan National Commission on Student Financial Aid expressed concern over the increased levels of indebtedness among low-income students, even under the current system.

There must be an appropriate balance among work study, loans and grants. I believe that Congressman Simon has worked hard to achieve that balance. I particularly welcome the Congressman's efforts to end the annual uncertainty that surrounds the award of Pell Grants by making the Pell Grant an entitlement.

In endorsing this proposal, I am fully aware of the current national concern over our nearly $200-billion-budget deficit. This is a cause of alarm for every citizen and it means that we face hard choices as to where cuts shall be made. But even in this difficult economic climate I believe we must find a way to make a greater commitment to invest in the future of our young people. I would hope that the committee would give very careful consideration to giving the Pell Grant a simpler and more secure legislative base.

I cannot emphasize too strongly the importance of continued full support for the TRIO programs. Upward Bound, Talent Search, Special Services, and the related programs which comprise TRIO provide low-income, first generation college students with the counseling, tutoring and basic information they need to enter and complete college. The 50-percent cut in this program recommended in the President's 1985 budget proposals would have a tremendously negative impact.

Just let me illustrate to you how important it is to reach these young people. In 1981 a black male high school graduate had a median income of $12,349. Three years of college could increase his income to $14,657. Completion of college would take him up to $17,253. In that same year, however, a white male high school graduate could start out earning $17,548—almost $300 more annually than the black male college graduate.

Now what these figures clearly show is the differential impact of the denial of an opportunity for higher education to black youth. Since a black male has to complete college in order to earn as much as a white male high school graduate, the denial of access to higher education can exact a tremendous social cost. It is therefore vital that we maintain vigorous outreach programs such as the TRIO programs to reach these youth. I would illustrate this further by a reference again to Tuskegee. The Tuskegee Institute's former legal counsel, a graduate of the Harvard Law School, was initially discovered as a Tuskegee high school student through the Institute's Talent Search Program.

Finally, I welcome the support Congressman Simon has recommended for an emphasis on the neediest students in the Graduate and Professional Fellowship Awards Program. The Graduate and Professional Opportunities Program has been important to minority students. Because of the large loan obligations incurred during their undergraduate years, however, an alarming decline in the numbers of blacks going on to graduate and professional school has occurred. This has serious implications for staffing our colleges and universities now and in the future. I urge a significant investment in this program. I might add that I hope the committee would not begin to see the development and expansion of need-based programs as a counterpoint to programs that are merit based.

I would also hope the committee would not begin to view expanded assistance to black colleges as something that competes with every white college. I certainly hope that my colleges in these institutions would not view it that way.

The fact of the matter is merit-based programs all too frequently are simply correlates for upper income families and support for such families. We must balance that with continued expansion of genuine opportunity for talented, young people who come from low-income families. That has been the specialty of the historically black colleges. It's not a matter of need versus merit. It's a matter of making certain that the talent and the merit that exists across the spectrum of social and racial groups in our society, that that talent can rise.

On institutional aid, I strongly endorse Congressman Simon's initiative to include in his proposals title III, the Black College and University Act. This act responds to the continuing need for direct assistance to historically black institutioms, particularly for construction, maintenance, or rehabilitation of classroom, library, and laboratory facilities. I believe there is a particular need for assistance to academic and professional programs where black Americans are underrepresented. As the only historically black college with a school of veterinary medicine, Tuskegee Institute is particularly eager to bring to the attention of this committee this especially difficult problem.

In 1980, of the 34,008 veterinarians in the United States, only 533 or 1.6 percent were black. Among all of the health professions, veterinary medicine has the smallest representation of blacks. Tuskegee Institute has trained over 90 percent of all black veterinarians, including 99 percent of those located in the South.

Training students who may well be both financially and educationally disadvantaged places a particularly difficult financial burden on a school such as our school of veterinary medicine. The cost of training one student exceeds $20,000. Tuskegee's tuition in 1983-84 was $3,600. To compare, Tufts University, one of the two other private veterinary schools in the country, charges $18,000 a year. Tuskegee Institute's fees are approximately one-sixth the cost of training, as calculated by the Counsel of Deans, Association of American Veterinary Medical Colleges.

In addition to financial aid, Tuskegee Institute must also provide a comprehensive academic reinforcement program. Many students must receive assistance through a structured program of pre-entry academic enrichment and postadmission supportive services to ensure their retention. These programs require special laboratory facilities, audio/tutorial/audio visual aids, low faculty-student ratios, faculty and student tutors and special counselors. The cost of these special programs places a considerable strain on the school budget, but the programs are necessary in view of the unique mission of the school of veterinary medicine.

I would therefore recommend that the Tuskegee Institute's School of Veterinary Medicine be included with the graduate and professional schools eligible for specialized program grants under section 326. While the school of veterinary medicine is located within the administrative structure of Tuskegee Institute, the special financial burden which I described above makes it essential for the school to have additional assistance tailored to its needs as a professional institution.

My concluding remarks are these, Mr. Chairman. Support for higher education is one of the greatest investments that can be made by individuals, by families, by businesses, and by government. In undertaking to make a thorough review of the Higher Education Act of 1965, I believe that Congressman Simon has performed an extremely constructive act. He has set a very high level for discussion of reauthorization. He has courageously proposed needed programs such as the Black Colleges and Universitities Act. He has discussed and debated his proposals throughout the higher education community. I believe we are off to a timely and positive start for the reauthorization process.

But as we continued this discussion regarding the future of the Nation's higher education programs, we must remind ourselves that this country is frighteningly at risk because of the economic conditions of millions of black and brown families. Unemployment rates of over 20 percent among black adults threaten to destroy the very basis for hope and aspiration.

Moreover, as the gap between the median income of black and white families continues to widen, from 61 percent in 1970 to 55 percent in 1982, equality as a goal begins to lose credibility and is increasingly supplanted by cynicism and despair. Yet, blacks and browns are the most rapidly growing populations in our society.

Failure to address the causes of their despair increases the possibility of loss of faith in basic values which underpin our society.

I earnestly believe that the provision of education of these young people, particularly through the strengthening of historically black colleges, can turn into America's most productive citizens.

Thank you, Mr. Chairman, for giving me this opportunity to share my views with you.

Mr. PENNY. Thank you, Dr. Payton. Last on our panel of presidents is Dr. Eileen Farley, President of the Bristol Community College; Dr. Farley?

[Prepared statement of Dr. Eileen Farley follows:]

PREPARED STATEMENT OF EILEEN T. FARLEY, PRESIDENT, BRISTOL COMMUNITY COLLEGE, FALL RIVER, MA

Mr. Chairman, my name is Eileen Farley. I am President of Bristol Community College, Fall River, Massachusetts. I am a substitute for Dr. Dean Lillie, president of Colorado Mountain College, who could not be here today because of illness.

First, I want to thank you for the opportunity to testify from the perspective of a community college administrator before your Subcommittee on a bill that is most important to our colleges, and, I would submit, to the future of this country. I am speaking today for myself and as a member of the American Association of Community and Junior Colleges/Association of Community College Trustees Joint Commission on Federal Relations.

Second, I want to thank you personally for the outstanding leadership you are asserting not only in preparing this new, exceptionally sensitive higher education bill but also for the brilliant direction you have set for higher education in this country over the past several years.

We could not agree more with the three pillars upon which your new legislation rest: expanding access to postsecondary education, improving program efficiency, and enhancing quality. These objectives are precisely what community, technical, and junior colleges are about. We are exceptionally pleased to find our specific endeavors and sensibilities reflected in your legislation.

Third, I would like to react to several different parts of your draft legislation. Mr. Chairman, for community colleges the centerpiece in the Higher Education Act is Title IV, Student Aid, and the most significant part of this centerpiece is the Pell Grant program. With you, we believe that this program should be viewed as an entitlement for any American who wishes to participate in higher education, that the application procedures should be simplified so that they are more understandable to students (as well as to administrators), and that the timetable for sharing information about the program ought to be advanced so that college officials can study the details and prepare lucid explanations of them for students.

I know that I do not have to define for you, Mr. Chairman, the importance of this Title for community colleges, but for the record, allow me to offer the following details:

Of the 2.6 million students who benefit under the Pell Grant program, nearly two-thirds (or about 1.7 million persons) attend public two- and four-year colleges; and nearly 63 percent of this number come from families with annual incomes below $8,000. Looking exclusively at community, technical, and junior colleges, more than 80 percent of our students come from families with $8,000 in annual income or less. Only 6 percent of our students come from families with incomes over $16,000.

Our colleges enroll 55.5 percent of all Hispanic students in higher education in this country and 44.4 percent of all Black students—minority groups that have been insufficiently represented in higher education for many years. Our colleges open the doors of opportunity for them. Another group of students to which community colleges cater are women; more than half of our credit student body this past year—the total number is very nearly 5 million students, Mr. Chairman—were women.

And we provide learning opportunities to adults, a group, according to all the demographic data, that will comprise the fastest growing portion of higher education students for the years ahead. The average age of our student body is approximately 28 years old. In fact, the general characteristics of our student body include the following details: it is female, enrolled in credit programs part-time, working full- or part-time jobs, participating in occupational/technical progams, commuting to college, and, in effect, working their way through college.

They are, in fact, the very people the Pell Grant program was designed to involve in our higher education institutions. Yet, they have suffered, as you know, over the past few years (11 to be precise) under the fixed maximum placed on the program. Since 1979, the portion of the all educational costs that the maximum allowed under the program fell by 15 percentage points—from 46 percent of costs in 1979 to 31 percent of costs this past year. And this is during a period when average college costs have increased by 10 percent per year in many institutions. Unless the cap is increased, the portion of full costs that the grants cover will continue to fall with the result that many of the individuals who are targeted for this program will be denied—a phenomenon that some institutions are already reporting as the result of the deterioration of the grants' actual value.

We firmly support your effort to advance the maximum possible award to $3,000, and to provide mechanisms by which the maximum will increase automatically on an annual basis, to coincide with increases in the costs of education.

We also support your effort to eliminate the half-cost limitation of the Pell Grant program, and your move to increase the allowance for tuition and fees to 75 percent of costs. The differential you propose, however, for calculating allowances for living costs causes us some concern. There is evidence that the costs of living on campus are about the same as those required to live off campus. Proposing differentials of $400 (off campus) and $800 (off campus with parents) is not consistent with cost figures that we have seen. We would be much happier were the Act to include provision of an allowance of at least 60 percent of total living costs for all students—on campus or off campus (in whatever living arrangement).

Mr. Chairman, community college students, as you know, have been penalized traditionally under this program in two ways: attending lower cost institutions and thereby qualifying for the maximum Pell award, even though the cost of this education was higher than the maximum award; and receiving less living allowance because they are commuting students when the costs of the two situations are fairly similar. We hope that your bill will eliminate these inequities.

We are pleased too, Mr. Chairman, that your bill includes a definition of "independent" student that reflects the fact that such students are adults and should be spared the need to prove their independence. Your definition will serve to speed up the eligibility procedures and to recognize the maturity of adult applicants.

Finally, Mr. Chairman, on Title IV, I have some concerns about lumping Work-Study and Cooperative Education together and then permitting the use of work-study students to tutor functionally illiterate adults. To avoid confusion between the programs and to permit them each to retain their distinct character, I feel they should not be folded into one another. Further, I don't think it would be useful to relegate portions of work-study monies for illiteracy programs. Once a provision is made, the history of such efforts suggests, it serves as a precedent for the inclusion of other special programs; then the next step is creating a set-aside for each discrete program. I would prefer to keep the programs separate and to place special literacy training programs where they are most appropriate—the Adult Basic Education and Bilingual Education programs or, as you have done, in the Continuing and Community Postsecondary Education Title, Part B, Title I. Adult illiteracy is a significant national problem; it has social, economic, and quality-of-life implications. AACJC and ACCT firmly support the implementation of special efforts to reduce the numbers of functionally illiterate adults in this country.

Briefly, Mr. Chairman, I would like to remark about various other Titles in your bill.

I am particularly pleased with the effort you make in Title I to pressure state and local officials to coordinate programs under this Title with other related federally-supported efforts. Too often federal initiatives in response to national problems are disparate, redundant, and frequently jealously guarded by one faction or another. This characterization certainly applies to human resource development programs sponsored by the federal government—an issue that is of particular concern to community, technical, and junior colleges and the Associations that represent them. We are also pleased with the stress you place on employment training and information resources in this Title. As I have noted earlier, population data suggest that adult education and training will be in increasingly greater demand in the near future.

My concern with Title I, Mr. Chairman, is not with the specific and worthy purposes that you enunciate for it, but rather that it does not seem to stretch beyond the familiar kinds of program activities to the broader domain of institutional change. Community, technical, and junior colleges—probably better than any other kind of postsecondary institution in this country—have produced an impressive array of programs for adults and we have adjusted our instructional behavior to match the mature individuals that fill our classes. But we still need to improve our

programs and our approaches, and we need financial incentives to make these improvements. More traditional postsecondary institutions need even more help, and it is important that they too become involved intimately with adult instruction—to ensure their vitality and endurance and to serve the nation's interest. One of the important stresses in this Title, then, should be on stimulating institutional changes and instructional modifications.

As the only institutional grant program, Mr. Chairman, Title III is of special concern to our colleges. The extraordinary minority percentages that I quoted you earlier that identify minority student populations that our colleges serve also indicate our interest in this Title. As it is presently cast, the Title does not fairly recognize the contributions that community colleges have made in addressing the conditions (findings) to which this Title points. Further, it does not propose solutions to the consistent history of poor program management, to the problem of institutional accountability (the program graduation issue), nor the redundancy problem (the absence of a national mechanism that could serve as a program memory, a provider of technical assistance, and a resource for speeding the development process). We also have some concerns about the eligibility formula involving Pell Grant averages, for it tends to favor higher-cost institutions, even within categories composed of similar types of institutions.

We feel the focus in Title III should fall on institutions that serve low-income students, on institutions that make unique contributions to the mix of higher education in this country because of their location and their student body, and on such institutions that are in danger of dissolution because of certain weaknesses—ones that can be redressed with the flow of federal assistance for a specific period of time, and no longer.

Mr. Chairman, we strongly endorse the details you offer in Title VI, believing with you that we continue to ignore the importance of international education at our own risk.

And finally, we vigorously support the renewal of the Cooperation Education program, Title VIII, which has proven so valuable in giving students the benefits of work experiences that help them relate their course work to specific career pursuits.

Thank you for the opportunity to share my thoughts with your Subcommittee.

STATEMENT OF DR. EILEEN T. FARLEY, PRESIDENT, BRISTOL COMMUNITY COLLEGE

Ms. FARLEY. Thank you, Mr. Penny and members of the committee. My name is Eileen Farley. I am president of Bristol Community College in Fall River, MA. I am substituting this morning for Dr. Dean Lillie, president of Colorado Mountain College, who could not be here today because of illness.

First, I want to thank you for the opportunity to testify from the perspective of a community college administrator before this subcommittee on a bill that is most important to our colleges and, I would submit, to the future of this country. I speak today for myself and as a member of the American Association of Community and Junior Colleges and the Association of Community College Trustees Joint Commission on Federal Relations.

Second, I want to convey the community colleges' recognition and great appreciation of the outstanding leadership of Chairman Simon on asserting not only his leadership in preparing this new, exceptionally sensitive higher education bill, but also for the brilliant direction he has set for higher education in this country over the past several years.

We could not agree more with the three pillars upon which your new legislation rests: expanding access to postsecondary education, improving program efficiency, and enhancing quality. These objectives are precisely what community, technical, and junior colleges are about. We are exceptionally pleased to find our specific endeavors and sensibilities reflected in your legislation.

Third, I would like to react to several different parts of your draft legislation. For community colleges, the centerpiece in the Higher Education Act is, of course, title IV, student aid, and the most significant part of this centerpiece, as far as we are concerned, is the Pell Grant Program. With the committee, we believe that this program should be viewed as an entitlement for an American who wishes to participate in higher education.

We believe that the application procedures should be simplified so that they are more understandable to students as well as to administrators and that the timetable for sharing information about the program ought to be advanced so that college officials can study the details and prepare proper explanations of them for students.

I know that I don't have to describe for this committee the importance of this title for community colleges but for the record, allow me to offer some of the following details. Of the 2.6 million students who benefit under the Pell Grant Program, nearly two-thirds, or about 1.7 million persons attend public 2- and 4-year colleges and nearly 63 percent of this number come from families with annual incomes below $8,000. Looking exclusively at community, technical and junior colleges, more than 80 percent of our students come from families with $8,000 of income or less and only 6 percent of our students come from families with incomes over $16,000.

Our colleges enroll 55.5 percent of all Hispanic students in higher education in this country and 44.4 percent of all black students—minority groups that have been insufficiently represented in higher education for many years. Our Colleges open the doors of opportunity for them. Another group of students to which community colleges cater are women. More than half of our credit student body this past year—the total is very nearly 5 million students—were women.

We provide learning opportunities to adults, a group, according to all of the demographic data, that will comprise the fastest growing portion of higher education students for the years ahead. The average age of our student body is approximately 28 years old. In fact, to give you the general characteristics of our student body, it is female, enrolled in credit programs part-time, working full- or part-time jobs, participating in occupational/technical programs, commuting to college and, in effect, working their way through college.

They are, in fact, the very people the Pell Grant Program was designed to involve in our higher education institutions. Yet, they have suffered, as you know, over the past few years under the fixed maximum placed on the program. Since 1979, the portion of all educational costs that the maximum allowed under the program fell by 15 percentage points—from 46 percent of costs in 1979 to 31 percent of costs this past year. And this is during a period when average college costs have increased by 10 percent per year in many institutions. Unless the cap is increased the portion of full costs that the grants cover will continue to fall with the result that many of the individuals who are targeted for this program will be denied access—a phenomenon that some institutions are already

reporting as a result of the deterioration of the grant's actual value.

So we firmly support their effort to advance the maximum possible award to $3,000 and to provide mechanisms by which the maximum will increase automatically on an annual basis to coincide with increases in the cost of education.

We also support your effort to eliminate the half cost limitation of the Pell Grant Program and your move to increase the allowance for tuition and fees to 75 percent of costs. The differential you propose, however, for calculating allowances for living costs causes us some concern. There is evidence that the costs of living on campus are about the same as those required to live off-campus. Proposing differentials of $400 and $800 for off-campus and off-campus living with parents, respectively, is not consistent with cost figures we have seen. We would be much happier were the act to include provision of an allowance for at least 60 percent of total living costs for all students on-campus or off-campus in whatever living arrangement.

Community college students, as you know, have been penalized traditionally under this program in two ways—attending lower cost institutions and thereby not qualifying for the maximum Pell award, even though the cost of this education was higher than the maximum award, and then receiving much less living allowance because they were commuting students when the cost of the two situations are really fairly similar.

We would hope that this bill would try to eliminate these inequities. We are pleased, too, that H.R. 5240 includes a definition of "independent student" that reflects the fact that such students are adults and should be spared the need to prove their independence. Your definition will serve to speed up the eligibility procedures and to recognize the maturity of adult applicants.

I would like to comment briefly about several other titles in the bill. We are particularly pleased with the effort you make in title I to pressure State and local officials to coordinate under this title with other related federally supported efforts. Too often, Federal initiatives in response to national problems are redundant and uncoordinated and frequently jealously guarded by one faction or another. This characterization certainly applies to human resource development programs sponsored by the Federal Government—an issue of particular concern to community and junior colleges and the associations that represent them.

We are also pleased with the stress you place on employment training and information resources in this title. As I have noted earlier, population data suggests that adult education and training will be in increasingly greater demand in the near future.

We are pleased, too, to see new initiatives to promote solutions to the grave problem of adult illiteracy. In my own community, for example, for a third of the population our college serves, English is not the primary language of the household and only 35 percent of the population have graduated from high school, according to the 1980 census.

With respect to title III as the only institutional grant program, we are particularly concerned with this title. The extraordinary minority percentages that I quoted to you earlier that identify mi-

nority student populations that our colleges serve also indicate our interest in this portion of your bill.

As it is presently cast, the title does not fairly recognize the contributions that community colleges have made in addressing these conditions. Further it does not propose solutions to the consistent history of poor program management to the problem of institutional accountability nor the redundancy problem—the absence of a national mechanism that could serve as a program memory, a provider of technical assistance and a resource for speeding the development process.

We are also concerned about the eligibility formula for this program involving Pell Grant averages for it tends to favor higher cost institutions, even within categories composed of similar types of institutions.

We feel the focus in title III should fall on institutions that serve low-income students on institutions that make unique contributions to the mix of higher education in this country because of their location and their student body and on such institutions that are in danger of dissolution because of certain weaknesses—ones that can be redressed with the flow of Federal assistance for a specific period of time, and no longer.

Finally, we strongly endorse the renewal of the Cooperative Education Program, title VII which has proven so valuable in giving students the benefit of work experiences that help them relate their course work to specific career pursuits.

I appreciate the opportunity to share my thoughts with the subcommittee.

Mr. PENNY. Thank you, Ms. Farley.

Several comments this morning centered on the reduction in the number of undergraduates who are immediately moving on to graduate school. The testimony indicated that the competition with the private sector offering attractive salaries is the major culprit. I would be interested in any additional comments that those of you involved in graduate programs might have to offer on how we can stem that flow of our best graduates moving into the work sector rather than continuing in school in attaining a higher degree. I would also like to know if you have any statistics to demonstrate how many of those students, once out of the school system, do come back at a point in the future to obtain a degree.

Dr. JORDAN. Mr. Penny, I think there is a very real problem in what you have just said. The Nation's institutions of higher education who carry on graduate activity and research face a very real shortage, as my colleague from Cornell pointed out, first of all, of faculty members in the engineering and scientific disciplines as well as in some areas of business administration, for example. The truth of the matter is that many students who, 10, 15 years ago, would have moved steadily into a Ph.D. program and thus into faculty positions in colleges of engineering, colleges of science and colleges of business, particularly, now go directly from the baccalaureate into the corporate or industrial world for a couple of reasons—first of all, because of competitive salaries and second, because—and most important to these hearings this morning--because of a reduction in student aid available for graduate students, and third, because in the scientific disciplines frequently the opportunity to

participate in other university-type activities has been increased in the corporate and in the private sector.

A subhead under the question you raise relates to the fact that, as Dr. Rhodes pointed out, we have a terrible shortage of minority faculty members in all disciplines on major university campuses. This has a very curious effect in that there is a notable lack of minority role models for undergraduates who might indeed be attracted into graduate school were they to be able to see minority role models on our faculties. It is a very real problem. I do not have statistics as to those who eventually come back to graduate school, but I think you can be assured that it is not a large number.

Dr. PAYTON. I would just like to first agree with my colleague from Pennsylvania and stress, and underscore the importance of the growing amounts of indebtedness through loans that students are incurring during their undergraduate years. That is having a very, very damaging effect. They are leaving college already with a burden of debt loan—particularly those who are black and Hispanic—who come out of their poor backgrounds and whose families are awaiting their entry into the job market to help.

But second, I think it also illustrates the importance of such schools as the historically black colleges where you do have critical masses of role models, where we are able to find them in spite of their limited supply and where you will find that over the years 75 to 85 percent of all of the blacks out there who do serve as role models are graduates of our schools. I think you have identified a very important issue.

The issue of competition with industry is crucial. How we can get college and university salaries, to some extent, competitive, I really don't know. I suspect it's going to require some rearrangements in terms of the relationship between business and industry and higher education. Some of those things I am beginning to see happen, but that's a very real dilemma for our programs.

Mr. PENNY. Dr. Rhodes, do you want to respond to that?

Dr. RHODES. Mr. Chairman, I would agree with everything that Dr. Payton and Dr. Jordan have just said and maybe add just one more thing. I think this is not only a critical problem for the universities and colleges in terms of maintaining their graduate programs and especially recruiting new faculty members. I think it's a very serious problem for the Nation because recruiting somebody at the baccalaureate level into an engineering company or a manufacturing company doesn't give the kind of capacity for long-term research development on which our productivity and competitiveness depend.

I think there are two things you can do and I don't think we have any right to come to you and simply say, "We want more of everything." The two most critical things you can do for us are, first of all, to fund an adequate number of national graduate fellowships based on merit and pay particular attention to the desperate need we have to encourage minority applicants.

Point one, national graduate fellowships, merit-based. Point No. 2, the instrumentation and facilities. There are literally some kinds of research that it's no longer possible to do adequately in universities because we have fallen behind in equipment. We hope you can help us for that on some kind of matching basis.

That leads to the next question that I wanted to ask and it has to do with a partnership arrangement to allow for the funding of the acquisition of current practice equipment by both government and private sector moneys. How would you envision the most effective cost share program? If you were in a position to design that cost share arrangement, what do you think would be the most effective way to see to it that we moved quickly to fund those purchases?

Dr. RHODES. I hope what you will consider, Mr. Chairman is, first of all, that I think that that has also to be merit-based. I think if you simply spread your help geographically in what I would know would be a prudent political way to do it in some respects, you will not really get the full benefit of the investment. Just as we are looking for merit in our graduate institutions, we must recognize merit in the institutions. We must look at both the pony and the stable, as one of my colleagues said some time ago, because the number of universities doing truly frontier work in research is not great. If those fall behind, then all will fall behind.

The second thing I would want to say is that I think you have several models—an increasing number of models—where universities and industry are already now in partnership. Let me just give you one example. Biotechnology is vital to the future prosperity of this country. We have established in the last 6 months at Cornell University a partnership with three corporations in biotechnology where each of those corporations is contributing $2.5 million to a program and where their scientists work at the bench with our scientists.

But overall, corporations contribute only about 3.5 percent of the total research costs of universities and colleges. We might hope that would increase over the coming years to something between 5 and 10 percent, but they will never displace the Federal Government and I think the pattern that you have set of requiring matching support from colleges and universities is a sound one.

I have just two suggestions to make in relation to it. The first is that the 50–50 match in relation to some pieces of equipment is simply not realistic because some of it is so unusual in its capacity that even industry doesn't foresee all of the possibilities. I hope there might be some flexibility in the rather rigid 50–50 match that we have at present.

Second, I would hope that you would recognize that the ceiling is now a very low one and is really inadequate for the kind of rebuilding of the research capacity that we now face. I don't have the competence to suggest to you what that ceiling should be, but I do know that the present level of funding is not enough to help us.

Mr. PENNY. Thank you. Dr. Jordan, do you want to answer that as well?

Dr. JORDAN. Yes, Mr. Chairman.

I do not disagree with anything Dr. Rhodes said. I would point out that the new environment in this country for cooperative endeavors between the private sector and the universities is increasing and we have some exemplary models. Dr. Rhodes mentioned one. I would also mention in the State of Pennsylvania the Ben Franklin partnership which is a three-way partnership between State government, universities, and private industry, which has the virtue of creating new research and job training opportunities as

well. It has funding from State government, from the university and from the private sector.

I would cite as a very large and brilliant example the relationship between Monsanto and the Washington University of Saint Louis, where very major R&D efforts are underway as joint enterprises.

This new activity represents a remarkable new resource for the country in terms of research and development opportunities.

Mr. PENNY. Thank you for your responses. I have several questions on how we respond to the financial needs of nontraditional students, but I know that's an area that Congressman Gunderson has also been pursuing in these hearings. So I will defer to him the privilege to ask those questions. But I do want to indicate that your response, Dr. Rhodes, to the need for us to be selective in targeting our assistance to a handful of universities that are intensively involved in research and, therefore, in need of modern day equipment parallels the response I got from land grant representatives before the Agriculture Committee not too long ago when I asked, "How best can we assist the land grant colleges in their agricultural research?" They said, "Realizing the limitations or resources, you ought to merit-base that assistance and make some choices." But in both instances you are asking us to do something that isn't common around here and that's zeroing in and assisting certain institutions and focusing attention on those institutions and leaving others out of the picture. The pressures here don't often make that possible, but I do admire the recommendation and hope that we perhaps can summon the courage and wisdom to make those choices, because I think you are right. If we try to take the shotgun approach, we are not going to move anyone along far enough to do what we need to do to keep all of our research efforts current.

Mr. PENNY. Dr. Caputo.

Dr. CAPUTO. I think I simply can't let that point go by. I absolutely agree that the frontier research is being conducted at relatively few of the major universities in the United States, but I wouldn't want the committee or anyone else to overlook the value of research and, therefore, of research quality equipment at a typical undergraduate institution where research is an intrinsic and essential part of instruction.

If the graduates of those institutions are to be prepared to make an important contribution to science and technology at that level, if they are to be immediately employed upon graduation or if they are to be prepared to participate in an advanced graduate program, they, too, must have a share of that market. They must have those facilities and those resources available in proportion to their need.

Mr. PENNY. Dr. Payton.

Dr. PAYTON. I would just like to add quickly my agreement on the notion of selectivity and my disagreement on the notion that the Congress has not been accustomed to being selective. There's a whole range of institutions that has been historically and still gets left out and the notion of selectivity within that range of institutions hardly gets focused upon. There is much diversity among the historically black colleges. Some are research oriented and have research programs. But historically, the Congress as well as the executive branch has historically locked those institutions out.

I would urge a process of selectivity, as has been suggested here, but one that is genuinely based upon an assessment of where the talent is and not simply on the basis of arbitrary allocations of social esteem and prestige.

Mr. PENNY. Ms. Farley.

Ms. FARLEY. I would also like to respectfully suggest that research and improved research would not be the only objective of good legislation in the higher education area. I think that technician training, for example, that is done in community colleges deserves consideration for incentives to businesses to form partnerships to provide equipment also. I think that the participation of the average person in the work force will require training with good equipment in various fields and so that incentives directed to businesses to share responsibility for this upgrading of the workforce ought to be considered at that level also.

Mr. PENNY. Well, thank you all for amplifying the quandry we're in in trying to decide how to focus our limited resources. I can't dispute that the need exists at every level, but we also can't dispute that we don't have the financial wherewithal to do everything for everybody. So, in my view, there is going to have to be some selectivity, but how we respond to the need at each of the institutional levels is going to continue to be a major controversy as we move forward with those choices.

Congressman Gunderson.

Mr. GUNDERSON. Thank you, Mr. Chairman, and thank you, members of the panel, for your testimony today. I am going to disappoint the Chairman, I am going to discuss the nontraditional student area and seek out your input. I would like to ask a two-fold question in that regard. What do you see as the future of the nontraditional student on your campus or in your university and, second, would you respond as to the ability of the financial aid programs presently existing to address the unique needs of that student, and if they don't, what would you suggest as changes that ought to be considered in reauthorization?

We will conclude this questioning about 3 p.m. this afternoon when you get done with answering all that.

Dr. JORDAN. Mr. Gunderson, let me point out that Penn State University has a somewhat unique role as a major research university in that it exists in 22 different locations in the State of Pennsylvania. Those 22 locations include 17 2-year liberal arts and technical colleges which are the first 2 years of Penn State University in that two-thirds of our freshmen begin their college career in those 2-year settings around the State and move on then to one of our three locations where baccalaureate and graduate degrees are given.

Those students at the 2-year level could, in many cases, be described as "nontraditional" in the sense that they are not in residence on the campus in many cases and the allowance for cost of living as laid out in the proposal of the administration disadvantages those students in a very real way. Plus the fact that the larger public universities in this country increasingly are attracting an undergraduate either as a resident student or a nonresident student who is older than was the case 10 or 15 years ago. These are not infrequently married with families, living at home, and

need very careful attention as to their student financial aid needs as they attend a university.

Ms. FARLEY. Well, first I would like to say that any program of aid that tends to benefit community colleges on the whole will inevitably benefit adult learners, so I would suggest that the provisions of the Higher Education Act that do benefit community colleges will have that result.

For example, the increase in the commuting allowance for students receiving Pell Grants is certainly of great benefit to adult students. Increasing the half-cost provision to 75 percent is likely to fall proportionately more to benefit adult students than others. But I would also like to mention that there are certain arenas where we have not really done the Federal job that could be done. One is in the area of day care. A large proportion of adults returning to higher education are women with children—often enough women who are receiving some form of aid to families with dependent children and, yet, provisions for aid to take care of this problem are not what they should be. So I think anything in that arena would be a great benefit to adults.

Second, I think—and I don't have any great suggestion here today—but I think that the issue of the retraining of adult workers already in the work force is an issue that needs to be addressed and one that can be probably readily addressed by community colleges if the proper financial incentives were in place. That's increasingly a problem and certainly it's a problem in the part of the country from which I come. We have a declining textile and apparel industry. There is a need for people who have been working in those industries to have incentives to return for training of various kinds. Incentives like that, I think, would go far toward dealing with some of the major problems facing the adult learners of the next decade.

Mr. GUNDERSON. Dr. Rhodes.

Dr. RHODES. Mr. Gunderson, we are a rural, residential university and so it may seem, in some respects, that we are not intimately involved in this, but let me make four brief comments about ways where we would welcome your help and interest.

The first is simply to say that many of our programs have been revolutionized in the last 10 years—the on-campus programs—because the character of the student population has changed. Let me give you just one example. It was traditional until 5 or 6 years ago for a young man or woman to leave college and go straight into an MBA program. The average age of our MBA students is now 28 because we insist on them having some experience in the world of work before they come.

The second one is more dramatic. Ten years ago the number of women involved as students in our College of Veterinary Medicine was 3 percent. Today it is 58 percent. I want simply to give those two examples to show the changes that are taking place in what were traditional students 10 years ago from those who are students today. There are three particular programs where I hope we can continue to have your interest and support.

The first is one that I would call continuing professional education in certain critical fields. If we are to solve the teaching problem in our schools, we have got to transform the skills of teachers,

both those who already teach and those who might be in industries who would have the willingness to become teachers and have the background knowledge to do it, but not the training. I am thinking of people in their fifties, for example, who might leave a career in engineering or a similar field to teach science or math in schools for 5 to 10 years.

It does seem to me that there may be a possibility of a new kind of partnership there between the Federal Government, industry, and the universities.

A second category that's a very important one to us is the work of the Cooperative Extension Program. Cornell is an independent university, but it's also the land grant institution of the State and we have cooperative extension agents in every county of the State of New York dealing not only with agricultural problems and with rural problems but also in the South Bronx dealing with problems of housing and nutrition.

The continuing Federal support of those programs is of enormous importance to the work that people do there.

The third kind of program that I want to mention is one that is widespread in the industrial parts of the State in which we are involved and that is a program mounted by the School of Industrial and Labor Relations that has training for both unions and management in labor relations across the board. It's a program that is sponsored partly by the unions, but the whole challenge to get management and labor working effectively together is one that merits continuing Federal interest.

Those, if you like, are nontraditional programs, but I hope they are ones that will have your interest and support.

Dr. PAYTON. I, too, am very pleased to have this question coming to us, Mr. Gunderson. The whole concept of an education based upon reaching out to those who have not traditionally been involved is a concept, as you well know, that lies behind the founding of a number of American institutions and, indeed, in one way, makes American institutions of higher education quite distinctive in the whole international sphere of higher education.

The whole concept of land grant institutions, which some of my colleagues share with Tuskegee Institute, grows out of that fission. At Tuskegee Institute, for example, founded the place on the notion of the need for a kind of education that was not in his words, "alien to the needs of the people," and by the people, he did not mean the privileged few. He meant some way to extend the benefits of education to the masses and that's how our place got started.

I would like to make two specific suggestions that are going to be very important if we are going to reach sigificant numbers of what we call nontraditional, and in the process, I want to at least put a few boundaries around that term "nontraditional." Some use it to mean those who are minorities, those who are disabled, those who are women and those who are adults. I would hope that in the course of looking at this that you would not confuse this with the tremendous job that has already been done and has been being done for some time now with respect to some of these populations. Blacks or disadvantaged in some minds would be nontraditional.

What they have done is they have acted in nontraditional ways in terms of securing the higher education and have done it very well.

But one area that I think needs great attention and help from the Government and from the private sector is the area of making the new computer technology available as an instrument for spreading knowledge and the dissemination of new knowledge more broadly. Here we have the instruments of a real revolution that has occurred in our society and I think it could, if properly used, decrease the cost of extending education out to those who are not residents on the campus.

Second, I think there is a need to look very hard the fact that in a real sense we are a global village, this world of ours, and not often enough do we include international programs in our concept of outreach. I think it's very important that American citizens, not just American students—that the kind of education that we make available to American citizens include those ingredients that broaden their concept of the kind of world we are in and that deepen their notions of the kinds of people we are, and therefore, how we have to live in this world. So international education and the extension of programs in that field, I think, are very important.

Finally, I see the need for the introduction of what I would call field-based experiences in learning in the traditional programs, because so frequently the nontraditional programs are based upon what so-called normal offerings are in colleges and universities. I think our students need to have more of what some of you do as Congressmen. For example, you take the intern program that you have in your offices with college students. I think we need to find ways to put behind academic training of youngsters, a field experience, no matter what the field is so that they, in the process of getting an education, also get a kind of encounter with nontraditional forms of education that are very important for their maturation and development.

Thank you.

Mr. GUNDERSON. Dr. Caputo.

Dr. CAPUTO. Mr. Gunderson, as I mentioned briefly in my testimony, Millersville University is one of 14 State-owned universities in the Commonwealth of Pennsylvania. Those institutions are spread across the Commonwealth, sprinkled, I think, in ideal locations to serve the population base of the Commonwealth. We each unique and different, but I think in many ways we are similar. We are observing at Millersville an increase in our enrollment in evening programs, in night courses and therefore, responding to that demand by offering still more sections and more courses and more degrees in the evenings and on weekends and in the summer and such programs as the Elder Hostile. I think that there's no question that we are seeing an increase in the nontraditional student as a percentage of the student body and are responding accordingly.

Indeed, we are about to embark on a program much of the kind that President Rhodes described—that is, the offering of a certificate opportunity to those currently in technical industries, in business, who wish to perhaps to retire early or leave that field for some personal reason and embark on a teaching career in high school. That's an initiative now being taken by the Department of

Education in Pennsylvania. Addressing the specific financial aids of those students is a topic that I am not prepared to address, but it's certainly an interesting question and one that I would like to look at.

I am not familiar personally with the particular needs of that group of students and the way in which we can respond to that.

Mr. GUNDERSON. I would very much appreciate it if all of you would discuss with your financial aid offices that second part of the question regarding the unique financial aid programs that may or may not be needed for the nontraditional student. If you could provide either me or the committee or both of us reactions to that, I think it would be very helpful.

Ms. FARLEY. May I make just one more suggestion? I think sometimes in the administration of the financial aid programs the rulemaking of the Department of Education can fall inadvertently with more hardship on nontraditional learners than others. So, for example, some of the interpretations of how student aid should be administered reveal very traditional assumptions about who is attending college and why and what profit they are getting from their programs. So I think some attention to rules about satisfactory progress, part-time status and what kind of courses—remedial—or developmental courses, I should say, and language training for people who are not primary English speakers—these things could be attended and if carefully overseen could pave the way for making opportunities greater for nontraditional students.

Mr. GUNDERSON. I have far exceeded my time, but I do want to ask one quick question, if I can get a response from all of you in a fairly quick manner. I think it's something Dr. Rhodes said, which I have to agree with, that it would be incorrect for all to come here and just ask for more of everything. We would all like to do that but reality doesn't allow us. Could you quickly tell me what your priority would be in terms of the student financial aid reauthorization. What, to your campus, is the area most in need of attention? Just very quickly.

Ms. FARLEY. Student financial aid and the Pell Grant Program, principally, to expand the cap, increase commuter allowance costs and expand the half cost provision to 75 percent.

Dr. JORDAN. I think I would put first priority on increased student financial aid for graduate students and follow that very quickly with the Pell grant increase.

Dr. CAPUTO. I would concur with President Farley. The student aid is the centerpiece of the program. The the Pell Grant, the College Work Study Program would be our first priority.

Dr. RHODES. I would have three priorities. One is the funding and the increase in merit national graduate student fellowships. The second, linked right up at the top with that is the various initiatives we have talked about for encouraging underrepresented minority students to participate in graduate and professional education. If we don't do that, we won't have anyone to teach the undergraduates. It's that simple. Third, the increase in the Pell grant appropriation.

Dr. PAYTON. I, too, would have three priorities. First, the strengthening of the Pell Grant Program along lines similar to what has been recommended by Congressman Simon with particu-

lar interest on securing its legislative basis as an entitlement and also with respect to removing the half cost limit—increasing that to 75 percent—plus additional amounts for fees.

Second, I want a Pell Grant that ensures access. Without those kinds of funds, we will inadvertently perhaps, slip into a system of educating only the privileged few. It's one thing to have a statement that's eloquent about equal opportunity, but without the resources to make it possible we are kidding ourselves. Pell Grants provide access.

But more than access is required if students are going to be educated. There must be some schools which see themselves as having a special mission designed to ensure the success, the actual graduation of these youngsters. Too many of the national traditional students including blacks and browns, are admitted to a variety of institutions but not sufficient is put on them to help them through so that the kinds of programs, such as title III, the TRIO Program—those things are enormously important if these students are going to not only be entered but also graduated.

Finally, the Graduate and Professional Opportunities Program. I think that the need our universities have and our society has for highly trained, well-educated people at advanced levels is extremely important if we are going to do justice to our students at the undergraduate level. It's a question of, where are the faculty members for future generations going to come from unless we pay some attention to those issues in the present.

Mr. PENNY. Do you have any questions?

Mr. PACKARD. I sure would, Mr. Chairman. I am sorry that I was unable to be here for your testimony. I would have liked to have been here, but we had another committee that it was important to be in—an education hearing also.

Just a passing question before I get into what I really want to talk about. The Penn State system, Dr. Jordan, you mentioned has 22 campuses. Does the grants and aid program come to individual campuses by application or does it come to the system and then you have flexibility within the entire State?

Dr. JORDAN. It comes to the system. The student financial aid officer for the entire system resides in University Park. As a matter of fact, those 22 campuses are administered in a highly centralized way for most of the services.

Mr. PACKARD. What criteria do you use in determining how that's going to be distributed?

Dr. JORDAN. It's done on the basis of the individual student and his or her qualification for aid and need. Needs analysis and financial need is the main criterion.

Mr. PACKARD. That leads then to a question that Congressman Penny asked earlier. That is, you have criteria apparently then to assist your statewide system in distributing on an equitable basis to the 22 campuses?

Dr. JORDAN. Yes, sir.

Mr. PACKARD. And ultimately to the students themselves?

Dr. JORDAN. Yes, sir.

Mr. PACKARD. Do those criteria that you have at the State level parallel somewhat the Federal criteria in the system?

Dr. JORDAN. My financial aid officer tells me—he describes it as a nationally approved system of need analysis. It's a standard system which has a great deal of commonality across the country.

Mr. PACKARD. I would assume then that yours is not a lot different than California's statewide system.

Dr. JORDAN. No, sir, it is not. That's correct, sir.

Mr. PACKARD. As you have implemented this kind of distribution at the State level to a variety of students and schools, do you see at the implementation level a need for changing the criteria at the Federal level, which I have to assume is somewhat of a guideline to your State system?

Dr. JORDAN. I would like to turn again, if I could, to my student financial aid officer and get him to help me with that question.

Mr. PACKARD. I guess the question is—and I might ask it of others, too or you certainly may respond if you choose—if you were to choose a criteria for selecting students to receive financial aid, if you were the body that was to determine the criteria upon which the program worked at the Federal level, what would those criteria be?

Dr. JORDAN. Well, first of all, need. I think I did caution before you came in, Mr. Packard, at the graduate level, need is not a sufficient criterion, but very careful merit selection is particularly called for there. There is, of course, merit selection for undergraduates entering the university. I think there is more emphasis on need at the undergraduate level than at the graduate level. But need certainly is the basic criterion for the first 4 years——

Mr. PACKARD [continuing]. Which provides access.

Dr. JORDAN. Yes, sir.

Mr. PACKARD. And yet, I have been hearing also in your responses that access is not the only criteria. What other criteria do you think ought to be considered in the legislation?

Dr. JORDAN. Well, certainly entrance standards which, first of all, allow a student to enter the university or not are automatically present and are matters of institutional preference and institutional decision.

Mr. PACKARD. Any response from any of the others? Dr. Rhodes?

Dr. RHODES. Mr. Packard, I want to make two small, but to us, significant points. I think access remains a priority for all of us, but I do believe that choice, just as Dr. Jordan pointed out, continues to be equally important. I am concerned that if we concentrate only student access to the lower priced institutions—price and not cost because the cost is the same, roughly, in the independent and the public. We shall deny people the opportunity to attend many independent colleges that may be well suited for them and I think of some of the religious institutions, for example, some of those with rather specialized curricula that are simply not available in the public sector.

I hope we design a program that recognizes that the cost at certain independent universities is now very great. We had an example this morning from my colleague Dr. Caputo which pointed out that the total cost of room and board at his institution next year as well as tuition, I think, is $3,400, if I remember the figure. At the institution that I serve it will be over $13,000, and that's not unusual in the comprehensive, independent universities.

So I am concerned that families as well up in the middle income group—families in the $60,000 a year group who may have two or three children in college paying $13,000 to $15,000 a year on each of them—may find unusual difficulties. I therefore hope that the rigid ceiling on loans of $65,000 might be replaced by a family needs test throughout the system which gives more flexibility and also allows not only access but choice.

Dr. PAYTON. I would just like to quickly add that I, too, think that the matter of choice and diversity are very important and the maintenance of a pluralistic system of different kinds of institutions—some independent, some public, some religiously supported, some historically black, some predominantly Hispanic, women—that this is very important in order to maintain the richness of our society, the texture of the society. That has something to do, I think, with the quality of education that people get.

I would want to make two suggestions with respect to the question, what should be the criteria? First I think that it ought to be possible to tie some of the student financial aid to the kinds of institutions that will ensure that we maintain diversity. I would think that some of the recommendations that have been made with respect to the black college bill ought to be given serious attention here particularly with respect to ensuring that students do have a real choice to attend those that are private because the costs are higher at the privates than they are at the publics.

I would think also that the Congress needs to begin to look at the whole issue of endowment, not merely as a way of supporting an institution, but as a way of reducing the difference between what institutions charge students and what it costs that institution to educate them. So that at private instutions where you tend to have endowments I think we really need to understand that at such institutions we are lowering the cost of an education for the public in general, precisely because of the hard work that goes into building and underpinning of resources that makes it possible for the public to get out cheaper, but for the student to get a better education.

Mr. PACKARD. One final question and it's an extension of Congressman's Gunderson's question and your response to his question still centered around the financial needs as you perceive your problems and what you see as the most significant need. I would like you to extend beyond that briefly and ask:

> What do you see as your greatest challenges as the president or the administrator of a college or university for the remainder of the eighties and perhaps through the nineties? What do you perceive as your greatest challenge right now?

Dr. JORDAN. Mr. Packard, if I may start, I think the greatest challenge to the Pennsylvania State University is to be sure that its research equipment in the fields of science and engineering keep pace with what is happening in the development of technology and the development of highly sophisticated research, teaching equipment in science and engineering. That problem is almost an insurmountable one at a major research university.

Mr. PACKARD. Thank you.

Dr. CAPUTO. Mr. Packard, I think our major challenge in the next decade or so is to maintain the diversity of programmatic offerings which, I think, works hand-in-hand with the notion of

access. Access to what? If important and essential programs are not included in that access package, it is indeed an empty package.

I think we must maintain the diversity of programs—an extremely difficult thing to do in the face of declining student enrollments and declining State and Federal support. I think we must maintain the quality of those programs as well—an equally difficult challenge under those circumstances.

If I may, since I didn't comment earlier, to go back on the question before, a moment ago. I am not sure that I am willing to allow the notion that education in the private and the public sector costs about the same and what we are dealing with here is a difference only in price. At least I would personally challenge that and indicate that at least in some institutions in the private sector—as but one example, the student/faculty ratio is considerably lower than in the public sector and that is considered to be one of the substantial cost factors contributing to higher cost obviously. That is one of the advantages that the private sector can offer to its clientele that is not commonly available in the public sector.

Mr. PACKARD. Thank you. Ms. Farley.

Ms. FARLEY. I think the greatest challenge in my view is keeping our programs—a proper mix of programs, as was mentioned before, and keeping the programs up-to-date and of high quality. I think we face a situation where faculties are increasingly stable and are getting older and are in need of retraining. We have inadequate resources to keep equipment up-to-date in our technical programs and so I think resources are going to have to be managed very carefully to make sure that they are being applied to the right programs and delivering the right quality.

Mr. PACKARD. Dr. Rhodes.

Dr. RHODES. Mr. Packard, we have three goals and each one of them is essential. The first is a superb faculty. Unless we get that right, nothing else will follow.

I freely acknowledge that in a university like mine costs are higher and faculty ratios tend to be higher for a very simple reason. If you have an appendectomy you don't want somebody performing that surgery who has seen it only on videotape. It's a one-on-one kind of trading and we mean to continue that, if we are to continue to play our role. So I think it's misleading to compare apples and oranges in terms of costs. The research universities and the great professional training schools are going to have higher costs than some others and we must recognize that and help support it.

Second, we shall be able to recruit a superb faculty not only of talented and dedicated people, but of diversified racial and ethnic composition, if we have superb support. I had the privilege of speaking a little earlier to the question of our desperate need for Federal help for facilities and equipment. That's a major need for us—everything from computers to library to instrumentation.

Third, we have got to retain a diversified student body. We have got to have the great universities of the Nation, the best universities, the most appropriate colleges open to every group of our citizens. Alfred North Whitehead said, "The task of the university is the creation of the future," and I believe that is literally true. Access and choice are the guarantee of that.

Mr. PENNY. Dr. Payton.

Dr. PAYTON. There are four things of extraordinary importance to us at our institution, Tuskegee Institute. First, I would like adequate resources for our students—resources in the way of financial aid of the mix that ensures them real opportunity for higher education.

Second, getting, maintaining highly qualified members of our faculty. I can only underscore what Dr. Rhodes has just said because of a number of factors occurring in our society now—the danger that faces us with respect to getting in fresh talent, maintaining them, competing with the private sector. Without a first-rate factor, everything else fails.

Third, improving facilities. Most of our institutions have gone through a period of what we call deferred maintenance, and we use that as a polite way of saying that, "Look. The roof is almost falling in." But it's a serious problem—improving facilities generally, and particularly in those high cost areas that require scientific instrumentation of a kind that has to be kept up-to-date and also of a kind that is most costly of all.

Finally, I would add maintaining and improving the quality of public support not only for our institution but for higher education and this does require some investment of time, because I think in the final analysis it is the citizens of this country who will determine the extent to which our institutions will maintain themselves and will improve themselves.

Mr. PACKARD. Thank you very much. I appreciated the opportunity to hear your testimony and your answers to questions. Thank you, Mr. Chairman.

Mr. PENNY. Ms. Farley, Dr. Jordan, Dr. Caputo, Dr. Rhodes and Dr. Payton, thank you for your instructive testimony. We have one more witness for this morning's session—Edward Fox, president of the Student Loan Marketing Association. Again, thank you to the panelists and I would ask Mr. Fox to come forward.

When you are ready, proceed as you will with your testimony.

[Prepared statement of Edward Fox follows:]

PREPARED STATEMENT OF EDWARD A. FOX, PRESIDENT AND CHIEF EXECUTIVE OFFICER, STUDENT LOAN MARKETING ASSOCIATION

Mr. Chairman, members of the Subcommittee. I am pleased to appear before you to discuss H.R. 5240, the reauthorization of the Higher Education Act of 1965, and the Student Loan Marketing Association (Sallie Mae).

The Student Loan Marketing Association is a federally-chartered, stockholder-owned corporation which provides the nation's largest single source of financing for postsecondary education credit. As a financial intermediary, the corporation offers a variety of financial products and services primarily to institutions which originate insured student loans. Since beginning operations in 1972, Sallie Mae has provided over $11 billion of funds and commitments to 1,800 financial and educational institutions, state agencies and other organizations. In so doing, it has funded more than five million individual student loans.

H.R. 5240 reenacts Sallie Mae's basic charter. Therefore, I have provided a review of our activities in my testimony. Sallie Mae has undergone significant changes since the Education Amendments of 1980 and I am pleased to report to you that we are a stronger, more viable corporation that is better able to provide increased and innovative programs in support of student credit.

I. OVERVIEW

By Congressional intent, Sallie Mae is structured along traditional corporate lines, with total responsibility in the hands of the board of directors and a management team. The President of the United States appoints one-third of the 21-member board and designates the chairman from among the full membership. By statute, only financial and educational institutions are permitted to own shares of voting stock of the corporation and each group elects one-third of the board of directors.

Sallie Mae provides a broad spectrum of private and public lenders—commercial banks, thrift institutions, credit unions, educational institutions, state agencies and other lenders—with a source of liquidity. It offers such lenders the opportunity to sell student loans at cash value or to borrow additional funds to support their student lending activity by pledging existing loans as collateral, thus serving as a secondary market for student loans.

As of March 30, 1984, its direct investment of $8 billion in the GSLP in addition to outstanding commitments was equal to approximately 30 percent of all insured student loans outstanding.

Sallie Mae has worked with 1,800 lenders providing direct or indirect financial assistance to millions of students in 51 states and territories. It has assisted in financing statewide programs in 20 states and the District of Columbia.

Sallie Mae obtains funds for its operations primarily from the sale of its debt obligations. In the past it financed its activities principally through the issuance to the Federal Financing Bank (FFB) of debt obligations guaranteed by the Secretary of Education. As announced by Secretary Regan on May 7, 1981, Sallie Mae now borrows in the public markets with the guarantee of the federal government.

The corporation is expected to meet the same profit and loss standards, including a return on stockholders' equity, as a business without a government link. It pays full federal income taxes and has received no federal appropriations during its entire history. Sallie Mae has severed its ties with the federal government in connection with its funding activities. Its objective is to achieve its primary social purpose of expanding credit in support of access to postsecondary education by operating as a business organization subject to the disciplines and opportunities of the marketplace. As such, Sallie Mae considers itself to be a prototype for transforming a quasi-government organization into a private sector corporation that functions efficiently and profitably while fulfilling its original public service purposes, and taking on new ones.

1983 was marked by a number of particularly significant events for Sallie Mae. The corporation successfully completed its first public offerings of nonvoting common and preferred stock. It also significantly broadened its line of services. For the first time, the corporation provided funding for nonfederally-related student loans.

II. SALLIE MAE PROGRAMMATIC SUPPORT FOR STUDENT CREDIT

Sallie Mae, as the national secondary market for student loans, has attempted to provide support for all sectors either through traditional secondary market programs or through specialized programs designed to address a particular need for providing student credit. An examination of these programs reveals the extent of the corporation's support of the GSLP and the national objectives set forth by the Congress.

Under its Loan Sale Program, Sallie Mae offers to purchase loans made under the GSL and HEAL Programs. The Loan Sale Program provides funds so lenders and, because the corporation utilizes a network of third-party servicing agents, relieves those lenders of the administrative considerations relative to loan servicing. Through its Warehousing Advance Program, Sallie Mae provides liquidity to lenders against the collateral of their existing student loan portfolios of other U.S. Government issues or guaranteed obligations. Institutions with advances collateralized by insured student loans must either reinvest all advance proceeds into additional guaranteed student loans or maintain a specified student loan portfolio level throughout the term of the advance. Institutions offering other collateral must fully invest all advance proceeds in guaranteed student loans. Sallie Mae also provides the assurance of future funds through the issuance of forward commitments. These commitments, for both the Loan Sale and Warehousing Advance Programs, have enabled many state and private lenders to maintain lending arrangements through the assurance of continued student loan credit.

Specialized programs

Community Lender Sale Program

In 1981 Sallie Mae developed the Community Lender Sale Program specifically to meet the student loan funding needs of the smaller institutions. Since the inception of this program, Sallie Mae has negotiated over $80 million in loan sales with more than 400 institutions, each with assets less than $100 million.

Money Market Advance Program

The Money Market Advance Program was created in 1982 to augment our traditional, variable rate advance program. Under this program Sallie Mae executes a master note with the borrower with the terms ranging from one to nine months. Sallie Mae has lent $125 million through our Money Market Advance Program. This program enables Sallie Mae to transmit the cost savings realized through the issuance of discount notes directly to the borrower.

HEAL Assured Access Program

During the past three years, Sallie Mae has provided a secondary market in support of the Health Education Assistance Loan (HEAL) Program. Because of increased demand for HEAL loans in 1982 and reduced participation by the banking system, Sallie Mae has provided capital in support of a program to assure that all qualified prospective borrowers are able to obtain a loan. This program was put in place following consultation and with the support of the Department of Health and Human Services, bankers, and the appropriate educational institutions. Through December, 1983, Sallie Mae had disbursed nearly $80 million under the Assured Access Program to approximately 11,400 students attending institutions all over the United States. This represented approximately one-third of all HEAL loans originated during this period. We are also pleased to report that in the last two years Sallie Mae has executed commitment agreements to purchase HEAL loans from ten financial institutions. Offering these commitments has induced many of the lenders into the Program.

The House Energy and Commerce Committee is currently reviewing the HEAL Program and we have and will continue to work closely with that Committee on development of mechanisms for student credit for health professions.

Assured access programs for GLS and PLUS participants

Sallie Mae has provided support for assured access programs for various identified groups of GSL and PLUS Program participants. The prototype for this Program was the United Negro College Fund Assured Access Program.

In 1982 Sallie Mae joined with the United Negro College Fund (UNCF), Health Education Assistance Foundation (HEAF), and Citibank to ensure the availability of funds for students attending the 42 UNCF member colleges. Sallie Mae is proud to have played a role in providing this important program to insure access to student credit. Sallie Mae has also advanced $300 million to a major GSL lender to finance an assured access plan for vocational school students.

Non-insured student loans

As we informed this Committee, we have instituted a small pilot program of non-insured student loans. A number of universities provide individual non-insured loan programs as a service to their students and parents. Sallie Mae has provided funding on a collateralized basis in support of such programs to two such universities.

This pilot program represents Sallie Mae's flexibility in providing new and expanded programs to both educational and financial institutions in its continued efforts to support the credit needs of students and their parents.

Programs to support State financing of student loans

To assure a future market should refinancing not be feasible when bonds mature before the underlying loans pay off, Sallie Mae has traditionally offered forward purchase commitments to state agencies that originate or purchase student loans. Sallie Mae has $493 million outstanding in forward purchase commitments to such agencies. In 1983 Sallie Mae introduced a letter of credit program which lends the highest investment grade to state bond issues they back. Sallie Mae expects to close its initial $77 million in letters of credit to back student loan bond issues within two weeks. Sallie Mae also in 1983 became for the first time a purchaser of student loan revenue bonds to assist in making a market in such issues. Sallie Mae currently holds $168.17 million in student loan revenue bonds and notes. In addition, Sallie Mae has recently introduced a Loans-to-States Program offering state agencies an

02511

alternative to tax-exempt bond financing, by providing them with direct loans and commitments on a taxable basis. All told, Sallie Mae has negotiated commitments totaling $660 million over the next five years to support the states' financing of student credit.

Loan Consolidation Program (OPTIONS)

Sallie Mae was given the responsibility in 1980 amendments to put in place a Loan Consolidation Program for certain qualifying students who had borrowed under the National Direct Student Loan Program (NDSL) and the GSLP. Before termination of this Program Sallie Mae had consolidated $390 million of indebtedness of 32,000 students. Sallie Mae continues to support a mechanism to encourage sound debt management of student indebtedness.

III. FINANCING OF SALLIE MAE

As was envisioned by the Congress in the Education Amendments of 1980, Sallie Mae has successfully entered the public capital markets for its financing needs, prudently and gradually severing its ties to the federal government. In 1981, Sallie Mae negotiated an agreement with Administration officials that set the basic course of Sallie Mae's funding activities for the future. In exchange for an additional $2 billion of long-term financing authority at the FFB (bringing the total of such borrowing authority to $5 billion) the corporation agreed to accelerate the time schedule for re-entry into the capital markets to fund its activities. Specifically the agreement called for Sallie Mae to end its borrowing from the FFB by September 30, 1982, or at the time a total of $5 billion of such borrowings was outstanding. Sallie Mae also agreed to enter the capital markets without the use of the full faith and credit guarantee of the Department of Education which was originally available until October 1, 1984. Working in concert with the Treasury Department, this agreement provided a sound base for Sallie Mae to begin financing its program acquisitions without additional federal support.

In 1983 Sallie Mae continued its transition to the capital markets with the successful completion of two equity offerings which significantly strengthened the corporation's capacity for future growth by providing $353 million in the new capital. This new equity, combined with $47 million in additional retained earnings, brought the corporation's total equity base to $503 million at year-end and lowered its debt-to-equity ratio to 17-to-1 from 71-to-1 at the end of 1982. In March, 1983, Sallie Mae sold 5 million shares of adjustable rate cumulative preferred stock which provided $250 million in new capital. In September, 1983, Sallie Mae sold an initial public offering of nonvoting common stock which raised $103 million for Sallie Mae and $114 million for voting stockholders who were given an opportunity to convert a portion of their voting common stock to nonvoting common stock on a share-for-share basis and to sell the converted stock in the public offering. In conjunction with the offering, Sallie Mae split its outstanding voting common stock 35-for-1, effective as of the closing of the stock sale on September 29, 1983. At the end of 1983, the corporation had outstanding 29 million voting shares and 12.1 million nonvoting shares. Sallie Mae began paying dividends on its common stock in 1977. In 1983, common stock dividends were increased to $.08 per share from $.06 per share in 1982 (both adjusted for the stock split). During 1983, Sallie Mae continued to meet its debt needs through the sale of $2.1 billion of long-term debt obligations of which $400 million was from floating rate notes and $1.7 billion was from fixed rate debt, most of which was effectively converted to floating rate obligations through interest rate swaps.

Sallie Mae's financing in 1983 of $2.1 billion of long-term debt and the infusion of $353 million in equity capital through public offerings have marked the achievement of a significant corporate milestone and the creation of a strong foundation for future growth. We were gratified that our innovation and expertise in capital formation enabled the corporation to meet its programmatic demands, albeit with the marginally higher costs associated with fund raising in the private capital markets. This was accomplished without raising our prices to our customers. Our plans forecast that in order to support the $7.3 billion plus annual GSL origination in the foreseeable future, Sallie Mae must be able to raise nearly $2 billion in each of the next 5 years. Given the increasing demands for capital throughout the world, a strong balance sheet and strong earnings statements are Sallie Mae's assurances that it will have access to capital in the quantity necessary and price appropriate to support student financial aid programs during the 1980's. I am pleased that during the past 18 months we have actually lowered the cost of doing business with Sallie Mae as we have passed through the benefit of operating efficiencies.

IV. H.R. 5240 "THE HIGHER EDUCATION AMENDMENTS OF 1984"

Mr. Chairman, as you have requested, I will now specifically focus my remarks on the proposed changes in the GSL Program included in H.R. 5240. I hope that my remarks will be taken as being offered on the basis of our considerable familiarity with the financial instrument that is a guaranteed student loan, and the financial markets that support them.

Special interest allowance

H.R. 5240 would propose a reduction in the special interest allowance for GSL's to 3 percentage points over the bond equivalent yield of the quarterly average of 91-day Treasury bills, a reduction of .5 percentage points or 50 basis points. It is unclear to us that this reduction applies only prospectively; we believe a clarification is necessary. While Sallie Mae, the largest holder of student loans, is sufficiently strong to bear such a reduction and would price its services accordingly, I feel compelled to remind the Committee that other institutions may not agree. This recommendation appears to conflict with efforts to cure the problem of access to GSL's for all students, and fails to recognize the steadily increasing servicing burden of GSL's which I have raised before and which we believe to be the Achilles heel of the GSL Program.

As the Committee is aware a GSL is a very expensive loan to service. Its term, the extraordinary number and complexity of statutory guaranteed suspensions and extensions, and the heavily regulated nature of the instrument combine to require expensive individually designed servicing systems. A small balance loan costs as much to service as a large balance loan. Many lenders currently do not choose to participate in making small loans. I believe your proposal would exacerbate this problem.

Numerous instances have been presented to this Committee of groups of students who do not, in the normal course of events, have access to GSL's. At least in some cases this occurs because of small balances created by the student's borrowing eligibility or cost of education. Some have suggested the need for a higher special allowance for lenders on small balance loans.

H.R. 5240 also recommends creation of state lender-of-last-resort programs. It can reasonably be expected that such a last resort lender would be faced with a disproportionately high ratio of small balance loans. I sincerely question the willingness of lenders to provide this total access in the face of a reduced yield.

Unless some effort is made to reduce the lender's administrative expenses by a reduction in servicing costs or reduced regulatory requirements, a reduction in yield should be expected to create a disincentive on the part of commercial lenders to participate in the program.

As I have said many times there are only three parties to this transaction; the student, the lender, and the government. Unfortunately since the lender provides the capital, which is the basis for this program, should lenders decide that the yield is inadequate or other investments more attractive, they may decide not to participate.

Lender of last resort

H.R. 5240, Section 453(a) of the Act provides for the creation of lender-of-last-resort programs. Guaranty agencies are asked to enter into agreements with eligible lenders in the state to assure access to GSL's to anyone who meets statutory eligibility requirements.

In addition, under Section 453(d), guaranty agencies, state direct lenders, and state secondary markets are authorized to be direct lenders of last resort, but apparently only with borrowings from Sallie Mae. These lenders of last resort are also made eligible to receive loans from Sallie Mae but only in very limited amounts. However, under existing law state agencies may already receive advances from Sallie Mae for even broader purposes, and without limit. If, in addition to the arrangements for lenders of last resort made in Section 453(a), it is appropriate for these agencies to also act as lenders of last resort, we question why their financing for that purpose should be limited, either as to amount or as to source.

Loan consolidation

Section 452 of the Act would authorize a loan consolidation program. These provisions are substantially similar to those of H.R. 4350 which passed the House last year but which has not been acted upon by the Senate.

As the only entity with actual experience with loan consolidation, I would like to express again my sincere concern that the system proposed, as would that proposed in H.R. 4350, could potentially result in a plethora of dissimilar consolidation sys-

tems, the permutations and combinations of which are infinite, which can be expected to confuse the student borrower, and prevent any reasonable possibility of a secondary market in such paper.

When you allow numerous consolidators, we assume you understand that in all likelihood the systems designed will vary widely. We already have problems servicing GSL paper with each state's variations. The creation of new consolidation paper will further exacerbate the servicing problems.

In addition, you would increase the student's interest rate to 9.5 percent in H.R. 5240, an increase of .5 percent over the rate which would have been provided by H.R. 4350. We believe the structure of loan consolidation plus the increased interest rate for a minimal, if indeed any, extension of repayment enforces a penalty on those students who are the ones in dire need of consolidation—those who cannot meet their debt burdens. In our opinion, any consolidation will result in cost savings to the federal government. While an increase in the interest rate of the student would theoretically increase that cost savings, if there is no real inducement to the student, there will be no cost savings to the government.

We believe that the percentage of all GSL recipients who qualify for loan consolidation is modest. A further reduction of the number of students who are eligible or who will choose to participate, coupled simultaneously with the reduced productivity of a splitting of the market and a reduction in yields to the lender, raises questions in our minds as to whether or not either lenders or students will consider this a viable program, and whether the cost savings to the government and the reduction in defaults that loan consolidation can provide will ever be realized.

Student Loan Marketing Association

H.R. 5240 provides for the reenactment of Sallie Mae's original law. New Section 463 is substantially identical to existing law.

We appreciate your support to Sallie Mae in making permanent the provision defining the federal government's position in the event of a bankruptcy of Sallie Mae. We believe that since this provision has been enacted three separate times, a permanent resolution of the issue is appropriate.

You have provided in Subsection 463(h)(2) an extension until 1991 of Sallie Mae's authority to ask for the full faith and credit guarantee of the federal government to support its financing. This authority expires on October 1, 1984, as provided by the Education Amendments of 1980. As you know Sallie Mae terminated borrowings from the Federal Financing Bank in January, 1982, and has not relied on the credit of the government with respect to its borrowings since then. We are proud of the corporation's success in the public capital markets. We did not request this extension nor do we believe it to be necessary although we recognize that the mere possibility of such guaranty may be of some significance to those who finance us.

Mr. Chairman, I appreciate the opportunity to testify on H.R. 5240 and of course my staff and I are available to provide whatever technical assistance you or other members of the Subcommittee may desire.

STATEMENT OF EDWARD FOX, PRESIDENT, STUDENT LOAN MARKETING ASSOCIATION, ACCOMPANIED BY MICHAEL WYATT, VICE PRESIDENT AND DEPUTY GENERAL COUNSEL.

Mr. Fox. I want to thank the committe for permitting me to testify on this date in recognition of my travel schedule in the next couple of weeks. At the request of counsel, we are submitting our statement to the record and we would be pleased to answer any questions that you may have relative to that statement.

Mr. PENNY. That's it? I was going to suggest that you summarize your comments in order to allow those with noon commitments to get along to those on time. I wasn't expecting it to be that brief.

Counsel, did you have a question that you wanted to pursue right at the start?

Mr. DEAN. Yes.

Mr. PENNY. I'll let you do that and then I have some other questions.

Mr. DEAN. OK. I just have a couple of questions. If the special allowance were reduced, as proposed in H.R. 5240, what possible ef-

fects would you envision occurring at Sallie Mae in terms of your general operations—by that, I mean the pricing policies and your ability to serve the GSL Program in other regards?

Mr. Fox. Well, as you are aware, over the last couple of years, as we have developed a much stronger balance sheet and augmented our capital accounts, limitations which we had relative to our ability to purchase loans have pretty much been reduced to the point where we are capable of buying just about any portfolio at par. That's come about because of the strengthening of the balance sheet, operational efficiencies and the like.

To the extent that yields are changed or that operational standards or servicing requirements are changed, all of these have an impact on the yield to this corporation which is a privately owned corporation and the bottom line for us is the ability to attract capital and if we can't attract capital, either because our earnings are not sufficient or because we are perceived as a weakened entity, we can't survive and we can't continue to provide service.

The amount of reduction is substantial that is proposed in this legislation. I could not assure this committee that I could continue to offer par purchases were the price of the yields associated with student loan to be diminished.

Mr. DEAN. Based on your familiarity with lenders in the GSL program, would you envision a large number of lenders dropping out of the program if the special allowance was reduced in terms of loan originations?

Mr. Fox. Lenders are in this program for many reasons, not all of which are just yield. The banking system has provided many, many billions of dollars in support of student aid going back to the mid-1960's in this program. To automatically suggest that it is totally yield that has kept them in the program, I think, would be incorrect.

A number of lenders who have expanded their program are finding that as their portfolios are going into repayment and they are reaching that time in the life cycle of a student loan portfolio, where the costs are greatest, that they feel if they're inadequately served by a 3½ percent over T-bills yield, some bankers have begun to lobby for higher yields in the repayment period rather than reduced yields. A number of major nationwide lenders have already gone on record as suggesting that they may not be able to continue their programs unless they get a higher yield to recognize the costs associated with the repayment period.

Mr. DEAN. At a hearing before this subcommittee in New York City, a witness suggested that Sallie Mae be required to secure congressional approval before embarking on any new activity. What problems would you foresee with requiring such congressional approval?

Mr. Fox. I suggest that the people who make such comments are those who are desirous of maintaining monopolistic positions for themselves and a concern lest a quasi-government entity that has a social purpose might do those things that might be in support of student credit that might diminish their corporate game plans relative to credit cards, interstate banking and the like.

We find that there are very few institutions who have actually felt that we are threat, but those who do feel that we are threat

think that it's not because we provide student credit, but that we might deny them access to data bases for whatever other purposes they may have relative to interest data and commercial and other types of banking services that they are desirous of providing.

I think that this corporation must be able to react quickly in the public interest, in support of student financial need. We have done so with a record that has not harmed anybody in the past, that has not been prejudicial to the interests of any other participants in this program and that you need a strong Sallie Mae that will be there for the long pull at all times in support of student credit, not that might be here for a year or two when we might have a corporate game plan that uses student credit, but that will be there when you need us.

Mr. DEAN. Thank you very much, Mr. Chairman.

Mr. PENNY. I would like to find out if you have a strong feeling about the loan aggregate level that should be reached before consolidation is allowed.

Mr. FOX. That's certainly a cost issue to the Federal Government more than anything else. The real thing is that with the number of students who borrow increasing, but more importantly the number of times that they borrow in order to get themselves through increasing, you are seeing a larger number of high indebtedness students coming through the system and I think that is going to increase over time, you will see more of those heavily indebted students coming through.

The major issue here is how to deal with the totality of the debt that they have and the totality of debt management for these people rather than looking at some small subset and saying, "This is the way we might want to deal with this or not." We are already hearing from the people at HHS that they are having problems with some of the high indebtedness medical students, for example. Loan consolidation was one means by which we were trying to address a certain set of issues—the high indebtedness student who is having difficulty in meeting their debt burden.

If you cut the minimum indebtedness level for loan consolidation, you are apt to be providing at a great deal of cost, not necessarily a beneficial service to all of the parties as you might intend. I think you would want to look very carefully at where you cut that line. We found that most of the people who use our services are in that $10,000 to $12,000 indebtedness area when it came to loan consolidation. There were not that many at the $5,000 level. Quite frankly, we didn't see that many in the $20,000 or above area either. There seemed to be a bell curve that suggested that most of the three or four times borrowers were the graduate students, were people who were not people in the high cost professions and, quite frankly, just couldn't hack the repayment.

I can't suggest to you that you drop it too low or that you automatically offer 15- or 20-year terms to everybody because I think the costs are far too great. You are going to have to figure out what subset really qualifies and figure out how much money you have got available in order to provide that service and then make it available.

You can't go down too deep.

Mr. PENNY. There is some evidence that students with a lower debt load have a high percentage of default and it may be because they have left school and they are not in a financial situation where it's easy to repay and I guess that is the premise of my question is that it seems to me, if we have got a big problem there, but we are not meeting it because the threshold is too high, it certainly is an issue that we need to look at.

Mr. FOX. We have about $4.75 billion of student loans that we own. We are beginning to develop data from this data base which is certainly not a fully stratified data base, but probably one of the better ones that you are going to see.

As to defaults, default levels and the like, we find that the highest level of default on an absolute basis is the person who borrows one time—for what purpose I can't tell you, but it's probably for community college, vocational school or the dropout or whatever—but the person who has a single loan generally will have a higher level of default in our portfolio than, say, the person who has borrowed two or three times and has between $4,000 and $7,000 worth of aggregate indebtedness. That's the lowest level of default that we see in our portfolio right now.

We see a surprisingly high level of default in the higher debt burdens. I wouldn't want to speculate as to why, but we are also seeing that some of the traditional patterns of default are changing. It used to be you would get 85 percent of your defaults and you would try to find somebody at the point in time in which you put them into repayment. Now we are finding that at about 2 years out of school there is a bubble of defaults where the people just can't manage the payments and perhaps of other indebtedness that they have accumulated over time.

How you deal with that lowest level issue, the person who perhaps goes to a community college or drops out of school or perhaps goes to a 2-year school—how you deal with that is one that you are probably going to have to do some research upon. There has been speculation that perhaps you want to provide more grant moneys to those people rather than loans, that maybe they are not a good loan candidate. Maybe you can direct your funds—if you know that you are going to have a high default level and you are paying out a considerable amount of money already, maybe there is a better delivery mechanism. I don't know the answer.

Mr. PENNY. I appreciate your appearance this morning.

We have two other witnesses that we want to move along to before the noon hour. Again, thank you, Mr. Fox.

Mr. Conyers and Dr. Coffey, welcome to the committee.

[Prepared statement of Congressman John Conyers follows:]

PREPARED STATEMENT OF HON. JOHN CONYERS, JR., A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MICHIGAN

Mr. Chairman and Members of the Subcommittee, I am pleased to testify today on the urgent need for intensified correctional education programs for the more than 600,000 inmates of Federal, State and local correctional institutions.

I appear before you as the chief sponsor in the House of the Federal Correctional Education Assistance Act (H.R. 3684), which also has been introduced in the Senate by Senator Claiborne Pell. As of today, the legislation has 52 sponsors in the House.

Therefore, I was delighted to learn that the bill forms Part C of Title I of Chairman Simon's legislation to reauthorize the Higher Education Act (H.R. 5240).

For a number of years Congress has authorized in one form or another programs to provide inmates with a variety of instructional and training resources, including vocational training, postsecondary education, and adult education. Unfortunately, the authority was never implemented and funds never have been set aside for the specific purpose of inmate education and training.

The Subcommittee on Crime and Criminal Justice of the Judiciary Committee, that I have chaired, held over the past several years a number of hearings on the relationship between crime, on the one hand, and skills and employment, on the other. The record of these hearings has forcefully demonstrated the recurring link between unemployment, the lack of job experience and the absence of employable skills, on the one hand, and the persistence and increase of criminal behavior, on the other. The failure, by and large, of Federal, State, and local governments and of correctional institutions to make available to inmates adequate correctional education figures prominently in this equation.

The nation has a great stake in the future of its inmate population since 95% of all inmates return to society after serving an average sentence of 2 to 3 years. Yet, tragically, some 60% of released offenders wind up back in the jails and prisons.

I am here to suggest that a relatively modest commitment of additional resources to train and educate inmates so that they would be employment ready upon release would go a long way toward their rehabilitation. In particular, the mandating of vocational education funds for inmates, as part of the reauthorization of the Vocational Education Act, also would reduce the tremendous fiscal and social costs that accompany incarceration and recidivism. These costs not only include the billions of dollars spent to maintain and expand correctional facilities, but also the costs of public assistance to inmate families and the costs to society of the social disorder that criminal behavior generates.

At the present time, the correctional system, that embraces 561 State prisons, 49 Federal facilities, 3,500 local jails and 2,600 juvenile retention centers, is costing in excess of $8 billion annually. The rate of growth in the inmate population and in correctional expenditures is truly astounding. Yet what are we getting for this spending?

Prison overcrowding is getting worse. Violence in our correctional institutions, including an upsurge in rioting, is on the rise. This past year alone 110 homicides and 138 suicides have occurred in the prisons. The overcrowding, combined with the inactivity and boredom prevailing in most facilities, constitutes an explosive condition.

The great majority of inmates are male, poor, undereducated, and lacking in any substantial job skills or work experience. Forty-seven percent are black. Sixty-three percent never finsined high school. Nearly half were unemployed at the time of their arrest. A majority are learning disabled.

For the most part, correctional institutions offer few opportunities for education, job training, or building marketable skills. Very few institutions offer transitional services that prepare inmates to re-enter society. On the average, the States spend less than 5% of their correctional budgets on inmate education. As a result, less than one-third of the inmate population is engaged in educational programs—most of which are meager at best—and only 12.5% are involved in vocational programs.

As long as society refuses to define the goals of incarceration in terms of rehabilitation, the existing conditions can only get worse. It is commonly acknowledged by correctional officials that prisons today serve as little more than open classrooms for the propagation of criminal learning. What The Education Commission of the States reported in 1976 holds true today: "It is obvious that to the extent that offenders cannot use knowledge and skill obtained from deviant cultures to cope in whatever way they can."

The glaring gap between inmate needs and resources has not gone unnoticed by the highest ranking law enforcement officials in the nation. Chief Justice Warren Burger has long championed correctional education as "a common sense application of the concept of society's collective self-interest." Two years ago, in response to the findings of the National Advisory Council on Vocational Education, Justice Burger warned: "Without any positive change, including learning marketable job skills, a depressing number (of inmates) . . . will return to a life of crime after their release. One small but practical positive step . . . is the introduction of mandatory educational and vocational programs for all inmates."

Numerous studies have demonstrated that correctional education, especially vocationally-oriented, leads to tangible, positive results. A study of inmate education in Texas, for example, found that the recidivism rate among offenders enrolled in an educational program was half the rate among those who did not participate. A study of Virginia's Correctional Center for Women found that the recidivism rate diminished in relation to the extent of training and education that inmates re-

ceived. Whereas the general inmate population in that institution had a repeater rate of 34%, the inmates who had completed a business education program had a rate of only 4%. An Ohio study indicated that the longer an inmate is involved in education and training, the less likely he or she will become a repeater. These studies emphasize the importance of the quality and content of correctional education. Programs that offer inmates practical, marketable skills have proved to be the most successful. The National Center for Research in Vocational Education has identified the Somers Correctional Institution in Connecticut as having one of the most successful vocational education programs. Upon release 75% of its inmate participants found employment. During their enrollment, motivation and achievement dramatically improved.

The Federal Bureau of Prisons has developed a well-organized correctional education program that has shown high enrollment, positive inmate evaluation, and successful outcomes. Unfortunately, few States have had either the disposition or the resources to develop programs on their own. A letter I recently received from Benjamin Groomes, education director of the State of Florida's Corrections Department, cogently summarizes the problem in correctional education that has been cited in numerous other communications from State correctional officials. Groomes writes in an October 5th letter: "Florida Correctional System is presently the third largest in the country. Approximately 68% of those incarcerated do not possess a high school diploma with more than 60% not having a marketable skill. While there have been strong efforts by the Department to provide educational services, we have been unable to acquire the level of resources appropriate to the need."

The most effective correctional education system appears to exist in only eight States that have created correctional school districts and that are able directly to utilize federal education assistance in their institutions. Even in these States, however, correctional facilities are forced to compete with the schools for scarce resources.

Outside of these States, the only substantial federal assistance derives from Chapter 1 of the Education Consolidation and Improvement Act of 1981 and the Education for Handicapped Children Act of 1977. The former only provides supplemental education funds for inmates under the age of 21. The latter basically provides only diagnostic services for juvenile offenders.

In general, there are numerous obstacles in the way of adequate inmate educational assistance. The Vocational Education Act authorizes, but does not mandate, inmate education. There is no uniform definition or set of standards governing inmate education. As a result, the National Advisory Council on Vocational Education found that only 5 States provide comprehensive and thorough vocational programs for inmates. The widespread lack of cooperation between State education agencies and correctional facilities hampers positive action. Correctional officials also have difficulty dealing with the maze of rules and regulations in Federal assistance programs.

The few Federal programs that deal specifically with State and local correctional facilities are badly understaffed. The National Institute of Corrections (NIC) has recently undertaken a joint demonstration program with the Department of Education, but has assigned only a single staff aide to correctional education. NIC focuses its assistance on prison maintenance rather than inmate education.

In 1979 the Comptroller General reported to Congress that "most States could use Federal assistance programs to help improve curriculum materials and implementation of the education and training programs in their correctional institutions." GAO recommended the targeting of Vocational Education Act assistance for the development of screening and evaluation of inmates' educational needs, the creation of uniform curricula in correctional education, and the prioritizing of vocational and on-the-job training.

In its March 1981 report, "Vocational Education in Correctional Institutions," The National Advisory Council on Vocational Education recommended that Congress a) "include in the VEA reauthorization language and policy assuring correctional programs access to funding and services under all provisions of the Act," b) that "Federal funds, either through the VEA or additional legislation, should be made available to upgrade and expand existing facilities and equipment used in correctional vocational education," c) that "(such) funds be administered by the state education agency rather than sent directly to correctional agencies," and d) that "the U.S. Department of Education should establish an Office of Correctional Education."

The correctional education provisions of H.R. 5240 would accomplish these purposes. It authorizes $25 million annually for a three-year period for the implementation of a number of correctional education programs, with an emphasis on vocation-

al education and training. It also would include basic education, transitional services such as counseling and job placement, and cooperative programs with private industry for on-the-job training. The program would be administered by the Secretary of Education and funds would be distributed to State education agencies in all States on the basis of their inmate populations. The bill would mandate that the funds be spent solely on inmate education and this mandate would be closely supervised by the Secretary. It is important now to take the necessary steps to reverse the existing situation in jails and prisons, and commit solid resources to State and local correctional institutions for inmate education. Enough models and tested programs exist to guide the implementation of the program.

It is timely to acknowledge that the goal of merely segregating offenders from the larger society and ignoring their current and future needs upon release is neither viable nor desirable. It is appropriate, therefore, for Congress to make a commitment to inmate education and rehabilitation with the expectation that upon release the great majority of inmates will have acquired the skills, training and the knowledge that will enable them to obtain employment and lead productive lives in society. Chairman Simon's legislation to reauthorize Higher Education programs is a promising step in this direction, and deserves our support.

[Prepared statement of Dr. Osa D. Coffey follows:]

PREPARED STATEMENT OF DR. OSA D. COFFEY, EXECUTIVE DIRECTOR OF THE CORRECTIONAL EDUCATION ASSOCIATION [CEA]

Mr. Chairman: I am Osa Coffey, Executive Director of the Correctional Education Association. I am here today testifying on behalf of thousands of dedicated teachers and administrators who make up the Correctional Education Association and who serve under the harshest conditions to bring education to the incarcerated. Based on our experience, no little, or inadequate monies filter down to correctional education when left up to the discretion of federal and state agencies. Therefore, we are gratified to find that H.R. 5240 "To Amend and Extend the Higher Education Act of 1965" includes a special set-aside for correctional education, by the inclusion in its entirety of H.R. 3684 "The Federal Correctional Education Assistance Act," introduced earlier in the 98th Congress by Congressman John Conyers, Jr. as Part C of Title I. We urge this committee to support the retention of such a set-aside in the reauthorization of the Higher Education Act and ensure that it does indeed become law.

The need for education and training programs among the Nation's incarcerated (an average daily of 600,000 men, women and children) is enormous. Only 10% of this population completed high school; 85% dropped out of school before their 16th birthday. Typically, inmates function about three grade levels below the grade completed. Some studies have indicated that as many as 32% display serious learning disabilities; 10% show incidence of mental retardation. It has been estimated that approximately 40% can be classified as "handicapped" under P.L. 94-142.

Most state systems find that 20–30% of their inmates are functionally illiterate. (Conrad, 1981). The average unemployment rate for offenders prior to arrest is approximately 40% (as compared to the national average of 18%). Of those who were employed prior to arrest, 80% made less than a poverty level salary. (Coffey, 1981)

Since no agency maintains national data on either the educational status of prisoners nor on enrollment in education programs, the following information cannot be considered conclusive. However, if these figures are anywhere near accurate, they do suggest a tremendous gap between inmate need and available education programs. For example, Davidson (1977) studied juvenile correctional institutions in the state of North Carolina and found that 90% of the inmates in both adult and juvenile populations desired vocational education, yet only 9% actually received institutionally based instruction. 34% of the population could not enroll in vocational education programs due to conflicts with work schedules. The Bell study found that 11% of the inmate body nationwide is enrolled in ABE programs; 12% in secondary GED programs. Carlson found that 12.5% of the 4,000 jails in the U.S. have any educational programs at all. On an average, state correctional agencies spend about 1.5% of their total correctional budgets on inmate education.

If we look at the gap between inmate educational needs and current educational service delivery, one is tempted to agree with those who feel that education as a rehabilitative agent has not really been tried yet.

The cost of not meeting the educational needs of the incarcerated is very high, not only measured in wasted human lives, but in tax dollars. Lack of meaningful programs has proven to be a contributing factor in prison violence as well as riots, as testify the experience in Attica, New Mexico, and most recently Oklahoma.

95% of all inmates do return to society at some point. Without adequate academic, job, and social skills, they are more likely than not to return to crime. Recidivism and reincarceration are costly and foolish alternatives, considering the fact that it takes on the average $15,000 to keep an adult incarcerated for a year, and about $60,000, in construction costs for every additional cell constructed in this country. Crime in America costs its citizens more than $100 billion annually in direct and indirect losses, and confining prisoners costs $12 million per day.

Chief Justice Warren Burger has recognized the dire need for more and better education and work programs for inmates and has spoken out to that effect upon many occasions. In 1981 he said: "One small but practical, positive step—indeed, a step that I have advocated for many years—is the introduction of mandatory educational and vocational programs for all inmates. No one should leave prison without at least being able to read, write, do basic arithmetic and be trained in a marketable job skill. Unless we accept the hard reality that the confinement of offenders behind walls and bars—without trying to change them—defeats a principal objective of the penal system, we will never make any progress in the battle against crime . . . we need to take positive steps as a nation to improve the quality of educational and vocational programs within our prisons. This is not a visionary idea but a common sense application of the concept of society's collective self-interest."

Despite some success stories and Justice Burger's recommendations, correctional education in many states has long suffered as a low priority on the hierarchy of needs for the incarcerated. With resources diminished at all levels and the prison population at an all time high; by necessity the primary concern of correctional administrators are security, custody and basic care, and most state and local funding for corrections is used to secure the institution, leaving little to support academic, social and vocational education programs for offenders.

State and local agencies desperately trying to cope with overcrowding, old and decaying facilities, and prison violence urgently need federal support if they are to be able to provide also for effective inmate education programs. The lack of a federal policy delegating responsibility for correctional education and delineating cooperation and coordination among agencies at the federal, state, and local level was a severe handicap to the field until August, 1983, when Secretary T. H. Bell issued a United States Department of Education Policy Statement. (Appendix A) We believe the policy, when implemented, could have a powerful effect in overcoming problems of confusion and frustration between the field and the federal/state/local levels. We agree with the philosophical and comprehensive nature of the policy. But we do have a grave concern with the level of commitment as evidenced by the Education Department. The educational needs of inmates will not come near being met until Congress mandates additional funds earmarked for correctional education and until the Department of Education allocates enough staff and funding to carry out the Secretary's correctional education policy through better coordination and consolidation of resources within the Department.

Title I, Part C of H.R. 5240 could give a great impetus in this regard. Currently, very few pieces of legislation actually mandates funding of education programs for inmates, although they may permit such funding. However, our experience shows that such permissive legislation is inadequate since correctional students generally do not fare will by federal, state, or local education agencies if they are a choice, competing for dwindling monies with other disadvantaged groups such as the handicapped.

Currently, Chapter I of the Education Consolidation and Improvement Act of 1981 is the only law setting aside funds for adult correctional institutions under Part B, Subpart 3, Programs for Neglected and Delinquent Children. These funds serve only to age 21 years. P.L. 94-142, The Education for All Handicapped Children Act of 1975, similarly mandates services for all handicapped children—including the incarcerated. However, these funds, too, reach only those who are 21 or under.

Although correctional administrators may apply for funding under many other programs administered by ED Offices, they must piece together information on authorizing legislation, program availability and eligibility, and the various rules and regulations which govern these programs, and somehow coordinate these efforts into a coherent programatic package. Within the Department, six Assistant Secretaryships are administering programs which can provide funding, technical assistance, research and development and information dissemination services for correctional education. These include: Special Education and Rehabilitation Services, Bilingual Education, Vocational and Adult Education, Educational Research and Improvement, Postsecondary Education, Elementary and Secondary Education.

Ed's current apporach to correctional education is irrational and fails to take into account the unique nature of correctional education. Whereas in the "free" world,

education is organized by age specific and functional institutions; correctional education is provided by a single institution responsible for all aspects of education. The Department's programs are organized to fit the "free" world structures which do not mesh with the organization of corrections.

With the sporadic and "soft" funding in the past, much knowledge was wasted, as good programs fell victims to dried-up funding sources, and valuable data were tossed out with the programs. Sustained, predictable funding is urgently needed. It can best be obtained by a line item in a major bill of longer duration. The current draft of H.R. 5242 presents a very sound alternative solution.

Finally, I would like to add a few words about the significance of the Pell Grant Program for incarcerated students. In April of 1982 we conducted a survey of the use of Pell Grants in Corrections. At that time, we found that Pell Grants are the primary source for college level education for 37% of the 24,560 students included in the report. Many State Directors of Correctional Education responded that postsecondary studies would become virtually impossible without the Pell Grant Program.

Furthermore, follow-up studies on inmate students who have participated in postsecondary programs (most of which seem to be in vocational areas) indicate: drastic decreases in recidivism rates, increases in employment rates, reduction in disciplinary incidents and growth in motivation and self-respect.

We therefore urge this committee to ensure that any new/revised Pell Grant rules and regulations will not only permit but facilitate the participation of incarcerated students, most of whom are indigent.

The community college has increasingly become one of the best partners of correctional systems nationwide, providing services under contract ranging from a single course to actually providing the whole spectrum of educational services (from adult basic skills to B.A level courses) for an entire correctional agency. These contractual, interagency agreements have served community college systems as well as correctional agencies very well. Part C of Title I of H.R. 5240 would seem to encourage further this development. This is yet another reason we in CEA support this legislation. We who work with inmates know that prison education and training programs can be made to work. And we believe, with Secretary Bell, that: "We must ensure that those who wish to improve education and prepare for a life of honest work have the opportunity to do so. Education must not stop at the prison gates; for some, that may even be where it can begin. We must build on the assumption that not even in prison have we exhausted the resources that might work, that might make a change. We must make sure that incarceration is a sentence to temporary loss of freedom; not a sentence to lifelong ignorance, unemployment, poverty and crime. Correctional education can be the way out; we must give it to our support." (Speech at the Forum on Prisoner Education, U.S. Department of Education, 1981).

We trust that Congress, through appropriate legislation, will give us the tools to do our job.

UNITED STATES DEPARTMENT OF EDUCATION CORRECTIONAL EDUCATIONAL POLICY STATEMENT

The Department of Education, under the direction of the Secretary of Education, is legislatively designated as the primary agency responsible for the administration of Federal programs of financial assistance to education. The Secretary is authorized, upon request, to provide technical assistance to State educational agencies, institutions of higher education, local school systems, and other instrumentalities of the States.

The Department's programs and budget are focused on two essential goals:

To guarantee that students of all ages enrolled in our schools, colleges, and vocational centers have equal access to the best possible education; and,

To improve the quality of education for every student by supporting research, development, and dissemination of new teaching methods and materials.

Education is a necessity for every American, including the more than 2.2 million adults and juveniles who are under the jurisdiction of the criminal justice system. However, few of the nations jails provide educational services. Most of the nations prisons provide basic academic and vocational programs, but fewer than 12 percent of the total prison population have access to such programs.

The men and women who serve time in the criminal justice system are among those the Department of Education has a responsibility to serve. It is, therefore, the commitment of the Department to lend its efforts in upgrading and making more effective the educational programs in correctional institutions of the States.

The Department's involvement in correctional education is further justified by the extreme level of educational disadvantagement found in the corrections population. By advocating improvement in the equality and quantity of education and training opportunities for adult and juvenile offenders, the Department of Education will address this educational disadvantagement found in the corrections population.

Compared to other educationally disadvantaged groups, the social and economic cost of the corrections population is extremely high. The criminal justice system places a heavy burden on the American taxpayer. Custody costs range from $13,000 to $40,000 per inmate each year. Also added to that are court costs, welfare payments, construction costs, and a host of other costs commonly associated with arrest, conviction, incarceration, release, arrest, and reincarceration.

At the current rate of recidivism, it is estimated that of the 150,000 inmates who will be released this year, between 30 to 70 percent will be recommitted to a correctional facility within one year. Lack of basic education and marketable job skills aggravate a released offender's difficulties in securing employment, thus, influencing the return to crime. However, with the tools for survival-basic education and a marketable job skill, coupled with the rise in self-esteem which is the inevitable result of achievement—a released inmate's chances for rehabilitation are considerably increased.

It is, therefore, the policy of the Department of Education that through its leadership and resources:

The Department will assist state and local jurisdictions to develop, expand, and improve their delivery systems for academic, vocational, technical, social and other educational programs for juvenile and adult offenders in order to enhance their opportunities to become law-abiding, economically self-sufficient, and productive members of society.

To carry out this policy:

The Office of Vocational and Adult Education will assume leadership for the Department's Correctional Education effort.

The Department will establish an intra-departmental coordinating committee on Correctional Education to assist in bringing about greater cooperation and coordination in the Department's corrections-related programs in the areas of policy, use of existing resources, avoiding duplication of efforts and costs, and effecting a better delivery system for needed services at the State and local levels.

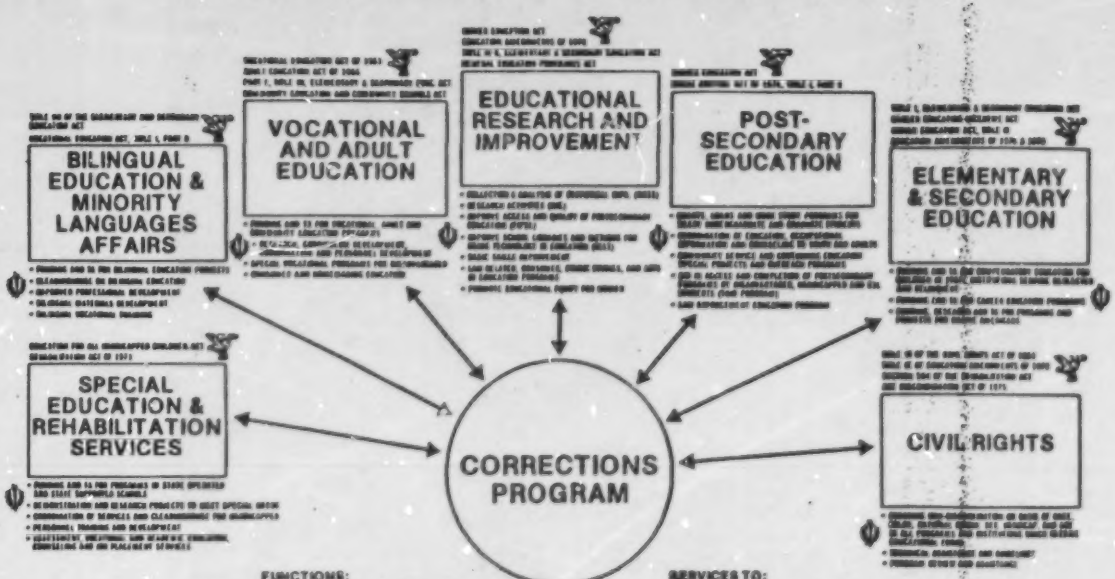
The Department will play an active role in interagency corrections coordination activities.

The Department will support research, development, and dissemination efforts to develop knowledge of special curricula, organization, personnel, and support services needed in correctional education.

All officers in the Department of Education and all State and local educational agencies receiving the Department's assistance are encouraged to act in accordance with this policy.

T.H. BELL,
Secretary of Education.

Correctional Education Within ED: A Functional Overview



FUNCTIONS:

- PROMOTE QUALITY AND QUANTITY EDUCATIONAL SERVICES FOR OFFENDERS
- COORDINATION OF ALL FEDERALLY FUNDED PROGRAMS WHICH IMPACT CORRECTIONAL EDUCATION AT ALL LEVELS
- CLEARINGHOUSE ON CORRECTIONAL EDUCATION
- RESEARCH AND DATA COLLECTION ON CORRECTIONAL EDUCATION
- INPUT INTO LEGISLATION AND REGULATION WRITING AFFECTING CORRECTIONAL EDUCATION
- COORDINATION AND INVOLVEMENT OF BUSINESS/INDUSTRY AND LABOR IN CORRECTIONAL EDUCATION
- PSE AND IN SERVICE PERSONNEL DEVELOPMENT
- PROMOTE QUALITY STANDARDS FOR CORRECTIONAL EDUCATION
- TECHNICAL ASSISTANCE FOR ALL OF THE ABOVE

SERVICES TO:

- PUBLIC AND PRIVATE LOCAL EDUCATIONAL AGENCIES
- STATE DEPARTMENTS OF EDUCATION
- STATE AND LOCAL CORRECTIONAL AGENCIES
- COMMUNITY-BASED ORGANIZATIONS
- YOUTHS AND ADULTS WHO ARE IN CORRECTIONAL FACILITIES, ON PAROLE OR PROBATION

STATEMENT OF HON. JOHN CONYERS, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MICHIGAN, ACCOMPANIED BY DR. OSA D. COFFEY, EXECUTIVE DIRECTOR, CORRECTIONAL EDUCATION ASSOCIATION

Mr. CONYERS. Thank you very much. I understand you are on a tight schedule, but we wanted to first of all appreciate the ability to testify on behalf of the measure that has been included in the authorization thus far that would provide financial assistance to the States for the use of expanding educational programs in the correctional institutions around the country.

I just want to get one or two lines in here before I let Dr. Coffey, who brought this idea to my attention and which has been moving along rather successfully and we hope that it will stay in the bill.

Let me just say a couple of things in its behalf. First of all, I am chairman of the Criminal Justice Subcommittee and our concern in judiciary with the escalating crime rates led me very naturally into this measure because this is operating in our national best interests, societally speaking.

What we are doing here is providing so many who are undereducated, who are unemployed, who need the kind of additional encouragement that this Federal training in which we would take this small amount of money—$25 million a year for 3 years—and send it to the State educational institutions. We think that it's very, very important.

The second thing that I would say is that this is really only supplemental money. It does not supplant any State funds. It does not create opportunities that are not already existing. It's a complementary program. I think that it has been very thoroughly thought out and I am very pleased to see it in your pending authorization measure and pray that it stays in there. I hope you will give it your consideration as one of the thoughtful members of this Postsecondary Education Subcommittee. I thank you and yield now to Dr. Coffey, the executive director of the Correctional Education Association who has worked in this area for many, many years.

Mr. PENNY. Thank you, Congressman.

Dr. Coffey.

Dr. COFFEY. Mr. Penny, I will be very, very short, realizing that time is running short today. I would just like to enter my testimony into the record. I would just like to highlight a few points. One is that we, as the Correctional Education Association, representing the teachers and administrators who deliver programs to inmates in the prisons in this country, we are very gratified to find that Mr. Simon has included as a title in H.R. 5240 a slot for correctional education.

One of the very major problems over the years in terms of funding education programs has been the fact that hardly any Federal legislation actually mandates moneys to be spent on this most educationally disadvantaged of groups in the country. There are two pieces of legislation—chapter I of the Elementary Act and Public Law 94-142, the Handicapped Act—that acually mandates moneys and both of those go only to age 21 and it leaves really the total adult inmate population without any moneys for their needs.

So we do hope that you will indeed see fit to keep this law in the legislation. I would also like to add something about the Pell Grants and then I will be very brief. We did a study of the Pell Grant's use in corrections a couple of years ago and we found out that for 37 percent of the 24,000 inmates who go to college level courses depend on the Pell Grant. Without that, many State directors of correctional education have told me that it would virtually be impossible for them to run a postsecondary program in corrections.

Most of the postsecondary programs in corrections tend to be vocational programs administered by community and junior colleges. They also show, in terms of followup studies, a higher success rate in terms of reduced recividism. There have been in the past several times legislation introduced trying to bar inmates from Pell Grants. We hope and we pray that this committee will make very sure that inmates will be included as eligible to participate in the Pell Grant Program.

Finally, I feel that it's very encouraging that correctional education has found a spot in the higher education bill because in recent years one of the greatest friends to correctional education has been the community college system in the country. They are deliverers on the contract to correctional agencies of some of the best programs that we have at the current time. I believe that this inclusion of title IV, correctional education, in the Higher Education Act is likely to give even greater impetus toward what is a very healthy development of a close linkage between the colleges and the correctional systems.

I appreciate very much your time, especially so late in the day. I would like to leave the rest of my remarks in the record.

Mr. PENNY. Dr. Coffey, I might have missed it, but in your comment about recidivism, did you indicate that there was or was not research presently available to determine the effect of education on the return rate of prisoners?

Dr. COFFEY. There is some research. I don't think that in quality or quantity it is as much as we would like but there are some studies. Today I just brought with me a couple. For example, in New York State there is a 1983 study of a college program that showed an 8-percent reduction in recidivism. If you translate that into moneys you have paid for the program several times over. In Texas——

Mr. PENNY. What was that percentage again?

Dr. COFFEY. A 7.9-percent reduction in recidivism for the groups that attended a college program while incarcerated. I have a similar report from a community college study in Texas in 1983 that also showed reduced recidivism.

In California, there has been a similar study out of a college program at San Quentin. You had 94 percent employment after release, which is unheard of former inmates and zero recidivism. This was a computer data processing program.

I could go on for quite a while, but these are isolated studies and, on the whole, they do show that postsecondary programs have the highest retention rate and probably the highest success rate.

Mr. PENNY. Could you enter all of those materials in the record for our purposes?

Dr. COFFEY. Yes, I will be happy to.

Mr. CONYERS. Mr. Chairman, could I point out that Dr. Donald Weir—phonetic—from the Michigan prison system is here and he was just telling me that they had a similar experience of reduction in recidivism in the Michigan prison system at two levels—one where inmates had gone on to get their 2-year degree and also even at the GED level, there was a marked falloff in what is about a 60-percent recidivist rate. It's higher in some places, of course.

But the point of all of these fragmented studies is that it works and that's very reassuring in these days and ages when some things that we think are going to help really don't. It's a small, modest beginning and we are encouraged at the Senate and the House enthusiasm about it.

Mr. PENNY. We do appreciate your testimony. We will reconvene at 1 this afternoon. Again, thank you, Congressman, and thank you, Dr. Coffey, for your presence here this morning.

The meeting stands adjourned.

[Whereupon, at 12 noon, on April 3, 1984, the subcommittee adjourned until 1 p.m. the same day.]

HEARINGS ON THE REAUTHORIZATION OF THE HIGHER EDUCATION ACT

TUESDAY, APRIL 3, 1984 (AFTERNOON)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON EDUCATION AND LABOR,
SUBCOMMITTEE ON POSTSECONDARY EDUCATION,
Washington, DC.

The subcommittee met, pursuant to call, at 1 p.m., in room 2261, Rayburn House Office Building, Hon. Ray Kogovsek presiding.

Members present: Representatives Andrews, Kogovsek, Penny, Gunderson, and Packard.

Staff present: William Blakey, staff director and John Dean, Republican assistant counsel.

Mr. KOGOVSEK. The Subcommittee on Postsecondary Education will please come to order for the purpose of continuing our hearings on the reauthorization of the Higher Education Act. The committee at this time would like to call Father Edward Glynn, president of Saint Peter's College; Flora Mancuso Edwards, president of Hostos Community College; Dr. Robert C. Corrigan, the chancellor of the University of Massachusetts at Boston; Dr. Bernard Harleston, president of the City College of New York; and Ms. Sandra Ritter, the trustee of the Oakland Community College, to the witness table, please.

[Prepared statement of Father Edward Glynn follows:]

PREPARED STATEMENT OF EDWARD GLYNN, S.J., PRESIDENT, SAINT PETER'S COLLEGE, ON BEHALF OF ASSOCIATION OF URBAN UNIVERSITIES

Mr. Chairman, I am Edward Glynn, S.J., President of Saint Peter's College, Jersey City, New Jersey. I am appearing today in my capacity as a Member of the Board of Directors of the Association of Urban Universities, in response to your invitation to testify on your bill to reauthorize the Higher Education Act. My comments will be directed primarily toward the reauthorization of Title XI of that Act, as provided for in your bill, and in H.R. 3384, another bill introduced by your distinguished colleagues, Mr. Ford of Michigan, and Mr. Coleman of Missouri.

I am accompanied today by Dr. Robert Corrigan, Chancellor of the University of Massachusetts at Boston, and Dr. Bernard Harleston, President of City College of New York, both of whom offer testimony illustrative of what we all believe Title XI can do if reauthorized and modestly funded. We also have with us Jim Harrison, President of the Association of Urban Universities, who will not offer testimony as such, but who is prepared to respond to any question you or members of the Subcommittee wish to direct toward the contents of the existing Title XI or the provisions of the reauthorization legislation.

Title XI—the Urban Grant University Program—was originally enacted on October 3, 1980, when the Higher Education Act was last reauthorized. Urban Grant was one of the few new initiatives of the 1980 amendments and became law at an inauspicious moment for new education programs. The Association of Urban Universities and the higher education community have sought funding for Title XI in the three appropriation cycles that have followed its enactment, but we have been

unsuccessful. Despite these temporary disappointments we come to you and ask enthusiastically for a reauthorization of Title XI and also for a second chance to put its concept to the test and the abilities of the urban universities to work.

The concept of Urban Grant is a simple one. The present Title provides for modest appropriations, from which the Secretary of Education can make to urban universities small grants on the basis of competitive applications. These grants will enable universities to provide appropriate applied research and related services to meet the needs that are perceived as high priority requirements by the metropolitan areas where those institutions are located. That simple sentence, Mr. Chairman, just about sums up title XI.

It may be helpful to the Subcommittee if I comment on what the title does not do. Such comments may assist you in understanding both the reach of our hopes and the limits of our expectations.

Most significantly, Mr. Chairman, Title XI and its backers have never believed that we or it can solve the problems of our cities.

Our cities are faced with a myriad of problems. No two cities face the same list of questions nor do they face a list in the same order of priority. The cities are governed, for the most part, by freely elected, dedicated and hard-working mayors and council members, who know their business and who are every bit as well-equipped to run those cities and counties as we are to manage the urban universities for which we speak. We do not come to you to suggest that we have a secret formula for the governing of the city, or that, given an unlimited checkbook, unfettered access to the levers of power, and total freedom from responsibility for our actions, we can remake the cities overnight.

But, speaking as citizens of our cities and as heads of institutions which provide a substantial portion of the human and intellectual resources of those cities, we believe firmly that:

(1) We can contribute to alleviating some of the problems that our cities face, and

(2) We have an obligation to contribute to alleviating these problems.

We hold both beliefs subject to the understanding that the selection of priorities among problems and that the final decisions as to how problems will be met must remain the particular province of those chosen by their fellow citizens to make such decisions. The urban universities stand ready to put their skills, their resources and their talents at the service of their cities, through close cooperation with City Hall and the County Court House, in tackling the problems that those institutions have decided are of high priority and that we and our faculty believe we have competence to address.

We have always visualized Urban Grant working in the way such town-grown linkage is already working in many American cities on an informal basis. The responsible people in City Hall or the County Court House will set down with the responsible executives of an urban university and identify:

(1) what the local government needs in the way of applied research or related services;

(2) what talents or resources the urban university already possesses that can assist in meeting those needs, and,

(3) where there is an area of coincidence between those needs and those talents and resources.

After discovering where the university may be able to help, both parties then proceed to develop a proposal by which the university's resources and talents can be put to work on the city's problems. Under Title XI, the university can then apply to the Secretary of Education for a modest grant to meet 90 percent of the costs of such a proposal.

Incidentally, Mr. Chairman, at this point we propose to violate all the proper principles of lobbying. The present law fixes the Federal share of project costs at 90 percent, neither more nor less. We agree with you and with Mr. Ford and Mr. Coleman that this is a bit overgenerous. We believe that the Act should be amended to make 90 percent a ceiling on the Federal share.

But back to Title XI in action. The Secretary of Education, in weighing the merits of a proposal, is instructed to look at the degree of local government participation in the development of the proposal, to examine the comments of the local government involved and to give priority to applications in which more than one urban institution is involved. He is not instructed and he is not expected to set limits on the subject matters to which such applications can be addressed. There is nothing whatever in the Act that can be used to give preference among applicants to either public or independent universities.

If, for an example, the City of Chicago asks Columbia College and/or the University of Illinois at Chicago and/or Northeastern Illinois University and/or Chicago

State to help it develop a long-range mass transit plan or to help it cope with particular urban problems of the elementary and secondary school system, there is nothing in Title XI that gives the Secretary of Education the authority to decide that mass transit or elementary and secondary education are or are not appropriate issues for Chicago to put at the top of its agenda. On the other hand, the Secretary may freely decide, through the peer review process, whether or not such an application looks like a good bet for success, and whether or not it compares favorably with other applications in the area of cost-effectiveness. He may certainly look at the resources of the applicant university or consortium and make a judgment as to whether or not they will sustain the offering of research or services that they have tendered to the city. These are wholly valid bases for the Secretary to use in choosing among applicants. In order to leave him relatively unfettered in making such choices, the Title avoids distribution formulas. The heart of Title XI and the core of its view of the best way to use the urban university as a tool for the city is the assumption that the city is the best judge of its own needs and that the university is the best judge of its own capacity in a given area.

The other members of our panel will speak, Mr. Chairman, on their own experiences in the building of linkages. We can respond to questions any of you have on the legislaton itself. But before finishing, I would address myself to one question.

"Why should we reauthorize a program which has remained unfunded since its enactment?"

We are aware, Mr. Chairman, that Title XI was born in difficult times. The Association of Urban Universities, like the remainder of the higher education community, has freely and unhesitatingly testified, even while asking for Title XI funds, that Title XI is not the highest priority of higher education. There are higher priorities appropriately attached to student financial assistance. Our own urban institutions would put a higher priority on programs aimed at our particular clienteles—the first-generation college or university student, and the so-called "non-traditional student" who now constitutes the majority of the consumers of higher education.

There are titles, such as Title VII, which have been unfunded for many years but which should nevertheless be reauthorized and carefully examined for funding, because the needs have grown in the years since funding. There are also new initiatives in your own bill, Mr. Chairman, notably including the adult literacy program which we support as being of vital importance to the nation's most basic concerns.

Nevertheless, we believe that there will be a time, and that soon, when the nation will rediscover the unchanging fact that the welfare of our cities is a matter of prime national interest and that the possibility of letting the urban universities play a role in the coming urban renaissance similar to that the land-grant universities played in America's agricultural miracle is one we cannot afford to neglect.

We do not ask, Mr. Chairman, that Title XI be put at the head of your list of priorities. We share the view of the ramainder of the higher education community that student aid should continue to occupy that place. But we do urge that you leave this useful authority on the statute books, made neater and tighter by the amendments you and your colleagues have proposed, and ready for funding when this or a later Congress or Administration suggest its use.

Mr. Chairman, there is an old, honored and generally valid rule of legislative thumb. Let me rephrase it slightly with regard to Title XI:

"It ain't broke, so don't fix it. But, financially, it IS broke, so do fund it."

Mr. Chairman, while my testimony has primarily been pointed at Title XI, there are a few provisions in Title IV, dealing with student financial assistance, with which the urban universities have a direct concern. One of these is the question of how to determine the cost-of-living under the Pell Grant Program, for so-called commuter students, i.e., those students who do not live on the campus or in campus-sponsored housing.

We believe that HR 5240 takes a step in the wrong direction on this issue.

Your bill prescribes that the cost-of-living element in the Pell Grant equation shall vary according to whether students live on campus, off-campus in housing of their own, or at home. If students live at home, your bill assumes that it costs them $1,200.00 to eat and clothe themselves; if they live in town, but away from home, your bill assumes it costs them $1,600.00, and if they live on campus or in campus-subsidized housing, your bill would allocate $2,000.00 for this same purpose.

It is certainly possible, Mr. Chairman, to make valid statistical analyses showing that on a national aggregate basis, it costs more to live away from home than at home. And it is possible, though less obviously so, that it may cost the "average" student less to live off campus in non-subsidized housing than off-campus in subsidized housing or on campus in a dormitory.

But such statistics, Mr. Chairman, beg the question. Surely, the urban universities could unquestionably make a case that is costs the typical urban student, living at or away from home, more to live than it costs in a non-urban setting. But, Mr. Chairman, such statistics would no more justify a higher cost-of-living figure for urban students than similar statistics justify one for a student who lives in a dormitory.

Last year, after a decade of assuming that commuter students automatically had lower living costs than dormitory residents, the Congress, under your leadership and that of your colleague from Michigan, Mr. Ford, increased the commuter allowance to parity with other students. That was not an act which was justified by its statistical impact on a particular kind of college. It was a simple act of justice, ending a decade of discrimination against commuter students. I am afraid, Mr. Chairman, that Sec. 402(c)(2) of HR 5240 would reverse your victory of last year. And it should not.

I understand, Mr. Chairman, that budget considerations may have persuaded you to look for areas of economy, and that a differential based on the kind of housing a student chooses—a choice, Mr. Chairman, that is as least partly determined by what kind of housing the institution chooses to offer—provides some such economies.

But, Mr. Chairman, even economies do not justify making arbitrary and unjust distinctions. And to distinguish among students on this basis, is both arbitrary and unjust. We believe, Mr. Chairman, that a cost-of-living allowance, set at the same rate across-the-board, would be fairer than a variable rate which selects living arrangements as the basis for the variation. Mr. Chairman, we believe the present $2,000.00 is a minimum and fair cost-of-living allowance. But if it must be reduced in the name of economy, let us reduce it equitably and uniformly.

The Association of Urban Universities has not, Mr. Chairman, calculated what its members, individually or in the aggregate, would "gain" or "lose" through the application of a commuter differential in estimating the cost-of-living factor in a Pell Grant award. We believe it would be wrong even though some of our members do have dormitories and would if fact benefit, at the expense of other institutions, in the aggregate total of their Pell Grant income. Gain or lose, we fail to see the legitimacy of this particular distinction, as a budgetary device, or its relevance to the contemporary educational scene.

STATEMENT OF FATHER EDWARD GLYNN, PRESIDENT, ST. PETER'S COLLEGE

Father GLYNN. Thank you, Mr. Chairman.

Mr. KOGOVSEK. Yes, Fr. Glynn, I think we're going to go ahead and let you start. Please proceed.

Father GLYNN. Mr. Chairman, I am Edward Glynn, president of St. Peter's College in Jersey City, NJ. I am appearing today in my capacity as a member of the board of directors of the Association of Urban Universities, in response to your invitation to testify on the reauthorization of the Higher Education Act.

My comments will be directed primarily toward the reauthorization of title XI of that act, as provided in this bill and in H.R. 3384, introduced by your distinguished colleagues, Mr. Ford of Michigan and Mr. Coleman of Missouri.

I am accompanied today by Dr. Robert Corrigan, chancellor of the University of Massachusetts at Boston, and Dr. Bernard Harleston, president of the City College of New York, both of whom will offer testimony illustrative of what we all believe title XI can do if reauthorized and modestly funded.

We also have with us Jim Harrison, president of the Association of Urban Universities, who will not offer testimony, as such, but who is prepared to respond to any question you or members of the subcommittee wish to direct toward the contents of the existing title XI or the provisions of the reauthorization legislation.

Title XI, the Urban Grant University Program, was originally enacted on October 3, 1980. Urban Grant was one of the few new

initiatives of the 1980 amendments and became law at an inauspicious moment for new education programs. The Association of Urban Universities and the higher education community have sought funding for title XI in the three appropriation cycles that have followed its enactment. But we have been unsuccessful.

Despite these temporary disappointments, we come to you and ask enthusiastically for a reauthorization of title XI and also for a second chance to put its concept to the text and the abilities of the urban universities to work.

The concept of Urban Grant is a simple one. The present title provides for modest appropriations from which the Secretary of Education can make to urban universities small grants on the basis of competitive applications. These grants will enable universities to provide appropriate applied research and related services to meet the needs that are perceived as high priority requirements by the metropolitan areas where those institutions are located.

That simple paragraph Mr. Chairman, just about sums up title XI.

It may be helpful to the subcommittee if I comment on what the title does not do. Such comments may assist you in understanding both the reach of our hopes and the limits of our expectations. Most significantly, title XI and its backers have never believed that we or it can solve the problems of our cities. Our cities are faced with a myriad of problems. No two cities face the same list of questions, nor do they face a list in the same order of priority.

The cities are governed, for the most part, by freely elected, dedicated, and hard-working mayors and council members, who know their business and who are every bit as well equipped to run these cities and counties as we are to manage the urban universities for which we speak.

We do not come to you to suggest that we have a secret formula for the governing of the city, or that given an unlimited checkbook, unfettered access to the levers of power, and total freedom from responsibility for our actions, that we can remake the cities overnight.

But speaking as citizens of our cities and as heads of institutions which provide a substantial portion of the human and intellectual resources of those cities, we firmly believe that, first, we can contribute to alleviating some of the problems that our cities face. And second, that we have an obligation to contribute to alleviating these problems.

We hold both beliefs subject to the understanding that the selection of priorities among problems and that the final decisions as to how problems will be met must remain the particular province of those chosen by their fellow citizens to make such decisions. The Urban Universities stand ready to put their skills, their resources, and their talents at the service of their cities through close cooperation with city hall and the county courthouse in tackling the problems that those institutions have decided are of high priority, and that we and our faculty believe we have competence to address.

We have always visualized Urban Grant working in the way such town-gown linkage is already working in many American cities on an informal basis. The responsible people in city hall or

the county courthouse will sit down with the responsible executives of an urban university and identify first what the local government needs in the way of applied research or related services.

Second, identify what talents or resources the urban university already possesses that can assist in meeting those needs. And third, identify where there is an area of coincidence between those needs and those talents and resources.

After discovering where the university may be able to help, both parties then proceed to develop a proposal by which the university's resources and talents can be put to work on the city's problems. Under title XI, the university could then apply to the Secretary of Education for a modest grant to meet 90 percent of the cost of such a proposal.

Incidentally, Mr. Chairman, at this point we propose to violate all the proper principles of lobbying. The present law fixes the Federal share of project costs at 90 percent, neither more nor less. We agree with you and Mr. Ford and Mr. Coleman that this is a bit overgenerous. We believe that the act should be amended to make 90 percent a ceiling on the Federal share.

But back to title XI in action. The Secretary of Education, in weighing the merits of a proposal, is instructed to look at the degree of local government participation in the development of the proposal, to examine the comments of the local government involved, and to give priority to applications in which more than one urban institution is involved. He is not instructed and he is not expected to set limits on the subject matters to which such applications can be addressed.

There is nothing whatever in the act that could be used to give preference among applicants to either public or independent universities.

If, for example, the city of Chicago asked Columbia College and/or the University of Illinois at Chicago and/or Northeastern Illinois University and/or Chicago State to help it develop a longrange mass transit plan or to help it cope with particular urban problems of the elementary and secondary school system, there is nothing in title XI that gives the Secretary of Education the authority to decide that mass transit or elementary and secondary education are or are not appropriate issues for Chicago to put at the top of its agenda.

On the other hand, the Secretary may freely decide through the peer review process whether or not such an application looks like a good bet for success and whether or not it compares favorably with other applications in the area of cost-effectiveness. You may certainly look at the resources of the applicant university or consortium and make a judgment as to whether or not they will sustain the offering of research or services that they have tendered to the cities.

These are wholly valid bases for the Secretary to use in choosing among applicants. In order to leave the Secretary relatively unfettered in making such choices, the title avoids distribution formulas. The heart of title XI and the core of its view of the best way to use the urban university as a tool for the city is the assumption that the city is the best judge of its own needs and that the university is the best judge of its own capacity in a given area.

Other witnesses, representing the Association of Urban Universities, will speak today on their own experiences in the building of linkages. We can respond to questions any of you have on the legislation itself. I wish, however, to anticipate at this time one question. Why should we reauthorize a program which has remained unfunded since its enactment? We are aware that title XI was born in difficult times. The Association of Urban Universities, like the remainder of the higher education community, has freely and unhesitatingly testified, even while asking for title XI funds, that title XI is not the highest priority of higher education. There are higher priorities appropriately attached to student financial assistance. Our own urban institutions would put a higher priority on programs aimed at particular clientele, the first generation college or university student and the so-called "non-traditional student" who now constitute the majority of the consumers of higher education.

There are titles such as title VII, which has been unfunded for many years, but which should, nevertheless, be reauthorized and carefully examined for funding because the needs have grown in the years since funding. There are also new initiatives, notably including the adult literacy program which we support as being of vital importance to the Nation's most basic concerns.

Nevertheless, we believe that there will be a time, and that soon, when the Nation will rediscover the unchanging fact that the welfare of our cities is a matter of prime national interest, and that the possibility of letting urban universities play a role in the coming urban renaissance, similar to that the land grant universities played in America's agricultural miracle, is a possibility we cannot afford to neglect.

We do not ask that title XI be put at the head of your list of priorities. We share with the remainder of the higher education community the view that student aid should continue to occupy that place.

But we do urge that you leave this useful authority on the statute books, made neater and tighter by the amendments you and your colleagues have proposed and ready for funding when this or a later Congress or administration suggests its use.

There is an old, honored, and generally valid rule of legislative thumb. Let me rephrase it slightly with regard to title XI. "It ain't broke, don't fix it. But financially it is broke, so do fund it."

Mr. Chairman my testimony has primarily been pointed at title XI but there are a few provisions in title IV dealing with student financial assistance, with which the urban universities have a direct concern. One of these is the question of how to determine the cost of living under the Pell Grant Program for the so-called "commuter students", that is, those students who do not live on the campus or in campus-sponsored housing.

We believe that H.R. 5240 takes a step in the wrong direction on this issue. The bill prescribes that the cost of living element in the Pell Grant equation should vary according to whether students live on campus, off campus in housing of their own, or at home. If students live at home, the bill assumes that it costs them $1,200 to eat and clothe themselves. If they live in town but away from home, the bill assumes it costs them $1,600. And if they live on campus or

in campus authorized, subsidized housing, your bill would allocate $2,000 for this same purpose.

It is certainly possible to make valid statistical analyses showing that on a national aggregate basis it costs more to live away from home than at home. And it is possible, though less obviously so, that it may cost the average student less to live off campus in nonsubsidized housing than off campus in subsidized housing, or on campus in a dormitory.

But such statistics beg the question. Surely the urban universities could unquestionably make a case that it costs the typical urban student, living at or away from home, more to live than it costs to live in a nonurban setting.

But such statistics would no more justify a higher cost of living figure for urban students than similar statistics justify for a student who lives in a dormitory.

Last year, after a decade of assuming that commuter students automatically had lower costs than dormitory residents, the Congress, under the leadership of Mr. Simon and that of his colleague from Michigan, Mr. Ford, increased the commuter allowance toward parity with other students. That was not an act which was justified by its statistical impact on a particular kind of college. It was an act of simple justice, after a decade of discrimination against commuter students.

I am afraid that section 402(c)2 of H.R. 5240 could reverse that victory of last year. And it should not.

I understand that budget considerations may have persuaded the committee to look for areas of economy and that a differential based on the kind of housing a student chooses—a choice, Mr. Chairman, that is at least partly determined by what kind of institution chooses to offer—provides some such economy.

But even economies do not justify making arbitrary and unjust distinctions and to distinguish between students on this basis is both arbitrary and unjust.

We believe that a cost of living allowance set at the same rate across the board would be fairer than a variable rate which selects living arrangements as the basis for the variation. We believe that the present $2,000 is a minimum and fair cost of living allowance. But if it must be reduced in the name of economy, let us reduce it equitably and uniformly.

The Association of Urban Universities has not calculated what its members, individually or in the aggregate, would gain or lose with the application of a commuter differential in estimating the cost of living factor in a Pell Grant award. We believe it would be wrong, even though some of our members do have dormitories and would, in fact, benefit at the expense of other institutions in the aggregate total of their Pell Grant income. Gain or lose, we fail to see the legitimacy of this particular distinction as a budgetary device, or its relevance to the contemporary educational scene.

Thank you, Mr. Chairman.

Mr. KOGOVSEK. Thank you very much, Father Glynn, for your testimony. What I would like to do is hold all questions of anyone until the whole panel has a chance to testify, if that's OK with the panel and that's OK with the committee.

So, with that we will proceed to Flora Mancuso Edwards.

Let me say to the people who are here testifying that it would be helpful to the committee, and this is not a criticism of Father Glynn, if you feel more comfortable summarizing your testimony, that we will submit each and every word that you have in your prepared text as part of the record, for the sake of saving some time. But I will leave it up to each and every one of you to do as you wish.

[The prepared statement of Flora Mancuso Edwards follows:]

PREPARED STATEMENT OF FLORA MANCUSO EDWARDS, PRESIDENT, HOSTOS COMMUNITY COLLEGE, CITY UNIVERSITY OF NEW YORK

Congressman Simon, distinguished members of the Subcommittee on Postsecondary Education, I wish to thank you for giving me this opportunity to testify before you regarding the reauthorization of the Higher Education Act of 1965.

I am Flora Mancuso Edwards, president of Hostos Community College, one of the eighteen colleges which together comprise the City University of New York. Of the 4,500 students enrolled at Hostos, over 50 percent are enrolled in business and allied health programs. Our student body, is essentially, a non-traditional one. Over 50 percent of our students are over the age of 25. Over 65 percent are female and sole support of households with two or more children, 90 percent are Hispanics 65 percent come to us requiring intensive English second language instruction. Eighty percent earn or come from families which earn less than $8,000 per year, 99 percent receive Federal and State supported financial aid. The income level of our graduates, however, averages approximately $20,000 per year. Hostos, then, as do many of our nations urban community colleges, serve as a vehicle—a vehicle to provide access to educational opportunity; access to the labor force, access to social mobility.

It is against this background that I offer my comments on the Higher Education Act.

The emphasis on expanded access, simplification and streamlining of student aid programs, enhancement of quality and incentives for endowment development programs all hold great promise for higher education in general and urban higher education in particular.

Specifically, the importance of converting the Pell grants program to an entitlement cannot be underestimated. If indeed, the original concept of the Pell grant as a true guarantee of access to higher education still obtains, than the security of these grants is central to the continued success of any college whose mission is one of access and opportunity. At Hostos alone, a relatively small institution for an urban area, over 4,350 students received Pell grants of approximately $1,050 each, this year, with payments totaling $4,592,717. Without this aid—a relatively small short-term investment for a long-term gain—few if any of our students would be able to underwrite the modest costs of even a part-time education. If we as a nation are truly committed to concept of education as an enfranchising vehicle, then a true floor of access in postesecondary opportunity must be assured.

Of equal importance to our urban community colleges—and to Hostos in particular is the extent to which provision can be made to "mainstream" the adult learner of limited English proficiency. Mention is made here of Title I which has within it both educational outreach and literacy training. Indeed, for an adult, thrust into a fast-moving, competitive, highly technological environment—the prerequisite skills in the English language become the one indispensable element in any equation leading to economic viability. The value of all other training is proportionately diminished by the lack of preparedness or fluency in English. As a response to this pressing need—a need almost above all others—perhaps the scope of title I—which at present appears somewhat diffuse—might not be sharpened to focus on those specific functional barriers that hinder and discourage the adult learner and to encourage institutional responses to the fundamental questions of adult illiteracy, and more clearly identifying those skills without which access both to higher education and to the labor market becomes unlikely.

Lastly, I would like to focus attention on title XI which authorizes an urban grant university program for the purpose of aiding urban universities in what is currently solely research in seeking solutions to urban problems. It is my understanding that a simple extention of title XI will be recommended. Located as we are in Bronx County—subject of considerable research and an ever greater amount of publicity—I cannot help but wonder if a concentrated research effort alone can truly shed light on the complex problems facing our urban centers. In the area—the South Bronx—

immediately served by the college of the 400,000 residents one-third of the families report income of less than $6,000 per year, 41 percent of the households are receiving public assistance other than social security, 63 percent of the residents over the age of 25 do not possess a high school diploma, and the average unemployment rate is 20 percent. In response, our community colleges in cooperation with a number of Bronx based organization and local development corporations have initiated an amazing variety of short- and long-term training and literacy programs from high school equivalency to welding to word processing reaching over 5,000 Bronx residents a year. Simultaneously, and in exquisite isolation—research studies, projections, case histories, policy analysis, and no small number of doctoral dissertations all attempt to grapple with the issue of urban deterioration, regeneration and renewal from an almost equally bewildering variety of perspectives. Yet there remain—at least for me—a number of questions that have yet to be answered. Questions such as the true relationship of manpower training to the stability of the industrial base, the effect of training on the stability of a given residential area, the impact of short vs. long-term training programs on longevity and/or mobility within the labor force. These questions cannot, I believe be answered in isolation. Perhaps, our national interest would be far better served—as would the long-range investment of manpower and training dollars—if title XI funds made provision for applied research tied to pilot initiatives in economic development and manpower training.

Our urban community colleges dedicated to the development of a trained labor force and deeply involved in local development issues could serve as an integral part of a collaborative effort with our great metropolitan research centers. A team approach wedding theory and practice might indeed find answers to some of these questions and in the long run I believe would have far greater impact and will make a far greater contribution to the resolution of the problems facing our Nation's cities.

In conclusion we have before us a great opportunity and challenge—the opportunity to extend to our citizenry the hope that all who come with determination and ambition to this country's shores can still fulfull the dreams that generations before them fulfilled—and the challenge to provide the means by which these dreams can become reality.

Thank you.

STATEMENT OF FLORA MANCUSO EDWARDS, PRESIDENT, HOSTOS COMMUNITY COLLEGE

Ms. EDWARDS. Thank you very much. I will make every effort to be brief.

Distinguished members of the Subcommittee on Postsecondary Education, I wish to take this opportunity to thank you for allowing me to testify before you regarding the reauthorization of the Higher Education Act. I am Flora Mancuso Edwards, president of Hostos Community College, 1 of the 18 colleges which together comprise the City University of New York. Of the 4,500 students enrolled at Hostos, over 50 percent are enrolled in the business and allied health programs. Our student body is essentially a nontraditional one. Over 50 percent of our students are over the age of 25. Over 65 percent are female and sole supports of their households with two or more children. Ninety percent are Hispanic. Sixty-five percent come to us speaking little or no English. Eighty percent earn or come from families which earn less than $8,000 per year. Ninety-nine percent receive Federal and State-supported financial aid.

The income level, at the other end, of our graduates, averages approximately $20,000 a year. Hostos then, as do many of our Nation's urban community colleges, serves as a vehicle, a vehicle to provide access to educational opportunity, access to the labor force, access to social mobility. It is against this background that I offer my comments on the Higher Education Act. The emphasis on expanded access, simplification, and streamlining of student aid pro-

grams, enhancement of quality, and incentives for endowment development programs, all hold great promise for higher education in general and urban higher education in particular.

Specifically, the importance of converting the Pell Grants Program to an entitlement cannot be underestimated. If, indeed, the original concept of the Pell Grant as a true guarantee of access to higher education still obtains, then the security of these grants is essential to the continued success of any college whose mission is one of access and opportunity.

At Hostos alone, a relatively small institution for an urban area, close to 4,400 students received Pell Grants this year of approximately $1,000 each, with total payments of approximately $4½ million. Without this aid, few if any of our students would be able to underwrite the modest cost of even a part-time education. If we as a nation are truly committed to the concept of education as an enfranchising vehicle, then a true floor of access in postsecondary opportunity must be assured.

Of equal importance to our urban community colleges, and to Hostos in particular, is the extent to which provision can be made to mainstream the adult learner of limited English proficiency. Mention is made here of title I, which has within it both educational outreach and literacy training. Indeed, for an adult thrust into a fast-moving, competitive, and highly technological environment, the prerequisite skills in the English language become the one indispensible element in any equation leading to economic viability. The value of all other training is proportionately diminished by the lack of preparedness or fluency in English.

As a response to this pressing need, the scope of title I appears somewhat diffuse. Perhaps it might be sharpened to focus on those specific functional barriers that hinder and discourage the adult learner, and to encourage comprehensive institutional responses to the fundamental questions of adult literacy.

Last, I would like to focus attention on title XI, but from a slightly different perspective. It is my understanding that a simple extension of title XI will be recommended. Located as we are in Bronx County, subject of considerable research and an ever greater amount of publicity, I cannot help but wonder if a concentrated research effort alone can truly shed light on the complex problems facing our urban centers. In the area immediately served by the college, of the close to half a million residents, one-third of the families report income of less than $6,000 a year. Forty-one percent of the households are receiving public assistance other than Social Security. Sixty-three percent of the residents of the area are of the age of 25 or older and do not possess a high school diploma. And the average unemployment rate is 20 percent.

In response, our community colleges, in cooperation with a number of Bronx-based organizations and local development corporations, have initiated what I can only characterize as an amazing variety of short- and long-term training and literacy programs, from high school equivalency to welding to word processing, reaching 5,000 Bronx residents a year, at the very least.

Simultaneously, in an exquisite isolation, research studies, projections, case histories, policy analysis, and a small number of doctoral dissertations all attempt to grapple with the issue of urban

deterioration, regeneration, and renewal, from an almost equally bewildering variety of perspectives.

But there remains, at least for me, a number of questions that have yet to be answered, questions such as the true relationship of manpower training to the stability of the industrial base. Questions such as the effect of training on the stability of a given residential area, and I might add just anecdotally, one of the things we find is that as we train people move. The neighborhood doesn't change; their lives do. But the neighborhoods don't. And there's a lot of out-movement.

The impact of short-term versus long-term training programs on longevity and/or mobility within the labor force. In other words, I would ask how much of all of this is working.

These questions cannot, I believe, be answered in isolation. Perhaps our national interest would be far better served as would the long-range investment of manpower and training dollars, if title XI funds made some provision for applied research, tied to carefully constructed pilot initiatives in economic development and manpower training.

Our urban community college is dedicated to the development of a trained labor force and deeply involved in the local development issues and it could serve as an integral part of the collaborative effort with our great metropolitan research centers. A team approach, wedding theory and practice, would indeed find answers to some of these questions and, in the long run, I believe, would have a far greater impact and will make a far greater contribution to the resolution of the problems facing our Nation's cities.

In conclusion, we have before us a great opportunity and a challenge, the opportunity to extend to our citizenry the hope that all who come with determination and ambition to this country's shores can still fulfill the dreams of generations before them, and the challenge here to provide the means by which these dreams can become reality.

Thank you.

Mr. KOCOVSEK. Thank you very much for a very interesting statement.

Dr. Robert Corrigan, chancellor of the University of Massachusetts at Boston? You may proceed, Doctor.

[Prepared statement of Dr. Robert A. Corrigan follows:]

PREPARED STATEMENT OF ROBERT A. CORRIGAN, CHANCELLOR, UNIVERSITY OF MASSACHUSETTS/BOSTON

Thank you Mr. Chairman.

I am Robert Corrigan, Chancellor of the University of Massachusetts at Boston. I am grateful for this opportunity to testify along with Presidents Harleston and Glynn, in support of the reauthorization of the Higher Education Act, and specifically in support of the provisions and intent of Title XI, the "Urban Grant" section of the Act. Father Glynn has spoken of the broad provisions of the Act and of Title XI. I will discuss how institutions like UMass/Boston engage in activities to be supported by Title XI and how much more we would be able to do were Title XI to be funded by the Congress.

The University of Massachusetts at Boston is only 20 years old. We are part, however, of a system that, for 120 years, has actively practiced the kinds of service embodied in the land-grant tradition. We know and understand that tradition well. I, myself, have been a teacher and administrator at land-grant institutions in Iowa, Missouri and Maryland. I deeply appreciate the enormous impact that the Land Grant Act has had on rural America during its 120 years. This Committee is to be

congratulated for its vision in seeing the importance of translating that tradition into the urban context.

You should know that UMass/Boston is very much the prototype of the modern public urban university:

The median family income of our students who ar financially dependent on their parents is $17,000. Approximately 40% of these families make less than $15,000. For those students who have left the home, the median income is under $4,000.

18 percent of our total student population is minority, as is 22 percent of this year's entering class.

54 percent are women.

Our median student age is 28 and 36 percent of newly enrolled students are over 25.

80 percent of our students work twenty or more hours per week.

97 percent are natives of Massachusetts and 72 percent are from the inner city or the inner suburbs.

There is no question that higher education has a role to play in the city. With the resources currently available to the University, we have established many programs within the urban communities and placed ever-increasing emphasis on basic and applied research which addresses the problems of an urban environment.

Some of the activities we are presently engaged in include:

Operation of an Adult Literacy Resource Institute, in cooperation with Roxbury Community College, which provides technical assistance and staff support to 18 neighborhood agencies that deliver basic education services to inner city illiterate adults.

An Occupational Literacy project in the South Boston and Mission Hill Neighborhoods, which combines basic education and job training for 75 unemployed and illiterate adults.

Information and orientation workshops for new members of the City Council and School Committee.

Technical assistance and teacher training in our neighboring McCormack School where reading and writing scores have showed measurable improvement.

Consultation to several public housing projects leading to creation or improvement in recreation for adolescents, day care, services to elderly.

Staff assistance to several government agencies, such as the new mayor's transition team, the State Departments of Social Services and Public Welfare.

Training for day care teachers and day care managers.

Providing mediation services to help mediate disputes between public housing tenants and housing managers.

A study of fish and shellfish in Boston Harbor to determine the degree of hazard to public health and safety occassioned by pollutants in the Harbor.

Let me describe in more detail two areas of public service in which the University has been very strongly committed.

It has been apparent for years that Boston Harbor, although scenically spectacular, is seriously polluted—a "toilet bowl" is the unglamorous image often invoked. UMass/Boston is located on a peninsula on the Harbor. Because we are aware of both the beauty and pollution of the Harbor and have a direct interest in its effective management, we have recently instituted a major PhD program in the Environmental Sciences. This program's major research thrust is into the chemistry, biology and even the politics of urban harbors and coastlines with Boston Harbor as the primary case study. We have also developed a proposal to create a research institute affiliated with the Environmental Sciences program, which would be the first "oceanographic" institute to concentrate its research specifically on the urban harbor and developed coastlines. In addition, UMass/Boston helped institute and provides institutional support for a special State commission which is charged with studying and recommending solutions to the problem of Boston Harbor's pollution. Through all these efforts, the University is committed to serving the environmental needs of the City and the Commonwealth.

A second example is the area of primary and secondary public education. Since the mid-1960's (and exacerbated by the unfortunate desegregation crisis of the 1970's) the Boston Public Schools have suffered a perceptible decline in the quality and volume of educational services. Like other urban systems, standard test scores have gone down, attrition rates have gone up, and the demand on scarce resources by meritorious but expensive special-education and bilingual-education programs has increased. Through our Institute for Learning and Teaching, established in 1970, highly-skilled professionals have approached urban public school teachers, par-

ents, pupils and administrators (in Boston and surrounding cities), worked with them to help understand their problems and assess their needs, sought external funding for and helped implement a broad range of in-service programs. Areas of particular emphasis are writing skills and the teaching of writing, computer education, and upgrading of the teaching of mathematics and science. We have also developed several direct intervention programs designed to locate and assist student populations who might otherwise go unheeded.

In each of these examples, and in many other areas, a funded and functioning Urban Grant program would be of invaluable assistance. Not for aid in basic research or for the training of academic professionals—that funding properly comes from other sources—but for assistance in coordination and efficient delivery of our services to the public or to City and State authorities. Urban Grant funding can buy time to reflect and to plan, through retreats and seminars; it can buy clear definitions and reasoned statements of problems; it can buy well-written and understandable reports and analyses; it can buy effective and efficient strategies for solutions to these problems.

Thank you for your attention and concern. Let me close by again urging continuation and funding of Title XI of the Higher Education Act.

STATEMENT OF DR. ROBERT C. CORRIGAN, CHANCELLOR, UNIVERSITY OF MASSACHUSETTS AT BOSTON

Dr. CORRIGAN. Thank you.

Mr. Chairman, I am Robert Corrigan, chancellor of the University of Massachusetts at Boston and I am grateful for this opportunity to testify along with presidents Harleston and Glynn in support of the reauthorization of the Higher Education Act and specifically in support of the provisions and intent of title XI, the Urban Grant section of the act.

Dr. Glynn has spoken of the broad provisions of the act and of title XI. I will discuss how institutions like the University of Massachusetts at Boston engage in activities to be supported by title XI, and how much more we would be able to do were title XI to be funded by the Congress.

The University of Massachusetts at Boston is 20 years old. We are part, however, of a system that is 120 years old and has actively practiced the kinds of service embodied in the land grant tradition. We know and we understand that tradition very well. I, myself, have been a teacher and/or administrator at land grant institutions in Iowa, Missouri, and Maryland, and I deeply appreciate the enormous impact that the Land Grant Act had on rural Americans during its 120 years.

This committee is to be congratulated for its vision in seeing the importance of translating that tradition into the urban context.

You should know about my institutions, that the University of Massachusetts at Boston, is very much the prototype of the modern, public, urban university. Our median family income for our students, living at home, is $15,000. For those who have left the home it is $4,000 annually. Eighteen percent of our student population is minority and 22 percent of this year's entering class were minority.

Fifty-four percent of our students are women. Our median student age at a university is 27. And 36 percent of the newly enrolled students at University of Massachusetts at Boston are over 25. Eighty percent of our students work at least 20 hours per week. Ninety-seven percent are natives of the Commonwealth of Massachusetts and 72 percent are from the inner city or the inner suburbs.

There is no question that higher education has a role to play in the city and with the resources currently available to the university we have already established many programs within the urban communities and placed ever-increasing emphases on basic and applied research which addresses the problems of an urban environment.

I'd like very quickly to identify several of these that we have done at the University of Massachusetts at Boston.

For example, in cooperation with Roxbury Community College, the operation of Adult Literacy Resource Institute, which provides technical assistance and staff support to 18 neighborhood agencies which deliver basic education services to inner city illiterate adults, and occupational literacy project in predominantly white south Boston and predominantly minority Mission Hill, which combines basic education and job training for 75 unemployed and illiterate adults.

Information and orientation workshops for new members of the city council and new members of the City School Committee. Technical assistance and teacher service training in our neighboring McCormick School where reading and writing courses, scores, have shown measurable improvement because of the courses.

Consultation to several public housing projects leading to the creation or improvement in recreation for adolescents, day care services to the elderly, and the like.

Staff assistance to several government agencies such as the new Mayor's Transition Team, the State Departments of Social Services and Public Welfare.

Training for day care teachers and day care managers. Providing mediation services to help mediate disputes between public housing tenants and housing managers.

A study of fish and shellfish in Boston Harbor to determine the degree of hazard to public health and safety occasioned by pollutants in the harbor.

Of these, let me describe in a little bit more detail two of the public services activities which we have engaged in. I think that it has been apparent for years that Boston Harbor, although scenically spectacular, is seriously polluted. It's been called a toilet bowl by the Boston Globe, a very unglamorous image.

And the University of Massachusetts at Boston is located on a peninsula on the harbor itself. And because we are aware of both the beauty and the pollution of the harbor and have had a direct interest in its effective management, we recently instituted a major doctoral program in environmental sciences. This program's major research thrust is into the chemistry, biology, and even the politics of urban harbors and coastlines, with Boston Harbor as the primary case study.

We have also developed a proposal to create a research institute affiliated with this environmental sciences program which will be the first oceanographic institute to concentrate its research specifically on the urban harbor and on developed coastline. In the addition University of Massachusetts at Boston helped institute and provides institutional support for a special State commission which is charged with studying and recommending solutions to the problem of Boston Harbor's pollution.

Through all these efforts the university is committed to serving the environmental needs of the city and the Commonwealth.

A second example is the area of primary and secondary public education. Since the mid-1960's and exacerbated by the desegregation crisis of the 1970's, the Boston public schools have suffered a perceptible decline in the quality and the volume of its educational services. Like other urban systems, standard test scores have gone down. Attrition rates have gone up.

For example, only 53 percent of those students who are in the ninth grade now in the Boston public schools will, in fact, graduate. Forty-seven percent of this year's ninth graders will not graduate from high school in Boston.

The demand on scarce resources by meritorious but expensive special education and bilingual education programs has increased enormously. Through our Institute for Learning and Teaching, established in 1970, highly skilled professionals have approached urban public school teachers, parents, pupils, and administrators in Boston and surrounding communities, worked with them to help understand their problems, and to assess their needs, sought external funding for and helped implement a broad range of inservice programs.

Areas of particular emphases are writing skills and the teaching of writing, computer education, and the upgrading of the teaching of mathematics and science. We have also developed several direct intervention programs designed to locate and assist student populations who might otherwise go unheeded.

In each of these examples, Mr. Chairman, and in many other areas, a funded and functioning Urban Grant Program would be of invaluable assistance, not for aid in basic research or for the training of academic professionals. That funding properly comes from other sources. But for assistance and coordination and efficient delivery of our services to the public or to the city and State authorities.

Urban grant funding can buy time to reflect and to plan, through retreats and seminars. It can buy clear definitions and reasoned statements of problems, and buy well written and understandable reports and analyses. It can buy effective and efficient strategies for solutions to these and other problems.

Thank you for your concern and attention and let me close again by urging both the continuation and the funding of title XI of the Higher Education Act.

Mr. KOGOVSEK. Thank you very much, Dr. Corrigan. The next witness will be Dr. Bernard Harleston. Am I saying that correctly, Doctor?

Dr. HARLESTON. Mostly. [Laughter.]

Mr. KOGOVSEK. When you have a name like Kogovsek, you pay attention to people's last names. Welcome, Doctor, and please proceed.

[Prepared statement of Dr. Bernard Harleston follows:]

PREPARED STATEMENT OF DR. BERNARD W. HARLESTON, PRESIDENT, THE CITY COLLEGE OF NEW YORK

Mr. Chairman, I am Bernard Harleston, president of the City College of the City University of New York. I appear today in my capacity as a member of the Board of

Directors of the Association of Urban Universities, and in response to your invitation to testify on your bill to reauthorize the Higher Education Act. I will focus primarily on the reauthorization of title XI of the act, as provided for in your bill, H.R. 5240.

I am here today with my colleagues, Dr. Mike Alexandroff, President of Columbia College, Chicago, Illinois, and Dr. Robert Corrigan, Chancellor of the University of Massachusetts at Boston. Both of them will share with you examples of what we believe title XI can make possible if reauthorized and funded. Jim Harrison, president of the Association of Urban Universities, is also present and, while not offering testimony, will respond to questions you, or any member of the subcommittee wishes to direct towards the contents of the existing title XI or the provsions of the reauthorization legislation.

The City College of New York has been a pioneer in urban programs and activities to assist governmental agencies and civic groups and community organizations and agencies cope with the problems of the urban environment. It was at City College in 1968 that Dr. Clark Kerr, then president of the University of California system, and chairman of a Study on the Future of Higher Eduation, stated that "The United States today needs 67 urban-grant universities to stand beside its 67 land-grant universities." Dr. Kerr thought that a federal policy was required in order to provide the funds for universities to assist in the revitalization of the cities just as land-grant colleges revitalized agriculture. In the ensuing years since that speech, City College, located in the largest urban center in our country, has pursued a policy of understanding and developing programs of a professional nature for students who desire to live and practice their profession in the urban environment and, at the same time, provide technical expertise to the institutions, agencies and organizations that comprise the urban infrastructure.

Let me make it clear. The City College of New York does not see itself as a social service agency and does not function like one in the provision of our expertise. We look upon the opportunity to work with municipal and state agencies and community agencies and organizations as an expression of responsibility in an urban context and as an opportunity to reinforce, strengthen and broaden the learning environment, experiences and opportunities for faculty and students.

If I may, allow me to describe examples of the sharing of such expertise with governmental and other institutions in New York City, and the nature of the two way process that follows from the participation in such experiences.

The Harlem Urban Development Corporation (HUDC) is a State agency with responsibility for certain aspects of the physical redevelopment of Harlem. HUDC requested assistance from City College to determine the feasibility of a free trade zone, in connection with the International Trade Center (planned for construction on 125th Street), which is to promote trade with third world countries. Faculty was assigned to the project, and a final report to HUDC recommended how the zone might be established and the form of third world business linkage with American businesses that might support such trade.

HUDC also was interested in the potential for developing technology activity in the Harlem Valley, between Columbia University to the south and City College to the north. This would increase employment opportunities in an area that is already zoned for mixed industry, and make it possible for industry to take advantage of the laboratories and professional expertise that reside in the two institutions. City College has been working very closely with HUDC and has had consultations with Columbia University of such possibilities. The college has involved engineering, economic and science faculty in these explorations.

I might say that at the same time that HUDC requested this assistance, it worked with City College in the establishment of a Harlem Public Service Science Center, a non-profit civic organization designed to provide scientific and technical information to the community in order for it to make informed decisions related to scientific and technological development, and participated with a City College Planning Committee to determine the future of our "south campus," whose buildings were going "off line" in the context of a master plan for college facilities. What has occurred is the opportunity to establish mutual ways in which institutions can link and assist each other if the resources are available.

Another example, in this case involving a municipal agency, exemplifies the possibilities for urban higher education institutions if the bill is reauthorized and funded.

City College's School of Architecture and Environmental Studies established the City College Architectural Center in order to assist the community in the solving of some of its environmental problems. The center has two components—professional and academic. The professional component involves providing technical assistance in architecture and planning to organized groups in low and moderate income

neighborhoods throughout the city of New York. Projects range from large scale community development plans to open space development on empty lots. Ten students work on a part-time or full-time basis in projects requested by local organizations. Their work (which may earn them academic credit) is supervised by consultants in the field that include architects, planners, and engineers. City College owes a large measure of the success of this program to the housing preservation and development department of the city of New York (HPD). HPD recognized that City College could be a major resource for its long range goals of assisting community residents in securing and owning their own homes along with strengthening the institutional infrastructure of the community. With limited resources, HPD contracted with the City College Architectural Center to provide services to residents and nonprofit corporations that were intent on saving and preserving their communities through rehabilitation. The City College Architectural Center is involved in more than ten projects that attest to the potential of an urban institution's ability to perform when commitment and policy are clear and some modest financial resources are available.

This willingness to be responsive to the needs of government at all levels also generated a linkage return. HPD has been consistently supportive of City College's concern about the needs of the immediate community within which we are located, and has assisted us in the conduct of a survey of student housing needs and participated with HUDC on our South Campus Planning Committee.

In the city of New York we have community boards in all five counties. These community boards are extensions of municipal government in the communities and participate in municipal planning processes and the recommending of the allocation of capital funds. The people who serve on the community boards are volunteers. The district manager, the chief administrative officer, has limited staff and a score of committees to manage. City College was approached by the chairman of Community Board No. 9, Manhattan, to conduct a management study in order to ascertain how he could make the most efficient use of his scarce staff resources. City College undertook the request and provided a report and set of recommendations to the community board. In addition, we assisted the community board by making it possible for some of our students to serve as staff support to appropriate committees.

City College also has outreach programs and activities with civic groups, community agencies and organizations, and the business community. It is this infrastructural fabric of our communities that requires the technical assistance, research support and access to the range of technical knowledge that resides within the faculty of our institution. City College is not simply a four-year liberal arts college. It is a mini-university with schools of education, nursing, biomedical education and engineering, along with centers for legal education, urban policy, worker education, performing arts, and a science division that has produced five nobel laureates.

Our intention, under the rubric of the urban educational model, is to provide quality education to those who aspire to the American dream and its promise to develop the individual's full human potential. This has been coupled with our clear understanding that institutions of such quality as City College, located in the urban centers of our country, cannot stand idly by while their communities struggle to make the urban environment a more humane in which to reside.

To be sure, in our current interactions costs are frequently absorbed in full by the college. These costs include in-kind expenses as well as commitments to labor for project staff and adjunct replacements for assigned faculty. Reauthorization and the funding of title XI will provide the financial resources for City College to assist the city and the State through the use of applied research, consultation and technical assistance. Finally, reauthorization and funding will provide the opportunity for institutions of higher education to develop consortial arrangements resulting in the increased ability to bring scarce expertise to bear on many of the intractable problems that beset the urban environment.

With your permission, I would like to leave copies of our pamphlet describing the City College of New York community outreach and facilities access programs. This publication lists, by units of the college, all of the diverse programs and activities that link our institution to the infrastructure that I previously mentioned. The document also has a listing of the various agencies, organizations and governmental entities by unit linkage, and a complete listing of groups that had access to the use of our facilities over a recent, two year academic period. We could do more if the resources were available.

STATEMENT OF DR. BERNARD HARLESTON, PRESIDENT, CITY COLLEGE OF NEW YORK

Dr. HARLESTON. Thank you, Mr. Chairman.

I am Bernard Harleston, president of the City College of New York and I appear today in my capacity as a member of the board of directors of the Association of Urban Universities and I'm pleased, indeed, to join my colleagues, President Glynn and President Corrigan to testify on the reauthorization of the Higher Education Act, and in particular I would like, as they did, to focus on the reauthorization of title XI of this act, as provided in your bill, H.R. 5240.

The City College of New York has been a pioneer in urban programs and activities to assist governmental agencies, civic groups, community organizations, and agencies to cope with problems of the urban environment. It was at City College, in 1968, that Dr. Clark Kerr, then president of the University of California system, and himself chairperson of a study on the future of higher education, stated that "The United States today needs 67 urban grant universities to stand beside its 67 land grant universities."

Dr. Kerr thought that a Federal policy was required in order to provide the funds for universities to assist in the revitalization of the cities, just as land grant colleges revitalized agriculture.

In the ensuing years since that speech, City College, located in the largest urban center in our country, has pursued a policy of trying to understand and develop programs of a professional nature for students who desire to live and practice their profession in the urban environment, and at the same time, provide technical expertise to the institutions, agencies, and organizations that comprise the urban infrastructure.

I'd like to make one thing clear. The City College, and I think no institution that gets involved this way, does not see itself as a social service agency and does not function like one in the provision of its expertise.

Rather, we look upon the opportunity to work with municipal and State agencies, and community agencies and organizations, both as an expression of responsibility in an urban context and as an opportunity to reinforce, strengthen, and broaden the learning environment experiences and opportunities for faculty and students.

If I may, I'd like to describe quite briefly two or three examples of projects that we've gotten involved in that we think make the point that I'm trying to make. First of all, the Harlem Urban Development Corp., HUDC, is a State agency with responsibility for certain aspects of the physical and redevelopment of Harlem. HUDC requested assistance from City College to determine the feasibility of a free trade zone in connection with the International Trade Center planned for construction on 125th Street, which is to promote trade with Third World countries.

Faculty were assigned to the project and the final report to HUDC recommended how the zone might be established and the form of Third World business linkage with American businesses that might support such trade. I might add that the proposal awaits appropriate funding for its implementation.

HUDC was also interested in the potential for developing technology activity in the Harlem Valley, between Columbia University, to the south, and City College, to the north. This would increase employment opportunities in an area that is already zoned for mixed industry, and make it possible for industry to take advantage of the laboratories and professional expertise that reside in the two institutions.

City College has been working very closely with HUDC and has had consultations with Columbia University on these possibilities. Right now the college has involved in it, this project, engineering, economics, and science faculty in these explorations and we're currently looking at locations for large and moderate-sized technology in that valley.

I might say at the same time that HUDC requested this assistance from us, it worked with the college in the establishment of a Harlem Public Service Science Center, a nonprofit civic organization designed to provide scientific and technical information to the community in order for it to make informed decisions related to scientific and technological development. And HUDC participated with the College Planning Committee to determine the future of our south campus, whose buildings were going to go off line.

What has occurred, then, is the opportunity to establish mutual ways in which institutions can link and assist each other if the resources are available.

Another example involving a municipal agency exemplifies the possibilities for urban higher education institutions, if the bill is reauthorized and funded.

Our School of Architecture and Environmental Studies established what we call the City College Architectural Center in order to assist the community in the solving of some of its environmental problems. The center has two components: One professional, one academic. The professional component involves providing technical assistance in architecture and planning to organized groups in low- and moderate-income neighborhoods throughout the city of New York. Projects range from large-scale community development plans to open space development on empty lots.

Ten students work on a part-time or full-time basis in projects requested by local organizations. Their work, which may earn them academic credit, is supervised by consultants in the field that include architects, planners, and engineers. City College owes a large measure of the success of this program to the Housing Preservation and Development Department of the city of New York, HPD.

This group recognized that City College could be a major resource for its own long-range goals of assisting community residents in securing and owning their own homes, along with strengthening the institutional infrastructure of the community. With limited resources, HPD contracted with the College Architectural Center to provide services to residents of nonprofit corporations that were intent on saving and preserving their communities through rehabilitation. The City College Architectural Center is involved in more than 10 projects that attest to the potential of an urban institution's ability to perform when commitment and policy are clear, and some modest financial resources are available.

This willingness to be responsive to the needs of government at all levels also generated a linkage return. HPD, the Housing and Preservation Department, has been consistently supportive of City College's concern about the needs of the immediate community within which we are located, and has assisted us in the conduct of a survey of student housing needs and participated with HUDC on our South Campus Planning Committee.

Finally, in the city of New York we have community boards in all five counties, as you doubtlessly know. These community boards are extensions of municipal government in those communities and participate in the fiscal planning processes and the recommending of allocation of capital funds. The people who serve on these boards are volunteers. The district manager, the chief administrative officer, has limited staff and a score of committees to manage.

City College was approached by the chairperson of the Community Board, No. 9, Manhattan, to conduct a management study in order to ascertain how he could make the most efficient use of his scarce staff resources. We undertook the request and provided a report and set of recommendations to the community board. In addition, we assisted the community board in making it possible for some of our students to serve as staff support to the appropriate committees.

Our intention in all of this, under the rubric of the urban educational model, is to provide quality education to those who aspire to the American dream and its promise to develop the individual's full human potential. This has been coupled with our clear understanding that institutions of such quality as City College, located in the urban centers of our country, cannot stand idly by while their communities struggle to make the urban environment a more humane place in which to reside.

To be sure, in our current interactions, costs are frequently absorbed in full by the college. These costs include in-kind expenses as well as commitments to labor for project staff and adjunct replacements for assigned faculty. Reauthorization and the funding of the title XI proposal will provide the financial resources for this institution and many others to assist the city and the State through the use of applied research, consultation, and technical assistance. Finally, reauthorization and funding will provide the opportunity for institutions of higher education to develop a consortial arrangement resulting in the increased ability to bring scarce expertise to bear on many of the intractable problems that beset the urban environment.

Thank you very much, Mr. Chairman.

Mr. KOGOVSEK. Doctor, the buzzer you heard was not for you. I think it is for a vote on the floor. But before we get to that, however, we would like to hear from Sandra Ritter, trustee, Oakland Community College. Sandra?

[Prepared statement of Sandra Ritter follows:]

PREPARED STATEMENT OF SANDRA L. RITTER, VICE CHAIRMAN, BOARD OF TRUSTEES, OAKLAND COMMUNITY COLLEGE, BLOOMFIELD HILLS, MI, TRUSTEE DIRECTOR, MICHIGAN COMMUNITY COLLEGE ASSOCIATION, MEMBER, BOARD OF DIRECTORS, ASSOCIATION OF COMMUNITY COLLEGE TRUSTEES

Mr. Chairman, we appreciate this opportunity to work with you on the legislation you have formulated to reauthorize the Higher Education Act. Your determination to get an early start on the reauthorization has pushed a lot of us into beneficial homework about what our colleges are doing in and with HEA programs. We believe that homework is going to help you to strengthen some of the programs to the benefit of our people and the Nation. I am testifying in behalf of the Joint Commission on Federal Relations of the Association of Community College Trustees and the American Association of Community and Junior Colleges.

As we contemplate reauthorization, we find our thoughts constantly touched by a deep appreciation for the existing Higher Education Act. As federal policies go, we think this has been a monumentally successful Act. Some key titles in the Act have never achieved the success that was once envisioned for them—largely because, in most cases, they are programs that could never be effectively funded. Significantly, some of the most critical needs facing colleges today relate directly to those unfunded federal committments.

Facilities are a prime example. We are not talking about new buildings; we are talking about updating and retro-fitting older facilities to handle emerging technical programs. As you have been told, cost estimates on this backlog are greater for higher education as a whole than the total of the endowments of all U.S. colleges lumped together. Years of tight budgets and funding neglect have forced delay for needed upgrading and providing some semblance of state-of-the-art equipment.

Even so, the state of American higher education benefits enormously from HEA. Because the deficits are making the competition among programs so acute, the attempts to restructure and improve the higher education programs must be approached with great care. It is more than coincidence that the Pell Grant program has become the dominant feature of the Act, at least it is so in the eyes of community colleges.

The vision and purpose that inspired the Basic Opportunity Grants, the belief that every qualified student should have access to postsecondary learning, regardless of ability to pay—is the same vision and purpose upon which community colleges have been built. The highest priority of community colleges in the reauthorization is to see the Pell Grant program renewed and strengthened, simplified and streamlined.

Clearly, Mr. Chairman, your proposals move in these directions. making the grants an entitlement for needy students, as you propose, would do more than any other single step to both simplify and strengthen the program and provide students with greater access to education.

Your determination to raise the maximum Pell Grant to $3,000 by next year, and to increase it as college costs continue to rise, is consistent with the basic grant that the President has proposed for the neediest students. We support this aim.

On the other hand, the differential allowances that are proposed for commuter students are not acceptable to community colleges. Our students have suffered far too long under the fixed cap on costs of attendance that has been applied to the commuter student for 11 years. The net effects of that cap seriously undercut the program's core intent of access, and actually deny access to tens of thousands of would-be applicants, most of them from the lowest income levels. Additionally, untold other numbers of needy students undoubtedly have found their persistence and progress in college impeded by the cap that we thought had been abolished in the 1980 Amendments. Community colleges are commuter colleges which provide business and industry with an almost immediate and unlimited source of highly skilled, professionally motivated workforce, filling the emerging needs for personnel.

Since community colleges service a different clientele than four-year institutions, there should be no fear of community colleges competing for the traditional student through a higher commuter allowance.

Data on full-time Pell Grant recipients show that more than 80 percent of those attending two-year colleges come from households with incomes of $8,000 a year or less. Only about six percent of the full-time Pell recipients in community colleges come from annual income levels of $16,000 or higher.

If a good case can be made for lowering Pell Grants to students living with their parents, then the rest of the Pell Grant recipients should be treated uniformly, regardless of whether they house and feed themselves off campus or take board and

room at the college. There is plenty of evidence to show the costs average roughly the same in both cases.

The community colleges are very thankful, of course, that you are trying to do away with the half-cost limitation. For the students whose level of eligibility and overall costs do not qualify them for a maximum Pell Grant, we would prefer to see their grants determined by a uniform percentage of cost, such as 60 percent or 70 percent; as was envisioned in the 1980 Amendments. We would not resist the 75 percent which you are allowing for tuition and fees, provided the cost allowance for other expenses has a floor of at least 60 percent.

The redefinitions of the independent and dependent student status that you provide in H.R. 5240 can be another vital step in simplifying the financial aid program. This would be highly beneficial to community colleges, since the two-year colleges serve such great numbers of older students who should not have to prove that they provide for themselves. As you propose, the students who are 24 or older should be spared the red tape of documenting their independence.

On College Work-Study, Mr. Chairman, the Administration's proposals that Cooperative Education be moved into work-study, and that work-study students be programmed to help functionally illiterate adults acquire basic skills, give us some concern.

While the community college associations are supporting "in principle" the literacy tutoring for adults, we feel the work-study program itself should be kept free of precedents that eventually could divide it up into a host of special setasides. Community colleges are natural environments for providing work-study and cooperative programs. Our existing curriculum is adjustable to co-op, but presently there isn't enough funding to intergrate practical experience into the course work.

You have done an amazing job, Mr. Chairman, of rethinking almost every phase of the Act. Permit us to comment briefly on several other titles, where we feel the community and technical colleges can and should be utilized.

Our view of Title I is that it should be cast in a wholly new direction. While we can appreciate the emphasis your proposal places on underserved adults, we would like to see this Title focused on institutional change. Support for institutional adjustments that will make college programs as responsive to working adults and part-time students as they are to the traditional students is imperative. If the national economy and the workforce are to keep pace with accelerating technology and global competition, all universities and colleges, including community colleges, must do a better job of serving working adults through flexible programs and responsive, quality educational delivery systems.

The discretionary grants that you have proposed in Part B to support literacy training, proficiency in English, and special tutoring would be highly beneficial. Your expanded definition of the veterans who could be served as anyone who has received an honorable discharge is another positive step. Yet, those veterans who have received less than honorable discharge are probably more in need of greater access to education and retraining. In addition, guidance and help in developing a positive self-concept would bring about attention to those who need a readjustment and retraining period, and who might otherwise be lost and become a greater burden to society.

We would also like to see Title II targeted in a new direction, to help colleges adapt the total learning process to technological change, rather than to remain focused chiefly on library resources. Our Nation has benefited from the use of telecommunication and computer technology in business, industry and leisure time; education could also benefit from their use to facilitate learning.

You already know, Mr. Chairman, that the community and technical colleges want to see Title XI broadened to encourage urban research universities to work in concert with community colleges to meet urban needs. Urban problems won't be solved by greater research—what is called for is new emphasis on teamwork in which urban institutions pool their talents to solve problems of decaying cities and withered resources. Today, we are no longer reactive institutions, but proactive and ready to pool our resources to alleviate social inadequacies. Without a corrective approach to urban problems, we think Congress is unlikely to ever fund Title XI.

Last, but hardly least, Mr. Chairman, we are extremely pleased that your bill provides a new Title XII to renew the endowment matching grants, for which you have earmarked Part C of Title III by your amendments of last year. This incentive will promote and foster an increased independence and self-sufficiency that will ultimately create greater fiscal prudency and responsibility in education.

Community colleges worked hard to help you and your colleagues establish this allocation of Part C, and you can count on our support to help you authorize and expand the funding for this program.

It is with admiration and respect that I have addressed you today. Your sense of urgency in dealing with higher education reauthorization reform is heartening—the trust you have put in education via your amendment is invaluable.

Thank you again.

STATEMENT OF SANDRA RITTER, TRUSTEE, OAKLAND COMMUNITY COLLEGE

Ms. RITTER. Mr. Chairman, we appreciate this opportunity to work with you on the legislation you have formulated to reauthorization of the Higher Education Act. Your determination to get an early start on reauthorization has pushed a lot of us into beneficial homework about what our colleges are doing in and with HEA programs. We believe that homework is going to help you to strengthen some of the programs to benefit our people and our Nation.

I am testifying on behalf of a Joint Commission on Federal Relations of the Association of Community College Trustees and the American Association of Community and Junior Colleges.

As we contemplate reauthorization, we find our thoughts constantly touched by a deep admiration for the existing Higher Education Act. As Federal programs go, we think this is a monumentally successful act. Some key titles in the act have never achieved the success that was once envisioned for them, largely because they are programs that never could be efficiently funded. Significantly, some of the most critical needs facing colleges today relate directly to those unfunded Federal commitments.

Facilities are a prime example. We're not talking about new buildings or bricks and mortar. We are talking about updating and retrofitting older facilities to handle emerging technical programs. As you have been told, cost estimates on this backlog are greater for higher education as a whole than the total of the endowments of all U.S. colleges, lumped together. Years of tight budgets and funding neglect have forced delays for needed upgrading and providing of some semblance of state of the art equipment. Even so, the state of American higher education today benefits enormously from HEA.

Because the deficits are making the competition among programs so acute, the attempts to restructure and improve the higher education programs must be approached with great care. It is more than coincidence that the Pell Grant Program has become the dominant feature of the act, at least in the eyes of the community colleges.

The vision and purpose that inspired the basic opportunity grants, the belief that every qualified student should have access to postsecondary learning regardless of the ability to pay, is the same vision and purpose upon which community colleges have been built.

The highest priority of community colleges in the reauthorization is to see the Pell Grant Program renewed and strengthened, simplified and streamlined. Clearly, Mr. Chairman, your proposals move in these directions. Making the grants and entitlements for needy students as you propose would do more than any other single step to both simplify and strengthen the program and provide students with greater access to education. Your determination to raise the maximum Pell Grant to $3,000 by next year and to

continue increasing it as college costs continue to rise, is consistent with the basic grant the President has proposed for the needy students. We support this aim.

On the other hand, the differential allowances that are proposed for commuter students are not acceptable to community colleges. Our students have suffered far too long under the fixed cap of costs of attendance that have been applied for commuter students for their last 7 years. The net effect of that cap seriously undercuts the program's core intent of access and actually deny access to tens of thousands of would-be applicants, most of them from the lowest economic levels.

Additionally, untold other numbers of needy students undoubtedly have found their persistence in the college impededed by the cap that we thought had been abolished in the 1980 amendment.

Community colleges are commuter colleges. They provide an almost immediate unlimited source of highly skilled, professionally motivated work force that will alleviate the problems that we now have. These community colleges serve a different clientele than 4 year institutions, so there should be no fear of community colleges competing for traditional students through a commuter allowance.

Data on full-time Pell Grant recipients show that more than 80 percent of those attending 2 year colleges have family incomes of $8,000 a year or less. Only 6 percent of the full-time Pell recipients in community colleges come from annual income levels of $16,000 or higher.

If a good case can be made for reducing the Pell Grants to students living with their parents, then the rest of the Pell Grant recipients should be treated uniformly, regardless of whether they house and feed themselves off campus or take board and room at the college. There is plenty of evidence to show the cost average is roughly the same in both cases.

The community colleges are very thankful, of course, that you are trying to do away with the half-cost limitation for the students whose level of eligibility and overall costs do not qualify for maximum Pell Grants. We would prefer to see their grants determined by a uniform percentage of cost, such as 60 percent or 70 percent, as was envisioned in the 1980 amendments.

We would not resist the 75 percent which you are allowing for tuition and fees, provided the cost allowance for other expenses has a floor of at least 60 percent. The redefinitions of the independent student and dependent student status you provide in H.R. 5240 could be another vital step in simplifying the financial aid program. This would be highly beneficial to the community colleges, since the 2-year colleges serve such great numbers of older students, who should not have to prove that they provide for themselves.

As you propose, the student who is 24 years or older should be spared the redtape of documenting their independence.

On College Work-Study, Mr. Chairman, the administration's proposals that cooperative education be moved into Work-Study and that Work-Study students be programmed to help functionally illiterate adults acquire basic skills, give us some concern. While the community college are supporting in principle the literacy tutoring for adults, we feel the Work-Study Program itself should be kept

free of precedents that would eventually drive it into a host of special set-asides.

Community colleges are natural environments for providing Work-Study and cooperative programs. Our existing curriculum is adjustable to co-op, but presently there isn't enough funding to integrate practical experience into the present work course.

You have done an amazing job, Mr. Chairman, of rethinking almost every phase of the act. Permit us to comment briefly on several other titles, where we feel the community and technical colleges can and should be utilized.

Our view of title I is that it should be cast in a wholly new direction. While we can appreciate the emphasis your proposals place on unserved adults, we would like to see this title focused on institutional change. Support for institutional adjustments that will make college programs as responsive to working adults and part-time students as they are to the traditional students is imperative. If the national economy and work force are to keep pace with accelerating technology and global competition, all universities and colleges, including community colleges, must do a better job of serving working adults, through flexible programs and responsive, quality educational delivery systems.

Mr. KOGOVSEK. Ms. Ritter, excuse me 1 minute. It's fairly important that I make this vote and I am going to excuse myself. And I'm going to let you finish your statement in my absence.

The committee will stand in recess after Ms. Ritter finishes her statement, probably for 5 or 10 minutes. So, if you would excuse me, but if you would please continue, we are getting this down on the record, and it's important that you finish your statement. But I ask your indulgence. So, please continue.

Ms. RITTER. It's like going to a party with no one else there.

The discretionary grants that you have proposed in part B to support literacy training, proficiency in English, and special triggering would be highly beneficial. Your expanded definition of the veterans who could serve is anyone who has received an honorable discharge, and it is another positive step.

Yet, those veterans who have received less than honorable discharges are probably more in need of greater access to education and retraining.

In addition, guidance and help in developing a positive self concept would bring about attention to those who need a readjustment and retraining period, and who might otherwise be lost and become a greater burden to society. We would also like to see, in title II, targeting in a new direction to help colleges adapt the total learning process to technological change, rather than to remain focused chiefly on library resources. Our Nation has benefited from the use of telecommunication and computer literacy in business, industry, and leisure time. Education could also benefit from their use in facilitating learning.

You already know, Mr. Chairman, that the community and technical colleges want to see title XI broadened to encourage urban research universities to work in concert with community colleges to meet urban needs.

Urban problems won't be solved by greater research. What is called for is new emphasis, of teamwork, in which urban institu-

tions pool their talents to solve problems of decaying cities and withered resources. Today we no longer are reactive institutions, but proactive and ready to pool our resources to alleviate social inadequacies;

Without a corrective approach to urban problems, we think Congress is unlikely to ever fund title XI.

Last but hardly least, Mr. Chairman, we are extremely pleased that your bill provides a new title XII to renew the endowment matching grants for which you have earmarked part C of title III, by your amendments last year. This incentive will promote and foster an increased independence and self-sufficiency that will ultimately create greater fiscal prudency and responsibility in education.

Community colleges worked hard to help you and your colleagues establish this application of part C and you can count on our support to help you reauthorize and expand the program.

It is with admiration and respect that I have addressed you today. Your sense of urgency in dealing with higher education reauthorization reform is heartening. The trust you have put in education via your amendments is invaluable.

Thank you.

[Brief recess.]

Mr. PENNY. The committee will come to order. If we could, I'd like the panelists who just completed their testimony, to return to their chairs for one last question before we move on to the next panel.

It's been suggested that the community colleges describe access to the title XI program and would like to see the title adopt a manpower and training focus. Should the subcommittee move in that direction? And if not, why not?

Mr. HARRISON. Mr. Chairman? May I respond?

Mr. PENNY. Yes.

Mr. HARRISON. As the president of the Association of Urban Universities I have spent a lot of time thinking about this question and I appreciate the opportunity to respond on behalf of the association. I came here today with the understanding that there might be something of a confrontation between the community colleges and the urban universities over this question.

And I have to say, having listened and having read with great delight the testimony from the community college members of the panel, that I think the question seems to have largely answered. President Edwards, says that the national interest would be better served, if the title XI made provision for applied research tied to initiatives such as economic development, and manpower training.

Ms. Ritter, a trustee of Oakland Community College, says that "the community and technical colleges want to see title XI broadened to encourage urban research universities to work in concert with community colleges to meet urban needs." There is no one in the Association of Urban Universities who could object to a word of that, sir.

Title XI, as it now reads in the law, provides for consortiate participation involving close cooperation between urban universities and other institutions of higher education, including the community colleges. The examples of what our great urban universities are

doing now, that you heard earlier today, were replete with instances of cooperation between our members and their neighboring community colleges. And we would like to see that part of title XI not only renewed, but indeed, given a stronger priority in the Secretary's allocation of funds. We recommend, Mr. Chairman, that consortiate applications be given a very strong priority when it comes to distributing funds.

If the community colleges, which do remarkable work in the nonresearch area, and work in concert and work tied together with, and work in consortium with the urban universities, can continue to do so, we think that would be the best possible use of higher education resources on the urban scene.

Now, I don't want to seem disingenuous. There's a nuance here. We would not like to see the title changed in its nature. We think there is already manpower training legislation on the books, which this committee has labored long and hard to put there, under which the community colleges can put their resources to work in the manpower training area. We would like to work in consortium with those community colleges in that area too.

Title XI is essentially an applied research and services title. We would like to have it remain such. But certainly we would look forward with eagerness to seeing title XI funded so that both the resources of the community colleges and the urban universities could be used, each doing what it can do best. I was delighted to hear the AACJC testimony this afternoon. I think it essentially solves the problem.

Mr. PENNY. Does anyone else want to respond to that question? If not, we don't have any further questions for these panelists.

Thank you for your testimony this afternoon.

We call forward the next panel, Dr. Edward Fort, chancellor, North Carolina A&T University; Dr. Raymond Burse, president, Kentucky State University; Dr. George Ayers, president, Chicago State University; Dr. Prezell Robinson, president, St. Augustine's College.

Oh, boy. If you don't mind, we're going to have to recess and I'm going to have to run my legs off. I've got 5 minutes to get to the floor for a vote. We'll take a brief recess.

[Brief recess.]

Mr. ANDREWS. We'll ask the meeting to come to order, please, and let me first of all, on behalf of everybody, just profusely apologize. These days I just don't know what's going to happen about the time pressures here. We've just had three consecutive votes, which was known to the membership. In other words, after the first one, had I or some other member tried to get here, we couldn't have gotten here before the bells would have rung to go back for the next vote, so that accounts—that's the most immediate, imminent problem.

In addition to that, I chair one of the Subcommittees of Education and Labor, personally, and we have jurisdiction over the Older Americans Act, the Head Start, the Follow Through, CSA, Juvenile Justice, and Delinquency Prevention, Missing Childrens Act, and authority for all of those programs expire this year. The Speaker has informed all of us that any bills other than appropriations that are going to be considered on the House floor this year have to be

out of full committees and reported to the Rules Committee by May 15. I have two primary opponents in North Carolina and I just don't know what any of us can do for time. But I do apologize and let me begin the meeting, then, with Dr. Edward B. Fort, chancellor, North Carolina A&T University in Greensboro.

I will have to go shortly to the subcommittee I chair and hopefully one of the other members will arrive before that. I hope I can stay until they do arrive.

All right, sir. Yes, sir, we look forward to hearing from you.

[Prepared statement of Dr. Edward B. Fort follows:]

PREPARED STATEMENT OF DR. EDWARD F. FORT, CHANCELLOR, NORTH CAROLINA A&T UNIVERSITY

THE ISSUE BEFORE THE HOUSE

IT IS QUITE APPARENT THAT AS THE FEDERAL GOVERNMENT BEGINS THE COUNT DOWN TO DECISIONS ASSOCIATED WITH THE STATUS OF THE HIGHER EDUCATION ACT OF 1965 AS FAR AS FY 1985 IS CONCERNED - SOME CHANGES MUST BE MADE IN THE POSTURE CURRENTLY BEING DEFINED BY THE REAGAN ADMINISTRATION. A FIRE STORM OF CONTROVERSY HAS ERUPTED BECAUSE OF THE ADMINISTRATION'S INSISTANCE UPON A REARRANGING OF FINANCIAL AID PRIORITIES, FOR EXAMPLE, SUCH THAT THEY WILL RESULT IN THE ELIMINATION OF HUNDREDS OF THOUSANDS OF PARTICIPANTS IN CURRENTLY EXISTING FINANCIAL AID PROGRAMS. SHOULD THAT OCCUR, THEN A CLEARLY IDENTIFIABLE DEVASTATING IMPACT WILL OCCUR AS DIRECTLY RELATED TO HISTORICALLY BLACK UNIVERSITIES. MAKE NO MISTAKE ABOUT IT - IF, IN FACT, WE ARE CURRENTLY IMMERSED IN THE ETHOS OF HIGH TECHNOLOGY - THEN OUR CHALLENGE IS ONE OF PREPARING THE YOUNG PEOPLE OF TODAY FOR SUCCESS IN THE ARENA OF TOMORROW'S TECHNOLOGY. UNFORTUNATELY - AS INDICATED BY DAVID SAXXON, RETIRED PRESIDENT OF THE UNIVERSITY OF CALIFORNIA SYSTEM. . .

> "THE PROBLEM IS THAT EDUCATED, INTELLIGENT, INQUISITIVE PEOPLE ARE UNABLE, CONSISTENTLY, TO BRING INFORMED JUDGEMENT TO BARE ON QUESTIONS CONNECTED IN ALMOST ANY WAY TO SCIENCE AND TECHNOLOGY QUESTIONS OFTEN VITAL TO THE WELFARE OF EACH OF US AND INDEED TO THE FUTURE OF THE WORLD. INSTEAD THE VAST MAJORITY OF BROADLY EDUCATED PEOPLE MUST RELY, AND ARE AT T MERCY OF THE TESTIMONY AND ASSERTIONS OF OTHERS.

> FURTHERMORE, THE DEGREE OF RELIANCE [ON SUCH TESTIMONY] REQUIRED DEMANDS FAITH THAT BORDERS ON THE CREDULOUS. ONE OF THE DISTINGUISHING CHARACTERISTICS OF A LIBERAL EDUCATION IS THAT IT SHOULD PROVIDE JUST THAT CRITICAL SENSE WHICH MAKES ITS POSSIBLE TO WINNOW OUT THE MERITRICIOUS FROM THE MERITORIOUS. YET, MANY LIBERALLY EDUCATED PEOPLE ARE UNABLE TO DO ANYTHING OF THE SORT WHEN IT COMES TO SCIENCE AND TECHNOLOGY.
>
> OUR SOCIETY IS BECOMING INCREASINGLY AND IRREVERSIBLY TECHNOLOGICAL. SCIENTIFIC INVESTIGATION IS INCREASINGLY AND IRREVERSIBLY CONCERNED WITH UNIMAGINABLE EXTREMES OF SPACE AND TIME, WHICH REMOVES IT EVER FROM THE REALM OF OUR DAILY EXPERIENCE. UNLESS WE REQUIRE UNDERSTANDING, WE WILL REMAIN WHERE WE ARE RIGHT NOW, AT THE MERCY OF EXPERTS OR WORSE, OR CHARLATANS POSING AS EXPERTS."[1]

AS SUGGESTED BY DANIEL BELL IN HIS THE COMING OF THE POST-INDUSTRIAL SOCIETY. . .

> "THE RISE OF THE NEW ELITES IS BASED ON SKILL DERIVED FROM THE SIMPLE FACT THAT KNOWLEDGE AND PLANNING - MILITARY PLANNING, ECONOMIC PLANNING, SOCIAL PLANNING- HAVE BECOME THE BASIC REQUISITES FOR ALL ORGANIZED ACTION IN MODERN SOCIETY. THE MEMBERS OF THIS NEW TECHNOCRATIC ELITE, WITH THEIR NEW TECHNIQUES OF DECISION MAKING (SYSTEMS ANALYSIS, LINEAR PROGRAMMING, AND PROGRAM BUDGETING), HAVE NOW BECOME ESSENTIAL TO THE FORMULATION AND ANALYSIS OF DECISIONS IN WHICH POLITICAL JUDGEMENTS HAVE TO BE MADE, IF NOT TO THE WEILDING OF POWER. IT IS IN THIS BROAD SENSE THAT SPREAD OF EDUCATION, RESEARCH, AND ADMINISTRATION HAS CREATED A NEW CONSTITUENCY - THE TECHNICAL AND PROFESSIONAL INTELLIGENTSIA."[2]

---

1 DAVID SAXXON, RETIRED PRESIDENT - UNIVERSITY OF CALIFORNIA SYSTEM

2 DANIEL BELL, THE COMING OF THE POST-INDUSTRIAL SOCIETY, (NEW YORK: BASIC BOOKS, 1973) PG. 199.

IF, IN FACT, THE RISE OF A NEW TECHNOCRATIC SOCIETY IS WITH US - THEN WE MUST INSURE THE REALITY THAT STUDENTS - INCLUDING THOSE ENROLLED IN HISTORICALLY BLACK UNIVERSITIES - GET A PIECE OF THE ACTION.

THE TRAGEDY OF PROPOSED FINANCIAL AID CUTS

ONE OF THE MAJOR CHALLENGES CONFRONTING HISTORICALLY BLACK UNIVERSITIES TODAY IS THAT ASSOCIATED WITH THE PROJECTED CUTS IN FINANCIAL AID. ACCORDING TO RECENTLY RELEASED INFORMATION FROM THE AMERICAN COUNCIL ON EDUCATION, MOST OF THE PROPOSED FINANCIAL AID CUTS ENVISIONED FOR FY 85 BY THE REAGAN ADMINISTRATION WOULD COME UNDER THE AEGIS OF A PROPOSED PRUNING WHICH WOULD SLASH 913,000 AWARDS TO UNDERGRADUATE AND GRADUATE STUDENTS. IN FACT, ACE CITES THE REALITY THAT . . .

> "A RECENT COLLEGE BOARD STUDY REPORTED AN ALARMING 21% DROP IN THE VALUE OF STUDENT AID FISCAL YEAR 1980 TO FISCAL YEAR 1983. DESPITE A REVERSAL OF TREND BY THE FISCAL YEAR 1984 APPROPRIATION (WHICH CUT THE LOSS TO 19%), THE REAGAN BUDGET WOULD ACCELERATE THE EROSION OF NEED-BASED AID TO 26% SINCE FISCAL YEAR 1980."3

THE ADMINISTRATION HAS SUGGESTED THAT WHILE ON ONE HAND PELL GRANTS WOULD BE MAINTAINED AT THE FISCAL 1984 LEVEL OF $2.8 BILLION , WITH AN INCREASE IN THE MAXIMUM AWARD FROM $1900 TO $3000 - RESTRICTING ELIGIBILITY OF MIDDLE-INCOME STUDENTS WOULD BECOME A REALITY WITH AID TARGETED MERELY TO THE MOST NEEDY. ADDITIONALLY, THE SO-CALLED "SELF-HELP" FORMULA WOULD MEAN THAT STUDENTS WOULD BE EXPECTED TO CONTRIBUTE A MINIMUM OF $500 OR 40% OF THE TOTAL COLLEGE COSTS THROUGH WORK OR LOANS BEFORE RECEIVING A GRANT UNDER THE PROPOSED PROGRAM. BY THE ADMINISTRTATION'S OWN ESTIMATES, ACCORDING TO ACE, 290,000 FEWER AWARDS WOULD BE MADE THEN CURRENTLY ARE AVAILABLE,

---

3/CHARLES SAUNDERS, "MANY CUTS PROPOSED IN STUDENT AID," HIGHER EDUCATION AND NATIONAL AFFAIRS (WASHINGTON, D.C.: AMERICAN COUNCIL ON EDUCATION) VOL. 33, NO. 2) PG. 1.

AND 80% OF THE REQUESTING FUNDS WOULD GO TO STUDENTS WITH FAMILY INCOME UNDER $12,000 ANNUALLY.

AS FAR AS SUPPLEMENTAL EDUCATION OPPORTUNITY GRANTS ARE CONCERED - (E.G. SEOG) - THESE WOULD BE ELIMINATED. THIS MEANS THAT SOME $655,000 IN AWARDS, AS CURRENTLY FUNDED AT A COST $375 MILLION, WOULD BE LOST. OUR CAMPUS, AND OTHERS LIKE IT, NEED THIS PROGRAM BECAUSE IT IS CRITICALLY IMPORTANT AS ASSOCIATED WITH YOUNG PEOPLE WHO DEPEND, ALMOST TOTALLY UPON FINANCIAL AID. EIGHTY PERCENT OF THE STUDENTS AT NORTH CAROLINA A. & T. STATE UNIVERSITY DEPEND UPON SOME FORM OF FINANCIAL AID SUPPORT TO REMAIN "IN SCHOOL."

THE REAGAN ADMINISTRATION'S PLAN CALLS FOR NO FEDERAL CAPITAL CONTRIBUTIONS AS FAR AS NATIONAL DIRECT STUDENT LOANS ARE CONCERNED. THE TOTAL COST, CURRENTLY, IS $161 MILLION FOR APPROXIMATELY 149,100 AWARDS.

THE REAGAN PACKAGE CALLS FOR THE ELIMINATION OF STATE STUDENT INCENTIVE GRANTS, THUS JEOPARDIZING 304,000 AWARDS AT A COST OF $76 MILLION IN MATCHING STATE FUNDS. MY RESEARCH SUGGESTS THAT ALTHOUGH MANY STATES OVERMATCH, AT LEAST 15 RELY ON FEDERAL SHARES FOR 40-50% OF TOTAL FUNDING IN THIS AREA. IT IS DIFFICULT TO DISCERN WHY THE ADMINISTRATION SUGGESTS THAT THE FINANCIAL AID PROGRAM CAN BE STREAMLINED WITH THE ELIMINATION OF STATE STUDENT INCENTIVE GRANTS. WHAT WILL HAPPEN, OF COURSE, IS THAT THOUSANDS OF STUDENTS WILL NO LONGER BE ABLE TO REMAIN ON CAMPUS.

AS FAR AS GUARANTEED STUDENT LOANS ARE CONCERNED, THIS SEGMENT OF THE PACKAGE WOULD BE REVISED SO AS TO REQUIRE THAT ALL FINANCIAL AID RECEPIENTS WOULD HAVE TO UNDERGO A "NEEDS TEST" TO DETERMINE THE AMOUNT OF THEIR LOAN. THE REAGAN AMINISTRATION HAS APPARENTLY ABANDONED ITS ATTEMPT OF LAST YEAR TO DOUBLE THE ORGINAL FEE TO 10% FOR GRADUATE STUDENTS, HOWEVER, THE NEEDS TEST WUULD SIGNIFICANTLY RESTRICT ACCESS TO LOANS BY GRADUATE STUDENTS AS WELL AS INDEPENDENT UNDER-

37-618 O—84——36

GRADUATE STUDENTS IN PUBLIC INSTITUTIONS SUCH AS OUR OWN. SUBSTANTIAL SAVINGS WOULD, CONCURRENTLY, BE SOUGHT THROUGH LEGISLATIVE CHANGES TO INCREASE STATE LOAN AGENCIES' SHARE OF DEFAULT AND ADMINISTRATIVE COSTS.

AND THEN, FINALLY, THE ADMINISTRATION WOULD ELIMINATE, TOTALLY, GRADUATE SUPPORT - BARELY SEVEN WEEKS AFTER THE BI-PARTISAN NATIONAL COMMISSION ON STUDENT FINANCIAL ASSISTANCE REPORTED SERIOUS SIGNS OF "STRESS" IN THIS SECTOR - AND UNANIMOUSLY DECLARED THAT FEDERAL SUPPORT IS ABSOLUTELY INDEPENSIBLE RELATIVE TO THE CONTINUATION OF EXCELLENCE OR GRADUATE EDUCATION.

THIS MEANS THAT SOME 1700 GRADUATE AND PROFESSIONAL OPPORTUNITY FELLOWSHIPS FOR MINORITIES AND WOMEN, PUBLIC SERVICE FELLOWSHIPS, FELLOWSHIPS FOR MINORITIES ATTENDING LAW SCHOOL, AND LAW SCHOOL CLINICAL EXPERIENCE GRANTS NOW TOTALLING NEARLY $16 MILLION WOULD BE ELIMINATED.

ON WHAT BASIS DOES THE ADMINISTRATION JUSTIFY THE ELIMINATION OF THIS KIND OF FISCAL SUPPORT AS FAR AS GRADUATE STUDENTS ARE CONCERNED?

IF THESE PROPOSED CUTS PREVAIL - THE FINANCIAL AID ARENA WILL BECOME A DISASTER AREA. IT COULD BECOME A NATIONAL DISGRACE. IT WILL MEAN THAT THOUSANDS OF STUDENTS WHO NOW DEPEND UPON FINANCIAL AID AS THE BASIS UPON WHICH THEY GAIN ACCESS TO POST-SECONDARY EDUCATION - WILL BE DENIED SAID ACCESS. AND, OBVIOUSLY, IT MEANS THAT LARGE NUMBERS OF BLACK STUDENTS WHO, TRADITIONALLY, MATRICULATE AT HISTORICALLY BLACK UNIVERSITIES WILL, NO LONGER, BE ABLE TO ATTEND THESE CAMPUSES FOR PURPOSES OF SECURING THEIR DEGREES.

THE BLACK COLLEGES AND UNIVERSITY ACT

THANKS TO CONGRESSMAN PAUL SIMON, ATTORNEY WILLIAM BLAKEY, AND OTHERS, WE NOW SEE THE POSSIBILITY OF RACE SPECIFIC LEGISLATION ASSOCIATED WITH THE ENHANCING OF BLACK UNIVERSITIES AND COLLEGES NATIONALLY. FOR IF, IN FACT, LESS THAN 5% OF THE FUNDING AWARDED UNDER TITLE III WENT TO HISTORICALLY BLACK COLLEGES AND UNIVERSITIES DURING FY 80 - THE TIME HAS NOW COME WHEREIN SOMETHING BE DONE, BY THE FEDERAL CONGRESS, IN CONCERT WITH THE PRESIDENTIAL EXECUTIVE ORDER OF NEARLY TWO YEARS AGO - TO APPROPRIATE SIGNIFICANT SUMS OF DOLLARS TO BE USED FOR PURPOSES OF INSURING THE PERPETUATION OF ACADEMIC QUALITY ON THE CAMPUSES OF MORE THAN 100 HISTORICALLY BLACK UNIVERSITIES NATIONALLY. THE $150 MILLION FUNDING RECOMMENDATIONS FOR FY 1985-86, AS DEFINED IN THE BLACK COLLEGES AND UNIVERSITIES ACT - WILL MEAN MUCH TO THOSE OF US WHO ARE RESPONSIBLE FOR INSURING THE ONGOING PERPETUATION OF QUALITY ON THESE CAMPUSES. IT IS QUITE CLEAR TO ME, AND MY COLLEAGUES, THAT ONLY WITH THE USE OF THIS KIND OF MONEY WILL WE BE IN A POSITION TO BENEFIT FROM THE PURCHASING OF NEEDED SCIENTIFIC AND LABORATORY EQUIPMENT, THE CONSTRUCTION AND/OR MAINTENANCE OF LIBRARY FACILITIES, THE ESTABLISHMENT OF ADDITIONAL NEW ACADEMIC PROGRAMS FOR BLACK STUDENTS IN THOSE DISCIPLINES WHEREIN THERE IS UNDER REPRESENTATION OR NO REPRESENTATION, E.G. ENGINEERING, ARCHITECTURE, PRE-MEDICINE, PRE-DENTAL, FOREIGN LANGUAGE, ECONOMICS, AND BUSINESS ADMINISTRATION; THE PURCHASE OF LIBRARY BOOKS, PERIODICALS, FILM MATERIAL AND THE DEFRAYING OF EXCESS COSTS AS ASSOCIATED WITH TUTORIAL REMEDIATION ON OUR CAMPUSES.

CONGRESSWOMAN EDITH GREEN WAS CORRECT, YEARS AGO, WHEN SHE ASSERTED THAT TITLE III DOLLARS FOR "DEVELOPING INSTITUTIONS" MIGHT VERY WELL BE A EUPHEMISM FOR BLACK INSTITUTIONS. THIS REALITY TO

TO THE CONTRARY NOTWITHSTANDING - IT IS QUITE APPARENT THAT TITLE III - IF THAT WAS ITS ORIGINAL INTENT - IS NO LONGER A BLACK UNIVERSITY PROGRAM. HENCE, RACE SPECIFIC LEGISLATION IS NEEDED AND I AM URGING IN THE STRONGEST TERMS POSSIBLE, THAT THE UNIQUE ROLE OF BLACK COLLEGES AND UNIVERSITIES IN THIS CENTURY BE ADDRESSED BY THE CONGRESS. AND, PERHAPS ONE OF THE MOST EFFECTIVE WAYS WHEREBY SAID GOAL CAN BE ACCOMMODATED IS THROUGH PASSAGE OF THIS LANDMARK LEGISLATION - E. G. THE BLACK COLLEGES AND UNIVERSITY ACT.

ENHANCEMENT OF RESEARCH LIBRARY FACILITIES

IN 1981 - PART C OF THE RESEARCH LIBRARY RESOURCES ACT PROVIDED $10 MILLION FOR RESEARCH LIBRARIES,NATIONALLY, ON COLLEGE AND UNIVERSITY CAMPUSES. THE FIGURE FOR 1982, 1983 AND 1984 WAS $6 MILLION. CONGRESSMAN SIMON IS NOW PROPOSING $15 MILLION FOR 1985 AND THIS MUST BE THE YEAR WHEREIN BLACK UNIVERSITIES GET A PIECE OF THAT ACTION. I SUPPORT THE SIMON PROPOSALS - BUT CALL FOR ONE MAJOR CHANGE WITH REGARD TO HIS RECOMMENDATIONS.

THE HISTORICAL RECORD CLEARLY SHOWS THAT NO BLACK UNIVERSITY HAS EVER BEEN ABLE TO SECURE FUNDS FOR RESEARCH LIBRARIES UNDER PART C OF TITLE II, UNITED STATES DEPARTMENT OF EDUCATION. I FIND UNACCEPTABLE THE EXPLANATION FOR THIS - AS BEING THE SUGGESTION THAT HISTORICALLY BLACK UNIVERSITIES DON'T QUALIFY FOR THIS ANNUAL POOL OF FEDERAL DOLLARS BECAUSE OF THE FACT THAT THEY DO NOT HAVE "MAJOR RESEARCH LIBRARIES". THIS SMACKS OF THE SAME KIND OF UNACCEPTABLE CONCLUSION ADVANCED TO MINORITY JOB APPLICANTS BY EMPLOYERS, TELLING THEM THAT THE REASON WHY THEY CAN'T GET A JOB IS BECAUSE "THEY HAVE NO EXPERIENCE". PERHAPS THE REASON WHY NONE OF THE 1890 BLACK INSTITUTIONS, FOR EXAMPLE, QUALIFY AS THOSE HAVING MAJOR RESEARCH LIBRARIES IS THE FACT THAT THEY HAVE NOT HAD ACCESS TO THOSE ANNUAL

ONS WHICH THE PREDOMINANTLY WHITE INSTITUTIONS ARE NOW CONTINUING
TAIN. YES, THE GUIDELINES CAN BE CHANGED AND THEY MUST BE CHANGED
GH THE POLITICAL AND AGENCY COMMUNICATION PROCESS. WE MUST
ERYTHING WE CAN TO ENCOURAGE YOU TO CHANGE THE RULES SO THAT IT
BE POSSIBLE, FOR THE FIRST TIME IN THIS NATION'S HISTORY, FOR
UNIVERSITIES TO BECOME RECIPIENTS OF DOLLARS AVAILABLE UNDER
OF TITLE II.

USION

AGAIN, THE ISSUE BEFORE THE HOUSE IS ONE OF DEFINING THE KIND
ISION-MAKING PROCESS, THE KIND OF POLITICAL POWER, THE KIND OF
SUPPORT, AND THE KIND ORGANIZATIONAL STRATEGY WHICH WILL BE
ARY TO INSURE THE PROMULGATION OF ACADEMIC QUALITY IN THOSE
ECONDARY EDUCATION INSTITUTIONS WHICH FORM THE BACKBONE OF
ION AT THE COLLEGE LEVEL FOR BLACK YOUTH. AFTER ALL -
IMATELY 80% OF ALL THE DEGREES GRANTED TO BLACK YOUTH STILL
ROM THOSE GRANTED BY HISTORICALLY BLACK UNIVERSITIES AND
ES.

UR RESPONSIBILITY AS LEADERS OF THESE INSTITUTIONS IS THAT
NED WITH THE GALVANIZING OF ALL THE FORCES NECESSARY TO INSURE
ALITY OF MISSION ACCOMMODATION IN THAT VEIN. AND THIS IS WHERE
D THE HELP AND ASSISTANCE OF THE FEDERAL CONGRESS. OUR CHALLENGE,
UR CHALLENGE, IS THAT OF SEIZING THE GAUNTLET OF OPPORTUNITY
VING FORWARD ON A DELIBERATELY CONTRIVED PATH DESIGNED TO INSURE
ALITY THAT THE DISPARITY BETWEEN THE "HAVES" AND THE "HAVE NOTS"
IMIZED, IF NOT ELIMINATED. THE POLITICAL SETTING IN WHICH WE
URSELVES INVOLVED REPRESENTS, FOR SOME, A PERCEIVED CRUCIBLE OF
IT REPRESENTS FOR MANY, A BATTLEFIELD OF ENDURANCE. IT
ENTS A TESTING GROUND FOR THE STRONG. IT REPRESENTS WHAT

BLACK INSTITUTIONS MUST BE ABOUT, WITH YOUR ASSISTANCE.

IT IS TRUE WE HAVE MADE A LOT OF PROGRESS, BUT WE HAVE NOT TRAVERSED DR. MARTIN LUTHER KING'S MOUNTAIN TOP YET. REMEMBER, THERE ARE STILL MANY RIVERS TO CROSS, THE SWAMPLAND OF "THE INVISIBLE MAN" TO TRAVERSE, THE INSIDIOUSNESS OF INDECISIVENESS TO WITHSTAND, THE OUTRAGE OF FISCAL INSUFFICIENCY TO ENDURE, AND THE HOBGOBLIN OF "IS ANYONE OUT THERE" TO TOLERATE - AS WE SEEK TO BUILD BETTER PROGRAMS DESIGNED TO ACCOMMODATE THE NEEDS OF OUR STUDENTS ON THESE CAMPUSES.

I WANT TO CONGRATULATE CONGRESSMAN SIMON AND HIS STAFF AND MR. BLAKEY FOR THEIR DECISION TO JOIN WITH US FOR PURPOSES OF INSURING THAT NOT ONLY SHALL WE BE ABLE TO FIND THE TUNNEL, BUT THAT WE SHALL BE ABLE TO, INEVITABLY, FIND AND SEE LIGHT AT THE END OF SAME.

STATEMENT OF DR. EDWARD B. FORT, CHANCELLOR, NORTH CAROLINA A&T STATE UNIVERSITY

Dr. FORT. Thanks very much, Mr. Andrews, Mr. Chairman. Those of us from North Carolina are delighted to have you in this seat this afternoon.

I am going to attempt to squeeze this down to 5 minutes by summarizing two facets of the presentation and then reading you a page and a half of the third facet.

Edward Fort, chancellor at North Carolina A&T State University, the largest historically black university in the State of North Carolina, public or private. My remarks are based upon my experiences as a chancellor here as well as in Wisconsin, two school superintendancies and faculty positions at the University of Michigan and Michigan State University.

I am going to concentrate on three things. One, title IV with regard to financial aid. Second, the title III segment that relates to Black Colleges and Universities Act, and third, title II, part C, with regard to research libraries. I will start with a quote from Daniel Bell, "The Coming of the Post-Industrial Society" as it relates to high tech and its relationship and importance to students that are involved in matriculation at black universities.

Second, I will summarize hurriedly four or five salient observations related to the Reagan administration's proposed cuts in financial aid. Third, I will then read the page and a half on title III related to the proposed Black Colleges and Universities Act, and then I will finalize this statement with a summarization of my views on part C of title II as it pertains to "research libraries." So, going back to the top of the key, I will begin with the quote from Daniel Bell.

Our society is becoming increasingly and irreversibly technological. Scientific investigation is increasingly and irreversibly concerned with unimaginable streams of space and time which removes it ever from the realm of our daily experience. Unless we require or understanding, we shall remain right where we are now, at the mercy of experts, or worse, charlatans posing as experts.

Given the saliency of that observation, it is critically important for those of us as administrators in the historically black universities to do what we can to ensure the reality that our young people are shored up against the possibility of that advent.

In that regard, then, the cuts that the administration is proposing as far as financial aid is concerned are summarized thus and they will have a massive impact upon not only my own institution, with nearly 6,000 students, but multiples of institutions, black and white, and Chicano, nationally.

For example, the ACE, American Council of Education, research suggests that the fiscal year 1985 recommendations would slash about 913,000 awards from the résumés of undergraduate and graduate students.

Second, even though the legislation called for a continuation of about $2.8 billion, the fact remains that because of the self-help concept, we would be talking about 290,000 fewer awards than these that are currently available. Third, the elimination of SEOG, if the Reagan administration had its way, would mean a loss of 655,000 in awards, which currently approach $375 million nationally, and that would be a tragedy. The 655,000, by the way, is not dollars, but students, translated into $375 million.

With the elimination, No. 4, of State student incentive grants we would jeopardize 304,000 awards at a cost of $76 million lost to our students. And then as far as Guaranteed Student Loans are concerned, the needs test would probably vastly eliminate large numbers of students with respect to access to higher education, because they just simply couldn't meet the test.

And finally, the administration has proposed elimination of total support for graduate students and that would mean the loss of some 1,700 graduate and professional opportunity fellowships that are mainly spread across a large range of minority and female programs, at a cost of about $16 million. That would be horrendous.

Second, with regard to the Black Colleges and Universities Act, as a part of title III, and I'm going to insert a correction here, it's a loss of 15 percent. In other words, less than 15 percent of the funding awarded under title III, as of fiscal year 1980 went under the aegis of title III to black universities and colleges nationally. The time has come, therefore, where something has to be done by the Federal Congress in concert with the Presidential Executive order of nearly 2 years ago, to appropriate significant sums of dollars to be used for purposes of ensuring the perpetuation of academic quality on the campuses of more than 100 historically black universities nationally.

This bill, of course, calls for the appropriation of $150 million for fiscal year 1985 and 1986, as defined in that act, and that's going to mean an awful lot to not only A&T, but black universities nationally, inclusive of such things as the purchase of needed scientific and laboratory equipment, the construction or maintenance of library facilities, the establishment of additional new academic programs

for black students in disciplines where there is either under-representation or no representation and, of course, it would enhance the prospects for getting more black dentists, or potential dentists, architects, physicians, engineers, and foreign language specialists, as well as economists, into the pipeline.

One aspect of this is critically important in our own university. We anticipate now, on the basis of a comprehensively defined 2-year study, undertaken by a task force of faculty, to begin the promulgation of activities associated with the construction of a new library, at a cost of between $8 million and $10 million. We could, therefore, use moneys that would come from this total of $150 million package for purposes of enhancing the prospects for assuring the adequacy of the libraries on our campus.

And then finally, in 1981 part C of the Research Library Resources Act provided $10 million for research libraries nationally. Chairman Simon is proposing that for fiscal year 1985 and 1986 that amount be increased to $15 million. The problem is this, Mr. Chairman: The record, unless I'm incorrect, shows that no black university has ever been able to secure funds for research libraries under part C of title II, from the U.S. Department of Education. I personally, as one chancellor of an historically black university, find unacceptable the explanation for this as being—or suggesting that historically black universities somehow can't qualify for this annual pool of millions because they, quote, "Don't have major research libraries," whatever that means.

I'm suggesting strongly that the committee do everything it can to encourage a change in the rules so that it will not be possible for the exclusion of these campuses and their libraries to continue into fiscal year 1985 and 1986 and beyond.

In conclusion then, in 1 minute, I would say this, that the issue before the House is one of defining the kind of decisionmaking processes, the kind of political power, the kind of fiscal support, and the kind of organizational strategy which will be necessary to ensure the promulgation of academic quality in these postsecondary education institutions, which form the backbone of college-level education for black youth in this country.

After all, approximately 80 percent of all the degrees granted to black youth in this country still come from those that are granted by historically black universities and colleges, including North Carolina A&T State University in North Carolina.

Our responsibility, therefore, as leaders of these institutions, is to galvanize the forces necessary to ensure the reality of mission accommodation in that vein.

What we're involved in, in conclusion, is this: A battlefield of endurance. This is a testing ground for the strong. It represents something that black institutions must be about, with your assistance. I would surmise that we probably have not traversed Dr. King's mountaintop yet. There are still rivers to cross, the swampland of the invisible man to traverse, the insidiousness of indecisiveness to withstand, the outrage of fiscal insufficiency to endure, and finally, the hobgoblin of, "Is anyone out there?" to tolerate as we seek to build better programs designed to accommodate the needs of the students that come to our campuses, such as those in North Carolina.

Thank you very much, Mr. Chairman.

Mr. ANDREWS. Well, thank you for a very good statement and for briefing it quite well.

I'd like to just share with you what I hear from some of the members of the House who are aware of the fact that I am a member of this subcommittee and, hence, I suppose perhaps to a greater extent than otherwise, they share some of their thinking with me in the consideration of the big deficits and debt. That, of course, is what we hear when we go home, perhaps more than any other one subject, I suppose. That varies. It depends somewhat on what was on "Sixty Minutes" the Sunday night before, and so forth.

But as a general rule, the deficit matter is what the press talk about when they come in, "What are you going to do about the debt?" And so that's obviously not only on the minds of the people back home; it's obviously on all our minds. And in the area of Federal assistance of whatever kind, to higher education, I don't see any threat of major cuts in any of the programs that fund higher education except in the area of student financial assistance. Many members are reading things, hearing things, and so forth, that cause them to think that, rather than having the several programs through which that financial aid is provided to students, many of the members are of the opinion that various of them should be reduced in amounts of appropriated funds.

But not totally. They would direct those funds so as to make them available to students on some sort of a family means test basis. In other words, they hear a lot of stories about families with quite high incomes whose children somehow or other receive Federal or partly Federal funds to assist the higher education of the children of that family which has a combined income of $50,000 or $70,000 or whatever. The members catch a hard time back home for that kind of thing when it's in the press and so forth, and they're more inclined to programs that provide money to those that are perceived to really have financial need for that money, in order to obtain that degree of education to which they aspire.

I just share that with you, as a political fact of life, that is a very prevalent feeling here.

Dr. FORT. Between 75 and 80 percent, Mr. Chairman, of the students on our campus are involved in some form of financial aid funding.

Mr. ANDREWS. Seventy-five to eighty?

Dr. FORT. Between 75 and 80. It fluctuates and has for the last 3½ years.

Right now it's at about 78 percent.

Mr. ANDREWS. Seventy-eight?

Dr. FORT. That's right.

Mr. ANDREWS. About what proportion of your total budget comes from the financial assistance received by that 78 percent of your student body?

Dr. FORT. We operate a $28.1 million budget, State funds. Add to that the millions that come from Federal sources and/or foundation sources and the amount increases to $45 million. So, our total budget is $45 million for nearly 6,000 students. And I would say

that the overwhelming majority of that less approximately 2½ million, is tied up in Federal funding.

For example, and this has nothing to do with financial aid, but we're involved with 13 other black institutions in a $5 million—I'm sorry, a 5-year, $4 million grant—for research facilities construction from OSDA.

Mr. ANDREWS. Yes.

Dr. FORT. Our campus generates the third highest acumen of externally procured dollars from the Federal coffers of any institution in the State, behind Chapel Hill and the City University at Raleigh.

So, we are heavily dependent upon the Federal Government, as associated with the issue of non-State funds, the differential between the $28 million that I quoted, and the $45 million total.

Mr. ANDREWS. Yes.

A&T has, of course, a long and distinguished reputation in the field of agriculture.

Dr. FORT. That's correct.

Mr. ANDREWS. What percentage of your graduating class obtains degrees in, of one kind or another, research or otherwise, in the field of agriculture, in the broad sense of that term?

Dr. FORT. Between 10 and 15 percent.

Mr. ANDREWS. I see.

Dr. FORT. I might mention that I envision and view the high technical mission of this institution as being inclusive of the School of Agriculture, with particularized reference to agribusiness, agronomy and, of course, animal science administration.

Mr. ANDREWS. Yes.

Dr. FORT. As well as preparation of baccalaureate degrees and environmental protection. If you add to that the engineering sciences, industrial technology, business administration, and computer science, then you, in effect, have one of the most highly technical institutions in the entire State of North Carolina.

Mr. ANDREWS. All right. Next we have Dr. Raymond Burse, president, Kentucky State University. Dr. Burse, we are pleased to have you with us.

[Prepared statement of Dr. Raymond Burse follows:]

PREPARED STATEMENT OF RAYMOND M. BURSE, PRESIDENT, KENTUCKY STATE UNIVERSITY

Chairman Simon and members of the House of Representatives Committee on Education and Labor's Subcommittee on Postsecondary Education, I am appreciative and thankful of the invitation extended to me to appear before you to testify and share with you my comments, suggestions and recommendations regarding proposals for legislation reauthorizing the Higher Education Act of 1965. There can be little doubt in anyone's mind that the Federal response to the educational needs of our citizenry has had a tremendous impact on the development of our country and its people. Even though the programs which have been established and implemented have had a tremendous impact, based on the current status of education in this country, we still face a greater challenge and it is to the overcoming and meeting of this challenge that our attention should be directed.

I am here today as President of a high quality institution of higher education, Kentucky State University, as President of a public historically black institution and as an American citizen deeply interested in the future development of our educational system. Kentucky State University was founded in 1886, as an institution for the education of blacks and in 1890 was designated as a land grant institution under the 1890 Land Grant Act (the Second Morrill Act). Today KSU is a multicul-

tural, multiracial institution dedicated to providing to its students the highest quality education it can deliver.

Kentucky State University, in spite of some of its problems of the past, has been producing students well educated, trained and qualified to undertake work in their chosen fields and to be successful in graduate school. Kentucky State, like a great many other public historically black institutions, for a number of years received the crumbs of educational financing from the table of state public financing and as a consequence did not always progress as it would have liked or needed to in order to remain at the cutting edge of educational development. In spite of the absence of the funding that was necessary to achieve these objectives, this institution, KSU, like its sister public historically black institutions, continues to survive and to make and have a meaningful impact upon the lives of students and in particular, black students.

The disparity in funding received by historically black and traditionally white institutions has been documented in the records for a number of years and I do not think it is necessary that I further comment on that fact; however, I do think that just one other further indication of this disparity in current times is highlighted by the failure of Kentucky to come to the realization that Kentucky State, being a full partner in the Kentucky public higher education system and a land grand institution has been underfunded because under the Morrill Act for the 1862 institutions, there is a mandatory state match of the Federal funds received. For the 1890 institutions founded under the Second Morrill Act no such mandatory matching is required. As a consequence, 1862 and 1890 land grant institutions in the same state receive different levels of support from the state.

Recently, in trying to come to grips with this problem in the Commonwealth of Kentucky, the path of least resistance was to provide to Kentucky State an amount similar to that provided to other 1890 institutions by their home state. As Exhibit 1 illustrates, most states are not contributing anything for their 1890 land grant programs and those states which are contributing are doing very little (there are seventeen 1890 Institutions located in sixteen states). These 1890 land grant institutions will remain underserved, undercapitalized and underfunded because of this disparity. A great many of the major research buildings at the 1862 land grant institutions were built with federal dollars and now today when the 1890s need such facilities it is unwise to expend such funds in these ways.

More specifically, the problems which an institution like Kentucky State faces are both immediate and long-range. The most immediate problem is to continue to have a sound financial picture in a time of scarce resources while attempting to enhance academic programs. As a result of a state-wide Desegregation Plan mandated by the Office of Civil Rights of the U.S. Department of Education, Kentucky State University is going through a tranformation from a limited comprehensive university to a liberal studies oriented public institution with the lowest student-faculty ratio of any public institution in the Commonwealth. The transformation has brought about growing pains and has required and is requiring that the University reassess what it has been doing. To undertake this reassessment, to plan new programs and to implement those programs require that resources be available immediately. In many instances the resources necessary to undertake this kind of activity are not available and have not been available from either the state or from the federal government. These present day needs place great pressures on what an institution can realistically do knowing that its resources must be allocated in a way to ensure the maintenance and operation of a sound and well managed institution.

The long-range problem of an institution like KSU is the realization that to have an institution that is self sufficient, there must be a base of financial support that is stable, can be counted on at all times and over which the University has control for the allocation of resources. The answer to the long-range problem is obviously an endowment for such institutions which is not subject to change with the political winds and is not strapped with restrictions on what an institution can realistically do to meet the changing needs and demands of its student body and the other clientele.

Any reauthorization for the Higher Education Act of 1965 must be one that deals directly with both the current and short-range problems of all institutions and particularly historically black institutions, and deals directly with the long-range problems of these institutions. If these kinds of questions are addressed and are addressed in a systematic fashion that allows institutions some discretion, then the constant need for changes to be made to make such programs more adept to current situations is alleviated as the needed changes can be made at a level where the most information is available, the solutions clearer, and the ability to make modifications to ensure that the solution addresses the problem or objective is easier. But, in al-

lowing such discretion, there must be a requirement for accountability of the resources allocated.

Kentucky State, as a historically black institution, is now poised in a position to provide to a wider population (a population that is beyond that of just black students), educational opportunities that are unique in Kentucky and the Nation. Kentucky State University for years accepted those students that no other institution in the Commonwealth would accept and was very successful in educating them. And, even today, Kentucky State University continues to be an institution doing a good job of educating students and in particular black students. Though KSU enrolls le than 10 percent of all black students in public higher education in the Commonwealth, it awards approximately 25 percent of all baccalaureate degrees awarded to black students by public institutions in Kentucky. It does so, not as a degree factory or mill, but with programs designed to ensure that students are truly educated, that they learn to read, to write, to think critically, to be able to make sound judgments, and to be able to distinguish between right and wrong and live in an often complex and perplexing society. KSU awards degrees with an education, not just degrees. This realization is gradually taking hold in the marketplace in which KSU operates and will continue to take hold as the situation changes.

What KSU is doing in this area is true of most, if not all, historically black institutions. And, in the present day environment when education and its quality is being called into question, when the literacy rate is low as in my home State of Kentucky, and when college going rates are dropping rather than rising, we need to ensure that access to education is available and that those institutions which have been doing the job will continue to be able to do so in the future. We can ill afford to have an institution (particularly in Kentucky) that is serving a substantial student population to no longer be able to provide educational services. We must ensure that those institutions doing a good job continue to improve and change to meet shifting demands and that the financial base for their operations becomes sounder and more secure.

To address the long-range and short-term problems of Kentucky State, I would like to say that the proposal put forth by Chairman Simon addresses in a very positive manner that which is needed to ensure that Kentucky State University continues to be a purveyor of knowledge, where students are allowed to drink from a well of knowledge they did not dig and to feel the heat from a fire of reason they did not start. After all, that is what education is about and to which we should be dedicated and committed.

In regard to Title III of the Chairman's recommendations, I find Part B—Strengthening Historically and Traditionally Black Colleges and Universities, to be the kind of short-range infusion of capital into my University that is needed to help it make the transition required under the Commonwealth's Desegregation Plan. The Plan is designed to ensure that Kentucky State University becomes a true and full participating and cooperating member of the system of public higher education in Kentucky. It is to these kinds of goals and ideas regarding public historically black institutions that the reauthorization of the Higher Education Act should be directed. For this nation to commit as is recommended in Part B of Title III direct grants and allotments to these institutions for a set period of time with some discretion as to where to expend the funds like the areas listed in proposed Section 323, would greatly benefit the transformation of these institutions from institutions constantly having to take money from Peter to pay Paul. The availability of these funds would ensure that long-range decisions are made today as to the expenditure of current funds so as to ensure the stability and continuation of these institutions. This, in my opinion, becomes the best way that the Congress and this Nation can ensure that these institutions continue to provide the kind of educational opportunities that everyone knows they have been the providers and purveyors of for years.

If these funds were available to KSU today, we would use them to—

1. Enhance our academic programs around a true liberal arts or liberal studies core curriculum;
2. Purchase the necessary equipment to keep the biological and natural sciences equipped to do the job necessary for survival;
3. Purchase additional computer equipment to meet a need that has our institution grappling;
4. Keep the University's library updated and current for student and faculty use;
5. Renovate decay in institutional facilities;
6. Implement a proposed new program of writing across the curriculum, as KSU realizes that effective communication is both oral and written.
7. Assist faculty members to complete terminal degrees or be retrained in areas needed at KSU; and

8. Continue our student services and counseling program needed to ensure that more students who enter KSU leave with a degree (increased retention).

These activities are not new or developmental but are what makes an institution of higher education. To improve and enhance the items I have listed will ensure a sound, stable and self sufficient institution, one of the key objectives of Title III.

The only changes I would suggest in the proposed language of Chairman Simon would be as follows:

1. That in defining the term "part B Institution," the reference to the composition of the student body be made to refer to the number of full-time equivalent students or that this definition be made specific in terms of the kinds of institution this section is designed to assist. This can be done by defining a "part B Institution" as those institutions established before 1964 and whose principal mission was in the education of black Americans. This later change will narrow the universe of eligible institutions and clearly define those institutions to which part B should be and is directed.

2. The provision relating to use of funds should be structured to encourage greater discretionary power at the institution, allowing institutions to identify areas of concern unique to their special circumstances and in accordance with their strengths. By allowing such discretion, it can be assured that the funds are properly spent in the areas that are of greatest need to the institution and does not put institutions in the position of chasing dollars for dollars' sake, even though the area in which they are seeking the money is not their area of greatest need.

This would address the short-range, current problems and/or needs of the historically black colleges or universities.

Part C and D of Title III as proposed would help to address the long-range problems which an institution like Kentucky State faces in that to the extent that KSU is able to generate funds from the private sector to the Challenge Grant Program to build an endowment, the long-range fiscal problems of the University will begin to be controlled. This is particularly important for public institutions in that until recently, public institutions have not felt the desire or the need to build endowments for purposes of assisting their operations. To provide an endowment funding program would serve as an incentive for an institution like Kentucky State to generate the dollars required for the matching funds to be placed in an endowment which would hopefully help secure its long-range financial planning. Additionally, providing the discretion at the institutional level as to how the allowable funds can be expended, also serves to reiterate and reinforce the need to put more discretion at the institutional level.

The present statutory authority under Title III and also as proposed in the Draft Bill by Chairman Simon allows the Secretary to waive the required non-federal matching in Title IV Programs is good legislation; however, the waiver has not been available in the current environment Rather than providing for waivers that institutions have been requesting for years and not receiving, a change should be considered. I know that in the case of Kentucky State University, which had a change in its student enrollment pattern with a concurrent reduction in its state appropriation, requested a waiver regarding its maintenance of effort level over one year ago and to date has not been granted approval or denial of its request. Rather than stating that the waivers are available, it may be well that the Congress should do as it suggested with the Pell Grant Family Contribution Schedule, enumerate or list the conditions under which waivers should be granted and maybe even limit the amount of the waiver that should be given. This action would ensure that waivers are granted rather than there being statutory provision allowing the Secretary to promulgate regulations for such waivers and the regulations not come forth.

Changes recommended and suggested for Title IV-Student Assistance are changes that would greatly benefit an institution like Kentucky State University. KSU, as a public institution, has a low tuition relative to other institutions, and this low tuition is designed to make access available to students, one of the objects of the Student Assistance Program. Raising the Pell Grant level and the amount of funding available would unable an institution like KSU, which is presently unable to provide to students enough campus-based aid to cover their educational costs, to provide additional aid to its students. Having the Pell Grants increased in amount and the percentage of educational costs to be covered would also serve to encourage more graduates of Kentucky high schools to attend institutions of higher learning knowing that if their need exists, they will be able to attend an institution of higher learning. Making this program an entitlement would help to ensure that students are provided the opportunity and the access to higher education.

Having the Pell Program as an entitlement would be a tremendous boost and encouragement to students in the Commonwealth of Kentucky. Kentucky has one of

the lowest college going rates of any state in the nation and any and everything that can be done to assist in improving and increasing the college going rate in Kentucky is needed. I see the proposed change in the Pell Grant Program as a welcome benefit to Kentucky State and in saying so I know that the changes will be a problem to a number of the more high-cost institutions.

Changing the current law on College Work Study and in making the allocation under the proposed formula, will serve to assist an institution like Kentucky State University greatly. At Kentucky State University, approximately 70% of all students receive some kind of financial aid. The average Pell Grant at KSU is approximately $1,650; and in the recent past, the average Supplemental Educational Opportunity Grant to a KSU student has been approximately $400. Changing the College Work Study funding allocation mechanism would mean that KSU would be awarded more work study funds to be used by its total student population. KSU would have available more college work study for its students.

The creation of the Block Grant Program which would combine the current SEOG, NDSL and SSIG into a campus base block grant program is very much welcomed. Having a program that does allocate funds based upon need to institutions and then allowing the institutions the discretion to utilize those funds as college work study funds, grant funds or loan funds, provides an institution the flexibility to move funds around to ensure that the key objective of student access is accomplished. In addition, it allows the institution an opportunity to decide whether the student needs a loan or grant. It is at the institutional level where this decision can best be made. Providing this discretion to the institution should have required accountability mechanisms as is set forth in the proposal made by Chairman Simon.

Eliminating the origination fee of the Guaranteed Student Loan Program will increase the student's net amount received and therefore enhance the student's ability to meet the educational cost of the institution he/she attends. Changing the interest rates and using state secondary loan markets will also make the Guaranteed Student Loan more accessible to students.

I see all of the changes recommended by Chairman Simon as having a very positive impact upon the student enrollment picture at Kentucky State University. I see having the ability under the block grant program to make wise decisions in the best interest of students at KSU. For instance, in our current student body we have found that in the last two years, given the past problems we have had with our National Direct Student Loan Program, the inability to meet the needs of several students, particularly, out-of-state students. Through the financial aid that is available we have been able to cover or provide through Pell Grants, SEOG, or Work-Study, most of the student's educational expenses but leaves students short by as much as Three to Seven Hundred Dollars per academic term. Having the ability to cover this amount through either a grant or a loan would help Kentucky State ensure that it meets the educational needs of its students. Meeting those educational needs should ensure that more students remain in college for the full period and gain an education.

In a state like Kentucky where the college going rate is very low, more is needed to ensure that these students have an opportunity to attend an institution of higher learning or at least know of the availability of that opportunity. The Programs have met that need in the past and there is no doubt regarding an obvious need for more in the future.

KSU endorses all of Title V, Teacher Training Programs as suggested and recommended in that these efforts should help to improve and address some of the concerns which are being heard on a national basis concerning the quality of education in the United States.

In conclusion, the proposals put forth by Chairman Simon would have a tremendously positive impact in ensuring access to Kentucky State University by students desiring to obtain an education from a small, liberal studies-oriented institution and in making that environment one conducive to learning. We at KSU applaud the effort and do hope that the kinds of programs and approaches proposed will become the basis for the reauthorization of the Higher Education Act and that the recommendation for Part B, Title III becomes a reality.

STATEMENT OF DR. RAYMOND BURSE, PRESIDENT, KENTUCKY STATE UNIVERSITY

Dr. BURSE. Mr. Andrews, I'm appreciative of the invitation extended to me this afternoon to present testimony on behalf of Kentucky State University.

Mr. ANDREWS. Where is Kentucky State University?

Dr. BURSE. Frankfort, KY.

Mr. ANDREWS. Frankfort.

Dr. BURSE. Yes.

Kentucky State, like a great many of the other historically black, both public and private, institutions, faces both immediate and long-range problems. The immediate problems are making the necessary changes in academic programs to meet the current needs. Most of these institutions are involved in reassessments at the particular point in time, trying to plan new programs, to implement these new programs, and in many instances the resources necessary to undertake this kind of activity are not available and have not been available from either the State or from the Federal Government.

The long-range problems of an institution like Kentucky State is the realization that to have an institution that is self-sufficient there must be a base of financial support that is stable, can be counted on at all times, and over which the university has control for the allocation of resources.

Because we have both short-range and long-range problems, any reauthorization for the Higher Education Act must be one that deals directly with both current and short-range problems of all institutions, and in particular, historically black institutions, and deals directly with the long-range problems of these institutions. If these kinds of questions are addressed and are addressed in a systematic fashion, and they allow institutions some discretion, then the constant need for changes to be made to make sure such pro-

grams are more adapted to current situations are alleviated, needed changes can be made at a level where the most information is available, the solution is clear, and the ability to make modification to ensure the solution addresses a problem or the objective, is easier. But allowing such discretion there must always be accountability.

Kentucky State, as the only historically black institution in the Commonwealth of Kentucky, today enrolls less than 10 percent of all black students in the Commonwealth of Kentucky and yet it awards approximately 25 percent of all baccalaureate degrees awarded to black students by public institutions in Kentucky.

And because it does this, and because Kentucky is a State where the literacy rate is low, where the college-going rate is going down, we need to do all that we can ensure that an institution like Kentucky State continues to provide services and support to the students and population of this institution. I think to address the long-range and short-range problems of an institution like Kentucky State the proposal that has been put forth addresses in a very positive manner that which is needed to ensure that Kentucky State continues to be a purveyor of knowledge, where students are allowed to drink from a well of knowledge that they did not do and to feel the heat from a fire of reason that they did not start. Those are the reasons for which academic institutions exist.

In regard to title III, part B, I find that to be the kind of short-range infusion of capital into my own university that is needed to help make it make the transition required of it in the Commonwealth of Kentucky to become a full and participating member in the system of public higher education in Kentucky. I think it is these kinds of goals and ideas regarding public historically black institutions that the reauthorization of the Higher Education Act should be directed.

For this Nation to commit, as is recommended in part B of title III, direct grants and allotments to these institutions for a set period of time with some discretion as to where to expend those funds, would benefit greatly the transformation required and get these institutions out of the position of taking money from Peter to pay Paul. The availability of these funds would ensure that the long-range decisions that are being made today as to the expenditure of current funds will be made to ensure stability and continuation of these institutions.

This, in my opinion, becomes the best way that the Congress and this Nation can help to ensure that these institutions continue to provide the kind of educational opportunity everyone knows that they have been the providers and purveyors of for years.

The only changes I would suggest in the proposed language, in part B, would be that in defining the term "part B institution" the reference to the composition of the student body be made to refer to the number of full-time equivalent students or that this definition be made more specific in the terms and kinds of institutions this section is designed to assist. This can be done by defining part B institutions as those institutions established before 1964 and whose principal mission was in the education of blacks. This latter change will narrow the universe of the eligible institutions and

clearly define those institutions to which part B should be, and is, directed.

The second change I would recommend is the provision relating to the use of funds. Funds should be structured to encourage greater discretionary power at the institution, allowing institutions to identify areas of concern unique to their special circumstances, and in accordance with their strength. By allowing such discretion it can be assured that such funds are properly spent in the areas that are of greatest need to the institution, and does not put institutions in the position of chasing dollars for dollars' sake, even though the area in which they are seeking the money is not their area of greatest need.

I find that part C and part D, as proposed, would help to address the long-range problems which an institution like Kentucky State faces in that public institutions in the past have not been particularly interested in building endowments or to assist in their operation. To provide an endowment funding program would serve as an incentive for an institution like Kentucky State to generate the dollars required for the matching funds to be placed in an endowment which, hopefully, would help secure this long-range financial planning.

Additionally, providing the discretion at the institutional level as to how the allowable funds can be expended also serves to reiterate and reinforce the need to put more discretion at the institutional level.

The changes recommended and suggested for title IV, the student assistance, are changes that greatly benefit an institution like Kentucky State and are things that we wholeheartedly endorse. And rather than go into all of those, I think that Chancellor Fort's points on those, on title IV student financial assistance were the same, are the same comments, and feelings, that we at Kentucky State University have and to which we endorse.

I see everything that's been put before me in terms of the reauthorization, proposed reauthorization, as the kinds of programs which would be tremendously—have a tremendously positive impact in ensuring access to Kentucky State University by students desiring to obtain an education from a small, liberal studies-oriented institution, and in making that environment one conducive to learning. We at KSU applaud the effort and do hope that the kinds of programs and approaches proposed will become the basis for the reauthorization of the Higher Education Act. Thank you.

Mr. PENNY. Thank you for your testimony.

Next we'd like to hear from Dr. Ayers.

[Prepared statement of Dr. George Ayers follows:]

PREPARED STATEMENT OF GEORGE E. AYERS, PRESIDENT, CHICAGO STATE UNIVERSITY

Mr. Chairman, Honorable Congressmen, thank you for inviting me to appear before your subcommittee and for giving me the opportunity to offer my views on legislative proposals and legislation reauthorizing the Higher Education Act of 1965.

Mr. Chairman, I accepted your invitation because, like most Americans, I strongly believe that the institution of Congress remains only the primary influence upon public policy in our governmental system, but also the main channel through which demands for change are made if new directions are to be pursued in public policy. Although legislation may not determine the final shape of public policy, it is cer-

tainly a central component of the policy process. Without congressional authorization no administrative agency would have the authority to act. The major function that legislation fulfills is to authorize administrative agencies to enter particular policy areas, and the boundaries within which agencies can formulate public policy are set and defined by Congress, although these boundaries can be very broad.

The task before this subcommittee is not an easy one. Any discussion of educational policy in the United States immediately brings to light the continuing disagreement on the objectives of education as well as the issue of equality in education. Education can serve as an equalizing or leveling institution, or it can act as a selection mechanism for the purpose of perpetuating an existing stratification system. As we are all aware, two traditions have over the years, generated cross-pressures and conflicting goals in American education policy. One tradition holds that individuals are endowed with differing levels of ability, and as such, efforts to guarantee an equal education are an exercise in futility. According to this mode of thought, intelligence rather than equal opportunity determines the life chances of the individual. The other school of thought to which I contribute, emphasizes equality of opportunity. It requires that all external constraints be removed to allow complete development of individual potential. Social and background characteristics should therefore, not determine individual opportunity.

Mr. Chairman, regardless of one's point of view on this matter, we all need to be reminded that schools, colleges and universities in America have been assigned the multiple tasks of providing students with the basic skills necessary for a productive life, establishing a positive self-image especially in students from minority groups, establishing a system of values by which they may direct their own lives, establishing the groundwork for an integrated society, providing the nation with an adequate supply of highly trained citizens for scientific and technical enterprise, and socializing students into the American political culture by creating a sense of loyalty to its values. From this stand-point, one sees the necessity for public officials to help shape our education system as a machinery for eliminating inequality of opportunity and for achieving a degree of social justice for all in America.

With this background statement, and while I support your recommendations in general, I shall proceed to specifically comment on a number of provisions of the proposed legislation.

The new Part B of Title III which will establish the Black College and University Act is worthy of support by all who see education as an instrument of economic and social mobility in American society. Mr. Chairman, the need to make the principal parts of Title III more race-specific is adequately demonstrated in your Discussion Paper. As you have rightly pointed out, although the Higher Education Act of 1965 included the "developing institutions" title for direct institutional aid to historically black colleges and universities, the vague language "has created difficulty in establishing eligibility criteria, targeting funding, and evaluating institutional progress over the years". As a result, funding under this program has shifted away from Black colleges to White institutions before passage of the Education Amendments of 1980, and again, as evidence in your Discussion Paper shows, "from 1966 through 1982, only 44 percent of the funds appropriated for Title III went to Black Colleges and Universities".

It goes without saying, Mr. Chairman, that Black colleges and universities play a critical role in redressing existing imbalances relative to underrepresentation of Blacks among university graduates, and in "graduate school enrollment (6 percent), professional school enrollment (4.5 percent), and doctorate degrees awarded (3.5 percent)". We must also note that assisting these colleges and universities greatly enhances the capacity of the Federal government to fulfill its access mission in higher education; a mission that remains largely unresolved.

As many of us are aware, formidable barriers still remain which prevent blacks from full and equal participation in higher education. Restrictive admission policies, the lack of interest and recruitment and retention of Black students, economic barries which prevent academically able Black students from enrolling in predominantly White schools when and if they are accepted, and weak academic preparation of students in high schools and community colleges which disqualifies such students from acceptance into four-year colleges and universities represent but a few of the factors.

Complicating the issue of equal access for Blacks are rising college tuition costs, diverse and shifting public attitudes regarding the value of higher education, substantial reductions in financial support for public colleges and universities, fluctuating enrollment patterns, reductions in state and federal student financial aid programs, a changing profile of student needs and a changing employment market resulting from an unstable economy. The degree to which consideration is being given

to these factors by colleges and universities obscures and, in some cases, has replaced appropriate attention being directed to equal access.

Some prominent educators have observed that the access principle promises no relief for increasing the number of Blacks at historically White institutions. They further suggest that there is even some doubt now, because of the Supreme Court's opinion in reverse discrimination cases, about the manner and extent to which any state may voluntarily seek to increase the diversity of its traditionally White schools by admitting Blacks whose credentials may be deemed to be less competitive than those of Whites. Access for students from Black families is being restricted to the highly talented. Such students comprise a relatively small portion of those who are eligible for higher education. Unless access to colleges and universities is available to a much larger segment of this society, we will be faced with large numbers of inadequately trained citizens. The economic and political impact of this will be disastrous. This proposed legislation, if passed, will undoubtedly enable Black colleges and universities to play a major role in resolving the equal access issue. With regard to activities which the institutions might undertake with the funds provided, the list suggested in your Discussion Paper seems adequate for a start.

Mr. Chairman, as I mentioned earlier, one of the main obstacles to equal access has been the reductions in state and federal student financial aid programs. The G.I. Bills, federal programs based on financial need, and student loans guaranteed by the federal government have all brought higher education within the reach of Blacks and other minorities. For many states, these federal programs have been supplemented by state efforts to make certain that financial need would not become an insurmountable obstacle to higher edcuation. Today, however, we see the federal government retreating from its support of programs to aid students. For instance, in President Reagan's fiscal year 1985 budget, $460 million is being cut from higher education programs, about $330 million of which would come from student aid. [If these cuts become a reality, the Reagan budget would succeed in reducing need-based aid to 26 percent] since fiscal year 1980. This would have devastating effects on colleges and universities with predominantly Black enrollments.

Progressive changes proposed in Title IV (Student Financial Assistance) of the new legislation come as great relief at a time when critical federal programs are being sharply curtailed or eliminated. Without adequate financial aid, about 90% of the Black students now in college would be forced out because many come from low-income families. In its Second Annual Status Report on Minorities in Higher Education, the Office of Minority Concerns of the American Council on Education found that in 1982, 35.6 percent of Black families had incomes below the poverty level. For Whites, the figure was 9.1 percent. 37.7 percent of all Black families were headed by single women. 70 to 80 percent of female-headed non-white families live in poverty. The consequence of these statistics, according to the ACE report is that "the high proportion of minorities, particularly minority women, living under the poverty level underscores the importance of financial aid for minorities and suggest that their relatively greater poverty is both a reflection of and a factor affecting their low-levels of educational attainment". The ACE report further notes that in 1980, 23.7 percent of the White 25-29-year olds were college graduates while only 11.7 percent of Blacks had achieved that level of education; demonstrating again, that despite the progress made in the education of minorities over the last few decades, Blacks still lag far behind Whites in their access to higher education.

Despite income gains achieved by Black Americans over the past three decades, most evidence shows that the income gap between Black and White families continues to widen. Also, if Blacks continue to experience adult unemployment that approaches three times that of White adults, and Black teenage unemployment remains above 50 percent, the impact on college attendance among Blacks will be devastating. This problem obviously cannot be eliminated without significant expansion of economic opportunity which facilitates greater equity in access to employment and strengthening of financial aid programs.

Private financial aid, and many state programs, as well are based on discriminatory criteria that often favor Whites, whereas federal programs have been based on need. While colleges and universities have remained primarily a state, local or private responsibility, it was their development as instruments of social and economic advancement what led to demands for federal involvement and support. This helps to explain the need and rationale for Congressional action in this matter.

Earlier today, Mr. Chairman, you took testimony from a panel of Presidents of urban universities. They testified to the promise inherent in Title XI, the Urban Grant University Act. I would like to add my own personal endorsement to the testimony of my Chicago neighbor, Mike Alexandroff, and our colleagues on the Board of the Association of Urban Universities, Bob Corrigan and Bernard Harleston.

While many of the urban universities are not considered historically Black institutions, I think it is fair to say that an urban university cannot lay claim to that proud title unless it is willing to shoulder a significant degree of responsibility toward making the urban communities in which so many Black and other minority Americans live, better places in which to live. The urban universities are a self-selected group, who have shown their readiness to be a part of the solution where they and other urban-located institutions have hitherto been part of the problem. My institution, Chicago State University, exemplifies the effectiveness of this role. Starting out as a teacher-training institution until its present multi-purpose status, Chicago State University has produced most of the teachers for the City of Chicago Board of Education. I am proud to say that in a recent Chicago Public School principals' examination, thirty percent—51 out of the 168 successful candidates—were alumni of my university. This, the largest number of any college or university in Illinois, reflects the continued positive impact the university has upon the broader educational community in the Chicago urban area. I share the hope that this subcommittee will see fit to reauthorize Title XI, and that the Congress will see fit to fund it in the immediate future.

In conclusion, Mr. Chairman and Honorable Members of this Subcommittee, many of us in higher education are pleased and encouraged by your efforts to initiate and promote policies that would use the educational system to broaden the base of social equality and expand the opportunities for social advancement in keeping with American egalitarian goals. According to Thomas Jefferson, the purpose of education was to develop citizens in our democratic society who would know what their rights were and be capable of defending them against those who would encroach upon them. If citizens were to participate and maintain a democratic system, they must be educated to the task, and in the words of noted educator Horace Mann, education is "the great equalizer of the conditions of men."

Again, thank you for inviting me to appear before you. I hope and trust that you will reauthorize the Higher Education Act of 1965 with all its main provisions as proposed by Subcommittee Chairman, the Honorable Paul Simon.

STATEMENT OF DR. GEORGE AYERS, PRESIDENT, CHICAGO STATE UNIVERSITY

Dr. AYERS. Thank you, Mr. Chairman.

I'm also pleased to have the opportunity to appear before you and also present testimony this afternoon. As president of a predominantly black university in Chicago, IL, we too are concerned about the legislation that is being proposed. I must say that I support your recommendations in general and I would like to comment briefly on a number of the provisions of the proposed legislation.

The new part B of title III, which will establish the Black College and University Act, is worthy of support by all who see education as an instrument of economic and social mobility in American society. Mr. Chairman, the need to make the principal part of title III more race specific is adequately demonstrated in a discussion paper. As you rightfully pointed out, although the Higher Education Act of 1965 included the, quote, "developing institutions," end of quote, title for the direct institutional aid to historically black colleges and universities, the vague language has created difficulty in establishing eligibility criteria, targeting funding, and evaluating institutional progress over the years. As a result, funding under this program has shifted away from black colleges to white institutions before the passage of the Educational Amendments of 1980. And again, as evidenced in your discussion paper, from 1966 through 1982 only 44 percent of the funds appropriated for title III went to black colleges and universities.

As many of you are aware, formidable barriers still remain which prevent blacks from full and equal participation in higher

education. Lack of interest in the recruitment and retention of black students and the economic barriers which prevent academically able black students from enrolling in predominantly white schools as well as black schools, when and if they are accepted, represent but a few factors.

Complicating the issue of equal access for blacks is the rising tuition cost, as well as substantial reductions in financial support for public colleges and universities. Also I might indicate, reductions in State and Federal student financial aid programs.

The degree to which these considerations are being given to factors by colleges and universities occurs and, in some cases, I think, has replaced appropriate attention being directed to equal access.

One of the main obstacles to equal access has been the reduction in the State and Federal student financial aid programs, the GI bills, Federal programs based on financial need, and the student loans, guaranteed by the Federal Government, have all brought higher education within the reach of blacks and other minorities.

In many States these Federal programs have been supplemented by State efforts to make certain that financial aid would not become an insurmountable obstacle to our higher education.

Today, however, we see the Federal Government retreating from the support of programs to aid students. For instance, President Reagan's fiscal year 1985 budget, $460 million is being cut from higher education programs. About $330 million of that would come from student aid. If these cuts become a reality, the Reagan budget would succeed in reducing need-based aid to 26 percent since fiscal year 1980. This would, no doubt, have a devastating effect on colleges and universities with predominantly black enrollments.

Progressive changes proposed in title IV, student financial assistance, of the new legislation come as a great relief at a time when critical Federal programs are being sharply curtailed or eliminated. Without adequate financial aid, about 90 percent of the black students now in college would be forced out because many come from low-income families.

In its second annual status report on minorities in higher education, the Office of Minority Concerns of the American Council on Education, found that in 1982, 35.6 percent of black families had incomes below the poverty level. For whites, the figure was 9.1 percent.

Earlier today, Mr. Chairman, you took the testimony from a panel of presidents of urban universities. They testified to the promise inherent in title XI, the Urban Grant University Act. I would like to add my own support and personal endorsement to that testimony. I think it is fair to say that an urban university cannot make claim to that proud title unless it is willing to shoulder a significant degree of responsibility toward making the urban community, in which so many blacks and other minority Americans live, better places in which to live.

I share the hope that this subcommittee will see fit to reauthorize title XI and that Congress will see fit to fund it in the immediate future.

In conclusion, Mr. Chairman, many of us in higher education are pleased and encouraged by your efforts to initiate and promote policies that would use the educational system to broaden the base

of social equality and expand opportunity for social advancement, in keeping with American egalitarian goals.

According to Thomas Jefferson, the purpose of education was to develop citizens in our democratic society who would know what their rights were and be capable of defending them against those who would encroach upon them. If citizens are to participate and maintain a democratic society, they must be educated for the task.

Again, thank you for inviting me to appear before you. I hope and trust that you will reauthorize the Higher Education Act of 1965 with all the main provisions, as proposed by the subcommittee chairman, the Honorable Paul Simon.

Thank you.

Mr. PENNY. Thank you, Dr. Ayers.

Our last panelist is Dr. Robinson.

[Prepared statement of Dr. Prezell Robinson follows:]

PREPARED STATEMENT OF DR. PREZELL ROBINSON, PRESIDENT, ST. AUGUSTINE'S COLLEGE, AND CHAIRMAN OF THE BOARD OF DIRECTORS OF THE NATIONAL ASSOCIATION FOR EQUAL OPPORTUNITY IN HIGHER EDUCATION

Mr. Chairman, and Members of the Subcommittee: My name is Prezell Robinson. I am President of St. Augustine's College in Raleigh, North Carolina and Chairman of the Board of Directors of the National Association for Equal Opportunity in Higher Education (NAFEO) with headquarters in Washington, D.C. I speak, today, on behalf of the Nation's 114 historically and predominantly black colleges and universities. We represent the more than 250,000 students currently studying at these institutions and the millions of Alumni, family members, friends, associates and other benefactors of the nation's historically black colleges.

Our Association is strongly in favor of the draft legislation introduced by Chairman Paul Simon in March, 1984 designed to Amend and Extend the Higher Education Act of 1965 and referred to as the Higher Education Amendments of 1984.

My colleagues, Dr. Raymond Burse, President of Kentucky State University; Dr. George Ayers, President of Chicago State University; and Dr. Norman Francis, President of Xavier University—all presidents of member institutions of our Association—have already addressed quite effectively most of the aspects of the draft legislation before you. As Chairman of the entire Association, I have been asked to speak especially in support of Part B of Title III of this draft legislation. Part B is designed specifically and explicity to "Strengthen Historically and Traditionally Black Colleges and Universities." As we understand it, this title is designed expressly to aid "those institutions established for Blacks before 1964 the enactment of the 1964 Civil Rights Act and whose principal missions were and are the education of Black Americans.

Because of the nature of my presentation, I am pleased to advise the Members of this Committee of the presence of two outstanding legal authorities who have served as co-counsel to our Association in considering this proposed legislation, and who are co-authors with their colleague of a position/brief paper on this subject which at this time we would like to submit for the record and will serve as the basis for my brief remarks on behalf of the Association. I would like to introduce Professor Herbert O. Reid, who is Charles Hamilton Houston Professor in the Howard University Law Center and Counsel of record to the National Association for Equal Opportunity in Higher Education, and Professor Kenneth Tollett, Distinguished Professor of Higher Education and Director of the Institute for the Study of Educational Policy at Howard University. Both of these gentlemen will be available to assist me in responding to your questions after my presentation.

Mr. Chairman, it is the view of the National Association for Equal Opportunity in Higher Education that the original and primary purpose of Title III of the Higher Education Act of 1965 was to provide direct assistance to the nation's historically black colleges and universities, which despite an historic pattern of neglect and underfunding have continued to bear a major share of the responsibility for the movement of Black Americans into the American Mainstream through the medium of higher education. We can say without fear of contradiction that there would be no substantial Black middle class today were it not for those institutions. There would be no substantial integration in the higher echelons of the Federal government, the military, the judiciary, the medical profession, or higher education itself, were it not

for the undergraduate and graduate programs of the nation's historically black colleges. As we look into the future, the need for strengthening these institutions in order to strengthen the nation itself is absolutely necessary.

In 1965, however, it was believed that the social and political climate would not support the Congress in the adoption of race specific language in Title III legislation. Therefore, these historically black colleges were referred to euphemistically as "developing institutions." This vague and imprecise language has been subjected to interpretations often at odds with the original intent of the legislation. The consequence has been inadequate, imbalanced, and uneven funding of these institutions compared with others. Thus, while in 1966, 1971 and 1972 the nation's historically black colleges and universities received fully 60 percent of funds appropriated under Title III, there have been other years when they received substantially less. In 1980, for example, they received only 14 percent of appropriated funds.

We come before you today to strongly urge that a most appropriate and effective means of correcting the imbalance in appropriation of Title III funds is to make the provisions of this Title race specific. By this we mean specifying in the language of the Act that funds are to be appropriated for the purpose of strengthening the nation's historically black colleges and universities and the furtherance of their particular mission as a contribution to the nation. Part B of the Title III of the Higher Education Amendments of 1984, drafted by Chairman Paul Simon and other Members of this Committee with the assistance of experts in education and law, is, in our judgment, a most appropriate and effective means of assuring the continued viability of these institutions.

Now, the question has been raised as to whether the social, political, legal and intellectual climate of today is sufficiently different from 1965 as to enable the Congress to consider positively the race specific language of this proposed legislation. We believe that it is. Indeed, we believe that the Higher Education of Act of 1965 itself, with its support for the tremendous expansion of higher education in the nation, has helped to produce today's climate which is much more enlightened on the question of racial progress.

There are four basic reasons why we urge the Committee and the Congress to adopt the provisions of Part B Title III.

First, we know that the nation's historically black colleges and universities still suffer gross and egregious neglect in the support of higher education from all sources as compared with the nation's predominantly white colleges. This is especially damaging when it applies to Federal support for higher education. So the need for remedy is critical.
